No. 7.

ST. VINCENT.

[In continuation of Colonial Report No. 94, Old Series.]

Sir W. HELY-HUTCHINSON to LORD KNUTSFORD.

Grenada, March 18, 1891.

Forwarded.

WALTER HELY-HUTCHINSON.

The Right Hon.
Lord Knutsford, G.C.M.G.
&c. &c. &c.

Government House, St. Vincent,
March 16, 1891.

SIR,

I HAVE the honour to transmit my report on the Blue Book of this Colony for 1890.

2. The Blue Book itself will follow by next mail.

I have, &c.
(Signed) IRWIN C. MALING,
Administrator.

His Excellency
Hon. Sir Walter Hely-Hutchinson, K.C.M.G.
&c. &c. &c.
Grenada.

Taxes, Duties, and Fees.

The only change to be noted under this head is that effected under "The Charcoal Ordinance, 1890," No. 13, viz.:—

For every license to make charcoal, the sum of two shillings and sixpence.

For every general license to sell charcoal the sum of fifteen shillings.

For every shop license to sell or expose for sale charcoal when the license is issued for a shop in the town of

Kingstown or within one mile of the said town, the sum of twenty shillings; and when the license is issued for a shop not within one mile of the said town, the sum of ten shillings.

Revenue and Expenditure.

The revenue of the Colony for the year amounted to 27,046*l.* 6*s.* 6*d.*, and that of 1889 to 27,522*l.* 6*s.*

The decrease of 475*l.* 19*s.* 6*d.* is more than accounted for in the decrease of Excise duty (591*l.* 15*s.*), the receipts from this source in 1889 yielding 4,394*l.* 8*s.* as against 3,802*l.* 13*s.* for this year.

To judge by the increased revenue from liquor licenses issued in 1890 (104*l.*, or 7·9 per cent.) the revenue from Excise should have shown a proportionate increase, say of about 900*l.* more than was collected.

The only ground on which the deficient Excise revenue can be accounted for is illicit traffic carried on through the Grenadine Islands, which are believed to be employed as a basis for smuggling spirits into the Colony. A recent single seizure of rum, representing about 293*l.* of Excise duty, fully supports this theory. Arrangements are in contemplation which it is considered will check effectually this illicit traffic, or at least reduce it to a minimum.

Beyond the Excise there have been the usual fluctuations in the revenue, but to no unusual extent.

The noticeable increases are of Customs.

	£	s.	d.
Import duties - - - -	217	0	0
To this, for a correct comparison, should be added a sum of 263*l.*, abated under the new and improved system of accounts, as "drawback" from the total amount of duties received, which was not so abated in 1889, but was charged as an item of expenditure; thus the actual increase of import duties was 480*l.*			
Export duties - - - -	47	0	0
Licences:—			
Liquor - - - - -	104	0	0
The increase under this head is considered to be due to extended liquor trade.			
Stills - - - - -	59	0	0
Due to the increased price of rum; and			
Post Office - - - -	56	0	0
Attributed to an artificial demand during the year for postage stamps by collectors. The only decrease of revenue as compared with the year 1889 worthy of notice is—			

	£	s.	d.
Fines, &c. - - - -	98	0	0
Due to the salutary effect of the prosecutions in 1889 for not taking out licenses in due time.			
The estimate of revenue for 1890 fixed the total at - - - -	24,885	0	0
Whilst there was actually collected - -	27,046	6	6
Being an excess of - - -	2,161	6	6

The following table will show the receipts of the year under the respective heads, and also those under the same heads in the previous year, 1889 :—

Details.	Revenue, 1889.	Revenue, 1890.	Increase.	Decrease.	Remarks.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	
Customs:

Sale of stamps -	890 10 1	946 9 3	55 19 2	—	

Details.	Revenue, 1889.	Revenue, 1890.	Increase.	Decrease.	Remarks.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	
Fines, &c. - -	564 6 4	466 5 8	—	98 0 8	
Fees of office:					
Registrar - -	164 12 2	174 13 7	10 1 5	—	
Police magistrates -	331 14 0	281 9 0	—	50 5 0	
Reimbursements in aid:					
Hospital - -	133 13 7	248 17 3	115 3 8	—	
Cemetery - -	41 19 0	98 7 0	56 8 0	—	
Miscellaneous - -	449 11 6	158 11 8	—	290 19 10	
Total - -	27,522 6 0	27,046 6 6	692 11 8	1,168 11 2	

The estimate of expenditure, 24,422*l.* 18*s.* 4*d.*, was subsequently increased by special votes amounting to 2,960*l.* 6*s.* 1*d.*, making 27,383*l.* 4*s.* 5*d.*

The actual expenditure during the year, however, was 25,950*l.* 16*s.* 9*d.*, being less than the amount authorised by 1,432*l.* 7*s.* 8*d.* This saving is to a certain extent due to the non-commencement or non-completion of certain works provided for.

In consequence of the total change in the description of all accounts under the estimates of the past year it has been found impracticable to furnish the usual comparative return of expenditure.

Public Debt.

At the close of the year the public debt of the Colony was 12,270*l.*, or 1,510*l.* less than at the end of 1889. It is satisfactory to note that no loans were negotiated during the year, the general revenue being in a position to and having advanced on account of the following services the amounts set opposite:—

	£
Kingstown new water works - -	2,712
Crown lands account - - -	732

The balance of public debt at end of 1890 is made up as under:—

	£
Government House loan - - -	2,000
Immigration loan - - - -	4,250
Public buildings loan - - -	1,000
Crown lands loan - - -	920
Public debt loan - - - -	2,900
Kingstown water works loan - -	1,200
	12,270

Public Works.

The total expenditure on public works during the year was 1,509*l.*, or 758*l.* more than in the previous year.

Of the authorised vote of 1,150*l.* for roads and bridges only 1,062*l.* was spent.

The following is a list of some of the principal works undertaken and completed during 1890 :—

1. New line of highway, Arnos Vale.
2. New line of roadway, Lowman's Village.
3. Fireproof room at Registrar's office.
4. Repairs to Court-house.
5. Clearing Mesopotamia river bed.

In addition to the foregoing, several repairs were effected to the various Government buildings throughout the Colony, and two cemeteries were established at Barrenallie and Mesopotamia. Several other works were taken in hand (though not completed) during the year, notably, the opening of a new line of highway at Overland Village, the former road having been carried away by a landslip in September last.

Legislation.

Sixteen Ordinances were passed in 1890, the most important of which were the following :—

No. 1. To provide for the better recovery of rent.

No. 5. To amend "the Public Officers' Security Ordinance, 1880."

No. 7. To amend "the Crown Lands Boundaries Commission Ordinance, 1887."

No. 11. To abolish the existing office of auditor and the present system of audit, and to enable other provision to be made in lieu thereof.

No. 13. To amend "the Charcoal Ordinance, 1888."

COUNCILS.

Executive Council.

Mr. Wm. E. Hughes, a member of the Executive and Legislative Councils, resigned his seats on the 31st March, and Mr. George Smith, Q.C., a member of the Legislative Council, who was appointed to the Executive Council, was sworn on the 15th June.

Mr. Henry A. Hazell was absent on leave from 6th August to 6th November.

Legislative Council.

In the Legislative Council Mr. G. Van Heyningen, Police Magistrate of the Kingstown district, died on 5th October.

St. Vincent.

Mr. Henry A. Hazell, as above mentioned, was absent on leave from 6th August to 6th November, and Mr. D. A. MacDonald was appointed to act during his absence, when he was appointed to the seat vacated by Mr. Hughes.

Mr. C. J. Simmons was absent on leave from 17th July to 17th September.

Civil Establishment.

The changes in offices during 1890 were as under:—

Mr. Henry Powell, from the Royal Gardens, Kew, was appointed curator of the Botanic Garden.

Dr. Wiltshire Stanton Bruce Austin was appointed a medical officer in the room of Dr. J. Vance Young promoted to Cyprus.

Mr. C. Ormond Hazell was appointed to act as Police Magistrate of the Kingstown district, vice Mr. G. Van Heyningen, deceased.

Dr. G. W. Paterson was appointed to act as a medical officer vice Dr. Kirkpatrick resigned, and Mr. T. A. Emett was appointed second landing waiter.

Officers who have given security for the discharge of their duties.

The validity of the sureties of the several officers (six in number) was duly inquired into, and found to be satisfactory.

Foreign Consuls.

No new consulates were established in the Colony during 1890.

Pensions.

No pensions were granted during the year.

The pension list has, however, been relieved by the death of two pensioners, who drew 35*l.*

Population.

The births in the year, exclusive of still-births, numbered 1,652, and the deaths, exclusive of still-born, 1,359, giving a natural increase of 293.

The still-births were 110.

The infant mortality during the past year was unusually high and is attributable to the cause given by the health officer in his report under "Public Health."

229 marriages were performed during the year, or 77 in excess of the previous year.

The total population of the Colony at the end of the year under report is estimated at 47,933.

Education.

There were 41 schools in operation under the Board of Education with an average attendance of 3,229 scholars as against 42 in 1889, with an attendance of 2,966 scholars; the annual expenditure of the past year was 1,393*l.* 17*s.* 10*d.* compared with 1,448*l.* 1*s.* 11*d.* in 1889.

A further sum of 100*l.* was granted in aid of a Grammar School with an attendance of 40 pupils.

The following comparative statement shows the expenditure on the elementary schools during the years mentioned:—

—	1889.	1890.
	£ s. d.	£ s. d.
Government grant based on average -	661 8 8	594 11 10
Payments by results - - -	732 13 3	723 6 0
Payments to pupil-teachers - - -	54 0 0	76 0 0
Total - - -	1,448 1 11	1,393 17 10

Miscellaneous Numerical Returns.

Savings Bank.

This was established in 1866, and the numbers making use of it yearly increase.

The following table gives the number of depositors, the amounts deposited, the amounts withdrawn, and the sums at credit of depositors in each of the three years mentioned:—

Year.	No. of Depositors.	Amount of Deposits.	Amount of Withdrawals.	At credit of Depositors on 31st December.
		£ s. d.	£ s. d.	£ s. d.
1888 -	833	3,516 4 5	3,035 10 0	10,318 6 2
1889 -	920	3,865 10 3	6,019 15 11	8,640 2 7
1890 -	956	4,607 8 11	4,224 16 2	8,797 1 4

Friendly Societies.

The proceedings of friendly societies are regulated by the provisions of Act No. 49 of 1843. There are 13 of these societies at present registered, and during the past year their operations have considerably extended.

Imports and Exports.

Imports.

The value of the imports during 1890 was almost identical with that of the preceding year, being 97,808*l.* as against 98,212*l.* in 1889, a difference of only 404*l.* There were, however, numerous fluctuations in the several items, of which the total was made up thus: In food stuffs—bread, butter, cheese, flour, fish, meats, rice, refined sugar, fine salt and tea, show an increase (fish notably, 2,425*l.*); whilst coffee, meal, lard, crystalized and muscovado sugar show a decrease. Of household stuffs, candles, matches and soap show an increase, kerosine oil a decrease. Cloths, furniture, hardware, &c., and other things liable to 10 per cent. *ad valorem* duty, fell off 2,977*l.* Metals increased as to iron, copper, &c., but decreased as to galvanised iron. Building materials varied greatly, for, whilst paints decreased 67*l.*, paint oils increased 276*l.* Again, soft shingles increased 328*l.*, and hard shingles decreased 236*l.* Also soft woods increased 1,320*l.* and hard woods decreased 1,057*l*, but, taken altogether, building materials increased 612*l.* Plantation supplies completely decreased 2,410*l.*, of which stores show 1,647*l.* and manure 727*l.* Horses and mules also decreased 963*l.* All spirits increased together 212*l.*; so also did tobacco 203*l.*; Government supplies increased 674*l.*; cordage decreased 476*l.*, machinery increased 310*l.*

All the imports are, however, satisfactory, and most of the decreases are due to an unfavourable comparison with a year (1889) in which many items, as the import of *ad valorem* goods, hard woods, manures, horses and mules, were abnormally stimulated in that year by the state of the sugar market. Staves, &c., are imported near the close of one year or the commencement of another and usually in large shipments, thus making comparisons of one year's imports with another of little use. The increase of Government supplies was in connexion with the construction of waterworks. No reason can be given for the decrease in cordage or increase in machinery unless it be attributed to fitful causes.

Exports.

Compared with 1889 the value of exports in 1890 decreased 19,842*l.*; the value of exports in 1889 having been 124,587*l.*, and in 1890 104,745*l.* The decrease may be attributed entirely to the reduced value of sugar and molasses. Indeed—

	£
Sugar decreased - - - -	25,494
and Molasses - - - -	2,649
	28,142

On the other hand, rum increased 2,285*l.*, due to a sudden rise of price, which stimulated its export trade. The value of cocoa exported shows a decrease of 397*l.*; but it is probable that the decrease is unreal, due partly to an over value being placed on this item in 1889, and partly to decrease in price, for the quantity exported was more than in the preceding year. Arrowroot increased in value of export 6,179*l.*, whilst cassava starch decreased 386*l.* The following tables of quantities exported (reduced to the common standards) will show that the productiveness of the Colony in 1890 was everything that could be desired :—

Sundry Exports in 1889–90.

Sugar :	Hhds.	Hhds.
1890 - - - -	6,078	
1889 - - - -	5,820	
Increase in 1890 - - -		258
Molasses :	Puns.	Puns.
1890 - - - -	1,951	
1889 - - - -	2,833	
Decrease in 1890 - - -		882
Rum :		
1890 - - - -	550	
1889 - - - -	238	
Increase in 1890 - - -		312
Arrowroot :	Barrels.	Barrels.
1890 - - - -	20,846	
1889 - - - -	16,732	
Increase in 1890 - - -		4,114
Cassava starch :		
1890 - - - -	196	
1889 - - - -	507	
Decrease in 1890 - - -		311
Cocoa :	lbs.	lbs.
1890 - - - -	102,771	
1889 - - - -	89,329	
Increase in 1890 - - -		13,442
Cotton :	Bales.	Bales.
1890 - - - -	91	
1889 - - - -	53	
Increase in 1890 - - -		38

Cotton seed:	Bags.	Bags.
1890 - - - -	588	
1889 - - - -	271	
Increase in 1890 - -	-	31
Ground nuts:	Barrels.	Barrels.
1890 - - - -	655	
1889 - - - -	481	
Increase in 1890 - -	-	174
Whale oil:		
1890 - - - -	587	
1889 - - - -	481	
Increase in 1890 - -	-	106
Pigeon peas:	Barrels.	
1890 - - - -	514	
1889 - - - -	221	
Increase in 1890 - -	-	293

The decrease in the export of molasses was mainly due to the retention in the Colony of that product for manufacture into rum. The decrease of export of cassava starch is not easy to account for, as the product is that of a permanent and steady industry of the labouring population. The export of 507 barrels in 1889 was abnormally large.

Shipping.

The total tonnage entered and cleared during the past year was 300,222 as against 266,123 in the previous year.

The subjoined abstract of the shipping returns for 1888, 1889, and 1890 will show the rate of increase and also the extent to which sailing vessels are being replaced by steamers in the shipping trade of the Colony:—

Description of Vessel.	No. of Vessels entered and Cleared.			Tonnage of Vessels entered and cleared.		
	1888.	1889.	1890.	1888.	1889.	1890.
Sailing - -	733	716	693	31,941	36,955	30,504
Steam - -	180	202	238	207,416	229,168	269,718
Total -	913	918	931	239,357	266,123	300,222

The number of British sailing vessels entered and cleared in 1890 was 613, and their tonnage 23,314; of foreign sailing vessels

the number was 80 and the tonnage 8,190. The number of British steamers entered and cleared was 238 and their tonnage 269,718. No foreign steamers entered or cleared at St. Vincent in 1890.

Prison and Prisoners.

The number of persons committed in 1890 was 170, namely, 109 men, 51 women, and 10 juveniles, or 22 less than in the preceding year.

At the close of the year there were only 21 males and five females in prison. There was only one death in the prison during the year—cause, heart disease; whilst the admissions to hospital only numbered two during the year, the daily average on the sick list being three. The medical officer of the prison attributes the satisfactory state of health maintained in the prison to the sanitary arrangements having been all that could be desired throughout the year, and to the close attention paid by the authorities of the prison to cleanliness, drainage, and ventilation.

Criminal Statistics.

Police Reports.

The number of offences reported to the police or to the magistrates was 1,552, a decrease of 489 compared with the number reported in 1889.

Apprehensions and Summonses.

The manner in which the cases brought before the magistrate's courts were disposed of was as follows :—

—	1889.	1890.
Convicted - - - - -	1,140	657
Discharged - - - - -	249	247
Acquitted - - - - -	643	610
Sent on to higher courts - -	9	19
Undecided at close of year - - -	—	19
	2,041	1,552

Convictions.

The total number of summary convictions in the magistrates' courts was 657 as compared with 1,140 in the preceding year and 780 in 1888, while in the Supreme Court there were 14 convictions

St. Vincent.

as compared with six in 1889 and six in 1888. There was in 1890 a marked decrease in the number of offences against property as compared with 1888 and 1889, as the table following will show:—

——	1888.	1889.	1890.
Offences against property other than malicious injuries to property.	94	119	84

Punishments.

The punishments inflicted in the magistrates' courts in 1889 and 1890 are shown under:—

Punishment.	1889.	1890.
Fine - - - - - - -	967	532
Peremptory imprisonment in lieu of fine or surety.	119	65
Peremptory imprisonment - -	18	32
Whipping - - - - - -	28	19
Bound over with or without sureties -	8	9
	1,140	657

Hospitals.

The number of patients in the Colonial hospital at the close of the year 1889 was 39, that is, 23 males and 16 females.

The admissions in 1890 were 412, of whom 246 were males and 166 females. There were therefore 451 patients treated during the year, the daily average being 48.

There were in all 41 operations performed during the year, of which, it is satisfactory to note, only one case succumbed.

The following table gives the number of cases treated under the classes stated, with the number of deaths as compared with 1889:—

Diseases treated.	No. of Cases, 1889.	No. of Deaths, 1889.	No. of Cases, 1890.	No. of Deaths, 1890.
General - - -	104	11	138	19
Local - - -	256	19	277	23
Injuries - - -	44	3	36	3
	404	33	451	45

The expenditure on this institution during 1890 amounted to 1,369*l.* 9*s.* 10*d.* and the daily average cost of each patient treated was 1*s.* 6¾*d.*

Grants of Land.

The total number of grants of Crown land during 1890 was 24, giving an acreage of 279; 23 of these grants were for lots under 100 acres, and one grant above 100 acres.

As compared with the preceding year there was a slight falling off in the number of grants issued in 1890.

Public Health.

Reviewing the health of the Colony during the past year, the Colonial Surgeon and Health Officer states:—"In common with "other parts of the world, St. Vincent had its full share of the "influenza epidemic in 1890, chiefly during the first half year. "This was attended with and followed by pulmonary and "gastro-intestinal disorders, and, for a time, greatly disturbed the "health of the island throughout. The medical staff for many "months had their hands full with cases of 'pneumonia,' "'dysentery,' and 'gastro-enteritis,' which diseases sent the death "rate up to a higher per-centage than usual, especially among "children and those over 60; that at the hospital was 9·9 per "cent., mainly from pneumonia and gastro-enteritis, which, "though higher than for four years previous, nevertheless com- "pares favourably with the hospital returns of some neighbouring "islands. Apart from these diseases, the direct consequence "of an epidemic so widespread, it may safely be said that St. "Vincent has in no way departed from the proverbially high "standard of healthiness; inasmuch as the wet season, com- "mencing in June, and the fall of the year, the usual season "for the development of tropical endemic diseases, was not "attended with malarial disturbances of any gravity, tertian "intermittent fever of a very mild form and simple remittent "fever only being met with here and there, chiefly in marshy "districts, which fortunately are few and far between, and of "limited extent. Few or no deaths have resulted from this cause. "Beyond 'influenza' the island has not been visited for the year "by contagious or infectious disease of any kind."

General Remarks.

There are other subjects of interest which have not been mentioned in my report, namely, the construction of a botanical station on the site of the old botanical garden, established in 1764 and allowed to go to decay since 1828: the discovery of a valuable tract of land called the Upper Richmond Valley; the construction

St. Vincent. of the Kingstown new waterworks, and the Local Exhibition held in connexion with the Jamaica Exhibition, 1891.

The Botanic Station is beautifully situated in a small valley, immediately below Government House and within easy distance of the town. The area devoted to this purpose is about eight acres and the soil is admirably adapted for the culture of plants.

Mr. H. Powell, the curator, arrived here from Kew on the 14th May last, and on the following morning commenced work. His zeal and devotion to his work have already made the garden that was a wilderness a pleasant resort; he has introduced and planted many valuable and economic plants from all parts of this island, from the neighbouring Colonies as well as from Kew Gardens. With very few exceptions these plants are doing remarkably well. The paths are all planned and are being laid out as fast as funds will permit. Mr. Morris, the assistant director at Kew, visited this station in December last, and his valuable suggestions are being carried out as rapidly as possible. It is intended to build a small but ornamental house for the curator within the grounds. A suitable site has been selected, and the work will commence on the 9th instant.

With regard to the Upper Richmond Valley, the only difficulty that presents itself is to obtain an easy entrance into it, but a new track has recently been found, which is shorter, and presents far fewer obstacles than the one that was at first attempted. From its peculiarly fortunate situation the valley is specially adapted for the cultivation of cocoa and spices. It is sheltered, the soil is extremely rich, and the whole valley is well watered by the Richmond river. The area is estimated at between three and four square miles and is surrounded by high mountains.

I am looking forward to this valley being opened up, as I am convinced that it will before very long prove a source of great revenue to this Colony, should the scheme as suggested by his Excellency the Governor be carried out.

Since my report last year on the Blue Book, the Kingstown new waterworks have been commenced and satisfactory progress has been made. The total sum expended on this work to 31st December 1890 was 5,256*l.*, but only 1,996*l.* was spent on its construction, the remainder having been paid for awards to owners of land, for water rights, debentures and interest, and other fees and charges.

The exhibition was opened on the 29th October last, and proved to be the most varied and successful which was ever held in this Colony. The exhibits covered a space of little over 3,000 square feet. It was indeed surprising to observe the large variety of articles collected and the good taste and ingenuity displayed in their manufacture, and most gratifying to realise the very great interest shown by every class and the trouble taken to ensure the success of the exhibition. During the three days it was open to the public over 2,000 persons were admitted.

The selected articles were forwarded to Jamaica by the middle of December in charge of Mr. T. B. C. Musgrave. More exhibits

could have been sent if more space could have been obtained. Six Caribs (three pure and three half-bred) were also sent to work at their trade of basket making in one of the cottages set aside for them in the grounds of the exhibition building. There was an agricultural show held on the 30th October in connexion with the Local Exhibition, which also proved very successful and much helped to bring the object and knowledge of the exhibition prominently before the people in the country districts.

No. 10.

ST. LUCIA.

[In continuation of Colonial Report No. 96, Old Series.]

Sir W. Hely-Hutchinson to Lord Knutsford

Grenada, April 17, 1891.

Forwarded.

(Signed) Walter Hely-Hutchinson.

The Right Hon.
Lord Knutsford, G.C.M.G.
&c. &c. &c.

Sir,

Government House, April 6, 1891.

I have the honour to transmit herewith my Report on the Blue Book of St. Lucia for the year 1890.

I have, &c.
(Signed) C. C. Knollys.

His Excellency
The Hon. Sir W. Hely-Hutchinson, K.C.M.G.
&c. &c. &c.
Grenada.

Report on the Blue Book for 1890.

Taxation.

1. On the third day of the year an Ordinance was brought into force imposing a harbour due of 6*d.* a ton on coal discharged in the harbour of Castries.

2. The *ad valorem* Customs dues were reduced to a uniform rate of 10 per cent., excepting on some few articles, such as arms, ammunition, jewellery, wines, &c., which still continue to be liable to a duty of 20 per cent.

3. By resolution of the Legislative Council a general exemption was made in favour of the Local and Imperial Governments with regard to stamp duty.

o 67280. Wt. 18975.

ST. LUCIA.

Finance.

4. The revenue for the year was 50,232*l.*, the expenditure, 45,430*l.*; and the Colony having commenced the year with a balance of 4,899*l.*, closed its accounts with one of 9,701*l.*

5. The revenue and expenditure of the past five years is shown in the following table:—

Year.	Revenue.	Expenditure.
	£	£
1886 - - - -	39,823	44,114
1887 - - - -	39,967	43,598
1888 - - - -	42,248	43,175
1889 - - - -	47,510	46,086
1890 - - -	50,232	45,430

6. This statement shows that, though the expenditure of 1890 was higher than that of 1886 by 1,316*l.*, the revenue has increased during the same time by 10,409*l.*

7. The chief items of revenue for the last three years appear in the following table:—

Item.	1888.	1889.	1890.
	£	£	£
Customs - - - -	21,514	23,540	23,442
Port dues - - - -	827	1,981	3,311
Rum duty - - - -	11,316	12,052	13,518
Licenses - - - -	2,004	2,087	2,286
Road tax - - - -	835	968	1,235
Fees of court and reimbursements in aid	3,820	4,983	3,789

8. The fluctuation in Customs was due to the increase of the duties in 1889 and their reduction in 1890.

9. A large increase is shown under port dues. In 1890 the sum of 811*l.* was raised under the new due of 6*d.* a ton on coal, and in the latter half of 1889, as also in 1890, the wharfage dues, which had till then been paid to the Castries Town Board, were carried to the credit of general revenue.

10. The steady influx of labourers attracted by the works on the harbour and military fortifications increased the revenue from rum duty.

Local Revenues.

11. The elected Castries Town Board has passed through its first year of existence. It started with an available balance of 722*l.* and closed the year with a surplus of 1,121*l.* Its revenue for the year was 3,062*l.*, obtained principally from property rates; its expenditure 2,212*l.*

12. The total revenue of the other towns and villages amounted to 1,139*l.*, and their total expenditure to 991*l.*

13. The audit system was this year entirely changed. Instead of a pre-audit conducted locally as hitherto, a system of post-audit was instituted under the Comptroller and Auditor General, Somerset House, with a local auditor for the government of the Windward Islands to make surprise surveys and personally inspect the books and accounts.

Debt.

14. The debt of the Colony stands as follows :—

	£
For central factory loans - - -	32,400
„ immigration purposes - -	14,000
„ harbour works - - -	70,000
„ public works - - -	17,300
	133,700

15. This was reduced by 2,400*l.* during the year. The debt charges (including this sum of 2,400*l.*) amounted to 6,814*l.*

Military Expenditure.

16. The amount spent by the Imperial Government on the pay and provisioning of the troops stationed in the Colony and for transport services was 12,446*l.* The defence works were actively proceeded with and large sums were spent on labour in this direction.

Post Office.

17. The business of the Post Office greatly increased. Mails were despatched by 206 steam vessels, and the receipts of the department exceeded the expenditure by 264*l.*

Public Works.

18. The sum of 15,965*l.* was spent on the public works of the Colony as follows :—

	£
Maintenance of roads - - -	3,467
Upkeep of public buildings - -	840
Improvement of roads - - -	3,431
Baron Asylum for the poor - -	2,233
New police barracks at Soufrière, Micoud, and Dennery - - -	820
Extension of Royal gaol - - -	1,096
Improved water supply for Castries -	848
Improvement to the harbour of Castries -	3,230
	15,965

19. The roads of the Colony are being improved by means of a small loan specially raised. The most important improvement is on the road from Castries to Dennery, which is being reconstructed with easier grades, and when it is completed it will be possible to drive a light vehicle over its entire length. An improved system for the upkeep of roads has been introduced during the last few years with marked success.

20. The Baron Asylum is a new asylum for the poor. Mr. J. S. Baron, a native of St. Lucia, left 2,160*l.* for this purpose, the expenditure of which has been entrusted to the Government. This sum has not proved sufficient to complete the buildings, which will be finished and afterwards maintained by the Government.

21. The present water supply of Castries is insufficient both in quality and quantity. The work now on hand is merely the renewal of the old main, which is absolutely necessary pending the adoption of a more extended scheme.

22. The dredging of the Castries harbour has proceeded steadily and nears completion. The material dredged has been utilized by making very valuable reclamations in various parts of the harbour. These reclamations not only furnish useful sites, but have also greatly improved the health of the town by filling up the swamps which formerly existed. The total amount spent on the harbour improvements to the end of the year was 95,981*l.*

Legislation.

23. Of the 14 Ordinances passed during the year the following may be noticed :—

24. The Shipping (Harbour of Castries) Dues Ordinance (No. 1) imposed a due of 6*d.* a ton on coal discharged in the harbour of Castries. It also imposed dues on steamers calling for or bringing coal and on sailing vessels, but these were shortly afterwards

abolished. This Ordinance has not yet received Her Majesty's assent.

25. The Customs Tariff Amendment Ordinance (No. 2) reduced the 15 per cent. and the greater part of the 20 per cent. *ad valorem* duties to a rate of 10 per cent.

26. The Crown Lands Amendment Ordinance (No. 6) transferred all powers relating to Crown lands from the Colonial trustee to the Survey Department.

27. The Stamp Amendment Ordinance (No. 10) enabled a system to be introduced by which all fees of court are paid by means of stamps.

Councils.

28. There were no changes in the Executive or Legislative Councils.

Civil Establishment.

29. On the 26th September the Administrator, Mr. R. B. Llewelyn, C.M.G., went on leave. The Governor of the Windward Islands administered the Government from the 14th to the 23rd April, and from the 18th September to the 14th November; Mr. P. J. K. Ferguson, Attorney-General, administered as senior member of the Executive Council from the 14th to the 24th November, and on the 25th November Mr. C. C. Knollys, C.M.G., Colonial Secretary of Barbados, assumed the Government under the authority of a warrant from the Governor.

30. Mr. A. Child was on the 2nd of October confirmed as Chief Justice, the duties of which office he had been performing since May 1889.

31. Mr. L. J. Bertram was, on the 1st January, appointed local auditor for the Windward Islands under the Comptroller and Auditor General, Somerset House.

32. Mr. F. B. G. Moore, B.A., was appointed Inspector of Schools on the 1st of January. This was a new office.

33. Mr. E. W. Lord, chief revenue officer, died on the 26th of December.

Pensions.

34. The pension list was reduced by deaths during the year by 136*l.* 10*s.* 1*d.*, and increased by new pensioners by 67*l.* 14*s.* 6*d.* At the close of the year it amounted to 672*l.* 7*s.* 2*d.* per annum.

Foreign Consuls.

35. Mr. William Peter was appointed Consular Agent for Germany in the place of Mr. J. D. Moffat, deceased.

Vital Statistics.

36. The registration returns show the population at the end of 1890 to have been 43,685, made up of 21,536 males and

ST. LUCIA.

22,149 females, as against a total in 1889 of 43,124, and in 1888 of 42,504.

Owing to the continual emigration and immigration of labourers these figures are not absolutely to be relied upon, and are probably below the mark. A census is to be taken in April 1891.

37. The living births numbered 1,574 (only two more than in 1889), males 840 and females 734. The deaths, exclusive of still-births, were 1,013. The still-births were 130. This gives, exclusive of still-births, a birth-rate of 3·65 per cent. of the population, against 3·70 in 1889, 3·40 in 1888, 3·46 in 1887, and 3·61 in 1886; and a death-rate of 2·35, against 2·24 in 1889, 2·14 in 1888, 2·22 in 1887, and 2·62 in 1886—the two rates being thus both above the averages for the four previous years of 3·54 and 2·30.

38. Of the total number of births, 594 were legitimate and 1,110 illegitimate, showing a per-centage of illegitimacy of 65, the same as in 1889, but 3·86 less than in 1888, 1·09 less than in 1887, and 6·32 less than in 1886.

39. Of the deaths half occurred under the age of five years and 30·53 under one year.

There were eight deaths from snake bites.

40. The marriages numbered 284, of which 264 were Roman Catholic, 17 of the Anglican Church, and three of Dissenters. The number for 1889 was 258.

Savings Bank.

41. The number of depositors in the savings bank steadily increases from year to year, as shown by the following table:—

On 1st January.	Depositors.	Deposits.
		£
1887 - - - -	296	6,538
1888 - - - -	438	8,567
1889 - - - -	453	9,492
1890 - - - -	640	8,279
1891 - - - -	681	9,492

42. The investments amount to 7,500*l.*, as follows:—

	£
New South Wales Inscribed Stock -	2,000
Canadian Inscribed Stock - -	2,000
Barbados Government Debentures -	1,000
Colonial Bank on deposit - - -	2,500
Total - - -	7,500

Ecclesiastical.

43. Three religious denominations are represented in the Colony, statistics of which are afforded in the following table :—

Religious Denomination.	Ministers.	Churches, &c.	Accommodation.	Average Attendance.
Roman Catholic - -	11	12	5,300	4,400
Church of England - -	2	4	650	400
Wesleyan - - -	1	1	200	175

44. The Government grant to the Roman Catholic and Anglican denominations amounted to 1,379*l.*; the Wesleyans receive no aid from Government.

45. In the past year an arrangement was made by which the payment of salaries to the Roman Catholic priests was discontinued and a grant of the total amount of stipends was made to that Church on the condition that the several cures were not allowed to become vacant.

Education.

46. *Primary Schools.*—In 1890 one school was added to the number receiving assistance from the public funds. They are divided as follows:—13 Roman Catholic, 11 Mico schools (Anglican), 3 under the direction of the Canadian Mission Society, principally for coolie immigrants, and one under an Anglican clergyman.

The following table shows the number on the registers and the average attendances at these schools :—

Schools.	On the Registers.		Total.	Average Attendance.
	Boys.	Girls		
Roman Catholic - - -	670	1,242	1,912	1,061
Mico (Anglican) - - -	1,024	359	1,383	605
Coolie - - - -	132	97	229	91
Anglican - - - -	87	58	145	63
Total - -	1,913	1,756	3,669	1,820

The numbers on the registers for the previous three years were 3,416, 3,351, and 3,255, and the average attendances 1,865, 1,848, and 1,900.

47. The grants made from public funds to these schools were—to the Roman Catholic 637*l.*, to the Mico 600*l.*, to the coolie schools 150*l.*, and to the Anglican School 45*l.*

48. The primary educational system of the island is in a state of transition. In consequence of the passing of a new Ordinance, the trustees of the Lady Mico Charity decided to close their schools. These have done excellent service for many years and will be taken over by the Government. An inspector of schools has also been appointed, filling a want long felt.

49. *Higher Education.*—For 20 years there has been no provision for the higher education of boys. A grammar school, assisted by the Government, was this year opened under the management of the Vicaire Forain, who is the head of the Roman Catholic Church. It was opened with 40 pupils, the teaching staff consisting of two English masters.

50. The higher education of girls is admirably provided by the convent school.

Weights and Measures.

51. New standard weights and measures have been imported and a thorough inspection made throughout the island.

Imports and Exports.

52. The total value of the imports amounted to 206,693*l.*, including stores and supplies for the War Department estimated at 34,232*l.*, which is an increase on the previous year of 7,855*l.*, excluding military stores. The figures for four years are given in the following table:—

Year.	Exclusive of Military Stores.	Military Stores.	Total.
	£	£	£
1887 - - -	115,755	196	115,951
1888 - - -	138,769	2,089	140,858
1889 - - -	164,606	7,442	172,048
1890 - - -	172,461	34,232	206,693

53. The quantities and values of the principal articles of imports are given in the following table.—

Articles.	Quantities.	Values.
		£
Cattle (including oxen) - - - -	401 head	3,531
Coals - - - - - -	33,554 tons	18,406
Flour - - - - -	11,644 brls.	10,886
Cottons, linens, woollens - - - -	—	32,098
Fish, salted and dried - - - -	9,219 cwt.	8,678
Haberdashery - - - - -		7,030
Hardware - - - - - -	—	3,776
Leather, manufactured - - - -	—	4,851
Machinery and other agricultural implements -	—	11,814
Manure - - - - - -	—	8,097
Meat, salted and cured - - - -	465,184 lbs.	3,664
Rice - - - - - -	772,855 lbs.	3,299

54. The value of the imports from the United Kingdom was 62 per cent. of the total imports, from the United States 17 per cent., from France 5 per cent., and from British Colonies 11 per cent. From the United Kingdom came cottons, linens, &c., hardware, machinery, coals, and manure; from the United States came flour, salted meat, and some 3,000 tons of coal. The British West Indies contributed nearly the whole of the salt fish.

55. The exports are shown by the following table:—

Year.	Produce of the Colony.	Coal.	Other articles.	Total.
	£	£	£	£
1887 - -	95,562	19,533	22,180	137,275
1888 - -	107,445	14,716	14,784	136,945
1889 - -	128,126	19,174	14,650	161,950
1890 - -	133,129	55,693	8,630	197,452

The Colony's produce, valued at 133,129*l.*, was distributed as follows:—59,075*l.* to the United Kingdom, 48,618*l.* to the United States, 14,017 to France, 9,027*l.* to the French West Indies, and 2,364*l.* to British Colonies.

ST. LUCIA.

56. The following table exhibits the principal exports of the Colony's produce during the past three years, and gives the direction of the trade :—

Articles.	Countries.	1888.	1889.	1890.
		Lbs.	Lbs.	Lbs.
Cocoa -	United Kingdom - -	491,594	408,440	495,500
	France - - -	300,575	401,520	430,830
	Barbados - - -	—	480	—
	Total -	792,169	810,440	926,330
		£22,987	£20,985	£26,864

Total -	448	252,623	638	452,533	623	438,376

and their nationalities are as follows :—

—	1888.		1889.		1890.	
	No.	Tons.	No.	Tons.	No	Tons.
Steamers.						
British - -	204	220,274	364	418,957	324	364,908
Foreign - - -	25	16,261	28	15,955	61	60,440
Sailing Vessels.						
British - - -	182	9,010	209	11,142	206	8,253
Foreign - - -	37	7,078	37	6,479	32	4,775
	448	252,623	638	452,533	623	438,376

58. Of the steamers, 82 came from South American ports, calling for coal, their destination being the United States. The quantity of coal shipped at Castries in 1890 amounted to 37,462 tons. The slight falling off in the number of steamers was caused by the depression in South America.

Crown Lands.

59. The working of the Crown Lands Ordinance of 1889 is gradually bringing the Crown Lands under control. Though no grants or sales were completed in the year, an amount of 547*l.* has been received as deposits and arrears on 1,067 acres of land, and some 46 town and village lots, the usual rate of deposit being

St. Lucia.

one-fifth the upset price—1*l.* for uncultivated land; cultivated land and town lots at varying prices. Applications for about 1,900 acres of land have been received.

Gaols and Prisoners.

60. The daily average number in prison was 50; in 1889 and 1888 the numbers were 40 and 47. The number of commitments was 460, as against 323 in 1889 and 412 in 1888. Of those committed, 310 were men and 150 women; 97 had been previously convicted, 49 once, 11 twice, and 37 three times or oftener.

61. The sanitary state of the prison was good, and there were but 10 admissions to hospital. One death occurred, and there was one execution.

62. The cost of maintaining the prison in 1890 was 878*l.*, and the estimated value of the work done by the prisoners was 560*l.*

Crime.

63. Offences against the person punishable on summary conviction have increased considerably. This may be accounted for by the large number of strangers who have been attracted to St. Lucia by the new works and by the expansion of the coaling trade.

64. The following table gives a retrospect of crime during the years 1887 to 1890:—

	1887.	1888.	1889.	1890.
Offences reported to the police - - -	1,309	1,339	1,212	1,237
Persons apprehended by the police or summoned before the magistrates - - -	1,696	1,585	1,430	1,426
Summary convictions:				
For offences against the person - -	225	172	198	283
For prædial larceny - - - -	29	35	25	24
For offences against property other than prædial larceny - - - -	89	99	67	57
For other offences - - - -	454	443	320	397
Convictions in the Superior Courts:				
For offences against the person - -	11	7	18	12
For offences against property other than prædial larceny - - -	4	16	5	13
Number of persons acquitted:				
In the Inferior Courts - - -	879	806	780	326
In the Superior Courts - - - -	11	7	16	11

Hospitals and Asylums.

65. The following table gives statistics as to the working of the three hospitals at Castries, Soufrière, and Vieux Fort during the year :—

Hospital.	No. on 1st January.	Admissions.	Total.	Daily Average.	Discharges.			Deaths.	Per-centage of Deaths.
					Cured.	Relieved.	Not improved.		
Victoria - -	75	1,248	1,323	74	1,079	40	—	40	3·02
Soufrière - -	10	123	133	8	85	31	—	14	10·53
Vieux Fort - -	11	120	131	9	73	16	19	12	9·16
Total -	96	1,491	1,587	91	1,237	87	19	66	7·57

The hospital at Dennery was closed towards the end of the year, and no returns have been made.

66. The following table, omitting Dennery, gives a comparison of the last three years :—

Year.	Total Number treated.	Daily Average.	Death-rate.
1888 - - -	2,599	127	3·9
1889 - - -	2,304	120	5·8
1890 - - -	1,587	91	7·57

67. The following is a classified list of the diseases treated, giving the number of cases, and the number of deaths from each disease :—

Disease.	No. of Cases.	No. of Deaths.
Abscess - - - - - -	34	1
Anæmia and debility - - - - -	218	12
Burns and scalds - - - - -	7	1
Cancer - - - - - -	3	3
Disease of—		
Bones and joints - - - - -	11	—
Circulatory system - - - - -	7	1
Digestive organs - - - - -	114	22
Ears and eyes - - - - -	23	—
Genito-urinary organs - - - -	59	4
Glandular - - - - - -	3	—
Nervous system - - - - -	27	12
Respiratory organs - - - - -	126	29
Skin - - - - - -	71	—
Spleen - - - - - -	1	—
Enteritis - - - - - -	6	1

Disease.	No. of Cases.	No. of Deaths.
Fevers	295	4
Fractures, wounds, &c.	91	—
Rheumatism	65	—
Senility	19	13
Serpent bite	1	1
Syphilis	39	2
Tumours	12	—
Ulcers	90	—
For confinement	4	—
Miscellaneous	89	1
Malingerers	156	—

68. *Poor Asylum.*—None but male patients were accommodated in this asylum. The female paupers were transferred in 1889 to the Victoria Hospital pending the completion of the new asylum which is being built in Castries out of the bequest left by Mr. Baron. On the 1st January there were 30 paupers in the asylum, and there were 93 admissions during the year, making a total of 123, of whom 49 were discharged relieved and 38 died. The daily average number in the asylum was 35. The principal ailments were senile decay, chronic ulcers, and rheumatism.

69. *Yaws Hospital.*—The number of admissions during the year was 65, which with the 45 remanets from 1889 made a total of 110 under treatment. Of these, 62 were discharged cured and 2 relieved, and there were 5 deaths.

70. *Lunatic Asylum.*—There is no lunatic asylum in the Colony. A temporary reception house has been fitted up at Soufrière to which patients can be sent until they are despatched to the Central Asylum for the Windward Islands at Grenada.

Meteorology.

71. The mean temperature of the air at Morne Fortuné, 800 feet above sea level, was 76. The highest reading, recorded in September, was 89, and the lowest 65, recorded in February and March. The total rainfall amounted to 88·11 inches, distributed over 288 days. In Castries the rainfall was 85·43 inches, and at Soufrière 59·09 inches.

72. The direction of the wind was as follows:—

Direction.	N.	N.E.	E.	S.E.	S.	S.W.	W.	N.W.	Calm.
Number of days	4	115	205	29	2	—	1	4	5

General Remarks.

73. The health of the Island was good throughout the year, and sanitation in the town and harbour of Castries has received

special attention. This and the reclamation of various swamps in the neighbourhood of the town has much improved the health of Castries. St. Lucia may now be considered as one of the more healthy of the West Indian islands.

74. Agriculture is recovering from the stagnation caused by the sugar crisis of 1883–85. Much new land has been taken into cultivation and renewed immigration of labourers from India determined upon. The usefulness of the botanical station is recognised, and applications for plants of economic value are numerous.

75. The return labourers from the Panama canal have brought a considerable amount of money with them and are everywhere taking up land and building houses. The new military and civil works and increased coaling trade have caused much money to be circulated; and altogether there is an appearance of prosperity and activity which speaks well for the future of the Island.

No. 23.

GRENADA.

[In continuation of Colonial Report No. 91, Old Series.]

Sir W. HELY-HUTCHINSON to LORD KNUTSFORD.

MY LORD, Grenada, August 13, 1891.

I FORWARD the Blue Book for Grenada for 1890, together with the Acting Colonial Secretary's report thereon.

2. Mr. Drayton has taken pains to revise the Blue Book carefully and thoroughly. Section A. in particular has been entirely remodelled, and for the first time contains a full statement of the parochial taxation.

I have, &c.
(Signed) WALTER HELY-HUTCHINSON.

The Right Hon.
Lord Knutsford, G.C.M.G.,
&c. &c. &c.

ACTING COLONIAL SECRETARY'S REPORT on BLUE BOOK for 1890.

Sources of Revenue.

1. There was no change made in taxation or other source of revenue in the year 1890, with the exception of the imposition of a fee of 1*l.* for every "occasional" license for sale of liquors issued by the Treasury. As in the previous year, an additional import duty of 2½ per cent. *ad valorem* was levied on articles not specified or exempted by the tariff, and the collection of export dues was suspended.

GRENADA.

Revenue.

2. The revenue for 1890 was 49,267*l.*, being 1,468*l.* more than the average of the four preceding years, and 1,174*l.* less than in 1889, as shown in the following statement:—

Head of Revenue.	1890.	1889.	Increase.	Decrease.
	£	£	£	£
1. Customs - - -	24,760	24,349	411	—
2. Licenses, excise, and internal revenue not otherwise specified - - - -	16,510	16,820	—	310
3. Fees of court or office, payments for specific services, and reimbursements in aid - -	6,371	7,052	—	681
4. Post Office - - -	913	873	40	—
5. Rent of Government property -	410	231	179	—
6. Interest - - -	122	427	—	305
7. Repayment by parochial boards of loans from general revenue	—	50	—	50
8. Miscellaneous receipts - -	130	86	44	—
9. Land sales - - -	51	553	—	502
Total - -	49,267	50,441	674	1,848
	—	49,267	—	674
Decrease in 1890 - -	—	1,174	—	1,174

The decrease is apparent only, and is due to the introduction of a proper system of treasury accounts by which sundry items formerly treated as revenue were relegated to their correct heads.

Expenditure.

3. The expenditure for 1890 was 53,356*l.*, being 6,303*l.* more than the average of the previous four years, and 2,270*l.* more than the expenditure of 1889, as shown in the subjoined table:—

Head of Expenditure.	1890.	1889.	Increase.	Decrease.
	£	£	£	£
1. Charge on account of public debt -	2,032	2,000	32	—
2. Pensions - - - -	638	690	—	52
3. The Governor and Legislature -	2,446	2,129	317	—
4. Colonial Secretary - - -	1,961	1,697	264	—
5. Treasury, Customs, &c. - -	3,438	3,486	—	48
6. Audit - - - -	581	433	148	—
7. Port and Marine - - -	257	225	32	—

Head of Expenditure.	1890.	1889.	Increase.	Decrease.
	£	£	£	£
8. Legal - - - -	4,427	4,549	—	122
9. Police - - - -	4,181	4,211	—	30
10. Prisons - - - -	1,115	1,201	—	86
11. Medical - - - -	6,321	6,999	—	678
12. Education - - - -	4,943	4,281	662	—
13. Ecclesiastical - - -	520	524	—	4
14. Charitable - - - -	415	380	35	—
15. Miscellaneous - - -	2,485	2,646	—	161
16. Post Office - - - -	2,258	2,386	—	128
17. Agricultural - - -	411	311	100	—
18. Public Works Department -	1,833	1,671	162	—
19. Public Works, Recurrent - -	9,430	9,540	—	110
20. Public Works, Extraordinary -	3,664	1,727	1,937	—
Totals - -	53,356	51,086	3,689	1,419
	51,086	—	1,419	
Increase in 1890 - -	2,270	—	2,270	—

The increase as compared with 1889 is due to the large outlay on necessary public works and roads in 1890, and to an alteration in 1889 of the education byelaws which made the result grants to primary school teachers payable in a lump sum after the annual examination instead of spreading them over the following year.

Assets and Liabilities.

4. On 31st December 1890 the Colonial assets exceeded the liabilities by 5,941*l.*, as will be seen from the annexed statement of the financial position :—

Assets.	£	s.	d.
Cash in Colonial chest - - -	236	13	6
On deposit with Colonial Bank -	3,017	13	7
On current account with ditto -	1,775	12	9
Invested in South Australian 4 Per Cent. Inscribed Stock (nominal value, 3,805*l.*) -	4,000	0	0
Advances (representing either amounts due to the Colony or expenditure not brought to account) :—Parochial boards for local works - - - -	7,019	5	11
Parochial boards, loans from general revenue - - - -	1,143	15	5
St. Lucia account - - - -	893	3	2
St. Vincent ditto - - - -	561	18	5
Trinidad and Tobago account -	57	6	8
Distillery apparatus - - -	1,141	19	11
Materials, &c., Works Department	497	5	2
Public Works Loan Works - -	1,932	7	11
Other advances - - - -	319	16	7
	£22,596	19	0

Liabilities.	£	s.	d.
Deposits, as follows :—			
Savings bank - - - -	6,883	14	7
Immigration fund - - -	1,963	11	6
Sinking Fund, Public Works Loan - - - - -	2,155	9	2
Fire insurance fund - -	1,591	13	10
Post Office account - -	795	4	4
St. Paul's water supply - -	191	1	7
Deposits on sight entries -	119	4	2
Governor's office fund - -	35	1	0
Primary school books - -	32	5	10
Family remittances - -	20	13	4
Petty Debt Courts' deposits -	15	13	4
Supreme Court deposits -	40	4	0
Land Acquisition deposits -	5	0	0
Due to Crown Agents - -	2,807	8	7
	16,656	5	3
Surplus assets - - -	5,940	13	9
	£22,596	19	0

GRENADA.

These figures are, of course, exclusive of the amount due for public works to debenture holders—44,475*l.*—for the redemption of which special provision is made, and of a loan of 1,000*l.* raised in 1879 for St. George's waterworks, the repayment of which in 1899 by the parochial board is guaranteed on the security of the general revenue.

Public Debt.

5. The net public debt of the Colony (exclusive of the above sum of 1,000*l.*) at the end of 1890, was 42,320*l.*, as follows :—

1890.		£ s. d.	1890.		£ s. d.
Dec. 31.	Amount of Sinking Fund on deposit with the Colonial Bank -	2,155 9 2	Dec. 31.	Due to sundry debenture holders at this date - - -	44,475 0 0
	Balance, being net indebtedness on account of loan for public works - - -	42,319 10 10			
	Total - -	44,475 0 0		Total - -	44,475 0 0

Parochial Revenue and Expenditure.

6. The receipts and disbursements of the parochial bodies, who are charged with the management of the towns and second-class byeways, are detailed in the following table :—

Parish.	Revenue, 1890.			Expenditure, 1890.		
	Balance at 30th Sept. 1889.	Receipts in 1889–90.	Total.	Expenditure in 1889–90.	Balance at 30th Sept. 1890.	Total.
	£	£	£	£	£	£
St. George's -	217	4,005	4,222	4,179	43	4,222
„ David's - -	—	313	313	341	—	341
„ Andrew's -	519	1,439	1,958	1,697	261	1,958
„ Patrick's -	—	1,746	1,746	1,971	—	1,971
„ Mark's - -	27	428	455	360	95	455
„ John's - -	52	979	1,031	843	188	1,031
Carriacou - -	243	646	889	554	335	889
Total -	1,058	9,556	10,614	9,945	922	10,867

7. In the above statement are included the following loans from the Government for local work :—

	£
St. George's, for Sendall Tunnel - -	1,502
„ Patrick's, for Sauteurs Jetty - -	1,100
„ John's, for Gouyave do. - -	450
Carriacou, for water supply - - -	300

The total indebtedness of the several boards to the Government for such works at the end of 1890 was 10,594*l.*, as shown below:—

	£	s.	d.	£	s.	d.
St. George's—						
For Sendall Tunnel - -	1,962	3	0			
„ waterworks, from immigration fund - -	1,430	19	3			
„ waterworks, John-McPhail - -	1,000	0	0			
„ market sheds - -	1,018	18	10			
„ street improvement -	600	0	0			
„ general purposes -	150	0	0			
				6,162	1	1
St. Andrew's—						
For Grenville breakwater -	400	0	0			
„ Grenville water supply -	45	3	8			
				445	3	8
St. Patrick's—						
For Sauteurs Jetty - -				1,100	0	0
St. John's—						
For Gouyave waterworks -	2,093	0	5			
„ Gouyave Jetty repairs -	450	0	0			
				2,543	0	5
Carriacou—						
For water supply - - -				343	15	5
				£ 10,594	0	7

There were also due to the Government from the boards at that date, 888*l.*, arrears of contributions for maintenance of byeways, and 468*l.*, arrears of interest on loans, so that their debts may be set down as 11,950*l.*

Public Works.

8. The total expenditure during the year on account of public works and roads was 22,981*l.*, of which 13,095*l.* was from general revenue, and 9,796*l.* from loan funds.

9. The erection of two important bridges at the Castigue and Balthazard Fords was commenced and nearly completed, and the work on that over the St. Mark's River at Victoria, which had been interrupted by the flood of 1889, was resumed, while the reconstruction of the main roads between St. George's and Grenville, Grenville and Sauteurs, and Gouyave and Grenville, was continued. On the ordinary maintenance and repair of highways and byeways 7,061*l.* was expended, and 1,096*l.* was granted from general revenue for road extension and other extraordinary work on the roads of the island.

10. General repairs and improvements of public buildings were executed at a cost of 1,586*l.*, and the erection of the new ware-

GRENADA.

house and library buildings and repairs of the Court House in St. George's were proceeded with. A lighthouse at Fort George was commenced, additions were made to the quarters of the revenue officer at Carriacou, and of the director of works, and a public works store-room was built at Grenville.

11. The additional waterworks for St. George's and the St. Paul's and Richmond Hill District were completed, securing for the chief town and its neighbourhood a supply of water which both for quantity and quality will compare favourably with any similar supply in the West Indies.

Legislation.

12. Eighteen Ordinances as follows passed into law during the year:—

No. 1. The Appropriation Ordinance, 1890.
No. 2. The Ad Valorem Duties Ordinance, 1889.
No. 3. The Export Duties Suspending Ordinance, 1890.
No. 4. The Audit Ordinance, 1890.
No. 5. The Collection of Ad Valorem Duties Indemnification Ordinance, 1890.
No. 6. The Non-collection of Export Duties Indemnification Ordinance, 1890.
No. 7. The Commissions of Inquiry Ordinance, 1890.
No. 8. The Magistrates' Clerks Ordinance, 1889, Amendment Ordinance, 1890.
No. 9. The Supplementary Appropriation Ordinance, 1890.
No. 10. The Liquor Licence Ordinance, 1887, Amendment Ordinance, 1890.
No. 11. The Bank Holidays Act, 1875, Amendment Ordinance, 1890.
No. 12. The Roads Ordinance, 1889, Amendment Ordinance, 1890.
No. 13. The St. George's Water Supply Amending Ordinance, 1890.
No. 14. The Parochial Boards Ordinance, 1889, Amendment Ordinance, 1890.
No. 15. The Appropriation Ordinance, 1891.
No. 16. The Excise Ordinance, 1890.
No. 17. The Export Duties Suspending Ordinance, 1891.
No. 18. The Ad Valorem Duties Ordinance, 1891.

13. The most important of these are No. 4, which abolishes the office of auditor and the system of audit as previously constituted, so as to enable the audit of the Colonial accounts to be conducted under the control of the Comptroller and Auditor General in England; No. 7, which empowers the Governor to issue commissions of inquiry with specified status and powers; No. 11, creating additional bank holidays; and No. 16, which provides for a complete alteration of the excise system and legalises distillation of rum into locked receptacles, the keys of which are in the custody of the revenue officers.

andronic

14. The system of distillation under police supervision, begun in 1888, although an improvement on previous arrangements, afforded opportunities for smuggling which, it may be anticipated, will not be offered by this new system, and at date of this report the proceeds of the duty on rum since the change fully justify the opinions which led to the alteration.

Councils.

15. Mr. L. R. Fyfe, the new Colonial Secretary, took his seat ex officio at both Councils, and Messrs. W. S. Comissiong, C. H. Collymore, C. F. Anton, and W. Low filled temporary seats while acting for the Attorney-General and the Treasurer respectively.

16. In the Legislative Council Dr. McLeod, medical officer of the first district, was appointed to a vacant seat on the official side, and Mr. C. Messervy, Director of Public Works, was given an acting appointment during the time that the Colonial Secretary was administering the Government. Temporary vacancies that occurred during the year in the unofficial section were filled by Messrs. D. Webster, J. R. Bertrand, and W. Copland.

Establishments.

17. During the absences of the Governor on duty in the other islands of the Government the administration was carried on by Messrs. F. M. Chadwick, L. R. Fyfe, and E. Drayton, the officers discharging the duties of Colonial Secretary. Mr. L. R. Fyfe, of the Colonial Secretary's Department in Jamaica, was appointed Colonial Secretary, and took up his duties on 7th February, and Mr. F. M. Chadwick, who had been acting in that office, retired on pension on 31st March, being succeeded in his offices of Treasurer and Comptroller of Customs by Mr. E. Drayton, the registrar, whose place was in turn taken by Mr. C. F. Anton, the auditor of St. Lucia. Mr. Fyfe, being compelled to go on leave at the end of October on account of serious illness, Mr. Drayton, took his place as Colonial Secretary, and the Treasury Department was placed in charge of Mr. C. F. Anton, temporarily, and then of Mr. W. Low, the police magistrate of the first district, St. Lucia.

18. Mr. J. F. Lavington Payne was appointed magistrate of the southern district in October, vice Mr. H. Lighton Robinson, resigned, and Mr. G. W. Smith took the place of curator of the Botanical Garden in November, vice Mr. C. M. Murray, who resigned after six months' service.

19. Important changes were made in the Treasury Department, the staff of subordinate revenue officers being increased and the duties revised, with the object of dissevering the outdoor and indoor branches of the work in the out districts, and providing an efficient check to smuggling. It may here be added that the most satisfactory results have so far attended the change, valuable seizures

GRENADA.

of smuggled goods having been made in the Grenadines, and increased revenue is being received from Customs and Excise.

Pensions.

20. The list was increased by 268*l.* during the year by the following pensions:—

	£
F. M. Chadwick, late treasurer - -	193
E. A. Guthrie, late organist - -	42
Jos. Roberts, late librarian, St. George's -	33

At the end of the year the total pensions payable by the Colony amounted to 739*l.* per annum.

Vital Statistics.

21. The estimated population at 31st December was 51,427, a result which the census of 5th April 1891 has demonstrated to be 1,350 short of the actual figures. This deficiency is (as shown in the Blue Book report for 1888) due to immigration from neighbouring Colonies of which no record is kept.

22. The birth and death rates have this year been calculated on the mean population at 30th June, instead of, as in previous years, on the population at 1st January, and the results per thousand are most satisfactory, being as follows:—Birth rate, 45·66; death rate, 25·31.

Education.

23. An abstract of the returns relating to primary schools for 1890, comparing the results with those of 1889, is appended.

Description of School.	No. of Schools.	Number of Scholars.				Income.			Expenditure.
		On Roll.		Total on Roll.	Average Attendance.	School Fees.	Government Contributions.	Voluntary Contributions.	
		Boys.	Girls.						
						£	£		£
Government -	9	863	613	1,476	748	186	1,057	—	1,243
Assisted:—									
Anglican - -	7	772	530	1,302	705	191	891	—	1,082
Roman Catholic	9	1,007	929	1,936	987	187	917	—	1,104
Wesleyan -	5	490	447	937	527	123	672	—	795
Presbyterian -	1	95	63	158	96	4	8	—	12
Totals for 1890 -	31	3,227	2,582	5,809	3,063	691	3,545	—	4,236
" " 1889 -	29	2,685	2,098	4,783	2,518	635	3,180	—	3,815
Increase in 1890 -	2	542	484	1,026	545	56	365	—	421

24. A Government school was established at Happy Hill, in St. George's parish, and a school on Samaritan Estate in St.

Mark's was placed on the list of assisted schools. The necessity for schools in these districts is evidenced by the number on the rolls, 117 and 158 respectively; and the school at Samaritan, which was established by the Presbyterian body in connexion with their mission to the Indian immigrants, is largely attended by the coolies' children, the daily average being 96.

25. 664*l.* was expended by the Government in the erection and improvement of primary school buildings during the year, in addition to the sums detailed in the above abstract.

26. The grammar school in St. George's made satisfactory progress during the year, the examination held in January 1891 resulting in 29 boys obtaining more than 50 per cent. of marks. The number of boys on the roll was 45.

Imports and Exports.

27. The subjoined table illustrates the amount and direction of the trade of the Colony during the last five years :—

Year.	Imports.				Exports.			
	United Kingdom.	British Colonies.	Foreign Countries.	Totals.	United Kingdom.	British Colonies.	Foreign Countries.	Totals.
	£	£	£	£	£	£	£	£
1886 -	53,553	49,044	17,741	120,338	159,805	10,940	9,946	180,691
1887 -	73,306	47,787	22,093	143,186	185,216	10,612	22,121	217,949
1888 -	[illegible],597	52,522	27,318	162,437	202,684	9,182	17,397	229,263
1889 -	87,762	45,733	40,586	174,081	172,912	7,515	15,168	195,595
1890 -	93,258	37,284	40,332	170,874	241,221	8,882	16,199	266,302
Totals -	390,476	232,370	148,070	770,916	961,[illegible]38	47,131	80,831	1,089,800
Average -	78,095	46,474	29,614	154,183	192,368	9,426	16,166	217,960

28. In the year under review the imports were 16,691*l.*, and the exports 48,342*l.* above the average of the period, the exports being in fact the largest on record. The steady increase of the trade with the United Kingdom and foreign countries, and the corresponding decrease of that with British Colonies, are noticeable features, and the following analysis of the foreign trade in 1890 may be interesting:—

Country.	Imports.	Exports.
	£	£
United States of America - -	39,086	1,319
France - - - -	136	13,846
Martinique - - - -	343	700
Venezuela - - - -	177	334
Other countries - - -	590	—
Total - - -	40,332	16,199

GRENADA.

29. A comparative statement of the value of the principal exports in the last five years is annexed:—

Year.	Cocoa.	Cotton.	Cotton Seed.	Fire-wood.	Fruit.	Hides.	Live Stock.
	£	£	£	£	£	£	£
1886 - -	155,938	998	127	1,456	71	511	4,693
1887 - -	185,412	8,048	1,368	1,170	110	457	2,742
1888 - -	199,902	7,632	1,413	1,098	167	547	3,230
1889 - -	166,178	6,714	1,182	842	151	641	3,312
1890 - -	228,889	7,973	1,503	1,231	426	302	3,116
Totals -	936,319	31,365	5,593	5,797	925	2,438	17,093
Average -	187,264	6,273	1,119	1,159	185	488	3,419

(*Continued.*)

Year.	Manure.	Peas.	Poultry.	Spices.	Sugar.	Turtle Shell.	Log-wood.
	£	£	£	£	£	£	£
1886 - -	311	1,705	341	8,999	771	784	786
1887 - -	301	3,063	484	9,709	1,920	280	301
1888 - -	766	1,487	580	9,429	697	200	147
1889 - -	938	431	451	10,220	2,255	280	273
1890 - -	614	850	597	15,955	642	300	1,460
Totals -	2,930	7,536	2,453	54,312	6,285	1,844	2,967
Average -	586	1,507	491	10,862	1,257	369	593

The increased export of cocoa, cotton and cotton seed, fruit and spices is worthy of notice, as there is no doubt that it is not transient, and that the current year, 1891, will yield even better results.

Shipping.

30. The number of vessels entered and cleared during the year was as follows:

—	Entered.		Cleared.	
	Number.	Tons.	Number.	Tons.
Steamers - -	159	222,657	162	229,450
Sailing Vessels - -	382	10,745	373	11,176
Totals - -	541	233,402	535	240,626

31. The nationalities of the vessels entered were as below :—

—	Steamers.	Sailing Vessels.
British - - - - -	154	363
United States of America - - -	3	8
German - - - - -	1	—
Venezuelan - - - - -	1	7
Dutch - - - - -	—	4
	159	382

Prisons.

32. A comparative statement of the chief statistics relating to prisons for the last five years is subjoined :—

Year.	Number of Persons committed.				No. of those committed who have been previously convicted.	Daily Average in Prison.	Admissions to Hospital.	Daily average on Sick List.
	For Debt.	For safe Custody.	For penal Imprisonment.	Totals.				
1886 -	5	52	149	206	49	59·35	18	3·95
1887 -	3	54	205	262	63	62·73	21	1·62
1888 -	3	47	153	203	56	55·75	15	2·98
1889 -	3	53	244	300	89	64·22	18	3·51
1890 -	2	44	196	242	74	59·86	25	2·56

GRENADA.

Continued.)

Year.	Deaths, excluding Executions.	Cost of Prisons.	Value of Work done by Prisoners.	Percentage of Committals of Persons previously convicted.	Cost of a Prisoner. Annual.	Cost of a Prisoner. Daily.	Cost of a Prisoner. For Diet, per Day.
		£	£		£ s. d.	£ s. d.	d.
1886 -	2	1,299	1,110	32·88	22 0 3	0 1 2¼	3¾
1887 -	—	1,224	1,318	30·73	19 10 1	0 1 1	3
1888 -	1	1,328	1,256	36·60	23 14 3	0 1 3½	3½
1889 -	2	1,231	1,303	36·48	19 4 8	0 1 0¾	2¼
1890 -	1	1,160	1,304	38·27	19 6 7	0 1 1	2¼

33. On 1st July the Inspector of Prisons resigned that office consequent upon his appointment as Treasurer and Comptroller of Customs, and Mr. J. M. Lash, the keeper of the Richmond Hill prison, was placed in charge of the department, with the title of Superintendent of Prisons, the duties of which office include those formerly discharged by him. On 10th October a new code of rules, similar to those in force in English prisons, and embodying the various improvements in prison management and discipline that had been introduced here since 1885, was brought into operation.

Criminal Statistics.

34. The difference in 1890 from the average statistics of crime in the last four years is noted in the subjoined abstract:—

———	1887.	1888.	1889.	1890.	Average.	Difference in 1890 from Average. Increase.	Difference in 1890 from Average. Decrease.
Offences reported to police - - -	*1,727	594	649	666	*909	—	*243
Apprehended by the police or summoned before the magistrates - - -	*1,727	1,279	1,279	1,356	*1,369	—	*257
Summary convictions:—							
Offences against the person - - -	190	241	379	311	280	31	—
Prædial larceny - - - -	22	18	31	26	24	2	—
Other offences against property - -	149	150	209	182	173	9	—
Other offences - - - - -	454	468	342	317	395	—	78
Total summary convictions - -	815	877	961	836	872	—	36

* In the years previous to 1888 the number of offences reported to the police and the number of persons apprehended by the police or summoned before the magistrates were stated together, in subsequent returns they are given separately.

	1887.	1888.	1889.	1890.	Average.	Difference in 1890 from Average.	
						Increase.	Decrease.
Convictions in the superior courts:—							
Offences against the person	11	7	11	3	8	—	5
Prædial larceny	—	—	4	1	1	—	—
Other offences against property	14	13	12	13	13	—	—
Other offences	2	1	1	9	3	6	—
Total convictions in the superior courts	27	21	28	26	25	1	—
Persons acquitted:—							
In inferior courts	333	356	337	437	366	71	—
In superior courts	12	16	38	9	19	—	10
Total acquittals	345	372	375	446	385	61	—

35. This record, as the Attorney-General remarks in his report, "so far as figures go, compares favourably enough with previous "years," but he also points out that with respect to prædial larceny, under the head of cocoa and spice robbery, it is to some extent misleading, as by far the majority of such robberies are never detected and punished. Special legislation of a very stringent nature has since been resorted to with the view of coping with this evil.

Hospitals and Asylums.

36. The following table contains the principal statistics of the hospitals and asylums for the year:—

Institution.	No. of Admissions.	Daily Average.	Patients discharged.			Number of Deaths.
			Cured.	Relieved.	Not improved.	
Colony Hospital	426	55·20	282	90	8	34
Yaws Hospital	102	36·30	134	—	—	1
St. Andrew's Hospital	76	7·	44	24	2	5
St. John's Hospital	111	8·17	75	21	4	11
Carriacou Hospital	115	5·70	108	7	3	—
Total hospitals	830	112·37	643	142	17	51
Lunatic Asylum	22	75·	13	5	—	4
Poor Asylum	27	48·	—	—	—	19
Totals	879	235·37	656	147	17	74

GRENADA.

37. At the Colony Hospital the admissions were 66 more than in 1889, and the death rate 7·1 against 7·28. At the Yaws Hospital there was a decrease of 128 cases as compared with 1889, and the death rate was ·63 per cent.

38. The sanitary condition of the lunatic asylum was most satisfactory, the death-rate (4·12 per cent.) being the lowest for many years. A copious water supply was laid on, and a scheme for the complete remodelling of the buildings, which will shortly be carried into effect, was elaborated.

39. The mortality at the Poor Asylum was very great, 19 deaths being recorded. Senile decay and diarrhœa caused one half of these.

Savings Bank.

40. The progress made by the savings bank is shown by the following return of its transactions for the last five years:—

Year.	Number of Depositors.	Amount of Deposits.	Amount of Withdrawals.	Balance at Credit of Depositors at 31st December.
		£	£	£
1886 - -	196	3,210	2,181	3,662
1887 - -	343	3,757	2,447	5,041
1888 - -	277	4,804	4,319	5,632
1889 - -	583	4,709	4,038	6,295
1890 - -	723	5,441	4,882	6,853

41. Early in 1889 four branch banks were opened in the out districts, and at the end of 1890 there were 136 depositors in them with a balance of 814*l.* to their credit. 4,000*l.* of the funds of the bank are invested in South Australian Government Stock.

General Remarks.

42. The statistics of the year point unmistakably to the steady progress and increasing prosperity of Grenada, which in the last six years has improved and advanced in almost every direction. With a population increasing at the rate of 25 per cent. in ten years, a large proportion of which owns land, with the liberal expenditure on roads and public works which has been the leading feature of the administration of recent years, and with the development of products other than cocoa and the opening up of a

new market in the United States of America, it is not unreasonable for those interested in this beautiful Colony to forecast for it a prosperous future, and in time to come a leading position in the West Indies.

(Signed) EDWARD DRAYTON,
Acting Colonial Secretary.

The Hon. Sir Walter Hely-Hutchinson, K.C.M.G.
&c. &c. &c.
Grenada.

---

1. *Taxes, Duties, and Fees.*

The only change to be noted under this head during the year is under "The Liquor Licence Ordinance, 1891," viz.:—

(*a*) The abolition of the town and country annual licences for sale of malt liquors, and

(*b*.) The creation of an "occasional licence" on payment of (10*s*.) ten shillings for sale of intoxicating liquors at any

ST. VINCENT.

public entertainment or place of amusement to which the public have access.

2. *Revenue and Expenditure.*

Revenue.

	£
The revenue estimated for the year was - -	26,615
There was actually collected - - -	27,649
Thus showing an excess of - - - - - -	1,034

The revenue exceeded that of the preceding year, 1890, (27,103*l.*) by 546*l.*

In comparison with 1890, the details of revenue for 1891 show the following noticeable variations:—

Increases:—

	£
Import duties increased - - - - -	536
Liquor licences „ - - - -	165
Excise duty on rum - - - - -	182

The above-mentioned items may be regarded as representing together an improved money-spending capacity of the Colony.

Revenue stamps increased 201*l.*, due entirely to the stamps used in connexion with the will of the late Mr. D. K. Porter.

The increase of 30*l.* under "Rents of Government property" is nominal, arising by the separation of this item from the head "Miscellaneous."

Under "Interest" the item "savings bank" represents the surplus interest on investments in excess of interest credited to depositors for the years 1889–1890.

The item "Kingstown Waterworks" represents interest charged to that account for advances from the general revenue in lieu of the issue of debentures.

Decreases:—

	£
Export duties decreased - - - -	169
Tonnage „ „ - - - - - -	143
Together - - - -	312

chiefly the result of the smaller sugar crop, which will be found on reference to the export figures to have been 1,108 hogsheads less than in 1890—about one-fifth.

The decrease in harbour dues, 49*l.*, has been caused by the discontinuance of the visits of American steamers bringing goods direct from America; these steamers paid 2*l.* on each entry.

The falling off in the Post Office revenue is due to the reduction in the rates to all British Possessions from (4*d.*) fourpence to (2½*d.*) twopence halfpenny, and a smaller demand by stamp-dealing people during the year—the reduction is an advantage, which not only will all well-wishers of postal intercourse rejoice at, but which it may in all reason be expected will be recouped by increased correspondence.

The following table exhibits a comparison between the revenues of 1890 and 1891 under the several heads of revenue:—

Details.	Revenue, 1890.	Revenue, 1891.	Increase.	Decrease.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Customs:				
Import duties	13,936 17 5	14,472 11 5	535 14 0	—

Expenditure.

	£
The expenditure of 1891 was fixed on the estimates at - - - - - - - - - -	26,478
The total amount expended was - - -	28,537
Of the excess - - -	2,059,
Public works recurrent represent, for extra heavy repairs about - - - - -	240
Public works extraordinary - - - - -	835
Education (extra grants to schools) about - -	225
Jamaica Exhibition - - - - -	278
Post Office - - - - -	283
Miscellaneous - - - - -	190
Together - -	2,051

In comparison with 1890 the details of expenditure of 1891 represent the usual fluctuations which call for no explanation beyond the general remark that many of the items of 1891 represent expenditure authorised in 1890 but not incurred in full or at all until 1891.

The following is a statement of the expenditure of the year, under the several heads enumerated as compared with that of 1890:—

Heads of Expenditure.	1890.	1891.	Increase.	Decrease.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Charges on account of public debt.	1,082 10 0	1,060 0 0	—	22 10 0

Total - - -	26,052 11 9	28,536 16 2	3,500 15 1	1,016 10 8

3. *Public Debt.*

	£
The year 1891 opened with a public debt of - -	12,270
which sum was augmented during the year by the issue of debentures for the purpose of repaying the general revenue the amounts advanced during the year 1890 on account of the following services:—	
Kingstown new waterworks - - -	2,600
Crown lands account - - -	1,000
making the total public debt - - - -	15,870
From this, however, has to be deducted a sum of -	1,510
being the amount represented by debentures redeemed during the year.	
The amount of public debt therefore at end of the year was - - - - - - -	14,360

made up as under:—

1. Government House loan - - -	1,840
2. Immigration loan - - -	3,750
3. Public buildings loan - - - -	800
4. Crown lands loan - - -	1,920
5. Public debt loan - - - -	2,550
6. Kingstown waterworks loan - -	3,500
	14,360

4. *Public Works.*

The total amount expended on public works, recurrent and extraordinary, during the year was 4,312*l.* 7*s.* 9*d.*; of this there was expended on:—

	£	s.	d.
1. New line of highway Overland Village -	73	0	0
2. Erection of bridge over Cumberland River -	261	0	0
3. Renewing piling to Kingstown jetty -	978	0	0
4. Continuation of road through Botanic Garden and repairs to main drain at Government House - - - - -	95	0	0
5. Construction of Curator's lodge - -	327	0	0
6. Establishing cemetery at Calliqua - -	62	0	0
7. Repairs to Colonial Hospital - -	113	0	0
8. Widening and deepening the "Bottle and Glass" Pass at Banonallie - -	76	0	0
9. Repairs to Banonallie police station -	67	0	0
10. Small repairs, &c. to various public buildings, &c. - - - - -	901	16	5

with the exception of the works numbered 2, 3, and 9, the above were completed during the year.

1,358*l.* 11*s.* 4*d.* was spent on repairs to highways during 1891.

5. *Legislation.*

The following Ordinances were passed by the Legislative Council during the year 1891 :—

Ordinances.

No. 1. An Ordinance to amend "The Kingstown Regulation Ordinance, 1882."

No. 2. An Ordinance to amend "The Trade and Revenue Ordinance, 1882."

No. 3. An Ordinance to provide for taking a census of Saint Vincent in the year one thousand eight hundred and ninety-one.

No. 4. An Ordinance to legalise the expenditure of certain sums of money paid from the general revenue for the service of the year 1889 in addition to the sums already sanctioned under "The Appropriation Ordinance, 1889," and "The Supplementary Appropriation Ordinance, 1889."

No. 5. An Ordinance to amend "The Births, Marriages, and Deaths Registration Ordinance, 1887."

No. 6. An Ordinance to provide for the appointment and Regulation of surveyors and for the survey of vacant lands and for the survey of the boundaries of Crown and other lands and to repeal certain laws relating thereto.

No. 7. An Ordinance to provide for the supply of water to Georgetown and for the repayment of a loan to be raised for that purpose.

No. 8. An Ordinance to amend "The Liquor Licence Ordinance, 1886."

No. 9. An Ordinance to provide for the service of the Colony of Saint Vincent for the year one thousand eight hundred and ninety-two.

No. 10. An Ordinance to legalise the expenditure of certain sums of money paid from the general revenue for the service of the year 1890 in addition to the sums already sanctioned under "the Appropriation Ordinance, 1890."

No. 11. An Ordinance to amend "The Charcoal Ordinance, 1890."

6. *Council.*

Mr. George Smith, Q.C., unofficial member of the Executive and Legislative Councils, obtained three months' leave of absence during the year. No temporary appointment was made in his place

On the 14th May Mr. G. P. St. Aubyn, police magistrate of the Kingstown district, was appointed a member of the Legislative Council in the room of the late Mr. G. Van Heyningen, whose seat had not up to the above date been filled.

ST. VINCENT.

Mr. C. J. Simmons, unofficial member of the Legislative Council, was absent on leave from the 14th of August to the 9th of November.

7. *Civil Establishment.*

Few changes of importance occurred during the year.

Dr. M. G. Pereira was appointed medical officer of the No. 4 District on the 14th April; and Mr. G. P. St. Aubyn, police magistrate of the Kingstown District on the 13th of May; both of these officers were selected for their posts by the Secretary of State for the Colonies.

During the month of December Mr. C. J. McLeod, registrar of the Supreme Court, resigned his appointment, and was succeeded by Mr. George Anton, the Treasury Accountant.

In the Treasury Department Mr. G. F. Grant was promoted to the post of Accountant and Mr. G. D. Mackie to that of Clerk in the Treasury.

Mr. E. C. Lewis was confirmed as Colonial Postmaster.

8. *Pensions.*

During the year two pensions, amounting to 33*l.* 8*s.* 4*d.*, were granted, viz:—

	£	*s.*	*d.*
1. Miss Cumming, Registrar of Births, Marriages, and Deaths, Windward District - - -	18	8	4
2. Mr. J. W. Creese, late Process Server - -	15	0	0
	33	8	4

The pension list has been, on the other hand, relieved by the deaths of the following pensioners:—

	£	*s.*	*d.*
1. The Venerable Archdeacon Laborde - -	384	8	11
2. Mr. J. Donawa, late schoolmaster - - -	20	0	0
	404	8	11

The pension list has thus been reduced some 371*l.* 0*s.* 7*d.*

9. *Population—Census.*

According to the returns of the census taken on the 3rd of April 1881, and that taken on the 5th of April 1891, the popula-

tion of the Colony at the two dates respectively were as shown in the following statement :—

Complexion.	Population, 1881.	Population, 1891.
White - - - -	2,693	2,445
Coloured - - - - -	7,176	,554
Black - - - -	30,679	31,055
Total - - - -	40,548	41,054

10. *Births and Deaths.*

The births and deaths registered in 1891 were as follows :—

Complexion.	Births, 1891.	Deaths, 1891.
White - - - -	78	51
Coloured - - - - -	326	161
Black - - - -	1,537	846
Total - - - -	1,941	1,058

11. *Education.*

There were 43 schools open during 1891 in receipt of Government aid ; two schools which had been closed for a considerable period were reopened and a new one was added to the list.

The average attendance of scholars during the year was larger than that of 1890, the amount granted in capitation fees having been in excess of that paid in 1890 by about 96*l.*

It is satisfactory, too, to note that the results of the last examinations held by the Inspector of Schools showed a very marked improvement on those of 1890, the number of passes and marks obtained being in excess of 1890.

Just before the close of the year an addition to the pay of the teachers was voted by the Legislature ; this step has tended to improve matters considerably, as not only have the teachers been placed in a better position, but it has acted as a stimulus to them in the performance of their duties.

The rules and regulations at present in force for the government of state-aided schools are being revised with the view of improving the educational system of the Colony.

St. Vincent.

The following comparative statement of schools, &c. in 1890 and 1891 may be found interesting:—

—	1890.	1891.
	£ s. d.	£ s. d.
Government grant based on average -	594 11 10	691 3 0
Payments by results - - - -	723 6 0	888 1 10
Payments to pupil-teachers - - -	76 0 0	66 10 0
Voluntary contributions - - - -	164 0 0	164 3 4
Fees - - - - -	195 19 11	191 18 4
Total - - -	1,753 17 9	2,001 16 6
Number of schools - - -	41	43
Average attendance - - - - -	3,229	2,925
Number on roll - - - -	Not shown	5,348

12. *Friendly Societies.*

During the year three new societies were registered in accordance with the provisions of the Friendly Societies Act, 1884, making a total of 16 registered.

13. *Imports and Exports.*

	£
The import and export trade of the Colony during the year amounted in value to - - -	196,512
Against, in 1890, - - - -	202,553
Showing a decrease of - - - -	6,041

which is doubly accounted for by the item "sugar," the export of which decreased in quantity about one fifth and in total value about the same, *i.e.*, 11,255*l.* On the other hand, however, the principal products of the Colony represent a very satisfactory condition in quantities and values as the following comparisons with 1890 will show:—

Article of Export.		Quantities. 1890.	Quantities. 1891.	Increase.	Decrease.
Arrowroot	barrels	20,847	17,591	—	3,256
Cassava starch	,,	196	633	437	—
Cocoa	lbs.	102,771	114,683	11,912	—
Cotton	,,	25,218	43,286	18,068	—
Firewood	cords	1,163	1,462	299	—
Rum	puns.	550	672	122	—
Spice	lbs.	13,005	14,846	1,841	—
Fruits and vegetables	bunches	126	234	108	—
	barrels	2,120	4,332	2,212	—
	dozens	2,070	2,392	322	—

Article of Export.	Values. 1890.	Values. 1891.	Increase.	Decrease.
	£	£	£	£
Arrowroot	31,270	31,095	—	175
Cassava starch	245	665	420	—
Cocoa	1,835	2,389	554	—
Cotton	421	902	481	—
Firewood	589	951	362	—
Rum	4,406	6,735	2,329	—
Spice	434	742	308	—
Fruits and vegetables	1,195	3,089	1,894	—

The increase in value in 1891 of the second staple product of the Colony, arrowroot, is most satisfactory, completely compensating for the reduced quantity (3,256 barrels) which was reaped.

It may here be added that the prices of arrowroot up to the date of this report in 1892 keep up bravely, thus giving hope of a comforting harvest for the year 1892.

14. *Shipping.*

The total number of sailing vessels entered during the year under review was 322. The tonnage of these vessels in the aggregate amounted to 14,410, their crews to 1,696.

The total number of sailing vessels cleared was 330 with a tonnage of 15,377 and crews 1,924.

The total number of steam vessels entered was 101 with tonnage amounting to 115,992 and crews 4,492.

Clearances of steam vessels in 1891 totalled 101 with a tonnage of 115,992 and crews 4,492.

St. Vincent.

Of the 322 sailing vessels entered the nationalities were as follows:—

British	287
American	11
Dutch	11
Venezuelan	11
Italian	1
French	1
Total	322

Of the 330 sailing vessels cleared the following were the nationalities:—

British	295
American	11
Dutch	11
Venezuelan	11
Italian	1
French	1
Total	330

The 101 steam vessels entered and cleared were all British.

From the above figures it will be seen that in the number and tonnage of sailing vessels entered in 1891, as compared with 1890, there is a decrease of 23 and 801 tons, whilst of those cleared, though a decrease in number of 18, there is an increase in tons of 84.

The following table will show the differences in the number and tonnage of steam vessels entered and cleared as compared with the previous year:—

1890.		1891.		Decrease.	
Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
119	134,859	101	115,992	18	18,867

15. *Gaols and Prisoners.*

There was nothing worthy of special mention which occurred under this head. The following table presents a comparative statement of the working of the prison during the last three years:—

Year.	Number of Commitments.	Committed for Debt.	Committed for Custody for Trial or for want of Sureties.	Committed for penal Imprisonment.	No. of Prisoners previously convicted			Commitment for				Daily Average in Prison.	Admission to Hospital.	Daily Average on Sick List.	No. of Deaths.
					Once.	Twice.	Thrice or more.	Five Years or more.	More than One Year and less than Five Years.	More than Three Months and less than One Year.	Three Months or less.				
1889 - -	192	2	48	142	19	3	20	1	4	7	130	22·9	1	·12	1
1890 - -	170	3	48	119	4	8	10	3	8	2	106	20·0	2	3	1
1891 - - -	176	1	40	135	16	7	9	1	3	4	127	26·25	1	·38	—
Total - -	538	6	136	396	39	18	39	5	15	13	263	68·34	4	·53	2
Average -	179	2	45	132	13	6	13	1	5	4	121	22·78	1	·17	—

St. Vincent.

16. *Criminal Statistics.*

Police Reports.

There was a decrease of 72 in the number of offences reported to the police as compared with 1890, the number for the latter year being 1,552, whilst that of 1891 was 1,480.

Apprehensions and Summonses.

Of the cases brought before the Magistrates' Courts for offences, 669 were convicted, 179 were discharged, 589 acquitted, and 15 were sent on to Higher Courts. With the exception of the number of convictions, there was a decrease in all of the above as compared with 1890.

Summary Convictions.

In the number of summary convictions in the Magistrates' Courts as compared with the preceding year there was an increase of 12; the number of convictions in the Supreme Court, however, was only six as against 14 in 1890.

The following comparative table showing the number of offences, convictions, and acquittals for the last four years shows a marked decrease under several heads in 1891:—

——	1888.	1889.	1890.	1891.
Number of offences reported to the police.	1,693	2,041	1,552	1,480
Number of summary convictions:—				
1. For offences against the person.	110	129	106	151
2. For prædial larceny - -	35	46	46	38
3. For offences against property other than prædial larceny.	96	125	92	110
4. For other offences - -	539	840	413	370
Number of convictions in the Superior Courts:—				
1. For offences against the person.	2	2	5	2
2. For offences aginst property other than prædial larceny.	4	4	9	4
Number of persons acquitted:—				
1. In the Inferior Courts -	244	249	247	179
2. In the Superior Courts -	8	2	2	4

17. *Crown Lands.*

Important changes took place in this direction. Up to the early part of the year the Crown Lands Boundary Commissioners, with their surveyor or surveyors, conducted the definition of the boundary line between the Crown lands (which occupy the whole of the interior of the island) and the adjacent estates; whilst allotments were surveyed and sold under the direction of the Administrator, assisted by the Colonial Engineer as superintendent of Crown lands. Roughly speaking, the Crown lands lying in the northern half of the island have been defined under the Commissioners, and it is from these lands that allotments have been and are being made. The Crown lands situated in the other, or southern, half of the island, with the exception of one or two localities, have yet to be marked off. Formerly allotments were sold as a rule in blocks of not less than one acre at 3*l.* per acre (including the cost of survey) payable in ten annual instalments of 6*s.* each, the option being always given to the applicant of purchasing outright, in which case the price per acre was considerably reduced.

By "The Surveyors Ordinance, 1891," the whole of this has been changed, the Crown Lands Boundary Commission having been abolished and a new Survey and Crown Lands Department created and placed under the charge of Mr. Henry Reeve, Director of Surveys of the Windward Islands.

The cost of survey and the price of Crown lands was rearranged, but the obligatory conditions as to payment of instalments, of purchase money, and planting of trees remain about the same.

A trigonometrical survey of the island has been commenced by the Director of Surveys and is proceeding, pending the further advancement of which the survey of the Crown lands boundary line has been temporarily stopped.

Under the new Regulations Crown lands (except village lots, for which there is special provision) are sold in blocks of not less than five acres.

The survey fee is required to be paid in advance at the time of application, and is 2*l.* 1*s.* 8*d.* for the first acre, 8*s.* 4*d.* for the second acre, and 4*s.* 2*d.* for every additional acre. The survey fee on five acres is therefore 3*l.* 2*s.* 6*d.*

After survey and reports by the surveyor and superintendent of Crown lands the price is fixed, the minimum being 30*s.* cash or 2*l.* in five yearly instalments, per acre.

If the latter mode of payment is chosen the purchaser is required to pay his first instalment six months after date of application.

The first application under the new system was made in May, 1891, and at the close of the year the applications numbered 103 for a total of 660 acres in allotments, exclusive of a special application for a lot exceeding 300 acres.

St. Vincent.

Of these lands applied for only a few were not surveyed within the year; whilst, on the other hand, about 25 lots of one and two acres, applied for under the old system, were surveyed. Grants for these lands will be issued during the current year.

From the above it is apparent that the benefits of the scheme are not unappreciated, and it can fairly be said that, but for the depression in the sugar trade which limits the circulation of money amongst the people there would have been many more applications during the year.

The scheme with careful management promises to be successful.

18. *Hospitals.*

On the 1st January 1891 there were 39 patients in the Colonial Hospital from the previous year, 21 being males and 18 females. During the year 424 were admitted, namely, 254 men and 170 women, an increase of 12 as compared with 1890.

The daily average number in hospital during the year was 52 as against 48 in the preceding year. The patients discharged were 431, 257 being males and 174 females.

The deaths were 32, of which 18 were those of men and 14 of women.

The total number of out patients attended to at the hospital from 1st January to 31st December 1891 was 2,317.

19. *Public Health.*

The Colonial Surgeon reports as follows with regard to the health of the colony during the past year:—

"1891 compares very favourably with the previous year from a health point of view.

"In 1890, from beginning to end, the effects of the epidemic of influenza of 1889-90 were severely felt in all parts of the island, greatly increasing the death-rate, whereas in 1891 the first six months were exceptionally healthy. In June, however, there was a return of influenza in a milder form, which for a time disturbed the general healthiness, but happily it died out in July, not leaving much trouble behind it. After the heavy rains of June there were several cases of typhoid fever in and about Kingstown, specially among young persons, and some deaths occurred, but this disappeared by the end of July. There were also some cases of cerebro-spinal fever and idispathic tetanus, brought into hospital from marshy districts, which nearly all came in moribund. There was, however, but little malaria fever even in the fall of the year when it is usually looked for.

"In the very hot months there were the usual cases of choleraic diarrhœa, but the cases were mild and followed by little or no dysentery, which generally comes in its track.

"The death-rate at Colonial Hospital was only 6·9 per 100 against 9·9 in 1890. That among children of the labouring classes is still higher than it should be; but against stolid stupidity, neglect, and superstition the best efforts of the medical officer can make but slow headway.

"Leprosy does not appear to be on the increase, as the small average of 17 at the Leper Asylum shows; were it so, it would easily be ascertained, as the negro in the present state of the labour market can ill afford to maintain useless members and is only too ready to avail himself of the help of the Pauper or Leper Asylum.

"Yaws, though more or less at the same level, does not so often present itself in its more hideous form. It has, however, made its appearance in the Grenadines which have hitherto escaped this pest."

20. *General Remarks.*

The year under review has been a prosperous one on the whole, and the present advanced price on the second largest staple product of the Colony, namely, "arrowroot," leads one to hope that the satisfactory financial condition of the Colony will be maintained during the current year.

Since writing my last report the Kingstown new water-works were satisfactorily completed in October last, at an expenditure of 7,735*l.* Thus the inhabitants of Kingstown are afforded a continuous supply of excellent water. No gift more acceptable could be presented to the inhabitants of Kingstown, and I am sure it is much appreciated, knowing as they do how much their health and comfort depend on the nature of the water they drink.

It is intended during the current year to cover with a suitable roof the reservoir at Montrose, situated at an elevation of 190 feet above the sea level, and calculated to hold a little over 300,000 gallons of water.

The actual daily supply from this reservoir being about 100,000 gallons there remain some 200,000 gallons of water for any emergency that may arise.

Besides this new water supply there are two other reservoirs, one at Richmond Hill, at an elevation of about 230 feet, containing 72,000 gallons, and the other at Lower Montrose, at an elevation of 131 feet, containing some 46,000 gallons. Both these reservoirs are reserved solely for fire purposes.

The Curator's house at the Botanic Station, also referred to in my last report, was commenced and completed within the year, and the Curator has taken up his residence there.

The extension and repairs to the Kingstown jetty were also undertaken during the year at an estimated cost of 1,171*l.*, out of which sum 978*l.* has been expended. The work is near completion. The total length of the jetty is 234 feet, having a width of 31 feet, with a frontage of 76 × 49. On this portion of the jetty it is

ST. VINCENT. intended to place a crane to facilitate the landing of goods, which will be removed in trucks running on rails to the Government Bonded Warehouse proposed to be erected within the Police Barrack yard.

St. Vincent.

I 73470. Wt. 10230.

GRENADA. 1891.

REPORT on BLUE BOOK of GRENADA for 1891.

Sources of Revenue.

An important change was effected at the close of the year in the taxation of land and houses by levying a uniform tax of 1*s.* an acre on lands in lieu of 1*s.* 6*d.* on cultivated and 6*d.* on uncultivated lands, and by increasing the house tax from 5*s.* on houses assessed at less than 10*l.* per annum to 6*s.* when assessed at 10*l.*, or under, and from 4½ per cent. when of the value of 10*l.* or more, to 6 per cent. when exceeding 10*l.*

At the same time the byeway rates, previously levied by the parochial boards for maintenance of second-class byeways, were abolished; a tax commissioner was appointed, and provision made for better collection of the tax in future. These changes, however, did not take effect until the present year.

2. An alteration was made in the water rates levied in connection with the St. Pauls and Richmond Hill water supply by fixing a rate of 5*s.* on houses within the rateable area of the annual value of £10 and under instead of 6 per cent. thereon.

3. The fee for a licence to deal in cocoa and nutmegs was increased from 1*l.* to 5*l.* per half year, and an additional liquor licence was provided under Class 4 enabling the Government to license premises within a mile of a town boundary at a reduced rate.

4. The change in the land tax and its collection was a much needed reform, for not only did the different rates on cultivated and uncultivated lands cause much evasion of the tax, but there was practically no control or check over this important section of the revenue, and as it was collected at a time of the year when money is most scarce in the community, and as the parochial byeway rate (another tax on lands and tenements) had to be paid at another time of the year, the proper amount of revenue under this head was never collected.

The period now fixed for payment of the tax, March to May, is that when the receipts for the cocoa crop are in full circulation in the colony, and it is intended to devote the entire yield of the tax (estimated at £6,100 in the current year) to the maintenance of the roads.

5. The collection of export duty was suspended during the year, and the usual additional import duty of 2½ per cent. *ad valorem* on articles not specified in or exempted by the tariff was imposed.

Revenue.

6. The revenue of 1891 was 54,018*l.*, the highest on record. This satisfactory result is chiefly due to the improved collection of

customs and excise duties rendered possible by the rearrangement of the Treasury staff, the establishment of a Revenue cruiser, and the change in the system of distillation referred to in last year's report. The receipts from excise duty on rum amounted to 10,133*l.*, being 1,917*l.* more than in the previous year, and in 1892 they are expected to exceed 12,000*l.*; in 1887 they realised only 5,223*l.* A detailed comparative statement of the revenues of 1890 and 1891 under the several heads is subjoined.

Head of Revenue.	1891.	1890.	Increase.	Decrease.
	£	£	£	£
1. Customs - - -	25,390	24,760	630	—
2. Licenses, excise, and internal revenue not otherwise specified - - - -	24,548	16,510	8,038	—
3. Fees of office, payments for specific services, and reimbursements in aid - -	2,028	6,371	—	4,343
4. Post Office - - -	1,041	913	128	—
5. Rent of Government property -	390	410	—	20
6. Interest - - -	297	122	175	—
7. Miscellaneous receipts - -	36	130	—	94
8. Land sales - - -	288	51	237	—
Total - -	54,018	49,267	9,208	4,457
	49,267	—	4,457	—
Increase in 1891 - -	4,751	—	4,751	—

Expenditure.

7. The expenditure was also the highest on record, being 56,450*l.*, or 3,093*l.*, more than in 1890, as shown in the following comparative statement :—

Head of Expenditure.	1891.	1890.	Increase.	Decrease.
	£	£	£	£
1. Charge on account of public debt -	1,929	2,032	—	103
2. Pensions - - - -	739	638	101	—
3. The Governor and Legislature -	2,211	2,446	—	235
4. Colonial Secretary - - -	2,063	1,961	102	—
5. Treasury, Customs, &c. - -	6,528	3,438	3,090	—
6. Audit - - - -	444	581	—	137
7. Legal - - - -	4,595	4,427	168	—

Head of Expenditure.	1890.	1889.	Increase.	Decrease.
(*Continued.*)	£	£	£	£
8. Police - - - -	4,335	4,181	154	—
9. Prisons - - - -	1,191	1,115	76	—
10. Medical - - - -	6,708	6,321	387	—
11. Education - - - -	5,264	4,943	321	—
12. Ecclesiastical - - -	517	520	—	3
13. Charitable - - - -	492	415	77	—
14. Miscellaneous - - -	4,064	2,485	1,579	—
15. Post Office - - - -	2,337	2,258	79	—
16. Agricultural - - -	546	410	136	—
17. Public Works Department -	2,249	1,833	416	—
18. Public Works, Recurrent - -	8,881	9,430	—	549
19. Public Works, Extraordinary -	1,357	3,665	—	2,308
20. Port and Marine - - -	—	257	—	257
Totals - -	56,450	53,356	6,686	3,592
	53,356	—	3,592	—
Increase in 1891 - -	3,094	—	3,094	—

8. It will be seen that the chief heads under which an increase appears are Treasury, Miscellaneous, and Public Works Department. The first is due to the establishment and maintenance of a revenue cruiser, to the heavy outlay on the new distillery apparatus, a moiety of which is paid by the Government, and to the purchase of premises in St. George's for use as a warehouse. All of this is productive of revenue.

The miscellaneous expenditure includes a subsidy at the rate of 1,000*l.* per annum to a direct line of steamers between the Colony and New York, with the object of developing a fruit trade and of securing another market for local produce, the expenses of the census, and of the representation of the Colony at the Jamaica Exhibition, sundry grants from escheated properties to persons with moral claims, and a grant in aid of the sufferers from the terrible fire in Martinique. The increase under Public Works Department is caused by the importation of a foreman carpenter from England, a step already productive of the best results, and by the transfer of the salaries of the road foremen to this head from another.

Financial Position.

9. The surplus assets of the Colony at 31st December were 3,509*l.*, as shown in the following statement :—

Assets.	£ s. d.	£ s. d.
Cash in Colonial chest		197 1 8
On deposit in Colonial Bank		920 3 6
Invested in South Australian 4 Per Cent. Inscribed Stock (nominal value, 3,805*l.*)		4,000 0 0

Surplus assets		3,509 1 7
		£34,492 9 0

GRENADA. 1891.

10. The net public debt at the same date was 42,320*l.* exclusive of a loan of 1,000*l.* raised in 1879 for the St. George's Waterworks, the repayment of which in twenty years by the parochial board is guaranteed on the security of the general revenue.

In the course of the year ordinances were passed authorising the creation of Grenada Inscribed Stock, and empowering the Government to convert the existing debentures into stock and to borrow a further sum of 50,000*l.* for public works. The loan has been floated in the current year and a Stock Exchange quotation obtained as a present issue of 80,000*l.* at 102–104.

Local Boards.

11. At the end of the year the parochial boards were relieved of the care and maintenance of the second-class byeways, and their duties were restricted to the towns, except where, as in St. George's and Carriacou, water rates are collected beyond the town boundaries. The receipts and disbursements of these bodies in the year ended 30th September, 1891, and their debt at 31st December, are detailed below :—

Parish.	Revenue 1890–91.	Expenditure 1890–91.	Debt at 31st December 1891, including arrears of interest.
	£	£	£
St. George - -	2,836	2,638	7,031
St. John - -	801	637	2,657
St. Mark - -	392	455	482
St. Patrick - -	763	736	1,158
St. Andrew - -	2,632	2,783	1,433
St. David - -	264	225	—
Carriacou - -	331	671	414
Total - - £	8,019	8,145	3,175

12. During the year the Grenville Board re-constructed and added to the jetty in the harbour at a cost of 950*l.*, borrowed from the Government. The work has been well executed, and is a great benefit to the town and district.

A similar work was begun by the Victoria Board, at an estimated cost of 1,100*l.*, and at this date is almost completed. All of the towns in the island will then be provided with jetties, rendering the shipment of produce and the transport of passengers, formerly difficult and at times dangerous, comparatively easy and simple.

Public Works and Roads.

13. 20,906*l.* was expended on public works and roads during the year, 10,668*l.* being from loan funds, and 10,238*l.* from general revenue; of this latter amount 6,188*l.* was for the ordinary upkeep of roads.

14. The bridging of the rivers at Balthazard, Castigne, and Victoria, was completed, and another bridge at Belmont, on the main road between Sauteurs and Grenville was commenced; the re-construction of the main roads from St. George's to Grenville along the coast and from Grenville to Gonyave across the island was continued, and the Sauteurs-Grenville main road completed.

15. The most important road work of the year was, however, the reconstruction of the second-class byeways, the arteries which connect the highways with the inland cultivated area. 6,216*l.* was expended on them up to 31st December under the supervision of Committees composed of the principal landowners in the various parishes; the work has been thoroughly done, and its importance to the Colony cannot be too highly estimated, as it is obvious that however good the main roads may be, their value is but little if the produce cannot be brought down to them from the interior of the island. The inception of this important work is due to the present Governor, who has also taken the most lively interest in its progress; it is, indeed, the fact that every detail has received his personal attention, and that every byeway in the island has been visited by him, most of them repeatedly, during the progress of the work.

16. The success of the byeway committees has brought about a most important change in the system of road maintenance. By an Ordinance which came into full force on the 31st December, all roads are handed over to the care of boards, one for each parish, composed of the principal landowners or their attorneys, holding office during pleasure and directly responsible to the Government. The roads in each parish are divided up by the boards among the several members, who employ the necessary labourers at rates of wages settled by the board, and personally supervise the work. The pay-sheets are certified by these delegates and sent to the Treasury, where, when checked, they are paid by a Treasury officer in the district to which they relate. The accounts of the roads are kept in the Treasury, and the expenditure is thus completely under control.

The system is working admirably.

17. Next to the road work of the year in importance was the establishment of a complete system of telephone exchanges in the island, begun in July. On account of the distances which divide the various centres, and the difficulty of getting about, communication by telephone is peculiarly acceptable in Grenada, and the success which has so far attended the scheme has been considerable.

GRENADA. 1891.

At the date of writing this report there are three exchanges at work, with 102 connections; two more are in course of erection, and it is safe to estimate that about 150 telephones will eventually be connected. The receipts for rent of instruments are expected to cover cost of maintenance, interest and sinking fund on the loan for cost of construction, and to provide a reserve fund as well.

18. On the repair and general improvement of public buildings 1583*l.* was spent, the lighthouse at Fort George was completed, and the drainage and walks of the Botanic Garden put in thorough order. A commencement was made of the work on the lunatic asylum, which it is proposed to completely remodel; so as to make it capable of fully accommodating the lunatics of the three colonies of the Windward Islands and giving them proper treatment. The alterations and additions to a building in Gonyave, which was purchased with the object of converting it into public buildings for that town, were begun, and are now approaching completion.

Legislation.

19. Twenty-two Ordinances became law during the year; the most important of these have been already referred to, and it is only necessary to notice the following:—

No. 2. The Land Surveyor's Ordinance, 1890.
No. 4. The Birds and Fish Protection Ordinance, 1891.
No. 6. The Purchase of Cocoa and Nutmegs Amendment Ordinance, 1891.
No. 11. The Inflammable Goods Ordinance, 1891.
No. 12. The St. George's Harbour Ordinance, 1891.

No. 2 regulates the licensing and control of land surveyors; No. 4 provides close seasons for oysters and turtle and certain valuable birds, and makes it an offence to catch turtle or their eggs on the land; No. 6 enacts very stringent provisions against theft of cocoa and nutmegs, the staple products of the Colony, and empowers the Courts to flog male offenders; No. 11 prohibits the importation of volatile petroleum, and establishes a system of tests for that end; No. 12 abolishes the office of Harbour Master and places the harbour under the control of the Treasury Department, the harbour duties being discharged by one of the Revenue staff with the title of Port Officer.

Councils.

20. Mr. C. Messervy, Director of Public Works in the Windward Islands, was appointed to an official seat in the Legislative Council in January. Temporary vacancies in the official section

andronicus publi

were filled by Messrs. J. F. L. Payne, Police Magistrate of the Southern District, and C. F. Anton, Registrar of the Supreme Court; and on the unofficial side by Messrs. John R. Bertrand, Captain M. Short, and W. Copland.

Establishments.

21. During the Governor's periodical visits to the other Colonies of his government the administration devolved on Mr. H. R. Pipon Schooles, the Attorney-General, by virtue of a commission issued to him by the Governor; Mr. E. Drayton acted as Colonial Secretary, and Mr. Low as Treasurer for the whole year, during the continued absence of Mr. L. R. Fyfe, the Colonial Secretary, on account of ill-health. Mr. H. Reeve, Director of Surveys in the Windward Islands, acted as Director of Public Works, in the absence of Mr. Messervy on leave.

The offices of road surveyors were abolished in the course of the year, the surveyor of the Northern district being given an abolition allowance, and the surveyor of the Southern district being appointed to be a revenue officer.

Pensions.

22. The pension list of the Colony was increased by the following grants:—

	£	s.	d.
Joseph Worall, late revenue officer -	7	4	9
Walter Gibbs, late Treasury messenger -	9	12	0
R. J. Graves, late road surveyor -	30	0	0
R. Toussaint, late matron, poor asylum	5	6	8
	£52	3	5

Pensioners in receipt of 14*l.* a year died, and the total amount payable by the Colony at 31st December was 778*l.*

Vital Statistics.

23. The population, according to the census of 5th April 1891, was 53,209, being an increase of 10,806, or 25·48 per cent. on the number returned at the census of 1881.

The mean annual birth-rate in the decennial period was 43·73 per thousand, and the death-rate 24, which will bear very favourable comparison with any other West Indian Colony.

24. The estimated population at 31st December 1891, was 54,062, and the birth and death rates for the year, 45·94, and 21·91 per thousand respectively.

hing company, inc.

GRENADA. 1891.

Education.

25. A comparative abstract of the primary education returns for the years 1891 and 1890 is appended.

Description of School.	No. of Schools.	Number of Scholars. On Roll. Boys.	Girls.	Total on Roll.	Average Attendance.	Income. School Fees.	Government Contributions.	Voluntary Contributions.	Expenditure.
						£	£		£
Government -	9	832	573	1,405	755	136	1,233	—	1,369
Assisted :—									
Anglican - -	7	743	540	1,283	707	162	893	—	1,055

Increase in 1891 -	1	141	205	346	183	Decrease.	587	—	465

The Roman Catholic School at Grand Ance was placed on the list of assisted schools during the year.

26. The St. George's Grammar School continued on a satisfactory footing.

The annual examination resulted in 31 boys obtaining more than half marks, and the examiner reports that "the work of the school has been done well and conscientiously. The late head master" (Mr. C. H. Johnson) "deserves much credit for what has been accomplished."

There were 43 boys on the roll, and the income of the school, including the Government grant of 400*l.*, was 535*l.*

Imports and Exports.

27. The amount and direction of the trade of the Colony in the last five years is shown below :—

Year.	Imports. United Kingdom.	British Colonies.	Foreign Countries.	Totals.	Exports. United Kingdom.	British Colonies.	Foreign Countries.	Totals.
	£	£	£	£	£	£	£	£
1887 -	73,306	47,787	22,093	143,186	185,216	10,612	22,121	217,949

A comparative statement of the value of the principal exports in the same period is appended :—

Year.	Cocoa.	Cotton.	Cotton Seed.	Fruit.	Fire-wood.	Hides.	Live Stock.
	£	£	£	£	£	£	£
1887 - -	185,412	8,048	1,368	110	1,170	437	2,742
1888 - -	199,902	7,632	1,413	167	1,098	547	3,230
1889 - -	166,178	6,714	1,182	151	842	641	3,312
1890 - -	228,889	7,973	1,503	426	1,231	302	3,116
1891 - -	200,267	8,194	1,783	600	1,096	434	2,696
Totals -	980,648	38,561	7,249	1,454	5,437	2,361	15,096
Average -	196,130	7,712	1,450	291	1,087	472	3,019

(*Continued.*)

Year.	Manure.	Peas.	Poultry.	Spices.	Sugar.	Turtle Shell.	Log-wood.
	£	£	£	£	£	£	£
1887 - -	301	3,063	484	9,709	1,920	280	301
1888 - -	766	1,487	580	9,429	697	200	147
1889 - -	938	431	451	10,220	2,225	280	273
1890 - -	614	850	597	15,955	642	300	1,460
1891 - -	171	998	560	12,598	1,905	714	708
Totals -	2,790	6,829	2,672	57,911	7,389	1,774	2,889
Average -	558	1,366	534	11,582	1,478	355	578

28. It will be seen that the trade with British Colonies continues to decrease and that the bulk of the imports now come direct from the United Kingdom and foreign countries.

GRENADA. 1891.

Of the 47,523*l.*, value of imports from foreign places, 46,517*l.* came from the United States of America; in 1881 the corresponding figures were 11,665*l.*; and of the 9,371*l.* exported to foreign countries, 4,437*l.* went to the United States; in 1881 there was nothing sent there.

Shipping.

29. The number of vessels entered and cleared during the year is shown below:—

—	Entered.		Cleared.	
	Number.	Tons.	Number.	Tons.
Steamers - -	172	249,735	168	246,870
Sailing Vessels - -	340	9,055	332	9,436
Totals - -	512	258,790	500	256,306

Prisons.

30. The subjoined table compares the chief prison statistics for the last five years:—

Year.	Number of Persons committed.				No. of persons committed who have been previously convicted.	Daily Average in Prison.	Admissions into Hospital.	Daily average on Sick List.
	For Debt.	For safe Custody.	For penal Imprisonment.	Totals.				
1887 -	3	54	205	262	63	62·73	21	1·62
1888 -	3	47	153	203	56	55·75	15	2·98
1889 -	3	53	244	300	89	64·22	18	3·51
1890 -	2	44	196	242	74	59·86	25	2·56
1891 -	6	47	189	242	75	73·13	19	3·02

(*Continued.*)

Year.	Deaths, excluding Executions.	Cost of Prisons.	Value of Work done by Prisoners.	Percentage of Committals of Persons previously convicted.	Cost of a Prisoner.		
					Annual.	Daily.	For Diet, per Day.
		£	£		£ s. d.	£ s. d.	d.
1887 -	—	1,224	1,318	30·73	19 10 1	0 1 1	3
1888 -	1	1,328	1,256	36·60	23 14 3	0 1 3½	3¼
1889 -	2	1,231	1,303	36·48	19 4 8	0 1 0¾	2¼
1890 -	1	1,160	1,304	38·27	19 6 7	0 1 1	2¼
1891 -	—	1,281	1,593	39·68	17 11 0	0 0 11¼	[illegible]

The annual cost of a prisoner to the Colony has decreased from 25*l.* 6*s.* 2*d.* in 1884 to 17*l.* 11*s.* 0*d.*, in 1891, and it will be noticed that the prisons are in reality self-supporting, as the value of their work exceeds their annual cost. For these satisfactory results much credit is due to the energetic and painstaking superintendent, Mr. J. M. Lash.

Criminal Statistics.

31. An abstract of the criminal statistics for the last four years, exhibiting the difference in 1891 from the averages of that period, is appended. The Attorney-General remarks in his annual report—"In view of the fact that the last census shows a very considerable increase of the population of Grenada, the present criminal statistical returns speak as favourably for the law-abiding character of the population as any which have hitherto been compiled."

—	1888.	1889.	1890.	1891.	Average.	Difference in 1891 from Average.	
						Increase.	Decrease.
Offences reported to the police - -	594	649	666	1,041	737	304	—
Apprehended by the police or summoned before the magistrates - - -	1,279	1,356	1,112	1,168	1,229	—	61

Hospitals and Asylums.

32. The principal statistics under this head for 1890 and 1891 are given below:—

Institution.	No. of Admissions.	Daily Average.	Patients discharged.			Number Deaths.
			Cured.	Relieved.	Not improved.	
Colony Hospital	617	75·66	471	100	—	44
Yaws Hospital	178	37·66	137	—	—	1
St. Andrew's Hospital	89	7	52	23	2	6
Carriacou Hospital	111	9	90	6	6	3
Total hospitals	995	129·32	750	129	8	54
Lunatic Asylum	30	78·	10	2	—	11
Poor Asylum	21	48·	—	—	—	14
Totals	1,046	255·32	760	131	8	79
Totals for 1890	879	235·37	656	147	17	74

33. The St. John's District Hospital was closed early in the year, as it was found that the patients from that part of the colony could more efficiently and economically be treated in the Colony Hospital in St. George's, with which there is daily communication by steamer.

34. The Administration of the Colony Hospital was much improved under the care of Dr. W. Boyd, the house surgeon.

Savings Bank.

35. The Savings Bank continues to progress, as will be seen from the subjoined return of its transactions for the five years 1887–91:—

Year.	Number of Depositors.	Amount of Deposits.	Amount of Withdrawals.	Balance at Credit of Depositors at 31st December.
		£	£	£
1887 - -	343	3,757	2,447	5,041
1888 - -	277	4,804	4,319	5,632
1889 - -	583	4,709	4,308	6,295
1890 - -	723	5,441	4,882	6,853
1891 - -	637	6,112	5,356	7,610

That the people in the out districts take advantage of the branch banks, is shown by the fact that there were 175 depositors in them at the end of the year, with 1,086*l.* to their credit; the corresponding figures for 1890 were 136 and 814*l.*

General Remarks.

36. In conclusion, attention may justly be drawn to the continued progress and prosperity of the Colony, the outward signs of which are to be seen in the remarkable increase of the population in the last decade, the expansion of trade, and the increase of the revenue. Every effort is being made by the Government to direct and stimulate the advance of the colony, and the future is full of promise.

(Signed) EDWARD DRAYTON,
Administrator.

Sir W. HELY-HUTCHINSON to LORD KNUTSFORD

St. Vincent, August 20th, 1892.

Forwarded.

(Signed) WALTER HELY-HUTCHINSON.

The Right Hon.
Lord Knutsford, G.C.M.G.,
&c. &c. &c.

SIR, Government House, August 12th, 1892.

I HAVE the honour to transmit herewith my Report on the Blue Book for the year 1891.

2. I regret that owing to the late period at which I received some of the returns, I was unable to forward my report at an earlier date.

I have, &c.
(Signed) V. SKIPTON GOULDSBURY.

His Excellency
The Hon. Sir W. Hely-Hutchinson, K.C.M.G.,
&c. &c. &c.

REPORT on the BLUE BOOK for 1891.

TAXES, DUTIES, AND FEES.

Excise Duty on Spirits.

Throughout the year the strength of Spirits had been tested by the use of the bubble, but on the 31st of December an Ordinance

became law substituting Sykes's hydrometer for the bubble. By the use of this instrument the exact strength of the spirit may be ascertained, and accurate calculations made for revenue and other purposes.

Dues falling on the Shipping.

These remain unchanged, except that a fee of 4*s*. for the use of the harbour master's boat in running lines has been authorised. This adds nothing to the charges paid by the shipping, as the fee was previously paid to the boat's crew.

Revenue and Expenditure.

The revenue and expenditure of the Colony for the year 1891 amounted to 49,326*l*. and 53,906*l*. respectively, showing an excess of expenditure over revenue amounting to 4,580*l*.

The estimated revenue and expenditure were, respectively, 48,624*l*. and 48,155*l*. The actual revenue exceeded the estimated revenue by 702*l*., and the actual expenditure the estimated expenditure by 5,751*l*.

The revenue for 1890 was returned at 50,232*l*. and the expenditure at 45,430*l*. The revenue for 1891 was, therefore, 906*l*. less, and the expenditure 8,476*l*. more, than the respective figures for 1890.

The following table shows the principal heads of revenue under which there was a falling off, and of expenditure under which there was an increase, in 1891 as compared with the preceding year, and also the principal items of decrease in the one case and of increase in the other.

Revenue.

Heads of Receipts.	Decrease in 1891 compared with 1890.
	£
Customs - - - - - - -	243
Port, Harbour, Wharf, and Light Dues - - -	316
Fees of Court and of office - - - - -	231
Land Sales (the proceeds of land sales were transferred in 1891 from General Revenue to a special account) - -	547

Expenditure.

Heads of Expenditure.	Increase in 1891 as compared with 1890.
	£
Treasury and Customs	568
Audit Department	738
Medical	597
Immigration	931
Education	637
Miscellaneous	894
Post Office	432
Colonial Engineer's Department	721
Materials and Stores	2,125
Census	415
Special Votes	435

The revenue and expenditure for 1891 compare as follows with the average revenue and expenditure for the preceding five years 1886–90 :—

—	1891.	Average for five years 1886–90.	Increase over average for preceding five years.
	£	£	£
Revenue	49,326	43,956	5,370
Expenditure	53,906	44,481	9,425

The decrease in the revenue for 1891, compared with the previous year, is attributable to several causes. The decrease in Customs receipts was mainly due to a reduction in the number of wage-earning people employed on military and public works, and a consequent diminution in the spending power of a considerable number of the working-class consumers; and to the amount of the Customs receipts carried to the credit of revenue being reduced by two-fifths of the duty received on tobacco having been assigned to the Immigration Fund.

The decrease in Port and Harbour Dues was chiefly caused by the discontinuance of certain dues charged on steamers entering

the port of Castries; and the falling off in the receipts from fees of office, was owing principally to fewer vessels having been piloted than in the previous year.

The decrease as regards land sales arose from the transfer from general revenue of the proceeds of land sales to a special account.

The increase of 8,476*l.* in the expenditure for 1891 as compared with 1890 was, in the main, due to the following circumstances:—The adoption of the system of increase to salaries of certain officers by annual increments; the payment of the audit expenses of 1890 in 1891; the resumption of coolie immigration, which caused increased expenditure under the head "Medical"; the charging against general revenue of salaries and certain other expenses incurred in connection with immigration which had previously been charged to the Immigration Fund; an increased vote for educational purposes; a larger allowance to the military in lieu of exemption from customs duty; an increased contribution to the Imperial postal subsidy; the rearrangement of the offices of Director of Public Works and Director of Surveys; the formation of a Public Works Store Department and the purchase of stores and materials; the cost of the census; and, under the head of Special Votes, the cost of plans, reports, &c., in connection with the proposed new water works for Castries, and the grant made to Martinique in aid of the sufferers from the hurricane.

Assets and Liabilities.

The subjoined statement exhibits the assets and liabilities of the Colony on the 31st December 1891.

Assets.	£	Liabilities.	£
Cash	363	Savings Bank Deposit Account	9,961
Colonial Bank Current Account	2,767	Castries Town and Towns and Villages Funds	2,790
,, Deposit Account	7,500	Police and Revenue Officers' Reward Fund	1,737
Investments on account of Savings Bank	5,000	Imperial Post Office Fund and Colonial Money Order Account	477
Investments on account of Police and Revenue Officers' Reward Fund	1,504	Grenada Account	1,296
Miscellaneous Advances	9,674	Public Works Loan Works Account	5,608
Crown Agent's Current Account	672	Land Sales Fund	352
London and Westminster Bank	114	Suspense Account	3
	£27,596	Prisons Manufacturing Account	140
		Sinking Funds	114
Surplus Stores Account	2,125	Surplus Assets	7,246
	£29,721		£29,721

Public Debt.

The public debt of the Colony at the end of the year under review amounted to 148,770*l.*, and was made up as shown in the annexed table.

Debts.	Amount due at end of year 1891.	Amount of original debt.	Source from which interest and sinking fund are paid.
	£	£	
Central Sugar Factory Loans -	31,600	40,000	General Revenue.
Immigration Loans - -	21,800	23,000	Immigration Fund.
Harbour of Castries Improvement Loans - - -	84,000	84,000	General Revenue.
Public Works Loans - -	11,370	11,370	Do.
	£148,770	£158,370	

The sum of 1,000*l.*, was paid off during the year by the redemption of drawn debentures. The public debt at the end of the year was equal to about three years' revenue, and represented an indebtedness equal to 3*l.* 10*s.* 6*d.* per head of the population.

Savings Bank.

The deposits in the Savings Bank during 1891 amounted to 8,268*l.*; the number of depositors at the end of the year was 909, thus giving an average of a little over 9*l.* per depositor. The withdrawals amounted to 8,264*l.* The deposits and withdrawals almost balanced each other. The total amount to the credit of depositors at the close of the year was 9,961*l.*

In 1890 the deposits amounted to 7,630*l.*, the withdrawals to 6,521*l.*, and the depositors numbered 681. The amount to the credit of depositors on the 31st December 1890 was 9,492*l.*

Municipalities and other Public Bodies.

The town of Castries is governed by an elective Town Board consisting of eight members. All the other towns and villages are under the supervision and management of Town Wardens, acting under the control of the Governor in Council.

The revenue of the towns and villages for 1891 amounted to 3,665*l.*, and the expenditure to 3,777*l.* The revenue is derived

principally from House Tax, the rate being levied upon the assessed annual rental, or value for rental, of the property. The rate varies from 5 per cent. in some of the villages to 8 per cent. in others and in the towns.

Military.

The only expenditure of the Colony in respect of the troops was 867*l.*, paid as an allowance in lieu of duty-free goods. The Imperial expenditure during the year for military purposes amounted to 35,059*l.*

Public Works.

The works executed by the Public Works Department during the year consisted partly of works of construction and partly of works of maintenance and repair. Under the former head may be enumerated the following as the principal works of construction carried out during the year:—The completion of the new police barracks at Dennery and of that at Soufrière; the addition of a verandah to the medical officer's quarters at Dennery Hospital; the building of a new kitchen at the Poor Asylum; the erection of a harbour-master's boathouse at Castries, and of a boat jetty at Rat Island (for Yaws Hospital); the completion of the infirmary at the Royal Gaol, and of the main building of the Baron Asylum; the laying of a new and larger main from the Castries Waterworks reservoir to the town; and the erection of one of the two leading lights for marking the line of entrance of the Castries Harbour.

Under the head of repairs the following were the principal items of work done:—General repairs to Governor's office, Post Office, and Treasury; general repairs to Dennery Hospital, Soufrière Lunatic Asylum, Gros Islet Police Barracks, and to Royal Gaol; repair of damage done at Eastern end of North wharf by storm on the 18th August (the day of the hurricane at Martinique, and the reopening, repairing, and renewal of drains on the Eastern reclamation and at the Carenage.

As regards roads and bridges the work executed was mainly that of maintenance and repair; the only new work of importance undertaken being the opening of a new trace from the fourth mile mark on the Dennery road, by means of which the very steep gradients of the Piton Flore are avoided; and the erection of a new iron bridge over the Grognet Ravine to replace the old wooden second bridge, Morne Road.

The total sum spent on public works for the year was 10,172*l.*, of which expenditure 8,136*l.*, was paid out of General Revenue and the balance of 2,036*l.*, out of loans.

Legislation.

Seventeen Ordinances were passed by the Legislative Council during the year.

Their titles are as follows:—

(1.) An Ordinance to authorise the raising of a Loan, not exceeding in the whole the sum of 28,000*l.*, for the purposes of Indian Immigration, and to provide for the repayment of the said Loan.

(2.) An Ordinance to amend the Surveyors and Boundaries Settlement Ordinance, 1886.

(3.) An Ordinance for taking the census of the Island of St. Lucia.

(4.) An Ordinance to amend the law relating to Immigration.

(5.) An Ordinance to amend the Customs Ordinance, 1888.

(6.) An Ordinance to protect Children under the age of twelve years from being made to perform Excessive Manual Labour.

(7.) An Ordinance to provide for the payment of certain sums of money for the Public Service of the year 1890.

(8.) An Ordinance to impose Dues on Ships entering the Harbour of Castries.

(9.) An Ordinance to amend the Liquor Licence Ordinance, 1886.

(10.) An Ordinance to provide for the appointment of an Administrator-General, and for vesting in him certain powers and duties hitherto attaching to the office of Colonial Trustee.

(11.) An Ordinance to amend the Quarantine Ordinance, 1871.

(12.) An Ordinance to amend the Immigration Loan Ordinance, 1891.

(13.) An Ordinance to regulate the carriage of passengers between St. Lucia and certain other places adjacent thereto.

(14.) An Ordinance to authorise and confirm certain expenditure incurred for the Public Service during the year 1889.

(15.) An Ordinance to provide for the Service of the Colony of St. Lucia for the year 1892.

(16.) An Ordinance to amend the Tax Ordinance, 1875.

(17.) An Ordinance to amend the Customs Tariff Ordinance, 1881.

The most important measure passed during the year was the Immigration Ordinance 1891. This enactment deals in a comprehensive manner with all matters connected with immigration. It, *inter alia*, defines the duties and powers of the Protector

St. Lucia. 1891.

of Immigrants; fixes the conditions and terms upon which immigrants are to be indentured to employers, and the rates of wages to be paid both for time and task work; and provides for the protection, medical care, and general well-being of the immigrants while in the Colony.

Civil Establishment.

Mr. C. C. Knollys administered the Government up to the 26th of May, on which day I arrived in the Colony and assumed the administration of the Government in succession to Mr. R. B. Llewelyn.

The Colonial Engineer and Surveyor's Department was reconstructed and the duties divided between two new offices. The execution of public works was committed to the Director of Public Works for the Windward Islands, and a foreman of works, resident in St. Lucia, was appointed for three years. The office of Director of Surveys for the Windward Islands was created, and the duties performed previously by the Colonial Surveyor were transferred to that officer, who was placed at the head of a Crown Lands and Survey Department. Mr. Messervy, Director of Public Works at Grenada, became the head of the Public Works Department, and Mr. Reeve, late Colonial Engineer and Surveyor at St. Lucia, was appointed Director of Surveys for the Windward Islands.

Mr. H. Gamble, harbourmaster and pilot, was dismissed from the service, and Mr. G. C. Bruce, harbourmaster and second Customs officer at St. Helena, was appointed in his stead.

Mr. Low, magistrate of the first district, who was transferred to Grenada in the previous year to act as treasurer of that Colony, continued absent throughout the year. The arrangement which had been made in consequence of his transfer remained the same, namely, the magistrate of the third district, Mr. J. W. Elliot, acted as magistrate of the first district, and Mr. T. H. Dix, magistrate of the second district, discharged Mr. Elliot's duties in conjunction with his own.

Pensions.

There was no change in the pension list during the year.

Population.

The birth-rate for the year under review was above, and the death-rate below, the average for previous years; and the gain to the population resulting from the excess of births over deaths was 734.

Census.

The census taken on the 5th April 1891 shows that the population of St. Lucia on that day was 42,220. The population in

1881 was 38,551. There was, therefore, an increase of 3,380 in the intervening 10 years, or an average annual increase of 338. Small as this increase is, it has not been a natural one, but has been contributed to by the addition of the troops, and by increased East Indian coolie and other immigration, which sources have supplied 1,806 out of the 3,380 shown as the gain in the decade; leaving 1,574, or 157 per annum, as the apparent natural increase in the population for the last 10 years. Against the poverty of this increment, however, there must be set an uncertain allowance which is to be taken into account in respect of the emigration which took place to Colon during the construction of the Panama Canal. Unfortunately no record was kept of the numbers who were lured away by the prospect of quickly acquired wealth, nor has any note been taken of those who have returned. Some slight and slow repatriation has been going on, but it is to be feared that of those who sailed away dreaming of easy work, rapidly acquired wealth, and a happy return to their native land, a large portion met, instead, with hardship, sickness, and disappointment, and finally fell victims to their unhealthy surroundings and to the climate.

Of the total increase since 1881, namely, 3,380, the town of Castries contributes 2,133, or 63 per cent.; and, adding in the towns of Dennery and Vieux Fort, the proportion is raised to 2,723, or nearly 81 per cent. contributed by these three towns to the total of the number gained during the decade, leaving the trifling increment of 650, or an average of 65 yearly, as that furnished by the rural districts. This cannot, I think, be regarded as a healthy and satisfactory state of things. It is, however, only an accentuated instance of the unhealthy tendency which obtains generally in other lands of crowding into towns at the cost of the country in the way of diminished agricultural production, and at the loss to the individual of desirable physical and moral qualities.

The following table exhibits in a general way the movements of the population for the decennial period, 1881–91:—

Year.	Number of Population.			Births per cent.	Deaths per cent.	Density of population per square mile.	Married.	Unmarried.	Widowed.
	Males.	Females.	Total.						
April 1881	18,973	19,578	38,551	4·30	2·55	165	6,935	30,469	1,147
April 1891	20,461	21,759	42,220	3·60	2·41	181	7,956	32,599	1,665

The relative proportion of the sexes is shown as 100 males to every 106·34 females. The census report gives the following as the numbers and centesimal proportions of the four racial

categories into which, for census purposes, the population has been divided.

—	Number.	Per-centage.
Black - - - -	28,766	68·13
Mixed - - - -	9,978	23·63
White - - - -	950	2·25
Asiatic - - - -	2,526	5·99
Total - -	42,220	100·00

The centesimal proportions of the married, unmarried and widowed appear as,—married 18·84, unmarried 77·22, widowed 3·94.

The proportion of the different religious denominations, expressed centesimally, is shown in the census report as follows:—

Roman Catholic - - - -	85·79
Protestant - - - - -	9·23
Mohammedan - - - - -	·47
Hindû - - - - -	4·38
Undetermined remainder - - -	·13

The 2,523 East Indian coolies in the Colony comprise 1,849 Hindûs, 199 Mohammedans, and 475 Christians.

Immigration.

The total number of East Indian immigrants introduced into the Colony during 1891 was 554. They were brought from Calcutta in the s.s. Roumania, and arrived at St. Lucia on the 31st of March. This batch of immigrants came by way of the Red Sea, Suez Canal, and Mediterranean, the Roumania being the first ship that brought immigrants for the West Indies by that route.

Three births and five deaths occurred during that voyage, and a birth and a death took place in the harbour of Castries before the immigrants had left the ship.

The 554 immigrants landed were classified in accordance with the Ordinance as follows:—309 male and 126 female adults, 7 minors, and 105 infants. According to the Immigration Ordinance an adult means an immigrant at or above the age of 15 years; a minor, an immigrant under the age of 15 years, and above the age of ten years; and an infant, an immigrant under the age of ten years.

The Protector of Immigrants reports that in some respects the immigrants were landed in a satisfactory condition, but that an unusually large number of them was sent direct from the ship to hospital, and that many of the smaller children were extremely emaciated.

The vital statistics of the immigrants brought by the Roumania, for the nine months April to December, appear as follows:—

	Adults.		Minors.		Infants.	Total.
	M.	F.	M.	F.		
Number landed from S.S. Roumania.	309	126	7	7	105	554
Births - - - -	—	—	—	—	12	12
					117	566
Deaths - - -	1	2	—	—	19	22
Remain -	308	124	7	7	98	544

The decrease of ten souls, shown above, was attributable to the excessive infant mortality, the deaths amongst infants corresponding to an annual death-rate of 216·5 per 1,000. On the other hand, the mortality amongst the adults and minors was slight, corresponding to an annual death-rate of 8·9 per 1,000. The Protector of Immigrants, in his report, states that the large number of children landed from the Roumania in a miserable and emaciated condition, furnishes the explanation as to the large number of deaths which occurred.

Although the immigrants who were brought to the Colony in 1881, had fulfilled their ten years' engagement, under which they were entitled to a free passage back to India in 1891, none of them returned during the year in consequence of a failure on the part of the Government to obtain the means of transport, no accommodation being available in any of the ships conveying coolies back to India from any of the other West India Colonies.

At the date of taking the Census (5th April) there were 2,523 East Indian immigrants in the Colony.

It is satisfactory to be able to report that the East Indian immigrants are large depositors in the Savings Bank; that many of them have acquired property in the form of stock, such as horses, cattle, sheep, &c.; and that some of the leading men have begun to purchase Crown lands in the neighbourhood of Castries. Another gratifying feature which is worthy of note, is the existence in the Colony of five schools (four of which were on the list of Government aided schools in 1891), organised and partly

maintained by the Canadian Mission, and specially devoted to the training and teaching of Indian children.

A comprehensive Immigration Ordinance was passed in the early part of the year repealing the Immigration Ordinance 1880, defining the conditions under which immigrants are to be introduced into the Colony and indentured to employers, making provision for the protection, medical supervision and treatment, and general well-being of the immigrants while in the Colony and finally for their repatriation at the end of their period of contract.

Education.

With the exception of two schools, the St. Mary's College and the St. Joseph's Convent, both in Castries, all those in St. Lucia are primary schools. Of these 24 are assisted and 4 are Government schools, the former consisting of 16 Roman Catholic, 1 Anglican, 1 Wesleyan school, 4 schools for East Indian children, and 2 undenominational schools. Four schools, 3 Roman Catholic and one Government, have infant schools attached to them. The Government schools are undenominational, but in certain specified hours religious instruction can be given to the scholars by their spiritual pastors.

Although education is in a backward state in St. Lucia, it is gratifying to learn that improvement is taking place, and to know that the improvement will become accelerated as the children become more familiar with the language in which they are taught, and in proportion to the improvement in the methods of instruction.

The schools which for many years past had been maintained in the Colony by the Lady Mico Charity Trust were withdrawn in the early part of the year, and of the seven schools so maintained five were taken over by the Government, the school premises having been purchased by the Colony for a sum of 1,203*l.* Two of these schools were subsequently disposed of to the Roman Catholic authorities, and the remaining three continue as Government schools.

From the subjoined table, in which I have shown certain percentages and given other particulars, some idea may be obtained of the state of primary education in the Colony :—

Number of primary schools in the Colony -	28
Total population of St. Lucia - -	42,220
Number of population between the age of 5 and 15 years (which may be taken as the school age) - - - -	11,405
Total number on school rolls - - -	3,149
Average attendance - - -	1,698
Number presented for examination - -	1,160
Number passed in two subjects - - -	948
Centesimal proportion of "school-age" children (5 to 15 years) to total population - -	27

Percentage on rolls of number of "school-age" children - - - -	27·6
Centesimal proportion of attendance to number of "school-age" children - - -	14·8
Percentage of attendance of number on rolls -	53·9
Percentage of attendance presented for examination - - - -	68·3
Percentage of attendance passed in two subjects	55·8
Percentage of those presented which passed in two subjects - - -	81·7
Centesimal proportion of numbers passed in two subjects to number of "school-age" children	8·3

As a rule, the children hear English spoken only while they are in school, the language of their homes being patois, and of their churches and spiritual pastors French. It can, therefore, be easily imagined how serious are the difficulties with which educational efforts have to contend in this Colony.

The amount contributed by the Government during the year in aid of primary education was 2,075*l.*, which corresponds to a sum of 13*s.* 2*d.* per head per annum of the number of scholars on the rolls. In aid of secondary education, a sum of 200*l.*, was contributed to the funds of St. Mary's College, Castries.

Vital Statistics.

There were 1,929 births registered during the year, 158 of the number being still-births; 735 of the births were legitimate and 1,194 illegitimate, the former representing 38·10 per cent. and the latter 61·90 per cent. of the total births for the year. The birth-rate (still-births included) was 4·05 per cent. of the population. The still-births were 8·19, and the live births 91·81 per cent. of the total births.

The foregoing figures compare as in the following table with those for the year 1890:—

Year.	Live Births.	Still Births.	Total Births.	Legitimate.	Illegitimate.	Percentage of legitimate Births.	Percentage of illegitimate.	Birth rate per cent. of population.
1890 - -	1,574	130	1,704	594	1,110	34·86	65·14	3·65
1891 - -	1,771	155	1,929	735	1,194	38·10	61·90	4.05

St. Lucia. 1891.

From this table it will be seen that, comparing the two years 1890 and 1891, the percentage of legitimate births increased from 34·86 to 38·10, and the percentage of illegitimate births consequently decreased from 65·14 to 61·90. Although the proportion of illegitimate to legitimate births is still lamentably high, yet it is satisfactory to be able to record an appreciable decrease in it, and to recognise this decrease as a hopeful evidence of an improving social and moral condition of the people.

The deaths during the year, including still-births, numbered 1,195, or, exclusive of still-births, 1,037. The death-rate (exclusive of still-births) was 2·45 per cent. of the population as against 2·35 in 1890. Of the total mortality 36 per cent. was represented by the deaths of children under one year of age. This excessive infant mortality is attributable to several causes, some of which are preventible, the chief of these latter being, in the opinion of the Registrar-General, intentional neglect before or after birth, incompetence of self-styled midwives, and protracted daily absence of mothers of the labouring and domestic class. As a primary cause, however, I think there can be little doubt that illegitimacy is the main source of the evil, and that, so long as it exists to such a deplorably large extent, infant mortality will continue excessive to an approximately corresponding degree.

It is worthy of note that there were only three deaths from snake bites during the year. The mortality from this cause for the previous 22 years gives an average of 10 deaths per annum.

The birth-rate during 1891 was above, and the death-rate below, the average of previous years; and the gain to the population arising out of the excess of births over deaths—the natural increase—was 734.

The number of marriages celebrated during the year was 396. It is satisfactory to observe that the resort to the marriage ceremony is on the increase, the marriages during 1891 exceeding those of 1890 by 112, and those of 1889 by 128.

Imports.

The total value of the imports for the year was 222,178*l.*, against 206,693*l.* in 1890, showing an increase of 15,485*l.* for the year under review. Of the total imports, 138,019*l.* worth came from the United Kingdom, 24,867*l.* from British Colonies, and 59,292 from foreign countries, the United States of America contributing 39,436*l.* of the last-named amount.

The following statement enumerates the articles of imports, which show an increase or decrease of 200*l.* or over in value in 1891, as compared with the preceding year:—

Articles.	Increase.	Articles, &c.	Decrease.
	£		£
Ale and porter - -	774	Animals, living :	
		Oxen - - - -	2,112
Animals, living :		Cottons, linens, and woollens -	4,969
Cattle - - -	2,301	Fish, salted and dried -	802
Butter - - - -	246	Jewellery - - -	260
Coals - - - -	1,343	Machinery and other agricultural implements - -	3,433
Confectionery - - -	241	Nails - - - -	217
Flour - - - -	2,900	Salt - - - -	367
Oats and bran - - -	488	Specie - - - -	1,400
Fruits and vegetables - -	294	Wines - - - -	389
Haberdashery - - -	3,163	Wood, white pine - -	420
Iron, galvanised - -	730		
Manure - - - -	1,998		
Oil—lard, olive, &c. - -	219		
Paints and varnish - -	228		
Preserves - - -	574		
Rice - - - -	1,991		
Railway materials - -	1,062		
Silks and satins - -	352		
Shingles - - - -	244		
Soap - - - -	605		
Gin - - - -	200		
Twine - - - -	231		
Wood—pitch pine - -	1,054		

Exports.

The value of the exports during 1891 was 181,503 against 197,452 in 1890, showing a decrease in 1891 amounting to 15,949*l.*

In the following statement is shown the articles of export, in which an increase or decrease of 200*l.* or over in value occurred in 1891 as compared with 1890, and the amount of such increase or decrease.

Articles.	Amount of increase in 1891 compared with 1890.	Articles.	Amount of increase in 1891 compared with 1890.
	£		£
Cocoa - - -	1,794	Sugar :	
Farine manioc - -	1,445	Muscovado - -	2,214
Mangoes - - -	1,230	Usine - - -	2,241
		Molasses - -	3,262
		Vegetables and provisions (fresh) - -	333
		Wood, timber and logwood	4,393
		Fuel, pimento sticks and other woods - -	478

It will be seen from the above table that three articles—cocoa, farine manioc, and mangoes—show between them an increase of 4,469*l.* Cocoa exhibits an increase of 1,794*l.* over the export of 1890, and taking the average export of this article for the five

St. Lucia. 1891.

years 1886–90, I find that the increase in 1891 compared with that average amounts to 6,730*l.*

Farine manioc (cassava flour) shows an increase of 1,445*l.* over the export for 1890, and an increase of 1,043*l.* over the average for the three years 1888–90. There does not appear to have been any export of this article in 1886 or 1887. In 1888 and 1889 the export of farine manioc was almost entirely to Colon, but in the years 1890 and 1891 the shipments were, with a very trifling exception, to the French West Indies, chiefly to Martinique.

Mangoes to the value of 2,004*l.* were shipped (and all to Barbados) during the year, representing an increase of 1,230*l.* over the value of the previous year's export, and of 1,616*l.* over that of 1889, which latter is the first year in which this article is shown as an export separately from other fruit and fresh vegetables. The export of mangoes appears to be rapidly enlarging, but I regret to say that, from an industrial point of view, this expansion is not as satisfactory as if it occurred in the case of fruits that were, to a greater degree than mangoes, the harvest and reward of foresight and intelligence, and of regular habits of industry and patient toil.

The articles which show a falling off of 200*l.* or over in the value of the quantity exported in 1891 compared with the preceding year are sugar, molasses, fresh vegetables and provisions, and woods and timbers, the decrease amounting to a total of 12,921*l.*

The following is a comparative statement of the value of the exports in 1891, of the three principal articles of export, and the average value of the exports of those articles for the preceding ten years 1881–90.

Articles.	Value.		Increase in 1891 over average for 10 preceding years.	Decrease in 1891 below average for 10 preceding years.
	1891.	Average for 10 years 1881–90.		
Sugar:	£	£	£	£
Usine - - -	60,870	44,306	16,564	—
Muscovado - -	18,253	64,830	—	46,577
Molasses - -	5,334	7,046	—	1,712
Cocoa - - -	28,658	17,226	11,432	—
	113,115	133,408	27,996	48,289

From the above statement it will be perceived that in the year 1891, as compared with the average for the preceding 10 years, there was an increase in the value of the exports of Usine sugar and cocoa amounting to 27,996*l.*, and a decrease in that of the exports of muscovado sugar and molasses amounting to 48,289*l.*, leaving a difference in the way of decrease in 1891 of 20,293*l.*

The value of the imports in 1891 exceeded that of the exports by 40,675*l.* Excluding the value of coal imported and exported, the excess amounted to 72,044*l.*

Shipping.

Six hundred and fifty-one vessels entered the Port of Castries during the year, 363 of this number being steam, and 288 sailing, vessels, with an aggregate tonnage of 430,787 tons.

Of the steam vessels 167 were with cargo, and 196 in ballast; 275 of the sailing vessels were with cargo, and 13 were in ballast

Of the steam vessels 330 were British, 26 French, 3 Belgian, 3 Norwegian and 1 was American. Of the sailing vessels 245 were British, 15 French, 15 Dutch, 10 American, 2 Venezuelan, and 1 was Norwegian.

The steam vessels which entered in 1891 fell short of the number for 1890 by 22, whereas, the sailing vessels exceeded those for 1890 by 50. The tonnage for 1891 was 7,589 tons less than that for the previous year. Of the 363 steam vessels which entered during the year 135 were steamers which called only for the purpose of taking in bunker coal.

The following table exhibits a statement of the number of vessels and of the amount of tonnage entered and cleared during 1891, and the averages for the previous five years :—

—	1891.		Average for five years 1886-90.		Increase in 1891 over average for five preceding years.		Decrease in 1891 compared with average for five preceding years.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage	No.	Tonnage.

Total - -	660	433,850	526	321,738	134	113,378	—	1,286

Post Office.

During the year, 43,614 letters and post-cards and 4,582 articles were despatched to the United Kingdom and foreign

countries, and 42,771 letters and postcards and 75,465 articles were received. As compared with 1890 the letters and postcards despatched show an increase of 5,084, but there was a falling off of 61 in the number of articles despatched. The letters and postcards received exceeded those for the previous year by 4,512 and the articles by 27,882. The Inland Postal transactions also exhibit an appreciable increase; and, generally, he business of the Post Office Department is rapidly expanding.

Money orders to the amount of 2,112*l.* were issued, and to the amount of 728*l.* were paid during the year.

The following were the receipts from the sale of stamps, &c. :—

	£
Stamps sold - - - - -	1,807
Unpaid letters delivered - - -	28
Commission on money orders - - -	64
Rent of letter boxes - - - -	28
	£1,927

Crown Lands.

No grants of Crown Lands were made during 1891. About 50 grants, however, were in course of preparation for issue at the close of the year, the first instalment of the purchase money having been paid by the applicants, and the surveys having been completed.

Gaols and Prisoners.

The Royal Gaol, Castries, is a general and also a military prison. The sanitary state of the gaol during the year was satisfactory. The number of persons committed to prison in 1891 was 547, including 12 military prisoners. Of the number committed 413 were committed for purposes of penal imprisonment, seven for debt, and 127 for safe custody till trial or for want of security.

The daily average number in prison was 48·50. The number of admissions to hospital was 21, and the daily average on the sick list 2·26. There were three deaths during the year.

Subjoined is a comparative tabular statement exhibiting the figures for the years 1890 and 1891 respectively :—

—	Total number committed.	For debt.	For safe custody, &c.	For purposes of penal imprisonment.	No. of recommittals.			Daily average number in prison.	No. of admissions into hospital.	Daily average on sick list.	No. of deaths.
					Once.	Twice.	Thrice or oftener.				
1890 - - -	460	19	119	341	49	11	37	50·77	10	1·61	*2
1891 - - -	547	7	127	413	56	40	57	48·50	21	2·26	3

* One executed.

It will be seen from the foregoing comparative table that the number of commitments and of re-convictions in 1891 were considerably in excess of those of 1890.

Corporal punishment was awarded four times in 1891, total number of lashes 43. In 1890 corporal punishment was ordered seven times, total number of lashes 102. In 1889 this form of punishment was awarded seven times, the total number of lashes amounting to 164.

In the month of October the gaol was appointed to be a military prison for the detention of European military prisoners undergoing short sentences.

Criminal Statistics.

The number of offences reported to the police or the magistrates during 1891 was 1,599, as against 1,237 in the previous year. The number of persons apprehended by the police or summoned before the magistrates in 1891 largely exceeded the number for 1890, amounting to 2,035 against 1,426.

The number of persons summarily convicted was 1,167, and the number committed for trial in the Supreme Courts, 20. Of the latter number 16 were indicted, and four were not prosecuted. Of the 16 cases of indictment, a *nolle prosequi* was entered in two cases, 11 of the prisoners were convicted, and 3 were acquitted.

The following is a comparative table showing the number of offences, apprehensions, convictions, &c., in 1891, and the average for the five previous years, 1886–90:—

—	1891.	Average of five previous Years, 1886–90.	Increase.	Decrease.
Number of offences reported to police - - -	1,599	1,286	313	—
Number of persons apprehended by police or summoned before the magistrate - -	2,035	1,587	448	—
Number of summary convictions	1,167	743	424	—
Number of persons committed for trial in Inferior Courts -	20	32	—	12
Number of convictions in Inferior Courts - -	11	20	—	9
Number of persons acquitted: In Inferior Courts - -	848	813	35	—
Number of persons acquitted: In Superior Courts - -	3	11	—	8
Percentage of convictions: In Inferior Courts - -	58	48	10	—
In Superior Courts - -	79	65	14	—

Hospitals.

The sanitary condition of the hospitals was very satisfactory, and no diseases of an epidemic nature appeared in the Colony during the year.

There were 2,932 patients admitted into the hospitals (exclusive of the Yaws Hospital) during the year, making, with those remaining in hospital from the previous year, 3,046 patients treated. Of these 2,643 were discharged cured, 77 were discharged relieved, and 134 died.

Of the 3,046 patients treated in hospital during the year no less than 1,017—one-third of the total number—were cases of malarial fever, the East Indian coolies and the natives appearing to be equally susceptible of contracting this form of fever. The type of the disease was generally mild, and the mortality was slight, being only 1·17 per cent. of the number treated; whereas, the death-rate for the total number of patients treated in hospital was 4·4 per cent.

Yaws Hospital.—There were 46 patients admitted into the Yaws Hospital during the year, which, with 41 patients remaining in hospital from 1890, made a total of 87 cases treated. Of this number 57 were discharged cured, and 3 died; the death-rate being 3·45 per cent.

Dispensaries.—The number of patients who received medical aid at the dispensaries was 8,305, the principal diseases treated having been malarial fevers and diseases of the digestive system.

Poor Asylum.—There were 92 destitute persons admitted into the Poor Asylum, Castries, during the year, the greater number of whom were suffering from chronic or incurable diseases, 36 inmates remained over from the year 1890, making with those admitted a total of 128 destitute persons who found food, clothing, shelter, and medical aid in the asylum during 1891. Of this number 52 were discharged relieved and 38 died, 13 of the deaths being from senile decay.

Lunatic Asylum.—This asylum is only a temporary one, in which lunatics are detained until such time as they can be transferred to the lunatic asylum at Grenada. The building is not well suited for the purpose to which it has been put, nor is its situation a very desirable one, and it is hoped that as soon as funds are available for the purpose a new and properly constructed and situated asylum will be built. Eight lunatics were admitted into the asylum during the year; of these, 1 was discharged as "relieved," 5 were transferred to the asylum at Grenada, and 1 died.

The total number of cases treated during the year in the hospitals and asylums and at the dispensaries was 11,576—somewhat over one-quarter of the number of the population of the Colony—and the total gross cost (including salaries of medical officers, &c.) of the aid and relief thus given amounted to 5,985*l.*, which gives an average of about 10*s.* 4*d.* per case, or, deducting

payments made by the sugar factories in respect of indentured coolies treated in hospital, and payments for seamen, &c., a net average cost of 9*s.* 3*d.* per case treated in the medical institutions of the Colony, or about 2*s.* 6*d.* per head of the population.

Botanical Station.

Gradual progress and improvements have been made at the Botanical Station during the year. Some cross drains were completed; the laying out a nursery was commenced; and the level part of the gardens was raised by the addition of extra soil. The growth and condition of the various trees and shrubs have been reported as satisfactory; and the unsightly appearance of parts of the garden previously left in fallow has been removed by the planting of these unoccupied spaces with banana trees and other plants.

In the early part of the year a plot of adjoining land, measuring about an acre and a quarter, was acquired by the Government for an addition to the garden, and this plot is being gradually reclaimed from its original state of swamp, and will soon be in a condition to permit of its being utilized for planting purposes.

The proceeds of the sale of plants, seedlings, flowers, &c., during the year amounted to 54*l.*

Meteorology.

The mean temperature in the shade, as shown by the observations taken at the Morne was 78·2°. The average maximum temperature for the year was 85·3°, and the average minimum temperature 71·1°.

The highest monthly maximum temperature was in August (88·2°), and the lowest monthly minimum in February (67.0).

The total rainfall for the year amounted to 75·65 inches, which was 12·46 inches less than the rainfall of 1890.

The heaviest monthly rainfall (10·69 inches) occurred in July, and the lowest (1·27 inches) in March.

General Remarks.

The early part of the year under review was exceptionally dry, the rains not having set in until an unusually late period.

The health of the Colony was good, and no disease of an epidemic nature appeared in the island during the year.

The crops suffered a good deal in the early part of the season from the drought, but recovered themselves during the latter rains.

The year was not marked by any appreciable advance in prosperity; but it is a satisfactory circumstance to note, and one of much promise, that increased atention was paid to the cultivation of the cocoa tree, and that the planting of this useful and generously repaying tree is extending.

St. Lucia, 1891.

A severe earthquake shock was experienced on the 4th of July, and on the 18th of August the island felt, to a slight degree, the influence of the disastrous hurricane that swept over and devastated a large portion of the neighbouring island of Martinique. Fortunately beyond doing some damage to the recently reclaimed land adjoining the harbour, the high wind which blew for some hours during the height of the hurricane wrought the Colony no appreciable harm. St. Lucia lay well outside the axis of the storm, and thus escaped a visitation that would have been an untold calamity to the Colony had it fallen to the fate of the island to be the victim of it.

In conclusion, I may mention that the Castries Harbour Improvement Works were completed in the month of June, and that the dredger "Dolphin," which had rendered such excellent service in deepening the harbour, and other plant and stores, were transferred at a valuation from the Harbour Works Department to the Public Works Department.

GRENADA.

[For Report for 1891, *see* Colonial Report (Annual) No. 52.]

Sir W. HELY HUTCHINSON to the MARQUESS of RIPON.

MY LORD, Grenada, June 1, 1893.

I HAVE the honour to forward the Colonial Secretary's Report on the Blue Book relating to this Colony for the year 1892.

2. I am aware that this report was practically ready two months ago, but its completion was delayed owing to the non-receipt of one or two of the Returns.

3. The Blue Book itself will be transmitted to your Lordship shortly.

I have, &c.
(Signed) WALTER HELY HUTCHINSON.

The Most Hon.
The Marquess of Ripon, K.G., G.C.S.I.,
&c. &c. &c.

REPORT on GRENADA BLUE BOOK for 1892.

Sources of Revenue.

No alteration was made in existing taxation during the year, but the change in the land and house tax referred to in last year's report came into operation, and a new source of revenue in the shape of rental of telephones was developed. As in previous years the collection of export duties was suspended, and an additional *ad valorem* duty of 2½ per cent. was levied on articles not specified in or exempted by the tariff.

Revenue.

2. The Revenue of 1892 was 55,820*l.*, being 1,802*l.* in excess of that of 1891, which was the largest on record up to that year. The increase was due to the transfer of the police reward fund (the system of making reductions from police pay being abolished and the payment of police pensions and rewards becoming a charge on general revenue); to increased receipts from rum duty and land and house tax, consequent on improved methods of collection; to the revenue from the new telephone service; and to increased business at the Post Office. There was, however, a decrease of 1,706*l.* in Customs duties as compared with 1891, in which year the receipts were abnormal. The value of imports in 1892 was about 18,000*l.* less than in 1891, a result due in some measure to smuggling, but also to the exceptional rainfall, which caused delay in the cocoa crop.

GRENADA. 1892.

3. The receipts from rum duty and land and house tax deserve special notice. The improved excise system produced a yield of 11,775*l.*, being 1,642*l.* more than in 1891, and 6,552*l.* more than in 1887, the last year of unbridled smuggling. There was, however, an outbreak of illicit distillation at the close of the year which caused an estimated loss to the revenue of nearly 1,000*l.* The land and house tax realized 6,316*l.*—the average receipts of the ten preceding years were 4,800*l.*

4. A comparative statement of the revenues of the two years is subjoined :—

Head of Revenue.	1892.	1891.	Increase.	Decrease.
	£	£	£	£
Customs - - - -	23,684	25,390	—	1,706
Licenses, &c. - - -	26,781	24,548	2,233	—
Fees of office - - -	927	2,028	—	1,101
Post Office - - -	1,358	1,041	317	—
Telephone - - - -	639	—	639	—
Rent of Government property -	378	390	—	12
Interest - - - -	617	297	320	—
Miscellaneous receipts - -	89	36	53	—
Transfer from Police Reward and Reserve Fund - - -	895	—	895	—
Land sales - - -	452	288	164	—
Total - -	55,820	54,018	4,621	2,819
	54,018	—	2,819	—
Increase in 1892 - -	1,802	—	1,802	—

Expenditure.

5. The expenditure was 59,260*l.*, or 2,810*l.* more than in the previous year. It will be observed from the detail given below that increases, other than nominal, appear under heads 1, 2, 4, 7, 9, 10, 11, 15, 17, 19, and 20; the causes are as follows:—

(1.) Issue of stock for a new loan of 50,000*l.* for public works, and of 30,100*l.* for conversion of existing debentures.

(2.) Addition of Rev. R. F. Berkeley (128*l.*) and ex-Sergeant-major Harris (38*l.*) to pension list.

(4.) Importation of special type for the Blue Book, and additional book-binding.

(7.) Increase of Chief Justice's salary by 200*l.*

(9.) Increased prison population.

(10.) Creation of another medical district, and extension of the ticket system; also to abnormal expenditure on quarantine measures and sanitation, consequent on the spread of cholera in Europe and the United States.

8/4 857

(11.) Increased grants in aid of primary and secondary education, and of libraries in the out-districts.

(15.) Increased contribution to Imperial mail subsidy.

(17.) Establishment of a system of telephone exchanges.

(19.) Larger expenditure on upkeep of roads, consequent on heavy rainfall.

(20.) Execution of a larger number of public works.

6. Decreases appear under heads 5 and 14 on account of exceptional expenditure in 1891; under police, caused by alteration of excise system; and under 18, due to reduced contribution to salary of the Director of Public Works, who resided in St. Lucia during the year, and to the abolition of the Public Works Accountant and the road surveyors.

Head of Expenditure.	1892.	1891.	Increase.	Decrease.
	£	£	£	£
1. Charge on account of public debt -	3,695	1,929	1,766	—

12. Ecclesiastical - - -	515	517	—	2
13. Charitable - - - -	498	492	6	—
14. Miscellaneous - - -	2,914	4,064	—	1,150
15. Post Office - - - -	3,200	2,337	863	—
16. Agricultural - - -	517	546	—	29
17. Telephone - - - -	639	—	639	—
18. Public Works Department -	1,341	2,249	—	908
19. Public Works, Recurrent - -	9,426	8,881	545	—
20. Public Works, Extraordinary -	2,272	1,357	915	—
Totals - -	59,260	56,450	6,311	3,501
	56,450	—	3,501	—
Increase in 1892 - -	2,810	—	2,810	—

Financial Position and Debt.

7. The available balance at the end of the year was 486*l.*, as shown in the accompanying statement of the Colonial assets and liabilities:—

Assets.	£ s. d.	£ s. d.
Cash in Colonial Chest		333 0 0
On current account with Colonial Bank		2,948 0 0
Invested in South Australian 4 Per Cent. Inscribed Stock (nominal value, 3,804*l.* 19*s.* 11*d.*)		4,000 0 0
On deposit with London and Westminster Bank		2,464 0 0
Due from Crown Agents on current account		228 0 0
Advances representing either amounts due to the Colony or expenditure not brought to account:—		
Loans to Parochial Boards, from General Revenue	1,100 0 0	
Government of St. Lucia	1,147 0 0	
" " St. Vincent	701 0 0	
" " Trinidad and Tobago	24 0 0	
Distillery apparatus	1,514 0 0	
Materials, &c., Works Department	1,153 0 0	
Crown Agent's Advances Account	14,500 0 0	
Primary School Books	70 0 0	
Other advances	1,954 0 0	
		22,164 0 0
Arrears of Revenue due to the Colony:—		
Interest on Loans to Parochial Boards	189 0 0	
Parochial Boards (arrears of Byeway Contributions)	223 0 0	
		412 0 0
		£32,549 0 0

Liabilities.	£ s. d.	£ s. d.
Deposits, as follows:—		
Savings Bank	6,864 0 0	
Immigration Fund	1,944 0 0	
Fire Insurance Fund	2,000 0 0	
Governor's Office Fund	31 0 0	
Suspense Account	337 0 0	
Post Office	276 0 0	
General Deposit Account	313 0 0	
St. Paul's Water Supply Account	368 0 0	
Sinking Fund, Public Works Loan (No. 1.)	2,156 0 0	
Public Works Loan Works Account	7,480 0 0	
Parochial Boards Loan Works Account	9,364 0 0	
		31,133 0 0
Debentures Conversion Fund		930 0 0
Surplus Assets		486 0 0
		£32,549 0 0

8. The public debt at the same date was 96,575*l.*, made up as follows:—

	£
Inscribed stock issued under Ordinance No. 5 of 1891 for public and parochial works -	50,000
Inscribed stock issued under that Ordinance to convert 28,000*l.* debentures - -	30,100
Four and a half per cent. debentures held in England, not yet converted - -	12,000
Five per cent. debentures held in St. Vincent -	4,000
Five per cent. debentures held in Grenada -	475
	£96,575

9. The average price obtained for the bulk of the new stock issued was 101*l.* 8*s.* 2*d.* per cent., and the conversion of debentures was effected at the rate of 103*l.* against 100*l.* debentures. The stock bears interest at the rate of 4 per cent. per annum, and at the close of 1892 stood on the London Stock Exchange list at 102–104. The probable capitalised saving to the Colony, resulting from the conversion, when completed, is estimated at 3,078*l.*

10. Of the total loan raised, 20,069*l.* is for parochial works, and the interest and sinking fund on this amount are, therefore, a charge on local rates, and refunded by the parochial boards to the general revenue, which is primarily responsible for their payment.

11. The Colony is also liable for the repayment in 1899 of a loan of 1,000*l.* raised in 1879 for the St. George's Waterworks, on the security of the general revenue; the Parochial Board is, of course, responsible for the amount.

Local Boards.

12. The Parochial Boards are entrusted with the general management and regulation of the towns; following is a statement of their finances for the year:—

Town.	Revenue.	Expenditure.	Debt.
	£	£	£
St. George's - -	1,903	2,178	6,812
Gouyave - - -	939	1,125	2,943
Grenville - - -	739	739	1,418
Sauteurs - - -	384	408	1,250
Victoria - - -	283	271	1,462
Hillsborough - -	412	323	500
Total - -	4,660	5,044	14,385

GRENADA. 1892.

13. The revenue and expenditure are taken from Returns furnished by the several wardens, and their accuracy cannot be guaranteed; the debt (except in the case of St. George's, where 1,169*l.* current liabilities are included) consists of loans from the Government for public works, the current liabilities, if any, not being known.

Public Works and Roads.

14. Twenty-one thousand three hundred and fourteen pounds was expended on public works and roads during the year, 9,616*l.* being from loan funds, and 11,698*l.* from general revenue, 6,894*l.* of the latter amount being for ordinary upkeep of roads.

15. The river at Belmont, St. Patrick's, was bridged; the reconstruction of the main road from St. George's to Grenville along the southern and eastern coast, and of the second-class bye-ways was proceeded with; and the main road to Gouyave from Grenville was completed with the exception of the bridge over the Chantilly River, which is now in hand. The reconstruction of the Mount Cenis main road in St. Mark's and the Noel's Hill main road in St. Andrews was commenced, and good progress made.

16. The new road system worked admirably throughout the year, and excellent work was done by the gentlemen who form the boards. The year was an exceptionally trying one for the roads, on account of the very heavy rainfall, and their condition, notwithstanding this, is a credit to all concerned.

17. The construction of telephone exchanges referred to in last year's report was continued during the year, and the scheme promises to be a complete success. Although the system was far from being complete at the end of the year, the revenue received was 639*l.*, which exactly balanced the expenditure for maintenance and for interest and sinking fund on the amount borrowed for construction. At the date of this report there are six exchanges in operation, with 149 instruments in connexion, and the work of construction is still in progress.

18. One thousand seven hundred and forty-four pounds was spent on the repairs, &c. of public buildings; the new library in St. George's was finished and furnished; the new public buildings at Gouyave were almost completed, and the work of reconstructing the lunatic asylum was proceeded with; excellent stables and servants' rooms were provided at Government House, and a quarantine station was erected.

Legislation.

19. Thirteen Ordinances were enacted during the year, the most important being:—

No. 1, abolishing the police reward fund, and making the payment of police rewards and pensions a charge on general revenue, to which the balance of the fund was transferred.

No. 2, providing for surveys of disputed boundaries, without litigation, under the direction of the Works Department:

No. 3, amending and consolidating the law relating to the recovery of petty debts.

No. 5, giving the Government a monopoly in the erection of telephones in the Colony, and conferring the necessary powers to regulate and control the telephone service.

No. 10, amending the medical laws by a better definition of "labourers" and "paupers," and by providing for deferred payment of medical officers' fees for attendance on labourers in certain cases.

Councils.

20. Mr. E. P. Brooks, the new Treasurer, took his seat *ex officio* at both Councils in July, and during the absence of the Colonial Secretary on leave his seat was filled by the Honourable C. C. Knollys and Colonel Sandwith, who acted for him. Other temporary vacancies on the official side were filled by Messrs. J. F. L. Payne and C. F. Anton, and among the unofficials by Messrs. John R. Bertrand, W. D. Martin, R. D. Hopkin, and D. S. DeFreitas.

21. The term for which the unofficial members of the Council were appointed expired on the 31st December, and the same members were reappointed by Her Majesty the Queen.

Establishments.

22. During the Governor's official visits to the other Colonies of his government, in the first half of the year the government was administered by Mr. H. R. Pipon Schooles, the Attorney-General, by virtue of a special commission, which determined upon Mr. E. Drayton's appointment as Colonial Secretary, in June. In the latter half of the year the administration was conducted, during the Governor's absence on duty and on leave, by the following officers:—

Honourable E. Drayton, Colonial Secretary.
" E. P. Brooks, Colonial Treasurer.
His Honour V. S. Gouldsbury, Administrator-in-Chief.
Honourable C. C. Knollys, Colonial Secretary of Barbados.
Colonel J. H. Sandwith, R.M.L.I.

GRENADA. 1892.

23. Mr. L. R. Fyfe, the Colonial Secretary, died in May, much regretted, and Mr. Edward Drayton, the Treasurer, who had acted for him since October, 1890, was appointed to succeed him in June, Mr. E. P. Brooks, the late Colonial Secretary of the Falkland Islands, being appointed Treasurer in July. Mr. Drayton was compelled to take three months' leave in September—December, on account of ill-health, and his place was filled by Mr. Brooks, Mr. Knollys, and Colonel Sandwith, successively.

During the absence of the Attorney-General, on leave, Mr. J. F. L. Payne, Police Magistrate of the Southern District, acted for him.

Pensions.

24. The list was increased by the following additions :—

	£
Rev. R. F. Berkeley, late Anglican Rector of St. John's - - - - -	128
W. Harris, late Sergeant-major of Police -	38
	£166

The total of the pension list at 31st December, 1892, was 937*l.*

Vital Statistics.

25. The estimated population at the end of the year was 55,333, an increase of 2,124 since the census of 1891, and of 1,271 during the year. The birth-rate was 45·08 and the death-rate 21·83 per thousand.

26. Of the total number of deaths, 1,194, 13 per cent. were caused by zymotic fevers, 17 per cent. by diseases of the organs of respiration, and 13 per cent. by diseases of the organs of digestion. It is satisfactory to note that, notwithstanding the large increase of population in that period, the percentage of infant mortality among the deaths for the last 10 years has decreased from 31·44 in 1883 to 24·70 in 1892. This result is mainly attributable to the extension of medical relief, and the facilities afforded under the ticket system for obtaining medicine, the good work of which was crowned in the year under review by the enactment of an Ordinance which, *inter alia,* provides free medicines, as well as medical aid for labourers' children under 10 years of age.

Education.

27. An abstract of the statistics of primary education for the years 1891 and 1892 is given here.

Description of School.	No. of Schools.	Number of Scholars. On Roll. Boys.	Number of Scholars. On Roll. Girls.	Number of Scholars. Total on Roll.	Number of Scholars. Average Attendance.	Income. School Fees.	Income. Government Contributions.	Income. Voluntary Contributions.	Expenditure.
						£	£		£
Government -	9	877	633	1,510	792	109	1,248	—	1,357
Assisted :—									
Anglican - -	7	750	513	1,263	689	122	846	—	968
Roman Catholic	10	1,187	1,155	2,342	1,111	149	1,270	—	1,419
Wesleyan -	5	510	448	958	547	82	679	—	761
Presbyterian -	1	98	76	174	109	9	159	—	168
Totals for 1892-	32	3,422	2,825	6,247	3,248	471	4,202	—	4,673
„ „ 1891-	32	3,368	2,787	6,155	3,246	568	4,132	—	4,701
Increase in 1892 -	—	54	38	92	2	—	70	—	—
Decrease „ -	—	—	—	—	—	97	—	—	28

28. It will be observed that the Colony spends about one-thirteenth of its revenue on primary education, and that the assisted schools are, in reality, supported by the State.

29. On secondary education 583*l.* was spent, 405*l.* of which was in aid of the Grammar School for Boys, and the balance divided between the Girls' High School and the Roman Catholic School for Girls, which received subsidies for the first time in 1892. The total expenditure of the Boys' Grammar School is returned as 574*l.*, so that three-quarters of its cost is provided by the Colony.

Imports and Exports.

30. As will be seen from the following table, the year 1892 was remarkable for the falling off in the imports, which exhibit a decrease of more than 18,000*l.* as compared with the previous year, and of nearly 10,000*l.* as compared with the average of the five years :—

Year.	Imports. United Kingdom.	Imports. British Colonies.	Imports. Foreign Countries.	Imports. Totals.	Exports. United Kingdom.	Exports. British Colonies.	Exports. Foreign Countries.	Exports. Totals.
	£	£	£	£	£	£	£	£
1888 -	82,597	52,522	27,318	162,437	202,684	9,182	17,397	229,263
1889 -	87,762	45,733	40,586	174,081	172,912	7,515	15,168	195,595
1890 -	93,258	37,284	40,332	170,874	241,221	8,882	16,199	266,302
1891 -	97,895	31,512	47,523	176,930	218,600	8,672	9,371	236,643
1892 -	79,015	34,549	45,138	158,702	241,112	9,794	13,775	264,681
Average -	88,105	40,320	40,180	168,605	215,306	8,809	14,382	238,497

31. Many causes contributed to this result. There was an exceptional rainfall, which retarded the cocoa-crop and produced a consequent "tightness" of money locally; there was less expenditure from loan funds on road work, so that the labourers, instead of relying on imported food supplies, devoted more time to the cultivation of provisions; and lastly, less capital was advanced to the peasant proprietors than in former years.

32. The trade with the United States of America continues to develop under the stimulus of the direct steamer service with New York subsidised by the Colony, which brings the island within seven days' distance of that centre of commerce. The imports thence amounted to 44,241*l.* and the exports to 9,785*l.* in 1892; in 1885 the corresponding figures were 17,325*l.* and 401*l.*

33. The value of the total exports for the year was 264,681*l.*, being 28,000*l.* more than in the previous year, and 26,000*l.* more than the average of the last five years.

As will be seen from the following statement of the value of the chief exports for the last five years, 84 per cent. of the total was cocoa; spices (chiefly nutmegs) and cotton being next in importance. The sudden increase in coffee is worthy of notice; it is due to increased cultivation consequent on the efforts of the authorities at Kew Gardens and of the Government to resuscitate this product in Grenada, the failing of the crops in eastern countries offering the strongest incentive to exertion in this direction in the West Indies. As a result, the export of this article in the next few years should be considerable.

Year.	Cocoa.	Coffee.	Cotton.	Cotton Seed.	Fruit.	Firewood.	Ground Nuts.	Hides.	Live Stock.	Logwood.	Manure.	Peas.	Poultry.	Spices.	Sugar.	Turtle Shell.

1889 -	3	53	244	300	89	36·48	64·22	18
1890 -	2	44	196	242	74	38·27	59·86	25
1891 -	6	47	189	242	75	39·68	73·13	19
1892 -	8	56	240	304	81	33·75	76·30	27

(*Continued.*)

Year.	Daily average on Sick List.	Deaths, excluding Executions.	Cost of Prisons.	Value of Work done by Prisoners.	Cost of a Prisoner.		
					Annual.	Daily.	For Diet, per Day.
			£	£	£ s. d.	£ s. d.	d.
1888 -	2·98	1	1,328	1,256	23 14 3	0 1 3¼	3¼
1889 -	3·51	2	1,231	1,303	19 4 8	0 1 0¾	2¾
1890 -	2·56	1	1,160	1,304	19 6 7	0 1 1	2¼
1891 -	3·02	—	1,281	1,593	17 11 0	0 0 11¼	3
1892 -	5·33	3	1,358	1,611	17 17 3	0 0 11¼	3¼

36. The following analysis of the value of the work done by prisoners is interesting as showing how the system of industrial labour has thriven since its introduction in 1885. At the commencement of that year, about 90 per cent. of the prisoners' work was beyond the walls, and unremunerative; in 1892 only 20 per cent. is beyond the prisons, and they are practically self-supporting.

Work within Prison.

	£	£
Cooking and baking - - -	836	
Tailoring and sewing - - -	141

	—	339
		£1,611

Criminal Statistics.

37. The following table compares the figures relating to crime in 1892 with the average of the last four years:—

	1892.	Average of the last four years.	Increase.	Decrease.
The number of offences reported to the police -	720	769	—	49
The number of persons apprehended by the police or summoned before the magistrates -	2,472	2,107	365	—
The number of summary convictions :—				
1. For offences against the person - -	312	324	—	12
2. For prædial larceny - - -	39	31	8	—
3. For offences against property, other than prædial larceny - - - -	211	192	19	—
4. For other offences - - - -	673	486	187	—
The number of convictions in the superior courts :—				
1. For offences against the person -	3	6	—	3
2. For prædial larceny - - -	1	2	—	1
3. For offences against property, other than prædial larceny - - -	23	16	7	—
4. For other offences - - -	4	4	—	—
The number of persons acquitted :—				
1. In inferior courts - - - -	356	382	—	26
2. In the superior courts - - -	8	17	—	9

38. It should be noted that the figures for "Persons apprehended by the police or summoned before the magistrates" are, for the first time, correctly computed; for purposes of comparison, those relating to the previous years have been recalculated accordingly.

Agriculture and Meteorology.

39. The chief meteorological feature of the year was the heavy rainfall, 105·89 inches being recorded, or 49·20 inches more than in the previous year. Rain fell on 280 days during the year. The maximum temperature was 93 degrees, and the minimum 67 degrees.

40. It is extremely satisfactory to note that the botanical station has at last earned the right to be included as one of the factors in the development of the Colony and its products. Since it was started, in 1886, it has had many difficulties to contend with, but the unvarying sympathy and assistance it has received from the authorities at Kew Gardens, backed locally by the interest taken in it by his Excellency the Governor, and, in the last two years, by the untiring energy of the present curator, have overcome all obstacles, and not only are the gardens a credit to the Colony, but there is an ever increasing interest being taken by the agricultural community in the institution and its aims.

41. At the date of this Report Mr. G. W. Smith, the curator, in addition to his other efforts, is engaged in giving a series of popular lectures in the several districts with the object of instructing the peasant proprietors in practical agriculture and the use of manures. The lectures are well attended and the keenest interest displayed.

Savings Bank.

42. The following is a statement of the transactions of the savings bank for the last five years :—

Year.	Number of Depositors.	Amount of Deposits.	Amount of Withdrawals.	Balance at Credit of Depositors at 31st December.
		£	£	£
1888 - -	277	4,804	4,319	5,632
1889 - -	583	4,709	4,308	6,295
1890 - -	723	5,441	4,882	6,853
1891 - -	637	6,112	5,356	7,610
1892 - -	904	5,994	6,672	6,886

43. It will be noticed that although in 1892 there was a considerable increase in the number of depositors, the amount deposited decreased, while the withdrawals increased, and the balance at the end of the year was consequently reduced. This was caused by the abolition of the police reward fund, to which reference has already been made, which resulted in a withdrawal of 895*l.* from the St. George's Bank and affected the deposits therein during the year. That the regular progress of the bank was not disturbed is shown by the subjoined return of the number of depositors and the balances to their credit in the branch banks since their establishment in 1889 :—

Year.	No. of Depositors.	Balances to Credit.
		£
1889 - - - - -	81	292
1890 - - - - -	136	814
1891 - - - - -	175	1,086
1892 - - - - -	196	1,483

Hospitals and Asylums.

44. There is nothing in the hospital statistics for the year requiring special notice. A private ward for paying patients of the better class was opened, and bids fair to be a success, two or three cases having been treated with satisfactory results. The Colony Hospital buildings need extensive repairs, which it is hoped may soon receive attention.

45. The alterations at the Lunatic Asylum were proceeded with, but even at the date of this report they are not finished; when complete, the buildings will be commodious and capable of affording proper treatment for the lunatics of the Windward Islands.

46. The St. Andrew's Hospital was thoroughly repaired during the year, and great improvements effected in its administration under the care of Dr. E. F. Hatton, who was appointed to it on the re-division of the medical districts of the Colony.

General.

47. As will be seen from this Report, the Colony continues to be prosperous and to advance, notwithstanding the existence of obstacles in the year under review. At the present date an excellent crop of cocoa is being reaped, and the good prices which are being obtained for it both in London and New York promise amply to repay the planters for the delay enforced by the exceptional meteorological conditions of 1892.

(Signed) EDWARD DRAYTON,
Colonial Secretary.

Administrator Gouldsbury to the Marquess of Ripon.

St. Lucia, July 10, 1893.

Forwarded.

V. Skipton Gouldsbury.

The Most Hon.
The Marquess of Ripon, K.G., G.C.S.I.,
&c. &c &c.

Government House, St. Vincent,
June 24, 1893.

Sir,

I have the honour to transmit to your Excellency my report on the Blue Book of this Colony for the year 1892.

2. The Blue Book is being printed and will be forwarded to your Excellency probably by next mail.

I have, &c.
(Signed) Irwin C. Maling,
Administrator.

His Excellency
The Hon. Sir Walter Hely-Hutchinson, K.C.M.G.,
&c. &c. &c.
Grenada.

---

1. *Taxes and Duties.*

To meet the purposes of the McKinley Treaty, considerable changes took place under this head.

On the 23rd January ordinances were passed to the following effect:—Certain imports upon which duty was previously collected were exempted from duty, whilst the duty on others was reduced by 50 or 25 per cent. This change was considered to bring about

a reduction on customs duties by 1,600*l.* To meet the deficiency in the amount on Revenue for the year already estimated, increased duty was levied on the one part upon all spirits intended for consumption whether made in the Colony or imported; and on the other part an additional export tax was levied on sugar.

By Ordinance No. 11 of 1891, which came into force on the 1st January 1892, a general licence to sell charcoal was reduced from 15*s.* to 5*s.*

By Ordinance No. 1 of 1892 the price of an hotel licence was reduced from 10*l.* to 6*l.*

Fees.

The only change under this head was a new scale of fees provided for the Registrar of Shipping, the Admeasurer of Shipping, and the Shipping Master.

2. *Revenue and Expenditure.*

Revenue.

The Revenue of 1892 was 28,906*l.* This exceeded the Revenue of 1891 by 390*l.*, an almost nominal difference, and looking to the fiscal variations necessitated by the McKinley Treaty, a matter for congratulation. The Revenue laws passed in connection with the Treaty involved an estimated decline in certain import duties of 1,600*l.*, less an increase in duties on spirits of 6*d.* a gallon. The comparative statement given in this Report, shows that the net loss of revenue by import duties was 1,141*l.* This sum may therefore be taken as fairly representing the net loss in import duties by reduction in the tariff.

The general revenue was sustained, as against the loss through the McKinley tariff, by the increase in the duty on imported spirits, a similar increase in the excise duty on native spirit (rum), and an increase in the export duty on sugar. There was also a rally in the excise trade, aiding the revenue by the increased issue of licences and sale of rum.

Expenditure.

The expenditure of 1892 was 23,112*l.*, 388*l.* more than in 1891. The only details of the increase deserving of notice are: Under "Treasury," &c., 218*l.* towards the establishment of a revenue cruiser; under "Medical" the cost of an additional Medical Officer; under "Educational" a permanent increase in the "Grants to schools"; and under "Public Works" a decrease in repairs and outlay on the new works, which may be regarded as casual.

3. *Public Debt.*

At the close of the year the Public Debt of the Colony was 15,250*l.*, as against 14,360*l.* at the end of 1891.

The increase of debt by 890*l.* is due to the issue of debentures for a further loan of 1,500*l.* under the Kingstown Water Supply Loan Ordinance, 1889. This amount was needed to effect the cost of completion of the Waterworks for the towns of Kingstown and Georgetown; the debt for other purposes, except for Crown lands, has been steadily reduced.

The following is a statement of the public debt at the end of 1892:—

	£
1. Government House Loan - - -	1,680
2. Immigration Loan - - -	3,250
3. Public Buildings Loan - - -	600
4. Crown Lands Loan - - -	1,920
5. Public Debt Loan - - - -	2,200
6. Kingstown Waterworks Loan - -	5,600
	£15,250

4. *Public Works.*

The total expenditure on Public Works during the year was 3,389*l.* or 923*l.* less than in the previous year.

Of this sum 1,155*l.* was spent on Highways.

The following is a list of some of the principal works undertaken during 1892:—

General repairs and painting Court House.
Painting four police stations.
Renewing Chateaubelair Jetty.
Repairs to Souffriere Road.
Telephonic communication in Kingstown.
Bridge over Cumberland River.

Several repairs were also effected to the various Government buildings throughout the Colony at the cost of 193*l.*

5. *Legislation.*

Eight Ordinances were passed in 1892, the titles of which are as follows:—

No. 1. To amend the Liquor Licence Ordinances, 1886 and 1891.

No. 2. To repeal an Ordinance intituled "An Ordinance to amend the Medical Aid Ordinance, 1878," and to make other provisions in lieu thereof.

No. 3. To repeal the Excise Ordinance, 1888, and to make other provisions in lieu thereof.

No. 4. To amend Ordinance Number Eleven of 1878 and to repeal Ordinance Number Twenty-nine of 1888.

No. 5. To amend the Imports Tariff Ordinances, 1881 and 1887.

No. 6. To authorise a loan from the General Revenue for the purchase of land adjoining the town of Georgetown and to incorporate such land and also other land with the said town.

No. 7. To amend the law relating to infant mortality.

No. 8. To exempt oil-meal from import duty.

Ordinances Nos. 3, 4, 5, and 8 were made to meet the purposes of the McKinley Treaty.

6. *Councils.*

Mr. Henry A. Hazell, an unofficial member of the Executive and Legislative Councils, resigned his seats on the 11th of January.

Mr. George Smith, Q.C., an unofficial member of the Executive and Legislative Councils, resigned his seats on the 11th of January.

Mr. Charles Ormond Hazell was appointed a member of the Legislative Council on the 19th of January.

Mr. Charles J. Simmons, an unofficial member of the Legislative Council, obtained leave of absence from the 12th of August to the 6th of December.

Mr. James G. Coull was appointed on the 1st of December to be, provisionally, a member of the Legislative Council.

7. *Civil Establishment.*

The following changes occurred :—

Mr. T. B. C. Musgrave was on the 1st of January appointed Superintendent of Crown Lands, and on the 23rd of April provisionally Chief Clerk in the Government Office, on the promotion to another Colony of Mr. C. F. Clements.

He was confirmed in this office on the 16th of June by the Secretary of State.

Mr. J. C. Choppin resigned the appointment of Attorney-General on the 4th of January, and Oliver Smith, Esq., M.A., was appointed by the Secretary of State to fill the office.

Dr. Martin O'Carroll, Medical Officer of No. 3 District, was suspended on the 18th of January from the performance of his duties. This was confirmed by the Secretary of State on the 15th of March.

Dr. R. A. Cleveland was temporarily appointed Medical Officer of No. 3 District consequent on the suspension of Dr. O'Carroll.

Mr. Frank W. Griffith was confirmed in the appointment of Inspector of Schools by the Secretary of State on the 18th of February.

On the 22nd of April Mr. Clifton Grannum was appointed Second Clerk in the Government Office.

Consequent on the removal of Mr. G. D. Mackie, Clerk in the Treasury, who was appointed Clerk in the Survey Office on the 11th of May, the following appointments were made:—Mr. H. A. Lewis to the Treasury, in the place of Mr. Mackie; Mr. W. E. Davis, Magistrate's Clerk, in place of Mr. Lewis; Mr. T. Dyer, Post Office Clerk, in place of Mr. Davis.

On the 12th of May Mr. Cecil F. Sitwell was appointed to act as Chief of Police during the absence of Mr. E. D. Laborde.

Mr. C. T. Hughes was appointed Clerk to the Postmaster on the 19th of May, *vice* Mr. T. Dyer promoted to St. Lucia.

Colonel J. H. Sandwith, C.B., administered the Government of the Colony from the 21st of June to 8th November, during the absence on leave of Captain I. C. Maling.

Dr. C. Jenner-Parson was appointed Acting Medical Officer of No. 4 District on the 5th of July, during absence of Dr. M. G. Pereira.

On the 2nd of August Mr. H. B. Walcott was appointed to act as Treasury Accountant during the absence of Mr. G. F. Grant.

On the 16th of August Dr. W. S. B. Austin was tranferred from District No. 2 to perform duties of Assistant Medical Officer, Kingstown, and Dr. M. G. Pereira transferred from No. 4 to No. 2 District.

The Honourable C. O. Hazell acted as Attorney-General during the absence on leave of the Honourable O. Smith from the 26th of August to the 22nd of November.

Brigade Surgeon V. S. Gouldsbury, M.D., C.M.G., was appointed Administrator-in-Chief of the Windward Islands during the absence on leave of the Governor, and administered the Government from the 28th to the 29th of September.

8. *Pensions.*

During the year one pension was granted, viz.:—

	£
Mr. James C. Choppin, late Attorney-General -	440

The pension list has been, on the other hand, relieved by the deaths of the following pensioners:—

	£	s.	d.
Mr. John Reilly, late Police Magistrate -	242	8	0
Dr. Ar[illegible] late Colonial Surgeon -	156	12	0
Miss Cu[illegible]ning, late Registrar of Births, Marriages, and Deaths - -	18	8	4
	£417	8	4

The pension list has thus been increased by 22*l.* 11*s.* 8*d.* only.

St. Vincent.
1892.

9. *Population.*

The births in the year, exclusive of still-births, numbered 1,908, and the deaths, exclusive of still-births, 1,022, giving a natural increase of 886.

The still-births were 117.

Two hundred and forty marriages were performed during the year, or 39 in excess of the previous year.

The total population of the Colony at the end of the year is estimated at 42,600.

10. *Education.*

There were 44 schools open during the year, 41 in St. Vincent, and three in the Grenadines, with an average attendance of 3,292, and a total of 5,848 names on the registers.

It is satisfactory to be able again to observe that the statistics show a considerable increase on the previous year, as may be seen from the following comparative statement:—

—	1891.	1892.
Number on rolls - - - -	5,348	5,848
Average attendance - - - -	2,925	3,292
Candidates presented at annual examinations	2,561	2,878
Passes in the standards - - -	1,928	2,494
Marks awarded - - - -	27,812	31,430

The total amount of the Government grant to primary schools was 1,817*l.* 7*s.* 5*d.* This is the largest sum that has been expended since 1882, and is a favourable sign, as in 1882 there were 65 schools open, as compared with 44 in 1892, showing that large and well-managed schools earning better results are gradually taking the place of small schools.

It is to be regretted, however, that it was not possible for the proposed new Education Code to be brought into force before the close of the year.

A further sum of 131*l.* 13*s.* 4*d.* was granted in aid of the Kingstown Grammar School, 31*l.* 13*s.* 4*d.* of which represents capitation fees at the rate of 2*l.* 10*s.* per head allowed to a girl's department attached to the school.

11. *Friendly Societies.*

There are now 21 friendly societies, five having been registered during 1892.

12. *Imports and Exports.*

Imports.

The value of the Imports in 1892 was 102,981*l.*, or 5,142*l.* in excess of the Imports of 1891. The value of Imports from the United Kingdom increased 4,865*l.*, and from British Colonies, 5,124*l.*, whilst from the United States there was a decrease of 5,056*l.* These two last items are, however, nominal, and are due to the circumstances that in 1891 there was a direct trade with the United States by steam, which was discontinued in 1892. Therefore in 1892 merchandise had to be imported viâ Barbados, and to be treated in the Customs Returns as Imports from that Colony. As a matter of fact nearly everything shown as imported from British Colonies, is imported from Barbados, and nearly every item of such things is the product of some other place. Flour, meal, beef, pork, grain, lard, lumber, kerosine oil, imported as from Barbados have the United States as their country of origin; the lumber and fish may be traced back largely to Canada; rice to the East Indies, and spirits to the United Kingdom and Holland.

The net increase of 5,142*l.* in the year's imports cannot be traced to any articles in particular, for decreases in the details of imports are as numerous as the increases. Goods free of duty, indeed, show an excess against 1891 of 6,652*l.*, and a casual glance without thought might make one regard this item as accounting for the net increase in all the imports. But it is not so; the increase in the value of "Duty Free" goods imported is the result of the transfer to that class of many kinds of goods rendered duty free under the McKinley Treaty.

Exports.

The value of the exports in 1892 amounted to 117,572*l.* This exceeded the like figures in 1891 by 18,899*l.* The trade of which this increase was made up was distributed thus:—

	£
To the United Kingdom - - -	12,468
British Colonies - - - -	13,124
	25,592
Less net decreased exports to foreign countries	6,693
	£18,899

The export trade with the United States decreased in 1892 by 8,999*l.* The whole of the sugar had been, as for some years preceding, shipped to that country; but the quantity of produce was very much reduced, and prices were almost the lowest ever realized. These two causes combined to make up the reduced figures shown.

ST. VINCENT. 1892.

The following tables will show the quantities and values of the principal products of the Colony exported, and their destination during 1892. There is also a table of comparison with the average figures of the three preceding years, which owing to many fluctuations in those years will afford a better means of comparison than with a single year.

Table of the Quantities, reduced to a common standard, of the prinicpal products of the Colony exported in 1892, *and a comparison thereof with the corresponding average figures of the years* 1889–90–91.

Produce exported.	In 1892.	In 1889-91 (Average)	Increase in 1892.	Decrease in 1892.
Sugar - - - - hhds.	3,884	5,623	—	1,739
Rum - - - - puns.	566	487	79	—
Molasses - - - - - ,,	1,366	2,155	—	789
Arrowroot - - - barrels	23,433	18,373	5,060	—
Cocoa - - - - - lbs.	129,589	102,261	27,328	—
Cotton - - - - - bales	176	100	76	—

Of the principal products exported, there is some interest to be found in tracing the course of the following figures during the five years 1888 to 1892:—

Tables of Quantities of Products Exported.

—	1888.	1889.	1890.	1891.	1892.
Sugar - - hhds.	5,105	5,820	6,078	4,971	3,884
Arrowroot - barrels	15,458	16,732	20,846	17,540	23,433
Cocoa - - lbs.	73,862	89,329	102,771	114,683	129,589

By this table will be seen the upward progress of sugar production to 1890, and its hasty decline afterwards. Arrowroot and cocoa are now the main chances of the Colony. The price of arrowroot in the last two years has been unprecedented, and seems to indicate that the intrinsic value of the product is being better appreciated in the world's markets. As the product of arrowroot is almost wholly limited to St. Vincent and Natal, and the product of Natal had almost disappeared nearly the very moment when the Jamaica Exhibition produced its effects on the

exhibits colony of St. Vincent, it may be assumed that the St. Vincent arrowroot finds itself, all of a sudden, in a position of commercial good luck, with the knowledge that arrowroot production cannot be increased on the smallest scale inside of at least six months, and on a scale (for want of plants) likely to affect prices, for a much longer time; so that there is a good early future for those who have arrowroot estates.

Table of the Values of Products shown in the preceding table and similar comparison.

Produce Exported.		Value 1892.	Average 1889–91.	Increase in 1892.	Decrease in 1892.
		£	£	£	£
Sugar - - - -	hhds.	33,366	57,942	—	24,576
Rum - - - -	puns.	4,530	4,421	109	—
Molasses - - - -	,,	4,158	6,651	—	2,493
Arrowroot - - -	brls.	61,313	29,152	32,161	—
Cocoa - - - -	lbs.	2,700	2,152	548	—
Cotton - - - -	bales	1,029	520	509	—

Table of the Destination of the Principal Products of the Colony Exported in 1892.

Product.		Destination.		
		United Kingdom.	United States.	
Sugar - -	hhds.	—	3,382	
Rum - -	puns.	497	—	Venezuela. 60.
Molasses -	,,	—	—	French W. Indies. 1366.
Arrowroot -	brls.	17,008	6,224	
Cocoa - -	lbs.	73,320	—	British W. Indies. 57,269.
Cotton - -	bales	153	—	23.

13. *Shipping.*

The total number of sailing vessels entered during the year under review was 313. The tonnage of these vessels in the aggregate amounted to 13,566, their crews to 1,637.

The total number of sailing vessels cleared was 301, with a tonnage of 14,382, and crews 1,735.

The total number of steam vessels entered was 105, with tonnage amounting to 119,154 and crews 4,653.

Clearances of steam vessels were in all respects the same as of those entered.

Of the sailing vessels the nationalities were as follows:—

—	Entered.	Cleared.
British	283	271
American	10	10
Dutch	6	7
Venezuelan	11	11
Norwegian	2	1
French	1	1
Total	313	301

The 119 steam vessels entered and cleared were all British.

The number and tonnage of sailing vessels entered and cleared in 1892, as compared with 1891 are stated as follows:—

Sailing Vessels.	1891.		1892.		Decrease.	
	No.	Tons.	No.	Tons.	No.	Tons.
Entered	322	14,410	313	13,566	9	844
Cleared	330	15,377	301	14,382	29	995

The following table will show the differences in the number and tonnage of steam vessels entered and cleared as compared with the previous year —

1891.		1892.		Increase.	
No.	Tons.	No.	Tons.	No.	Tons.
101	115,992	105	119,154	4	3,162

14. *Prisons and Prisoners.*

The following table presents a comparative statement of the working of the prison during the last four years:—

Year.	Number of Commitments.	Committed for Debt.	Committed for Custody for Trial or for want of Sureties.	Committed for penal Imprisonment.	Number of Prisoners previously convicted.			Commitment for				Daily Average in Prison.	Admission to Hospital.	Daily Average on Sick List.	Number of Deaths.
					Once.	Twice.	Thrice or more.	Five Years or more.	More than One Year and less than Five Years.	More than Three Months and less than One Year.	Three Months or less.				
1889 - -	192	2	48	142	19	3	20	1	4	7	130	22·9	1	·12	1
1890 - -	170	3	48	119	4	8	10	3	8	2	106	20·0	2	·3	1
1891 - - -	176	1	40	135	16	7	9	1	3	4	127	26·25	1	·38	—

St. Vincent.
1892.

15. *Criminal Statistics.*

There were 1,346 persons summoned before the magistrates, a decrease of 134 as compared with the numbers of the previous year.

The cases were disposed of in the magistrates' courts as follow:—

Discharged for want of prosecution - -	539
Dismissed on the merits - - - -	153
Summary convictions - - - -	625
Committed for trial - - - -	29

Of the persons convicted in the magistrates' courts 493 were fined, 24 underwent imprisonment in default of payments of fines, and 44 peremptory imprisonments, 21 were whipped and 43 were bound over with or without sureties or submitted to some other trivial punishment. There were 21 convictions in the Superior Court, 11 of which were of offences against property and 10 of assault. Of the total number, 129 persons, committed during the year for the purpose of penal imprisonment, there were 50 against whom previous convictions were recorded.

16. *Savings Banks.*

The following table gives a summary of the Savings Bank transactions during the last five years:—

Year.	No. of Depositors.	Amount of Deposits.	Amount of Withdrawals.	At credit of Depositors on December 31.
		£ s. d.	£ s. d.	£ s. d.
1888 - -	833	3,516 4 5	3,035 10 0	10,318 6 2
1889 - -	920	3,865 10 3	6,019 15 11	8,640 2 7
1890 - -	956	4,607 8 11	4,224 16 2	8,797 1 4
1891 - -	938	5,215 16 8	5,474 5 9	8,714 13 3
1892 - -	946	4,843 5 6	4,750 14 2	8,957 10 6

The rate of interest allowed to depositors is 2½ per centum per annum.

17. *Crown Lands.*

In addition to the routine duties consequent on the work done up to the end of 1891, I am glad to be able to say that considerable progress has been made in the Trigonometrical Survey of the island commenced in 1891. During the year, also, 74 applicants received allotments, the total acreage surveyed being 505 acres. A

great deal more work would doubtless have been accomplished had not the duties of the Office of Director of Surveys of the Windward Islands been performed throughout the year in conjunction with those of the office of Director of Public Works of the Windward Islands, as during the first half of the year Mr. Reeve, the Director of Surveys, acted for Mr. Messervy, the Director of Public Works, absent on account of ill health, whilst during the latter half Mr. Messervy acted for Mr. Reeve, himself obliged to go home on sick leave.

The scheme is progressing favourably and the people are evincing a great desire to avail themselves of the benefit of possessing land of their own, whilst, on the one hand, lack of ready money amongst the people prevents sales from being more rapidly effected; on the other hand, the fact that applications for land are steadily received, fairly shows that the majority of applicants, while anxious to purchase lands, are delayed by having to save or by other efforts obtain sufficient money to pay the necessary survey fee, an indication, patent enough, that the advantage offered to the peasant is not unperceived.

18. *Hospitals.*

The number of patients in the Colonial Hospital at the close of the year 1891 was 59, viz., 31 males and 28 females.

The admissions in 1892 were 400, of whom 263 were males and 137 females. There were, therefore, 459 patients treated during the year, the daily average being 58·5.

There were 61 operations performed during the year, of which, it is satisfactory to note, only one case succumbed.

The following table gives the number of cases treated under the classes stated, with the number of deaths, as compared with 1891:—

Diseases treated.	1891.		1892.	
	No. of Cases.	No. of Deaths.	No. of Cases.	No. of Deaths.
General - - -	118	16	117	17
Local - - - -	291	15	284	14
Injuries - - -	54	1	58	1
Total - - -	463	32	459	32

Administrator GOULDSBURY to the MARQUESS OF RIPON.

St. Lucia,
July 19, 1893.

MY LORD,

I HAVE the honour to transmit herewith my Report on the Blue Book of St. Lucia for the year 1892.

2. I hope to be able to forward manuscript copies of the Blue Book to your Lordship by next mail.

I have, &c.
(Signed) V. SKIPTON GOULDSBURY.

The Most Hon.
The Marquess of Ripon, K.G., G.C.S.I.,
&c. &c. &c.

REPORT on the BLUE BOOK for 1892.

Taxes, Duties, and Fees.

During the year five Ordinances were passed altering or affecting the customs and excise duties.

In the early part of the year an Ordinance (No. 5) was passed giving effect to the provisions of the reciprocity clause of the McKinley Tariff Act, under which a large number of articles which theretofore had been subject to duty were admitted duty free and the duty on a considerable number of other articles of import was reduced in some cases by 25 per cent., and in others by 50 per cent., of the former duties chargeable on them.

The loss of revenue resulting from the exemptions and reductions effected by this Ordinance was estimated by the United States authorities at 2,500*l.* and by this Government at a little over 3,000*l.* per annnm.

The actual loss, however, for the eleven months of 1892 during which the Ordinance was in operation was 3,823*l.* or at the rate of 4,171*l.* per annum.

St. Lucia. 1892.

In order to compensate for the loss of revenue consequent on the McKinley Tariff Agreement, the duty on rum and spirits (except brandy) was increased. The excise duty on rum was raised, by Ordinance No. 4, from 3*s.* 4*d.* to 4*s.* per proof gallon, and, by Ordinance No. 5, the customs duty on gin, rum, whiskey, and other spirits (except brandy, the duty on which was already 8*s.*) was raised from 6*s.* 8*d.* to 8*s.* per proof gallon.

The amount realised by the increased excise duty on rum and customs duty on rum and other spirits was, for the eleven months during which the Ordinances were in operation, 2,564*l.*, or at the rate of 2,797*l.* per annum.

The amount estimated to be obtained by the increase in the excise and customs duty on rum and other spirits was not realized in consequence of the general shrinkage in trade, and the falling off in the consumption of these articles by the community owing to the scarcity of money arising from the partial failure of the cocoa crop, the low price of produce generally, and the diminution in the expenditure on public works by the Imperial and Colonial Governments.

By Ordinance No. 10 the import duty on Usine and Muscovado sugar was reduced from a penny to a halfpenny per pound, with the object of lowering the price of sugar to the consumer by introducing the element of competition between the outside markets and the sugar factories of the island, which competition had hitherto been precluded by the high import duty on sugar, and the absence of which had resulted in the retail price of sugar being higher in St. Lucia than even in England and in other countries which do not produce sugar.

By Ordinance No. 17 the holder of any licence under the Liquor License Ordinance was prohibited from selling any spirits of less strength than 25 per cent. under proof; and by Ordinance No. 18, the *ad valorem* duty on articles subject to it was increased from 10 per cent. to 15 per cent., this latter Ordinance having been passed in consequence of the serious falling off in the revenue which had taken place during the year.

Revenue and Expenditure.

The revenue and expenditure of the Colony for the year 1892 amounted to 48,297*l.* and 54,934*l.* respectively, the expenditure thus exceeding the revenue by 6,637*l.*

The estimated revenue and expenditure were respectively 52,420*l.* and 53,846.

The actual revenue fell short of the estimated revenue by 4,123*l.*, and the actual expenditure exceeded the estimated expenditure by 1,088*l.*

The revenue for 1892 fell short of that for the previous year by 1,029*l.*, and the expenditure exceeded that for 1891 by 1,028*l.*

In the following table are shown the principal heads of revenue, under which there was a considerable increase or decrease in 1892 compared with the preceding year :—

Heads of Revenue.	Increase.	Decrease.
	£	£
1. Customs	—	4,261
2. Port, Harbour, and Wharf Dues	—	304
3. Licences, Excise, &c.	867	—
4. Fees of Court, office, &c.	300	—
5. Miscellaneous	—	539
6. Materials and Stores (sale of)	276	—
7. Land Sales (transferred from special fund to credit of General Revenue)	488	—

The subjoined table shows the principal heads of expenditure under which there was a considerable increase or decrease in 1892, compared with 1891 :—

Heads of Expenditure	Increase.	Decrease.
	£	£
1. Treasury and Customs	—	204
2. Audit Department	—	423
3. Port and Marine	576	—
4. Education	353	—
5. Miscellaneous—Military Duty allowance, &c.	1,795	—
6. Post Office	444	—
7. Public Works Department	—	948
8. Materials and Stores	—	2,125
9. Public Works Recurrent	—	856
10.* Crown Lands Department	772	—

* New head of expenditure formerly shown under head "Colonial Surveyor."

The decrease in the revenue for 1892, compared with the previous year, was the result of several causes, the principal being the operation of the McKinley Tariff Agreement, the large

reductions in expenditure on Public Works by both the Imperial and Colonial Governments, the partial failure of the cocoa crop, the low price obtained for produce, and the general declension in trade.

The increase in the expenditure for 1892 as compared with the preceding year, viz., 1,028*l.*, was chiefly due to the purchase of new buoys and moorings for Castries Harbour, the erection of leading mark lights, the increased military duty allowance, the increased subsidy to the coasting steamers, and the increased contribution to the Imperial postal subsidy.

The revenue and expenditure for the year 1892 compare as follows with the revenue and expenditure for 1891, and with the average of the revenue and expenditure for the preceding five years 1886–90:—

—	1892.	1891.	Average for five years 1886–90.
	£	£	£
Revenue - - - -	48,297	49,326	43,956
Expenditure - - - -	54,934	53,906	44,481

Assets and Liabilities.

The subjoined statement shows the assets and liabilities of the Colony on the 31st December 1892:—

Assets.		Liabilities.	
	£		£
Cash - - - -	130	Savings Bank Deposit Account -	7,704
Colonial Bank Current Account -	3,071	Castries Town Fund - -	439
" Deposit Account -	3,500	Towns and Villages Fund - -	1,262
Investments on account of Savings Bank - - - - -	5,000	Police and Revenue Officers' Reward Fund - - - -	1,776
Investments on account of Police and Revenue Officers' Reward Fund - - - - -	1,504	Imperial Post Office Reward Fund -	23
Miscellaneous Advances -	12,253	Post Office Money Order Account -	296
London and Westminster Bank -	76	Grenada Intercolonial Account -	1,125
Bank of England - - -	3	St. Vincent Intercolonial Account -	6
		Immigration Fund - - -	3,452
		Crown Agents' Current Account -	10,891
	£25,537	Sinking Fund - - - -	79
Stores, Surplus Account -	1,849	Balance Surplus Assets - -	333
	£27,386		£27,386

Public Debt.

The public debt of the Colony at the end of the year amounted to 147,850*l.*, and was made up as shown below :—

Debts.	Amount due at end of year 1892.	Amount of original Debt.	Source from which interest and Sinking Fund are paid.
	£	£	
1. Central Sugar Factory Loans -	30,800	40,000	General Revenue.
2. Immigration Loans - -	21,600	23,000	Immigration Fund.
3. Harbour of Castries Improvement Loans - - -	84,000	84,000	General Revenue.
4. Public Works Loans - -	11,450	11,450	Do.
	£147,850	£158,450	

The sum of 1,000*l.*, was paid off during the year by the redemption of drawn debentures. The public debt at the end of the year was equal to a little over three times the amount of the revenue for the year, and represented an indebtedness equal to 3*l.* 8*s.* 3*d.* per head of the population.

Savings Bank.

The deposits in the Savings Bank during the year 1892 amounted to 6,955*l.*, the number of depositors at the end of the year, being 905, thus giving an average of 7*l.* 13*s.* 8*d.* per depositor. The withdrawals amounted to 9,212*l.*

The large excess of the withdrawals over the deposits was caused by the withdrawal and transfer to India of the amounts deposited by the Indian immigrants who were repatriated towards the latter end of the year.

The total amount to the credit of depositors at the close of the year was 7,704*l.*

Municipalities and other Public Bodies.

The town of Castries is governed by an elective Town Board consisting of eight members. All the other towns and villages are under the supervision and management of Town Wardens, acting under the directions and control of the Governor in Council.

St. Lucia. 1892.

The total revenue of the towns and villages for the year 1892 amounted to 3,820*l.*, and the expenditure to 5,265*l.*

The revenue is derived principally from house tax, the rates being levied upon the assessed annual rental, or value for rental, of the property.

The rate varies from 5 per cent. in some of the villages to 8 per cent. in others and in the towns of Castries, Soufriére, and Vieux-Fort.

Military.

The only expenditure of the Colony in respect of the troops was 1,974*l.*, paid as an allowance in lieu of duty-free goods.

The Imperial expenditure during the year for military purposes amounted to 34,613*l.*

Public Works.

The Public Works executed during the year consisted as usual of works of new construction and of works of maintenance and repair.

The following were the principal works of new construction carried out during the year:—

The construction of a road leading from the Morne Road to site of the proposed new Government House; the erection of leading marks and lights to indicate the line of safe entrance into the harbour; the addition of timber fenders to the North Wharf; the construction of a new jetty at Soufriére; and the erection of village latrines.

Under the head of maintenance and repairs, the following may be enumerated as the principal works executed:—

The upkeep and repair of roads and bridges; general repair of Government buildings, that of the Victoria Hospital being the most extensive; and the repair of the jetties at Vieux Fort, Laborie and Choiseul.

The following works, which partook partly of the character of new construction and partly of that of repair, were also executed during the year, viz.:—The construction of a new face to the Western Wharf by the erection of a new line of piling in the front of the old facing, which was weak and defective, and the deepening of the water alongside; the extension of the jetties at Vieux Fort and Choiseul; and the laying down of new moorings in Castries Harbour.

Of all the works executed during the year the refacing of the Western Wharf was the most extensive and important, involving an outlay of 4,889*l.*, ensuring the stability of the wharf for years, and, by permitting of the deepening of the water alongside,

enabling vessels up to 18 feet of draught to utilize this wharf by loading and discharging cargo at it.

The amount spent on Public Works during the year was 16,266*l.*, of which expenditure 7,370*l.* was paid out of General Revenue and the balance of 8,896*l.* out of Public Works Loans.

Legislation.

Eighteen Ordinances were passed by the Legislative Council during the year, and these, together with an Ordinance (Coroners' Ordinance, 1891) passed on the 29th December 1891, were promulgated in the Colony during the year under review.

The titles of these Ordinances are as follows :—

(1.) An Ordinance to make provisions for deterring prisoners from persistently malingering, and to promote prison discipline.

(2.) An Ordinance to repeal the Castries Loan Ordinance, 1885.

(3.) An Ordinance to amend and consolidate the law relating to Coroners and Fire Inquiries.

(4.) An Ordinance to amend the Tax Ordinance, 1875.

(5.) An Ordinance to amend the Customs Tariff Ordinance, 1881.

(6.) An Ordinance to amend the Savings Bank Ordinance, 1871.

(7.) An Ordinance to amend the Liquor Licence Ordinance, 1886.

(8.) An Ordinance to amend the Spirits Ordinance, 1886.

(9.) An Ordinance to amend the Harbour Master Ordinance, 1888.

(10.) An Ordinance to amend the Customs Tariff Ordinance, 1881.

(11.) An Ordinance to amend the Army (Colonial Allowance) Ordinance, 1888.

(12.) An Ordinance to provide for the Enrolment of Coast Defence Volunteers.

(13.) An Ordinance to legalise the expenditure of certain sums of money paid from the General Revenue for the service of the year 1891, in addition to the sums already sanctioned under the Appropriation Ordinance, 1891.

(14.) An Ordinance to amend the Castries Ordinance, 1888.

(15.) An Ordinance to naturalise Gottfried August Ludwig Graf as a British subject.

(16.) An Ordinance to provide for the service of the Colony of Saint Lucia for the year 1893.

(17.) An Ordinance to amend the Liquor Licence Ordinance, 1886.

(18.) An Ordinance to repeal the Customs Tariff Amendment Ordinance, 1889, and to make other provisions in place thereof.

(19.) An Ordinance to declare the terms and conditions applicable to Loans authorised to be raised by the Government of Saint Lucia, and to provide for the creation of Saint Lucia Inscribed Stock.

Of the Ordinances promulgated during the year the most important were :—The Coroners' Ordinance, 1891, which amends and consolidates the law relating to Coroners and to Fire Inquiries; the Customs Tariff Ordinance, 1881, Amendment Ordinance, 1892, which was passed to give effect to the provisions of the reciprocity clause in the McKinley Tariff Act; and the General Loan and Inscribed Stock Ordinance, 1892, which provides for the creation of St. Lucia Inscribed Stock, and for the conversion into Inscribed Stock to be issued under the provisions of this Ordinance of all or any of the St. Lucia Loans, whether in the form of Stock or Debentures.

Civil Establishments.

His Excellency Sir Walter Hely-Hutchinson was absent on leave from the Windward Islands from the 9th September to the 8th November, during which period I administered the General Government.

Mr. P. J. K. Ferguson, Attorney-General, administered the Government of St. Lucia during my absence at Grenada from the 9th to the 30th September, to which Colony I had proceded to be sworn in an Administrator-in-Chief of the Windward Islands.

Mr. Low, who had been acting as Treasurer in Grenada, resumed his duties as Stipendiary Magistrate of the First District on the 19th of August. He left this Colony on the 6th of December to assume his duties as Commissioner of Tobago, to which post he had been appointed.

Mr. Dix, Magistrate of the Second District, was appointed to act as Magistrate of the First District consequent on Mr. Low's departure for Tobago; and Mr. Elliot, the Magistrate of the Third District, performed the duties of Magistrate of the Second District in conjunction with his own, on Mr. Dix being removed to the First District.

Captain Hughes, the Chief of Police, left the Colony on leave on the 20th of May, and during his absence Mr. Laborde, Chief of Police at St. Vincent, performed his duties. Captain Hughes was subsequently appointed to the command of the police at the Gambia, and Mr. Granville Ponsonby was appointed Chief of Police and Inspector of Prisons.

Mr. Ponsonby arrived in the Colony on the 20th of December, and took over the charge of the Police and Prisons Departments

from Mr. Laborde. Mr. Bartlett, Keeper of the Royal Gaol, resigned his appointment in October, and Mr. Lash, Superintendent of Prisons, Grenada, performed the duties of keeper until the arrival in November of Mr. Heels, who had been appointed Keeper of the Gaol *vice* Mr. Bartlett.

Legislative Council.

Mr. Ozanne left the Colony on leave in January, and Mr. Battam was appointed to act during his absence.

Mr. Ozanne resigned his seat in March, and Mr. Battam was appointed to the vacancy.

Mr. C. Chastanet was absent for six months, during which time Mr. Graff acted.

Mr. J. Macfarlane resigned his seat in July, and Mr. W. Peter as appointed to the vacant seat.

Mr. E. DuBoulay was on leave for six months; Mr. Henry Devaux acted during his absence.

Mr. S. Barnard was appointed to the Council in October.

Mr. Messervy was appointed to act during the absence on leave of Mr. Reeve in November.

Pensions.

With the exception of the death of Mr. J. W. King, formerly Sub-Inspector of Revenue and Police, and who was the recipient of a pension of 40*l.* per annum, there was no change in the pension list during the year.

Population.

Both the birth-rate and death-rate for the year 1892 were below those for the preceding year. The gain to the population resulting from the excess of births over deaths was 602, raising the number of the population by this natural increase to 43,310 at the end of 1892.

Immigration.

The report for 1892 of the Protector of Immigrants shows that there were 522 indentured Indian coolies in the Colony at the close of the year.

The number of births and deaths during 1892 were respectively 25 and 16, and one indentured coolie was sent back to India.

The birth-rate was 4·6, and the death-rate 2·8 per cent., showing a higher birth-rate and a lower death-rate than the averages for previous years.

The birth and death rates among the indentured coolies compare with those for the general population as follows :—

	Per-centage.	
	Coolies.	General Population.
Birth-rate - - - -	4·6	3·76
Death-rate - - -	2·8	2·85

It will be observed from the above table that both the birth and death rate were higher among the coolies than among the general population, the death-rate being, however, only fractionally (0·45 per cent.) higher.

In August 137 time-expired immigrants, including children, were repatriated, having sailed in the ship "Jumna" for India.

It is worthy of note that these return immigrants carried away as savings the very considerable sum of 2,138*l.* One coolie had to his credit as much as 170*l.*, another had 143*l.*, and two were the possessors of above 100*l.* each.

In 1891, 627 acres of Crown lands in the neighbourhood of Castries were reserved for the purpose of forming an Indian settlement, and several grants for lots varying from five to ten acres in extent were issued during the year 1892. The land is granted on very reasonable terms, the price being only 1*l.* an acre, the payment being by instalments spread over a period of five years.

The immigrants who have taken up lots on the Reservation have begun to clear and cultivate their properties, and such have been their diligence and industry that some of them have already been able to secure good crops, the surplus of which they disposed of at remunerative prices. It is a fact of some interest and significance, that amongst these crops were to be found potatoes (English) of a most excellent quality; and also of interest to know that two full crops at least of this tuber could be grown and gathered in the twelve months. I hope to be able before long to establish the nucleus of another Indian coolie settlement in the neighbourhood of Vieux Fort at the south end of the island, and am having lands surveyed in that locality for that purpose.

Education.

All the schools in the Colony with two exceptions are primary schools. There were 33 primary schools on the list of assisted schools during the year. Of these 21 were Roman Catholic, 4 were Government, 4 were Indian Mission, 1 was Anglican, 1 was Wesleyan, and 2 were private aided schools.

During the year one Indian Mission school, that at Crown Lands, was closed, and five additional schools were placed on the list of assisted schools, three of them being Roman Catholic and two Indian Mission.

Four of the primary assisted schools are infant schools; two of them being in Castries, and two in Soufriere.

The Inspector of Schools reports that "the general condition of "the schools shows steady progress in improvement," and there is every reason to believe that the improvement will become accelerated as the children acquire and become more familiar with the English language.

The work of education in this Colony must necessarily be one of somewhat slow progress. It has, at least, one great difficulty to contend with, namely, ignorance on the part of both the parents and children of the language in which the latter are taught.

It is, however, satisfactory to know that progress is being made, and a hopeful reflection that the main factor in the retardation of advancement will be a constantly decreasing quantity until, in a generation or two, it finally disappears.

From the subjoined statement some idea may be gathered as to the state of primary education in the Colony :—

Number of primary schools in the Colony -	23
Total population of the Colony - -	43,310
Total number of children on school rolls at end of year - - - - - - -	4,156
Average attendance - - - -	2,357
Number presented for examination - -	1,644
Number passed in two subjects - - -	1,330
Centesimal proportion on rolls to total population - - - -	9·59
Percentage of attendance of number on rolls -	56·7
Percentage of attendance passed in two subjects	56·4
Percentage of those presented which passed in two subjects - - - -	80·9

Vital Statistics.

There were 1,760 births and 1,158 deaths registered during the year; the difference, viz., 602, being the natural increase of the population for the year. This increase raised the population to 43,310 at the end of 1892.

Of the 1,760 births 907 were male and 853 female.

The illegitimate births outnumbered the legitimate by 320, and constituted 59·09 per cent. of the total births. In the previous year the illegitimate births formed 61·90 per cent. of the total births

The still births numbered 156, and amounted to 9·73 per cent. of the live births, or one in every 11·28 of the total births.

The birth-rate, exclusive of still births, bore the proportion of 3·76 per cent. to the population. The percentage for 1891 was 4·05.

The foregoing figures for 1892 compare with those for the year 1891 as follows :—

Year.	Live Births.	Still Births.	Total Births.	Legitimate.	Illegitimate.	Percentage of legitimate Births.	Percentage of illegitimate.	Birth-rate per cent. of population.
1891 - -	1,771	155	1,929	735	1,194	38·10	61·90	4·05
1892 - -	1,604	156	1,760	720	1,040	40·91	59·09	3·76

It will be seen from the above table that the total births for the year fell short of those for 1891 by 169, and that the percentage to population decreased from 4·05 to 3·76. On the other hand, it will be observed that the proportion of legitimate to illegitimate births rose from 38·10 per cent. in 1891 to 40·91 per cent. in the year under review.

The deaths during the year numbered 1,158, being 37 less than in 1891. The death-rate (exclusive of still-births) was 2·35 per cent. of the population. In the preceding year it was 2·37. The death-rate for 1892 was about the normal rate, as the average death-rate for the previous five years 1887–91 was 2·26.

The deaths of children under one year of age amounted to 35·23 per cent. of the total deaths.

In 1891 the percentage was 36. The rate of infant mortality is very high, and will continue excessive so long as the several causes which contribute to its existence remain in unabated operation. In my report for 1891, I enumerated some of these causes, naming illegitimacy as the principal one.

The number of marriages celebrated during the year was 246. This number compares very unfavourably with that for 1891, viz.: 396, and is 70 less than the average for the three years 1889–91.

Imports and Exports.

Imports.

As compared with the previous year there was a serious falling off in the imports during the year 1892, the decrease, expressed in value, amounting to 49,153*l.*

The total value of the imports in 1892 only reached the sum of 173,025*l.*, whereas in the years 1890 and 1891 the value of the imports amounted to 206,693*l.* and 222,178*l.* respectively. If, however, the comparison be extended over a larger number of years, a different result is obtained.

Taking the average of the five years 1887–91 the average yearly value only amounts to 171,481*l.*, being 1,544*l.* less than the value of the imports for the year 1892. The decrease, therefore, in the year 1892 should be regarded, at least partly, more as a reversion to a normal or average volume of imports than a retrogression of the Colony in the way of trade and commerce.

Of the total imports, amounting to 173,025*l.* in value, 103,859*l.* worth came from the United Kingdom; 30,360*l.* from British Colonies; and 38,806*l.* from foreign countries; of which last named amount the United States of America contributed 22,030*l.*

The following table enumerates the imports which show an increase or decrease of 200*l.* or over in value in 1892, compared with the previous year and the amount of the increase or decrease:—

Articles.	Amount of increase in 1892 compared with 1891.	Articles.	Amount of decrease in 1892 compared with 1891.
	£		£
Ale, beer, porter &c. -	238	Animals: Cattle and oxen	553
Animals: Sheep - -	219	„ Mules and asses	2,624
Bloomer - - -	280	Biscuits - - -	228
Cement - - -	302	Butter: Oleomargarine -	255
Cutlery - - -	203	Candles: Sperm -	328
Wines - - -	226	Cheese - - -	668
		Coals - - -	2,827
		Coffee - - -	314
		Confectionery - -	348
		Cottons and woollens -	3,741
		Fish, salted and dried -	1,937
		Flour, Wheat - -	2,045
		Haberdashery - -	1,515
		Hardware - -	1,113
		Leather: Boots and shoes	790
		Machinery and agricultural implements -	1,470
		Manures - - -	1,422
		Medicines - -	267
		Machinery for coasting steamers - -	357
		Oats and bran - -	217
		Paints and varnish -	273
		Preserves - -	800
		Rice - - -	2,103
		Shingles - - -	269
		Silks and satins - -	645
		Soap - - -	699
		Wood—pitch and white pine - - -	639

Exports.

The value of the exports for 1892 was 179,056*l.*, showing a decrease of 2,447*l.* compared with the preceding year, but an

increase of 22,881*l.* compared with the average yearly value of the exports for the five years 1887–91.

In the following table are shown the articles of export in which an increase or decrease of 200*l.* or over in value occurred in 1892 compared with the previous year, and the amount of such increase or decrease :—

Articles.	Amount of increase in 1892 compared with 1891.	Articles.	Amount of decrease in 1892 compared with 1891.
	£		£
Ammunition - -	370	Coals - - -	8,780
Rum - - -	320	Cocoa - - -	5,188
Sugar : Usine - -	15,344	Corn - - -	332
Molasses - - -	2,246	Farine manioc - -	487
		Mangoes - -	1,696
		Rice - - -	1,115
		Iron, Galvanized -	903
		Sugar, Muscovado -	3,597
		Woods, Logwood -	1,334

It will be observed that, as compared with the previous year, there was a large increase in the value of the Usines sugar, and a considerable decrease in that of the Muscovado sugar, exported during 1892, and that a serious falling off occurred in the case of cocoa. This latter decrease is attributable to the shortness of the crop, owing to the season having been a very unfavourable one for cocoa.

The mangoe crop was also a very poor one, and resulted in a falling off to the amount of 1,696*l.* in the value of the exports of this fruit as compared with the preceding year.

The subjoined table exhibits a comparative statement of the value of the exports in 1892 of the three principal articles of exports, and the average yearly value of the exports of these articles for the preceding ten years 1882–91.

Articles.	Value.		Increase in 1892 over average for 10 preceding years.	Decrease in 1892 below average for 10 preceding years.
	1892.	Average for 10 years 1882–91.		
Sugar :	£	£	£	£
Usine - - -	76,214	48,097	28,117	—
Muscovado - -	14,656	55,926	—	41,270
Molasses - -	7,580	6,559	1,021	—
Cocoa - -	23,470	18,335	5,135	—
	121,920	128,917	34,273	41,270

It will be observed from the above statement that, as compared with the average for the preceding ten years, there was an increase in the value of the exports of Usine sugar, molasses, and cocoa amounting in the total to 34,273*l.*, and a decrease in that of the export of Muscovado sugar amounting to 41,270*l.*, showing a difference in the way of decrease in the year under review of 6,997*l.*

Of the total exports amounting to 179,056*l.* in value 44,757*l.* worth were exported to the United Kingdom; 7,153*l.* to British colonies, 84,446*l.* to foreign countries, of which last-named amount the United States absorbed 56,402*l.*, and the remainder, viz., 42,700*l.*, was the value of the bunker coal exported.

The value of the exports in 1892 exceeded that of the imports by 6,031*l.*; whereas, in the preceding year the position was reversed, the value of the imports exceeding that of the exports by 40,675*l.*

Shipping.

Six hundred and one vessels entered, and the same number cleared, at the Port of Castries during the year. Of those that entered 246 were sailing and 355 steam vessels; and of those that cleared 249 were sailing and 252 steam vessels.

The aggregate tonnage of the vessels entered during the year amounted to 398,249 tons.

The number of vessels which entered in 1892 fell short of that for 1891 by 50, 42 fewer sailing and 8 fewer steam vessels entering in 1892; and there was a decrease of 32,538 tons in the aggregate tonnage.

Of the sailing vessels, 229 were with cargo, and 17 were in ballast; and of the steam vessels 157 were with cargo and 198 were in ballast.

Of the 355 steam vessels which entered during the year, 109 called for the purpose only of taking in bunker coal, and 68 regular traders coaled, making a total of 177 steamers which coaled at this port during the year.

The 246 sailing vessels which entered were composed of vessels of the following nationalities:—British 200, French 25, Italian 2, Danish 2, American 5, Dutch 11, Norwegian 1; and the 355 steam vessels which entered were made up of 313 British, 3 French, 4 Russian, 3 Belgian, and 3 German.

The subjoined statement shows the number of vessels and amount of tonnage entered and cleared during 1892, and the averages for the previous five years.

—	1892.		Average for five years 1887–91.		Increase in 1892 over average for five preceding years.		Decrease in 1892 compared with average for five preceding years.

Post Office.

During the year 1892 there was a notable increase in the transactions of the Post Office, compared with previous years, 48,471 letters and post-cards having been despatched to, and 47,423 letters and post-cards having been received from, the United Kingdom and foreign countries, and 22,617 inland letters and post-cards having passed though the Post Office, making a total of 118,511 letters and post-cards dealt with.

The following comparative statement shows the number of letters, post-cards, newpapers, &c. dispatched and received each year for five years 1888–92:—

1888.		1889.		1890.		1891.		1892.	
Letters and Post-cards.	Papers and Books.	Letters and Post-cards	Papers and Books.	Letters and Post-cards.	Papers and Books.	Letters and Post-cards.	Papers and Books.	Letters and Post-cards.	Papers and Books.
75,391	35,[illegible]14	86,363	56,961	90,743	59,523	102,997	87,998	118,511	94,036

Money orders to the amount of 4,353*l.* were issued, and to the amount of 994*l.* were paid, during the year, these sums being a considerable increase on the transactions of the previous year.

The following were the receipts from the sale of stamps, commissions on money orders, &c. :—

	£
Stamps sold - - - - -	2,167
Unpaid letters delivered - - -	28
Commission on money orders - - -	70
Rent of letter boxes - - - -	27
	£2,292

being 365*l.* in excess of the amount received in the year 1891.

Crown Lands.

Grants of Crown lands to the number of twelve in the country and five in towns were made during the year, the total acreage granted being 75¼ acres.

There were 96 applications for grants during the year, the lots applied for varying from 5 to 10 acres. Owing to the long absence from the Colony of the Director of Surveys, partly on sick leave and partly on duty in St. Vincent and Grenada, as much progress as could be wished was not made in dealing with the many applications for Crown grants.

Gaols and Prisoners.

The Royal Gaol, Castries, is a military as well as a general prison, soldiers undergoing a sentence of not more than 14 days being confined therein. It is also used as a place of temporary detention for soldiers undergoing longer terms of imprisonment, pending transfer to Barbados.

The sanitary state of the gaol was satisfactory, and no disease of an epidemic nature occurred during the year.

The number of persons committed to prison in 1892 was 579, including 43 military prisoners. Of the number committed, 451 were committed for purposes of penal imprisonment, and 128 for safe custody till trial, or for want of security. There were no committals for debt.

The daily average number in prison was 49·65, being 1·15 in excess of the average for the preceding year.

There were 18 admissions to hospital, and the daily average on the sick list was 1·70.

There were 3 deaths during the year, the same number as in 1891.

The following comparative table shows the foregoing particulars for the years 1890, 1891, and 1892 respectively:—

Year.	Total number committed.	For debt.	For safe custody.	For purposes of penal imprisonment.	Number of those committed who have been formerly convicted.			Daily average number in prison.	Number of admissions into hospital.	Daily average on sick list.	Number of Deaths.
					Once.	Twice.	Thrice or more.				
1890 - - -	460	19	119	341	49	11	37	50·77	10	1·61	*2
1891 - - -	547	7	127	413	56	40	57	48·50	21	2·26	3
1892 - - -	579	—	128	451	45	29	60	49·63	18	1·70	3

* One executed.

It will be seen from the foregoing figures that the commitments during the year were in excess of those respectively for 1890 and 1891, and that, while the re-convictions were more numerous than those for 1890, they were fewer than those for 1891.

The increase in the number of commitments in 1892 as compared with the previous year was made up of commitments of soldiers for military offences.

Corporal punishment was awarded four times during the year. The total number of lashes inflicted was 45.

Criminal Statistics.

As compared with the preceding year, there was an increase of 92 in the number of offences reported to the police or the magistrates during 1892, the number amounting to 1,691, against 1,599 for the previous year.

The number of persons apprehended by the police or summoned before a magistrate was slightly in excess of the figures for 1891, and largely in excess of the average for the five years 1886–90.

The number of persons summarily convicted was 1,143, and the number committed for trial in the Superior Courts 23. Of the number of persons committed for trial in the Superior Courts, three were not indicted, twowere discharged for want of prosecution, a *nolle prosequi* was entered in one case, eight were convicted, and nine were acquitted.

The following comparative table shows the number of offences, apprehensions, convictions, &c. in 1892 and 1891 respectively, and the averages for the five years 1886–90:—

—	1892.	1891.	Average for Five Years, 1886–90.
Number of Offences reported to Police	1,691	1,599	1,286
Number of persons apprehended by police or summoned before the magistrate	2,015	2,035	1,587
Number of summary convictions	1,143	1,167	743
Number of persons committed for trial in the Superior Courts	23	20	32
Number of persons acquitted in Inferior Courts	849	848	813
Number of persons acquitted in Superior Courts	9	3	11
Percentage of convictions in Inferior Courts	52	53	48
Percentage of convictions in Superior Courts	47	79	65

Hospitals.

As in my report for 1891, I am able to state that the sanitary condition of the hospitals was very satisfactory.

With the exception of the prevalence for a short time in the early part of the year of a mild type of influenza, no disease of an epidemic nature appeared in the Colony during 1892.

There were 2,809 patients admitted into the hospitals (exclusive of the Yaws Hospital) during the year, making with those remaining in hospital from the preceding year, viz., 171, a total of 2,980 patients treated. Of this number 2,631 were discharged cured, 81 were discharged relieved, and 134 died.

Of the 2,980 patients treated in the hospitals during the year 975 were cases of malarial fever.

As in the previous year, the type of the disease was of a mild nature, and the mortality was but slight, being only 1·02 per cent. of the number treated. The deaths amongst the total number of patients treated in hospital during the year were at the rate of 4·49 per cent.

Yaws Hospital.—There were 55 patients admitted into the Yaws Hospital during the year, which, with the 27 patients remaining in hospital at the close of 1891, made a total of 82 cases treated.

Of the 82 cases treated 38 were discharged cured, 1 was discharged uncured, and 4 died; the deaths being at the rate of 4·88 per cent. of the number treated.

Dispensaries.—The number of persons who received medical aid at the Dispensaries during the year, was 8,917, being 612 in excess of the number treated in the year 1891. The principal diseases treated were malarial fevers and diseases of the digestive system.

Poor Asylum.—There were 78 destitute persons admitted into the Poor Asylum, Castries, during the year, which number, with the 38 inmates remaining over from 1891, makes a total of 116 destitute persons who received food, shelter, clothing, and medical attendance in the institution during 1892. Many of those remaining over from the previous year, and of those admitted in 1892, were afflicted with chronic or incurable diseases. Of the number (116) who were afforded aid in the institution during the year, 52 were discharged relieved, and 27 died, leaving 37 remaining in the asylum at the end of the year under review.

The death-rate was 23·27 per cent., a lower death-rate than that for previous years.

The Medical Officer of the Poor Asylum reports that, whereas formerly there was an excessive mortality from diarrhœa amongst the inmates of the asylum, a marked decrease in the number of deaths from that disease has taken place since 1890, in and from which year the inmates were and have been supplied with rain water stored in a concrete tank, instead of, as formerly, with river water drawn from the Castries town hydrants.

Lunatic Asylum.—This asylum is only a temporary one in which lunatics are detained until they can be transferred to the General Lunatic Asylum at Grenada.

Four lunatics were admitted into the asylum in 1892. Of these two were discharged cured, one was discharged as "relieved," and one died.

The total number of cases treated during the year in the hospitals and asylums and at the dispensaries was 12,101, at a total cost (including salaries of medical officers, hospital attendants, &c.) amounting to £6,105, which gives an average of 10*s.* 1*d.* per case, and an average of 2*s.* 10¾*d.* per head of the population.

Botanical Station.

The work carried out during the year was principally of a routine nature, and the gradual filling up of the swampy plot of land adjoining the garden was proceeded with.

The growth and condition of the various trees and shrubs were satisfactory, and the plantations of cocoa and nutmegs throve exceedingly well.

The proceeds of the sale of plants, seedlings, fruit and flowers amounted to 36*l.*

Meteorology.

The mean temperature in the shade, as shown by the observations taken at the Morne at an elevation of 790 feet above sea level, was 76·7°. The mean maximum temperature for the year was 82·7°, and the mean minimum 70·8°.

The highest monthly mean maximum temperature (84·3°) was in September, and the lowest mean monthly minimum (69·0°) in February.

The absolute maximum temperature (89·2°) occurred in the months of January, August, and September; and the absolute minimum (59·6°) in August.

The total rainfall for the year amounted to 109·67 inches, the rains having been unusually abundant, and in excess of the average yearly rainfall.

The heaviest monthly rainfall (20·12 inches) occurred in June, and the lowest (2·67 inches) in February.

General Observations.

The year under review was not a very prosperous one for St. Lucia. The cocoa crop was a short one, and the price of sugar was low. Although the sugar crop was not a deficient one the low price obtained for it made it a poorly remunerative one.

Among minor exports that of managoes was comparatively small, in consequence of an extensive failure in the crop of that fruit.

Owing to causes which I have enumerated elsewhere in this report, the revenue for the year fell short of the estimated revenue by a considerable sum, and there was a general falling off in the trade of the Colony throughout the greater part of the year.

The prevalence of cholera in Europe necessitated the adoption of quarantine precautions and restrictions in this as in the other West Indian Colonies, but as the period of quarantine for vessels arriving from infected or suspected ports was of a shorter duration than that fixed by the other West Indian Islands, St. Lucia was placed in the invidious and inconvenient position of being quarantined by our neighbours, both British and foreign.

It would, I think, be very expedient and advisable if all the West Indian Colonies adopted similar quarantine periods in cases of epidemics.

In conclusion, I am glad to be able to report that cocoa is being largely planted in many parts of the island; and as the price of that commodity is a very remunerative one, and the soil

ST. LUCIA. 1892.

and climate of St. Lucia are well adapted for its growth, there is every reason to hope that prosperous days await the Colony in the not far distant future.

No. 108.

ST. VINCENT.

(For Report for 1892, *see* Colonial Report [Annual] No. 84.)

Sir Chas. Bruce to the Marquess of Ripon.

My Lord, Grenada, May 26, 1894.

I have the honour to transmit the Blue Book of the Colony of Saint Vincent for the year 1893, together with the report of the Administrator.

I have, &c.
(Signed) Chas. Bruce.

1. *Taxes, Duties, and Fees.*

No changes were made under these heads during 1893, with the exception of an Order in Council, which exempted from import duty "all official goods for Foreign Consulates," in accordance with the provisions of section 3 of Ordinance No. 3 of 1893.

2. *Revenue and Expenditure.*

Revenue.

The Revenue for the year was 27,914*l.*, being just slightly in excess of he amount estimated for.

The only head which showed a falling off to any extent was Customs, 910*l.*

This was balanced by increases under Licences and Internal Revenue, 410*l.*, and Post Office, 555*l.*

Small increases and decreases under various other heads practically balancing each other.

The fall in Customs Revenue is due to general depression in trade during the year, especially in the dry goods trade.

Expenditure.

The total expenditure for the year was 29,439*l.*, 1,525*l.* in excess of the Revenue, or 1,676*l.* in excess of the estimate for the year.

The heads under which increases show are :—

Post Office, 596*l.*, due to increase of subsidy and transit charges.

Telephones, 156*l.*, additions to staff.

Audit, 103*l.*, two years' charge paid in 1893.

Hospitals, 204*l.*, necessary additional maintenance.

Miscellaneous, 132*l.*—Official Telegrams, 96*l.*; Town rates on Government buildings, 36*l.*

Public Works Extraordinary, 412*l.*—Repairing Layou Public Buildings, 182*l.*; Buccament Cemetery, 60*l.*; Experimental Distillery at Lower Diamond, 172*l.*

3. *Public Debt.*

At the close of 1893 the Public Debt of the Colony was 16,240*l.*, as against 15,250*l.* at the end of 1892.

The increase of the debt by 990*l.* is due to the raising of 1,500*l.* new debentures under the Kingstown Water Supply Loan Ordinance, 1889, necessary to refund the general revenue which had advanced the amount necessary to complete the new Waterworks, and also by the issue of debentures for a new loan of 1,000*l.*, authorised by the Georgetown Water Supply Loan Ordinance of 1893, which sum was required to repay the Treasury for having advanced to the Town of Georgetown 1,000*l.* out of the Revenue of the Colony; except the debt for Crown lands, all the other loans have been steadily reduced.

The following is a statement of the Public Debt at the end of 1893 :—

	£
Government House Loan - - -	1,520
Public Buildings Loan - - -	400
Crown Lands Expenditure Loan - -	1,920
Public Loan - - - - -	1,850
Immigration Loan - - - -	2,750
Kingstown Water Supply Loan - -	6,800
Georgetown Water Supply Loan - -	1,000
	£16,240

4. *Public Works.*

The expenditure on Public Works during the year was 3,382*l.*, a sum very similar to the previous year, without counting the cost (about 1,000*l.*) of the telephone line to Windward; 1,121*l.* was spent on the roads.

Among the principal works undertaken in 1893 were the following:—

General repairs to public buildings.
Repairs to Government Office, Kingstown.
Re-building Layou Police Station.
Fitting up a close still at Lower Diamond.
Sanitary improvements, Colonial Hospital.
Fixing railings, Kingstown Jetty.
New Cemetery, Buccament.
Repairs, Kingstown Prison.

5. *Legislation.*

Ten Ordinances were passed in 1893, the titles of which are as follows:—

No. 1. To legalize the expenditure of certain sums of money paid from the general revenue for the service of the year one thousand eight hundred and ninety-one, in addition to the sums granted by the "Appropriation Ordinance, 1891."

No. 2. To provide for the service of the year one thousand eight hundred and ninety-three.

No. 3. To provide for the exemption from import duty of official goods imported for the use of foreign Consulates.

No. 4. To make further and better provision for the promotion of education.

No. 5. To legalize the expenditure of certain sums of money paid from the general revenue for the service of the year eighteen hundred and ninety-two, in addition to the sum granted by the "Appropriation Ordinance, 1891."

No. 6. To amend the "Kingstown Harbour Regulation Ordinance, 1885."

No. 7. To protect the Government telephone lines erected in this Island.

No. 8. To amend "the Public Officers Security Ordinance 1890."

No. 9. To raise a loan to repay to the general revenue of this Colony a loan made by it to the town of Georgetown under the "Georgetown Water Supply Ordinance, 1891."

No. 10 To raise a loan to meet the past and future expense of establishing the telephone system in this Island.

The more important of these measures were the following:—

No. 4. Education.—Under this Ordinance an improved system of education was introduced.

No. 7. Telephone.—This Ordinance gave powers for the protection, &c. of the newly created Government telephone lines.

St. Vincent. 1893.

Nos. 9 and 10.—Ordinances raising loans to refund the revenue for advances made by it for the Georgetown Waterworks and the establishment of telephones.

6. *Councils.*

The few changes that occurred under this head were :—

Mr. C. Ormond Hazell as Acting Attorney-General became *ex officio* a member of the Executive Council, and Mr. Geoffrey P. St. Aubyn, while acting as Treasurer during the absence on leave of Mr. F. B. Griffith, and again when acting as Attorney-General, became *ex officio* a member of the Executive Council.

Mr. C. J. Simmons was re-appointed by Her Majesty the Queen an unofficial member of the Legislative Council, 1st January, 1893.

7. *Civil Establishment.*

The following changes occurred :—

His Excellency the Hon. Sir Walter Hely-Hutchinson, K.C.M.G., left the Government of the Windward Islands on 30th June on promotion.

His Excellency Sir Charles Bruce, K.C.M.G., assumed the Government of the Windward Islands on 25th October, and of St. Vincent on 18th November.

Captain Maling C.M.G., resigned his appointment on 30th June.

Mr. Edward Drayton administered the Government of St. Vincent from 1st to 3rd July.

Colonel J. H. Sandwith, C.B., assumed the Government of the Colony on 4th July.

Mr. Musgrave from 1st June performed the duties of Superintendent of Crown Lands only. Mr. Griffith was appointed to act as Chief Clerk during his absence.

Mr. Grannum left the Colony on 2nd June on promotion. Mr. Rice was appointed to act as Second Clerk, Government Office.

Mr. St. Aubyn, Police Magistrate, Kingstown District. acted as Treasurer, during the absence on vacation leave of Mr. Griffith, from 3rd to 20th November.

Mr. Emett acted as Chief Landing Waiter during the absence on leave of Mr. Isaacs. Mr. Brown acted as Second Landing Waiter.

Mr. Osment acted as Chief of Police from 1st to 3rd January.

Mr. Mayers was appointed to act as Inspector of Schools, while Mr. Griffith performed the duties of Chief Clerk, Government Office.

Mr. O. Hazell performed the duties of Attorney-General from 1[illegible]th June to 30th November, during the absence of Mr. O. Smith; Mr. St. Aubyn acted in the same capacity from 1st December.

Mr. Dalrymple acted as Clerk to the Registrar during the absence on leave of Mr. Huggins.

Mr. W. E. Davis acted as Registrar of Births, Marriages, and Deaths, Kingstown District, during the absence on leave of Mrs. Checkley.

8. *Pensions.*

During the year one pension has been granted viz.:—

	£
Scipio T. Hunt, late police constable - -	15

The pension list has, on the other hand, been relieved by the deaths of the following pensioners:—

	£	s.	d.
William Cupid, late police constable -	18	15	0
William Goodridge, " " -	26	13	4
Rev. H. Flint, of over 21 years' service as curate of St. George's Cathedral -	50	11	1
	£95	19	5

9. *Consuls.*

Senor M. Bermudez Lecuna was appointed Consul for the Republic of Venezuela, but resides at Grenada.

10. *Population.*

The total population of the Colony at the end of 1893 was computed to be 43,300.

The births, marriages, and deaths in the year were:—

Births, 1,832, add 98 still-born.
Marriages, 238.
Deaths, 1,128, add 98 still-born.

the birth-rate and death-rate per thousand being respectively 44·2 and 26·2.

Owing to an epidemic of bilious remittent fever in the Grenadines during last autumn, the death-rate amongst those Islands rose to 30·6, or exactly double that of 1892; except for this difference, the remaining districts of St. Vincent preserved their nominal rates, and again proved the exceeding healthy climate that this Colony is noted for.

11. *Education.*

There were 45 schools open during the year, 41 in the Island of St. Vincent and four in the Grenadines,—the school in Mayreau Island, which was closed in 1892, having been re-opened—with an average attendance of 3,219, and a total of 5,958 names on the registers.

From the subjoined comparative statement it may be satisfactorily observed that the statistics show a considerable increase on the previous year, except in the return of "Average Attendance."

—	1892.	1893.
Number on rolls - - - -	5,848	5,958
Average attendance - - - -	3,292	3,219
Candidates presented at annual examinations	2,878	3,015
Passes in the standards - - -	2,494	2,729
Marks awarded - - - -	31,430	42,771

The total amount of the Government grant to primary schools was as follows:—

	£	s.	d.
Results - - - -	1,044	7	0
Capitation Fees - - -	742	8	8
Pupil Teachers - - -	121	10	0
Rent, Repairs, Furniture - -	24	0	0
	£1,932	5	8

The rules under the new Education Ordinance came into force in October. A classification of the teachers has taken place, and certificates have been granted them according to their qualifications. It may be added that the system of payments is different from the plan adopted under the old rules, where teachers were paid by results and capitation fees on average attendance. Under the new scheme, teachers are paid under four headings:—(i.) Capitation; (ii.) Results; (iii.) Discipline bonus; (iv.) Class certificate. It seems that, with the new Education Ordinance, the grant for Education will have to be considerably increased later on.

A further sum of 121*l.* 6*s.* 8*d.* was granted in aid of the Kingstown Grammar School, 21*l.* 6*s.* 8*d.* of which represents capitation fees allowed on the girls' department which is attached to the school.

12. *Imports and Exports.*

Imports.

The value of the Imports during 1893 amounted to 93,424*l.*, or less than in 1892 by 9,557*l.*

	£
The Imports from the United Kingdom fell off -	7,926
and from the Colonies - - - -	4,124
Together	12,050
But from foreign countries (United States, 2,510*l.*, less decreases from other places, 17*l.*) there was a net increase of - - -	2,493
thus leaving a net general decrease of -	£9,557

The decrease in the value of Imports from the United Kingdom was of goods liable to "*ad valorem*" duty, not enumerated, chiefly what are known as "dry goods" (4,507*l.*); also, machinery (1,039*l.*), Government importations (1,323*l.*); sundry other items complete the difference.

The decrease in the Imports from the British Colonies is referable to no particular items, but is general.

These decreases may be regarded as nominal, being due to importations direct from the United States of goods which would otherwise have appeared as being imported from Barbados.

In this way, also, the increase of Imports from the United States may be accounted for.

Exports.

The value of the Exports in 1893 was 114,694*l.*, a decrease as compared with 1892 of 2,878*l.*

	£
The value of Exports to the United Kingdom decreased - - - - - -	10,528
and to the Colonies - - - - - -	772
Together	11,300
But those to foreign countries increased by (net)	8,422
making the net difference - -	£2,878

as shown above. The increased export to the United States was 11,780*l.*, but there was a large decrease in respect of other foreign places. The increase in the value of Exports to the United States was due up to the amount of 10,339*l.* to increased price of sugar. The whole of that product, 3,319 hogsheads (less three hogsheads), was shipped to that country.

The following tables of the chief products of the Colony exported will be of some interest :—

Table of Quantities exported reduced to the common Standard.

—	1893.	1892.	Increase, 1893.	Decrease, 1893.
Sugar - - - - hhds.	3,619	3,884	—	265
Rum - - - - puns.	242	566	—	324
Molasses - - - casks	749	1,367	—	618
Arrowroot - - - barrels	22,310	23,433	—	1,123
Cocoa - - - - lbs.	130,854	129,589	1,265	—
Cotton - - - - lbs.	33,249	49,396	—	14,147

Table of Destination of the Products given in the preceding Table.

—	United Kingdom.	British* Colonies.	United States.	Other Colonies.
Sugar - - - - hhds.	—	—	3,616	3
Rum - - - - puns.	206	6	—	30
Molasses - - - - casks	25	25	533	166
Arrowroot - - - barrels	15,860	6,067	66	317
Cocoa - - - - lbs.	73,764	56,238	672	180
Cotton - - - - lbs.	14,400	18,849	—	—

* Almost entirely Barbados.

13. *Shipping.*

The total number of sailing vessels entered during the past year was 303.

The tonnage of these vessels in the aggregate amounted to 12,897 tons ; their crews to 1,682.

The total number of sailing vessels cleared was 304, with a tonnage of 13,505, and crews 1,748.

The total number of steam vessels entered was 109, with tonnage amounting to 123,840, and crews 4,679.

The same number of steam vessels cleared as were entered.

Of the sailing vessels the nationalities were as follows :—

Nationality.	Entered.	Cleared.
British - - - - - -	276	278
American - - - - -	7	5
Venezuelan - - - - -	11	11
Dutch - - - - - -	7	7
French - - - - - -	2	2
Norwegian - - - - -	—	1
Total - - -	303	304

All the steam vessels entered and cleared were British.

The following is a comparative statement of the sailing vessels entered and cleared during the last two years :—

—	1892.		1893.		Decrease.	
	No.	Tons.	No.	Tons.	No.	Tons.
Entered - - -	313	13,566	303	12,897	8	669
Cleared - -	301	14,382	304	13,505	3	877

The following table also shows the differences in the number and tonnage of steam vessels entered and cleared as compared with the previous year :—

1892.		1893.		Increase.	
No.	Tons.	No.	Tons.	No.	Tons.
105	119,154	109	123,840	4	4,686

14. *Agriculture.*

Under this heading reference must be made to the Botanic Station which shows great progress since its re-establishment in 1890, when a portion of the grounds of the Old Botanic Garden of St. Vincent, which was the first of its kind in the West Indies, and started in 1765, but allowed in 1849 to go out of cultivation, was again turned into use.

It is most interesting to note that the present Botanic Station is of great assistance to the Colony, and of growing importance to the planters, who are able to study the various experiments conducted for the benefit not only of the planter class, but also of the peasant proprietors.

During the last year grants of coffee and cocoa plants have been made to the purchasers of Crown Lands, to encourage the growth and produce of those valuable trees, which should ere long add considerably to the revenue of the Colony and the prosperity of the planters themselves.

The authorities of Kew Gardens give every assistance, not only in giving advice but also in furnishing valuable seeds and plants, and in the hands of the indefatigable and energetic Curator, Mr. H. Powell, the future success and development of the Botanic Station is assured, and it is to be hoped that the minor industries of fruit products throughout the Island will receive greater attention than has lately been the case.

During the fall of the year, a small Meteorological Station was formed in the gardens, and reliable observations were recorded for the last quarter.

Though sugar is still the chief staple product, the cultivation of arrowroot is largely on the increase, and, after the introduction of a better class of machinery, since 1890, the quality of arrowroot has much improved.

Much greater attention has lately been paid to the cultivation of cocoa, coffee, and spices, and several new plantations are now commencing to bear with a hopeful promise for the future; the frequent visits of the Curator to different localities, and his practical lessons on planting and pruning, given on the spot, are productive of much good.

15. *Crown Lands.*

Though only seven grants were actually made in 1893, as compared with 74 in 1892, there were no less than 108 fresh applications for grants, representing an area of 676 acres, as against 505 in the previous twelve months, whilst new villages have been laid out in convenient sites, from which 32 village lots have been sold in addition to the 108 applications mentioned above.

The sum of 1,147*l.* 9*s.* 3*d.* was paid into the Treasury in 1893 (929*l.* 4*s.* 5*d.* since the 1st June) in connexion with the survey and allotment scheme, showing a satisfactory working, especially during the latter half of the year, when money is always more plentiful amongst the peasantry.

The compulsory-cultivation clauses are being carried out satisfactorily, and the crops of 1896 should show a marked increase in the exports of cocoa, nutmegs, and coffee from lands which hitherto have returned no revenue to the Colony.

The scheme being now well established, its success in dealing with the question of unemployed and unoccupied lands is assured, both from a philanthropic and a financial point of view.

The movement, moreover, which is more or less a social revolution, is being accomplished without friction in this Colony, very little opposition being shown, even by those whose personal interests may be deemed antagonistic to that part of the scheme which establishes an independent class of small proprietors on the boundaries of their estates.

This favourable result in St. Vincent should have an important influence on the same problem which still remains to be solved in some of the West Indian Islands.

Great interest in the progress of the scheme was shown by Mr. Reeve, the Director of Surveys, who, ably assisted by Mr. Musgrave, Superintendent of Crown Lands, worked hard to develop the resources of this fertile Island.

16. *Prisons and Prisoners.*

The following table presents a comparative statement of the working of the prison during the last four years :—

Year.	Number of Commitments.	Committed for Debt.	Committed for Custody, for Trial, or for want of Sureties.	Committed for Penal Imprisonment.	Number of Prisoners previously convicted.			Commitment for				Daily Average in Prison.	Admission to Hospital.	Daily Average on Sick List.	Number of Deaths.
					Once.	Twice.	Three or more.	Five Years or more.	More than One Year and less than Five Years.	More than Three Months and less than One Year.	Three Months or less.				
1890 -	170	3	48	119	4	8	10	3	8	2	196	20·0	2	·3	1
1891 -	176	1	40	135	16	7	9	1	3	4	127	26·25	1	·38	—
1892 - -	186	3	54	129	17	10	23	3	7	18	101	33·20	2	·27	—
1893 - -	149	2	41	106	19	9	29	1	12	3	90	31·27	3	·45	—
Total -	681	9	183	489	56	34	71	8	30	27	424	110·72	8	1·40	1
Average -	170·25	2·25	46	122·25	14	8·5	18	2	7·5	6·75	106	27·68	2	·35	·25

17. *Criminal Statistics.*

There was an increase of 287 in the number of offences reported to the police, the total being 1,633, against 1,346 in 1892; the increase shows under the headings of Prædial Larceny and other offences, but does not in any way signify that crime is more rife than heretofore.

The following table explains how the cases were disposed of in the magistrates' courts:—

Discharged for want of prosecution - - -	506
Dismissed on the merits - - - - -	214
Summarily convicted - - - - -	885
Committed for trial - - - - - -	28

The cases tried in the Superior Court were disposed of as follows:—

Judgment for the Crown - - - - -	21
Judgment for prisoner - - - - -	5
Cases not prosecuted - - - - - -	8

The 21 convictions were for the following offences:—

For rape - - - - - - - -	1
„ other offences against the person - - -	5
„ robbery with violence - - - - -	1
„ other offences against property - - -	14

18. *Hospitals.*

At the close of 1892 there were 60 patients in Hospital, 40 being males and 20 females.

In 1893 there were 441 admissions of patients, 301 males and 140 females, so that a total of 501 were treated, giving a daily average of 62·5, a slight increase over 1892.

Ninety-nine operations were performed, and it is with satisfaction a note can be made that only one death resulted.

The accompanying table shows number of cases treated under the different classes, with the number of deaths, as compared with 1892:—

Diseases treated.	1892.		1893.	
	No. of Cases.	No. of Deaths.	No. of Cases.	No. of Deaths.
General - - -	117	17	125	11
Local - - - -	284	14	308	30
Injuries - - -	58	1	68	1
Total - - -	459	32	501	42

19. *Literary Institutions.*

The St. Vincent Public Library, which had become moribund, was revived in 1892, and re-opened last year in Kingstown by the aid of a Government grant.

At the end of 1893 there were 103 subscribers, who evinced, by their daily attendance, great interest in the reading rooms and library, thus proving what a boon the institution is to a large number of residents.

20. *Savings Banks.*

The following table shows the transactions of the Savings Bank for the last five years:—

Year.	No. of Depositors.	Amount of Deposits.	Amount of Withdrawals.	At Credit of Depositors at 31 December.
		£ s. d.	£ s. d.	£ s. d.
1889 - -	920	3,865 10 3	6,019 15 11	8,640 2 7
1890 - -	956	4,607 8 11	4,224 16 2	8,797 1 4
1891 - -	938	5,215 16 8	5,474 5 9	8,714 13 3
1892 - -	946	4,843 5 6	4,750 14 2	8,957 10 6
1893 - -	1,001	4,514 0 3	5,154 4 0	8,317 6 9

The rate of interest allowed to depositors is 2½ per centum per annum, and the total amount of interest that accrued to depositors was 188*l.* 18*s.* 6*d.*

21. *Friendly Societies.*

The number of Friendly Societies registered now amounts to 29, showing an increase of eight on last year: nine societies having been added to the list and one discontinued. Most of these have been in existence two or three years, but were only registered, in accordance with the Friendly Societies Act, during 1893.

22. *Telephones.*

A great advance was made in the telephone system, especially during the latter half of 1893.

At the close of the year there were five exchanges, with 100 connections, proving the system, though far from complete, to be a complete success.

The work of construction still continues, the only drawback being the difficulty of supplying the requisite plant quick enough to meet the demands of intending subscribers.

It is impossible at present to say anything more of the financial aspect of the telephone system than that the revenue will amply balance the expenditure.

23. *Post Office.*

The total revenue of the Post Office was 1,516*l.* 16*s.* 3*d.*, showing an increase of 300*l.* on 1892; however, against this must be set off an increased expenditure, due, however, to conveyance of mails beyond the Colony.

The actual postal business shows a steady advancement, 82,259 letters and cards having been posted in 1893, as against 76,670 in 1892.

Four new branch Post and Money Order Offices were opened in 1893, and, from the amount of work done, fully justify the additional expenditure on account of the advantages in the shape of postal communications throughout the Colony.

[For Report for 1892 *see* Colonial Report (Annual) No. 86.]

Sir CHARLES BRUCE to the MARQUESS OF RIPON.

MY LORD, Grenada, September 6, 1894.

I HAVE the honour to transmit a copy of the St. Lucia Blue Book for the year 1893, together with the Report of the Administrator, Surgeon Lieutenant-Colonel Gouldsbury, C.M.G.

I have, &c.

(Signed) CHAS. BRUCE.

REPORT on the BLUE BOOK for 1893.

Taxes, Duties, and Fees.

With the exception of a reduction amounting to one-half in the fee payable by vessels for services rendered by the harbour master between the hours of seven o'clock p.m. and six a.m., no alteration was made in the rate or incidence of any tax, duty, or fee during the year.

Revenue and Expenditure.

The revenue and expenditure of the Colony for the year under review amounted to 51,598*l.* and 49,271*l.* respectively, the revenue exceeding the expenditure by 2,327*l.* This contrasts very favourably with the financial results of the preceding year, which showed an excess of expenditure over revenue of no less a sum than 6,637*l.*

The estimated revenue for 1893 was 49,731*l.*, and the estimated expenditure 49,437*l.*

The actual revenue exceeded the estimated revenue by 1,867*l.*, whereas the actual expenditure was less than the estimated expenditure by 166*l.*

The revenue for 1893 exceeded that for the preceding year by 3,301*l.*, while the expenditure fell short of that for 1892 by 5,663*l.*

The principal heads of revenue under which there was a considerable increase in 1892, as compared with the previous year, are shown in the subjoined table.

Heads of Revenue.	Increase in 1893.
	£
Customs - - - - - -	3,147
Port, Harbour, and Wharf Dues - - -	992
Licences, Excise, &c. - - - - -	1,222
Miscellaneous - - - - -	454

The following table shows the principal heads of expenditure under which there was a considerable increase or decrease in 1893 as compared with the preceding year :—

Heads of Expenditure.	Increase in 1893.	Decrease in 1893.
	£	£
Charges on account of Public Debt - - -	893	—
Port and Marine Department - - - -	—	424
Prisons - - - - - -	281	—
Medical - - - - - -	—	225
Miscellaneous - - - - - -	—	1,754
Public Works Department - - - -	—	516
Public Works Recurrent - - - -	—	2,342
Public Works Extraordinary - - - -	—	1,747

The revenue and expenditure for 1893 compare as follows with the average yearly revenue and expenditure for the preceding five years, 1888–92 :—

—	1893.	Average for Five Years 1888–92.	Increase in 1893 over Average for preceding Five Years.
	£	£	£
Revenue - - - -	51,598	47,523	4,075
Expenditure - - - -	49,271	48,706	565

It will be seen that in 1893 there was a considerable increase in the revenue as compared with the average yearly revenue for the previous five years, and that, although there was also, in relation to a similar comparison, an increase in the expenditure in 1893, the increase was much smaller than that which occurred in the case of the revenue.

Assets and Liabilities.

The following is a statement of the assets and liabilities of the Colony on the 31st December 1893:—

Assets.	£	Liabilities.	£
Cash in hand	147	Savings Bank Deposit Account	9,812
Colonial Bank Current Account	5,321	Castries Town Board	552
" Deposit Account	4,500	Towns and Villages Funds	1,358
Investments on account of Savings Bank	5,000	Police and Revenue Officers' Reward Fund	1,843
Investments on account of Police and Revenue Officers' Reward Fund	1,504	Imperial Post Office Fund	103
Miscellaneous Advances	4,694	Post Office Money Order Account	321
Crown Agents' Current Account	243	Immigration Fund	714
London and Westminster Bank	488	Grenada Intercolonial Account	335
Bank of England	1,686	Prison Manufacturing Account	55
	£23,583	Public Works Loan Works Account	4,914
Stores, Surplus Account	1,639	Workyard Account	67
		The Jetties Fund	91
		Lands Sales Fund	433
			£20,598
		Sinking Funds	2,174
			£22,772
		Surplus and Deficit Account	2,450
	£25,222		£25,222

Public Debt.

The public debt of the Colony at the end of the year 1893 amounted to 159,202*l.*, and was made up as shown in the subjoined statement:—

Debts.	Amount due at end of Year 1893.	Amount of original Debt.	Source from which Interest and Sinking Fund are paid.
	£	£	
St. Lucia Central Factory Loans	29,900	40,000	General Revenue.
Immigration Loans	21,500	23,000	Immigration Fund.
Harbour of Castries Improvement Loans	83,300	84,000	General Revenue.
Public Works Loans	24,502	24,502	Do.
	£159,202	£171,502	

The sum of 1,700*l.* was paid off during the year by the redemption of drawn debentures. The public debt at the close of the year was equal to somewhat over three times the amount of the revenue for the year, and represented an indebtedness amounting to 3*l.* 12*s.* 0½*d.* per head of the population.

Savings Bank.

The deposits in the Savings Bank during the year 1893 amounted to 7,995*l.*, being 1,040*l.* in excess of deposits for the previous year.

The number of depositors at the close of the year was 1,128, being an increase of 223 over the number of depositors at the end of 1892.

The average sum per depositor was 7*l.* 1*s.* 9*d.*

The withdrawals amounted to 5,887*l.*, and the total amount to the credit of depositors at the close of 1893 was 9,812*l.*

Municipalities and other Public Bodies.

The town of Castries is governed by an elective Town Board consisting of eight members. All the other towns and the villages in the Colony are under the supervision and management of Town Wardens, subject to, and acting under, the directions and control of the Governor in Council.

The total revenue of the towns and villages for the year 1893 amounted to 4,432*l.*, and the expenditure to 4,093*l.*

The revenue of the towns and villages is derived chiefly from house-tax, the rates being levied upon the assessed annual rental, or value for rental, of the property.

The rate varies from 5 per cent. in some of the villages to 8 per cent. in others, and in the towns of Castries, Soufriere, and Vieuxfort.

Military.

The only expenditure of the Colony in respect of the troops was 1,794*l.* paid as an allowance in lieu of duty-free goods.

The Imperial expenditure during the year for military purposes amounted to 35,223*l.*

Public Works.

The works carried out by the Public Works Department during the year comprised works of new construction and works of maintenance and repair.

The only works of new construction executed during the year were the building of a Treasury strong and fire-proof room, and the construction of a road leading from the Morne road to the site of the proposed new Government House.

Under the head of maintenance and repairs the following is an enumeration of the principal works executed in 1893 :—

General repairs of Public Buildings; upkeep and repair of roads and bridges, and dredging in Castries Harbour.

In consequence of the falling off in the revenue of 1892 and the deficit at the close of that year, strict economies had to be observed in the expenditure of 1893, and no public work of importance was undertaken. The amount spent on the repair and upkeep of roads was only just sufficient to keep them passable.

The amount expended on Public Works during the year was 4,132*l.*, of which the sum of 3,785*l.* was defrayed out of general revenue, 140*l.* out of loans, and 207*l.* out of Town and Village Funds.

Legislation.

Fifteen Ordinances were passed by the Legislative Council during the year, none of which were disallowed by Her Majesty.

Of the Ordinances passed during the year only one is of more than local interest, viz, "The Bills of Exchange Ordinance, 1893." This Ordinance amends the law relating to Bills of Exchange, Cheques, and Promissory Notes, by bringing it into line with the Imperial law, and so securing uniformity of law on the subject with the United Kingdom, and with the Colonies which have adopted a similar course.

Civil Establishment.

His Excellency Sir Walter Hely-Hutchinson, having been appointed Governor of Natal and Zululand, left for England on the 29th of June, and I assumed the administration of the General Government from the 30th June and continued to administer it until the arrival of Sir Charles Bruce on the 24th October.

Mr. P. J. K. Ferguson, Attorney-General, administered the Government of St. Lucia during my absence at Grenada from the 1st to the 8th July, to which Colony I had proceeded to be sworn in as Administrator-in-Chief of the Windward Islands.

Dr. C. Dennehy, Colonial Surgeon, was absent on leave for six weeks, during which time Dr. O. Galgey acted as Colonial Surgeon.

Legislative Council.

Mr. Battam left the Colony on three months leave of absence in June.

Mr. Du Boulay was absent from the Colony from the 6th July to the 5th October.

Dr. C. Dennehy, Colonial Surgeon, acted in the place of Mr. Low from the 14th April to 10th July. He was appointed a member of the Council on the 11th of July, *vice* Mr. Low, resigned.

Mr. Chastanet was absent for six months, during which time Mr. Graf acted.

Mr. Reeve was absent for six months, during which time Mr. Cropper acted.

Messrs. Lloyd, Chastanet, and Du Boulay were re-appointed members of the Council on the 9th of March.

Pensions.

There was no alteration in the Pension List during 1893.

Population.

The number of births during the year was the largest on record, there being a total of 2,161 births—1,110 males and 1,051 females. The gain to the population arising out of the excess of births over deaths was 890, thus raising the population by natural increase to 44,200 at the end of 1893.

Immigration.

There were 730 indentured East Indian Immigrants in the Colony at the close of the year, of which number 554 were adults, 395 of these being males and 159 females.

Excluding the East Indian immigrants who arrived in the Colony on the 10th December 1893, the births and deaths amongst the indentured coolies during the year were 37 and 15 respectively, giving a birth-rate of 6·7 per cent., and a death-rate of 2·5 per cent., the birth-rate being higher, and the death-rate lower, than the averages for previous years.

The birth and death rates amongst the indentured coolies compare as follows with those of the general population :—

	Per-centage.	
	Indentured Coolies.	General Population.
Birth-rate - - - -	6·7	4·52
Death-rate - - - -	2·5	2·47

It will be seen from the above statement that the birth-rate amongst the indentured coolies was 2·18 per cent. higher than that amongst the general population, while the death-rate was only 0·03 per cent. higher.

On the night of the 10th of December, the ship "Volga" with Indian immigrants on board arrived off the port of Castries after a quick and so far safe voyage from Calcutta; but, unfortunately, owing to keeping too close inshore the vessel went aground at the Vigie Point and became a total wreck. Providentially there was

not much wind blowing and the sea was comparatively smooth, so that, with the aid of the ship's boats and those from shore, every soul on board was safely landed without the occurrence of a single accident.

Of the immigrants on board, 487 were for Jamaica and 156 were for this Colony. The coolies for Jamaica remained in this Colony from the 10th to the 22nd December, on the afternoon of which latter date they were despatched for their destination in the ship "Jumna."

Education.

With two exceptions, all the schools in the Colony are primary schools.

There were in 1893 thirty-one primary schools on the list of assisted schools, which with four Government schools made a total of thirty-five primary schools in operation in the Colony at the close of the year. Of these schools, twenty-two were Roman Catholic, four were Government, four were East Indian Mission, two were Anglican, two were undenominational, and one was Wesleyan.

Two new schools were opened during the year, namely, an Anglican school in Castries and a Roman Catholic school at Etangs in the neighbourhood of Soufriere.

An East Indian Mission school which had been established at Crown Lands (part of Central Factory Estate) but which had been closed in the end of 1892 by the action of the present authorities of the estate (the mortgagees) was reopened in February 1893, but was again closed by the same authorities in October of that year.

Four of the primary schools are infant schools, two of them being in Castries and two in Soufriere.

The Inspector of Schools reports that the year 1893 was one of general progress in school work, and calls attention to the remarkable decrease in the failures in 1893 compared with those in the previous year; the failures in 1893 amounting only to 59 out of 1,873 pupils presented for examination, or 3·15 per cent., against 314 failures in the year 1892 out of 1,644 presented, or 19·1 per cent.

The following comparative statement gives certain particulars and percentages which will serve to show what progress has been made in primary education since 1891:—

—	1891.	1892.	1893.
Total population of St. Lucia - - -	42,200	43,310	44,200
Number of primary schools in the Colony -	28	33	35
Total number of children on school rolls -	3,149	4,156	4,544

——	1891.	1892.	1893.
Average attendance - - - -	1,698	2,357	2,458
Number presented for examination - -	1,160	1,644	1,873
Number passed in two subjects - -	948	1,330	1,814
Centesimal proportion on rolls to total population - - - - -	7·46	9·59	10·28
Percentage of attendance of number on rolls -	53·9	56·7	54·1
Percentage of attendance presented for examination - - - -	68·3	69·7	76·2
Percentage of attendance passed in two subjects	55·8	56·4	73·8
Percentage of those presented which passed in two subjects - - - -	81·7	80·9	96·8

Speaking generally, there is much room for improvement in the various school premises and in the accommodation afforded by them, but as funds become available so will improvements in equal measure be effected.

Another consummation much to be desired is an improvement in the methods of instruction. At present there is, as a rule, no regular intelligent system followed, and owing, at least in part, to an insufficiency in the number of teachers, there is not as much of individual teaching as could be wished. Again, there is but little attempt at the cultivation of the reasoning faculties, an omission which becomes at once apparent when the pupil is asked a question involving in its answer the exercise of something more than the faculty of mere memory.

In the course of time, when teachers who have themselves been properly instructed how to teach become available, an improvement in methods and results will follow, and in the meanwhile the present teachers will from time to time be enjoined to make strenuous efforts to advance along the road towards the desired improvement.

Vital Statistics.

There were 2,161 births and 1,271 deaths registered during 1893, the excess of births over deaths, viz., 890, being the natural increase of the population during the year, and by which the population was brought up to a total, at the end of the year, of 44,200.

Of the 2,161 births 1,110 were males and 1,051 females.

The illegitimate births exceeded the legitimate by 465, there having been 1,313 illegitimate to 848 legitimate births. The illegitimate thus formed 60·76 and the legitimate 39·24 per cent. of the total births.

The still births numbered 201, or 10·25 per cent. of the live births; there being one still birth in every 10·75 of the total births.

Excluding still-births, the birth-rate for the year was 4·52 per cent. of the population.

This birth-rate compares favourably with that for the previous, and five preceding years, as the following statement will show:—

Year.	Live Births.	Still Births.	Total Births.	Legitimate.	Illegitimate.	Percentage of legitimate Births.	Percentage of illegitimate Births.	Birth-rate per cent. of Population.
1890 - -	1,574	130	1,704	594	1,110	34·86	65·14	3·65
1891 - -	1,771	158	1,929	735	1,194	38·10	61·90	4·05
1892 - -	1,604	156	1,760	720	1,040	40·91	59·09	3·76
1893 - -	1,960	201	2,161	848	1,313	39·24	60·76	4·52

The births in 1893 exceeded those recorded in any previous year, and the birth-rate advanced in proportion.

The deaths during the year, excluding still-births, amounted to 1,070, giving a death-rate of 2·42 per cent. The deaths and death-rate in the previous year were, exclusive of still births, respectively 1,002 and 2·31. The death rate for 1893 was slightly above the average for the preceding five or six years.

The deaths of children under one year of age amounted to 40·36 per cent. of the total deaths. The rate of infant mortality was very high in 1893, exceeding that for 1891 by 4·36 and that for 1892 by 5·13 per cent.

There were 265 marriages in the year. This number is 19 in excess of the marriages celebrated in 1892, but falls short of those which took place in 1891 by 131.

Imports and Exports.

Imports.

The total value of the imports for the year was 168,978*l.*, being 4,047*l.* less than the amount for 1892, and 2,503*l.* less than the average for the five years 1887–91.

Of the total imports, expressed in value, 86,838*l.* came from the United Kingdom; 26,602*l.* from British Colonies, and 55,538*l.* from Foreign Countries.

Of the 26,602*l.* worth of imports from British Colonies 20,556 worth came from Barbados, being more than three times the total from all the other British Colonies.

Next in amount comes Canada with 3,200*l.*, Jamaica with 894*l.*, St Vincent with 577*l.*, and so on through an unequally descending scale until the sum of 3*l.* 3*s.* 0*d.* is reached, which expresses the value of the imports from Bermuda.

The following table shows the respective values for 1893 and for the five preceding years of the imports to St. Lucia from

British Colonies from which St. Lucia received imports of the value of 200*l.* or upwards in any one of those years:—

Countries.	Value of imports therefrom.					
	1893.	1892.	1891.	1890.	1889.	1888.
	£	£	£	£	£	£
Barbados - -	20,556	21,213	18,724	22,141	19,003	18,245
Canada - -	3,200	5,375	782	48	300	Nil
Jamaica - -	894	1,435	637	702	212	565
St. Vincent - -	577	223	3,256	225	5,983	2,052
Trinidad - -	510	399	513	610	2,333	151
Demerara - -	137	1,206	650	313	287	1,761

Of the total of 55,538*l.* worth of imports from foreign countries 36,550*l.* worth came from the United States of America, 9,957*l.* from France, 1,459*l.* from Germany, and the remainder from other foreign countries, including foreign West India Islands.

The subjoined table enumerates the imports, which show an increase or decrease of 200*l.*, or over, in value in 1893, as compared with the imports for the preceding year, and the amount of such increase or decrease.

Articles.	Amount of Increase in 1893 compared with 1892.	Articles.	Amount of Decrease in 1893 compared with 1892.
	£		£
Animals: Cattle -	1,156	Ale, beer &c. - -	349
„ Mules - -	303	Bags, empty - -	983
Bacon and Hams -	228	Bloomer and other chemicals used in the manufacture of sugar -	279
Beef and Pork - -	430	Butter - - -	657
Oleomargarine - -	1,595	Cement - - -	350
Boots and shoes - -	854	Machinery and agricultural implements -	4,595
Coals - - -	4,144	Manure - - -	4,893
Copper - - -	502	Puncheons and casks -	401
Cottons and woollens -	1,525	Ropes and cordage -	288
Fish, salted and dried -	2,417	Twine - - -	273
Flour, wheaten - -	432	Wood—pitch and white pine - - -	1,174
Glassware - - -	215		
Haberdashery - -	791		
Medicines - -	265		
Oats - - - -	865		
Oil; Olive, Cotton-seed, and Lard - -	403		
Rice - - -	999		
Soap - - -	674		

Exports.

The value of the exports for 1893 amounted to 221,646*l.*, against 179,056*l.* for 1892, being an increase in 1893 of 42,590*l.* Compared with the average for the five years 1887–91, the increase the amounts to 65,471*l.*

Of the 221,646*l.* worth of exports shipped during the year, 55,217*l.* went to the United Kingdom, 5,212*l.* to British Colonies, 118,000*l.* to Foreign Countries, and the remainder, 43,217*l.*, was value of the bunker coal shipped.

Amongst British Colonies, Barbados and Canada were our best customers, taking exports to the value of 2,434*l.* and 2,073*l.* respectively; and of Foreign Countries our best customers were the United States of America and France, which took exports to the amount of 65,367*l.* and 44,572*l.*, respectively.

In the following table are shown the articles of export in which an increase or decrease of 200*l.*, or over, in value occurred in the year 1893 as compared with the previous year, and the amount of such increase or decrease :—

Articles.	Amount of Increase in 1893 compared with 1892.	Articles.	Amount of Decrease in 1893 compared with 1892.
	£		£
Coal - - - -	384	Ammunition - -	370
„ Bunker - - -	517	Animals—horses -	201
Cocoa - - - -	15,440	Farine manioc - -	1,032
Fruits fresh - - -	282	Rum - - -	295
Logwood - - -	34,041	Molasses - -	2,824
Pimento sticks - - -	743	Vegetables and Provisions (fresh) - -	373
Fuel and other woods -	448		

It will be perceived from the above table that, comparing 1893 with the previous year, there was a large increase in 1893 in the export of cocoa and logwood, and a considerable decrease in the export of farine manioc and molasses.

The subjoined table exhibits a comparative statement of the value of the exports in 1893 of the four principal articles of export, and the average value of those articles for the preceding ten years 1883–92:—

Articles.	Value.		Increase in 1893 over Average for 10 preceding Years.	Decrease in 1893 below Average for 10 preceding Years.
	1893.	Average for 10 Years 1883–92.		
	£	£	£	£
Sugar :				
Usine - - -	76,106	50,929	25,177	—
Muscovado - -	14,463	42,784	—	28,321
Molasses - -	4,756	5,947	—	1,191
Cocoa - - -	38,910	19,671	19,239	—
Logwood - -	37,752	5,022	32,730	—
	171,987	124,353	77,146	29,512

St. Lucia. 1893.

The foregoing table shows that, compared with the average exports of similar products for the decennial period 1883–92, there was a large increase in 1893 in the export of usine sugar, cocoa, and logwood, amounting in the total to 77,146*l.*; and a large decrease in the export of Muscovada sugar, and a considerable decrease in that of molasses, amounting in the total to 29,512*l.*; giving a difference, in the way of a net increase in 1893, of 47,634*l.*

The value of the exports in 1893 exceeded that of the imports by 52,668*l.* Excluding the value of coal imported and exported, the excess amounted to 30,037*l.*

Shipping.

Six hundred and fifty-four vessels entered, and 651 cleared, at the port of Castries during the year. Of those that entered, 251 were sailing and 403 were steam vessels, with an aggregate tonnage of 485,816 tons.

Of the sailing vessels that entered, 213 were with cargo and 38 were in ballast; and of the steam vessels, 192 were with cargo and 211 were in ballast.

The nationality of these vessels was as follows:—

—	Sailing Vessels.	Steam Vessels.
British - -	208	341
French - -	24	25
United States - -	4	1
Dutch - -	6	—
Norwegian - -	4	1
Swedish - -	3	—
Italian - -	1	—
Columbian - -	1	1
Russian - -	—	4
Belgian - -	—	17
German - -	—	2
Portuguese - -	—	1

The number of vessels which entered in 1893 exceeded that for the previous year by 53; the increase being made up of five sailing, and 48 steam, vessels, and there was an increase of 87,567 tons in the tonnage.

The following table shows the number of vessels and the amount of tonnage entered during 1893, and the averages for the preceding five years, 1888–92:—

Entered.	1893.		Average for Five Years 1888–92.		Increase in 1893 over Average for Five preceding Years.		Decrease in 1893 compared with Average for Five preceding Years.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
Sailing Vessels:								
With cargo - -	213	13,805	227	14,469	—	—	14	664
In ballast - - -	35	5,703	20	2,575	18	3,128	—	—
Steam Vessels:								
With cargo - -	192	212,881	155	167,639	37	45,242	—	—
In ballast - - -	211	253,427	189	224,447	22	28,980	—	—
Total - -	654	485,816	591	409,130	77	77,350	14	664

Post Office.

During the year 49,815 letters and post-cards were despatched to the United Kingdom and other places outside the Colony, and 54,349 letters and post-cards were received therefrom; 42,716 inland letters and post-cards passed through the Post Office, making a total of 146,880 letters and post-cards dealt with by the Department.

Book packets, samples, and circulars to the number of 98,500, and parcels to the number of 1,511, passed through the Post Office during the year.

The following is a comparative statement, showing the number of letters, post-cards, papers, and books despatched and received in 1893 and in each of the five preceding years:—

1888.		1889.		1890.	
Letters and Post-cards.	Papers and Book Packets.	Letters and Post-cards.	Papers and Book Packets.	Letters and Post-cards.	Papers and Book-Packets.
75,391	35,714	86,363	56,961	90,748	59,523

continued.—

1891.		1892.		1893.	
Letters and Post-cards.	Papers and Book Packets.	Letters and Post-cards.	Papers and Book Packets.	Letters and Post-cards.	Papers and Book Packets.
102,997	87,998	118,511	94,036	146,880	98,500

It will be seen from the above table that, in a period of five years, the number of letters and post-cards passing yearly through the Post Office has nearly doubled, and that of papers and books and packets has more than doubled.

Money orders to the amount of 4,593*l.* were issued, and to the amount of 872*l.* were paid, during the year.

The following were the receipts from the sale of stamps, commissions on money orders, &c.

	£
Stamps sold - - - - -	2,161
Unpaid letters delivered - - -	30
Commission on Money Orders - -	77
Rent of letter boxes - - - -	26
	£2,294

being 2*l.* in excess of the amount received in 1892.

Crown Lands.

Grants of Crown Lands to the number of 16 in the country and 14 in towns were made during the year under report, the total acreage granted being 260 acres.

The Crown now possesses about 12,678 acres, and estates comprising an area of 12,233 acres are now in process of being escheated.

Gaols and Prisons.

The Royal Gaol, Castries, is a general prison and also a military prison for soldiers undergoing a military sentence not exceeding fourteen days. It is also used as a prison of detention for military prisoners, sentenced by court-martial to longer terms of imprisonment than fourteen days, while awaiting transfer to Barbados.

The number of persons committed to prison in 1893 was 909, a number largely in excess of that for previous years. Of the committals, 59 were those of soldiers committed by sentence of a court-martial.

Of the number committed, 610 were for purposes of penal imprisonment, 298 were for safe custody till trial, or for want of security, and one was for contempt of Court.

The daily average number in prison during the year was 70·3, being 20·67 in excess of the daily average for the year 1892.

There were fourteen admissions to hospitals, and the daily average on the sick list was 1·81, a slight increase of 0·11 over the daily average for the preceding year.

There were two deaths during the year, giving an annual death-rate of 2·84 per cent.; or 0·42 per cent. higher than the general death-rate for the year amongst the population at large.

Corporal punishment was awarded four times during the year, and the total number of lashes inflicted was 68.

The subjoined table shows the figures for the years 1890 to 1893 respectively:—

Year.	Total number committed.	For debt. (Contempt of Court.)	For safe custody.	For purposes of penal imprisonment.	Number of those committed who have been previously convicted.			Daily average number in prison.	Number of admissions into hospital.	Daily average on sick list.	Number of Deaths.
					Once.	Twice.	Thrice or more.				
1890 - - -	460	19	119	341	49	11	37	50·77	10	1·61	*2
1891 - - -	547	7	127	413	56	40	57	48·50	21	2·26	3
1892 - - -	579	—	128	451	45	29	60	49·63	18	1·70	3
1893 - - -	909	1	298	610	127	65	78	70·30	14	1·81	2

* One executed.

Criminal Statistics.

The number of offences reported to the police or the magistrates during 1893 amounted to 2,130, as against 1,691 in 1892 and 1,599 in 1891.

Of the number of offences reported, 516 were for offences against the person, 121 for prædial larceny, 190 for offences against property other than prædial larceny, and 1,303 were for other offences.

The number of persons apprehended by the police or summoned before a magistrate in 1893 amounted to 2,226, exceeding the number for the previous year by 211.

The number of persons summarily convicted was 1,209, and the number committed for trial in the Superior Courts 39. Of the latter number, 37 were indicted, 2 were not indicted, 27 were convicted, and 10 were acquitted.

The following table shows the number of offences, apprehensions, convictions, &c. in 1893 and 1892 respectively, and the averages for the five years 1887–91:—

—	1893.	1892.	Average for Five Years, 1887–91.
Number of offences reported to police -	2,130	1,691	1,339
Number of persons apprehended by police or summoned before the magistrates - - - -	2,226	2,015	1,634
Number of summary convictions - -	1,209	1,143	817
Number of persons committed for trial in the superior courts - -	39	23	30
Number of persons acquitted in inferior courts - - - -	978	849	788
Number of persons convicted in superior courts - - - -	27	8	10
Number of persons acquitted in superior courts - - - -	10	9	10

The number of committals to prison in 1893 largely exceeded that for 1892, and still more largely exceeded the average for previous years. Several causes combined to bring about this increase, the principal being the advance of Castries as a coaling port, the establishment of a garrison in its neighbourhood, and the influx from the neighbouring West Indian Colonies of persons of loose and bad character.

A certain proportion of the increase in the committals was made up of the committal of road tax defaulters for non-payment of the road tax, and of indentured East Indian Immigrants for such offences as absence from the estates without leave, and for neglecting or refusing to work.

A large proportion of the total committals to prison was for minor offences, and of the 27 persons convicted in the Royal Court, 12 were soldiers of the West India Regiment, who were convicted for rioting.

Hospitals.

In my reports for the years 1891 and 1892, I was able to state that the sanitary condition of the hospitals of the Colony was very satisfactory, and I am glad to be able to report that, throughout 1893, this desirable sanitary condition of the hospitals continued without exception to obtain.

No diseases of an epidemic nature appeared in the Colony during the year under review, and the general health of the community at large was good.

The Colonial Surgeon in his report for the year writes as follows:—

"The general health of the island has been very good, and to "the most casual observer the adipose and muscular condition "of the West Indian, and the rubicund appearance of the "European, troops, their general set up and elastic step, indicate "a vigour and tone that speak well for the general health of the "climate under fair hygienic conditions."

There were 2,397 patients admitted into the hospitals (exclusive of the Yaws Hospital) during the year, making, with those remaining in hospital from the preceding year, viz., 129, a total of 2,526 patients treated. Of this number 2,076 were discharged cured, 154 were discharged relieved, and 144 died.

Of the 2,526 patients treated in hospital during the year, 731, or 28·9 per cent., were cases of malarial fever. The type of this disease was generally mild, and the mortality was but small, amounting only to 1·37 per cent. of the number treated.

The death-rate for the total number of patients treated in hospital during the year was 5·7 per cent.

Yaws Hospital.

There were 41 patients admitted into the Yaws Hospital during the year, which, with 38 patients remaining in hospital from the previous year, made a total of 79 cases treated. Of this number, 48 were discharged cured, and 6 died, the deaths being at the rate of 7·6 per cent. of the number treated.

Dispensaries.

The number of patients who received medical and surgical aid at the several dispensaries in the Colony was 10,228. The principal diseases treated were, as in previous years, malarial fevers, and diseases of the digestive system.

Poor Asylum.

There were 66 destitute persons admitted into the Poor Asylum, Castries, during the year, making, with the number remaining in the asylum at the close of 1892, viz., 37, a total of 103 destitute persons whose wants were supplied and infirmities were relieved or alleviated in the asylum during the year.

The numbers who found shelter, food, and medical aid in the asylum during the years 1891 and 1892 were, respectively, 128 and 116.

Most of the inmates suffered either from chronic and incurable diseases or from senile decay.

Of the number (103) who received aid in the asylum during the year, 41 were discharged relieved, and 14 died, leaving 48 remaining in the asylum at the close of the year 1893.

The death-rate was 13·59 per cent., being the lowest death-rate recorded for many years past.

Lunatic Asylum.

This asylum, which is situated at Soufriere, is a temporary one in which lunatics are detained until they can be transferred to the Central Lunatic Asylum at Grenada. Eight lunatics were admitted into the asylum in 1893, and of these three were discharged cured.

General.

The total number of cases treated during the year under review in the hospitals and asylums and at the dispensaries was 12,946, at a total cost (including salaries of medical officers, hospital attendants, &c.) of 5,879*l.*, which gives an average of 9*s.* 1*d.* per case, and an average of 2*s.* 8*d.* per head of the population.

Botanical Station.

The work carried out at the Botanical Station during the year was of the usual routine nature, and considerable progress was made in filling up the adjoining swamp to a level with the garden.

The various trees and shrubs continue to thrive, and notably so in the case of the palms.

Specimens of the following fibres were prepared at the Station:—

Sisal hemp.
Manilla hemp.
Bowstring hemp.
Mauritius hemp.

The sisal hemp fibre was over 5 feet in length, and was strong and of good colour.

The amount realised by the sale of plants, flowers, &c. was 47*l.*

Meteorology.

The mean temperature in the shade, as shown by the observations taken at the Morne, at an elevation of 745 feet above sea level, was 76·8.

The mean maximum temperature for the year was 83·2, and the mean minimum 70·5.

The highest monthly mean maximum temperature (80·8) occurred in September and October, and the lowest monthly mean minimum (67·5) in March.

The absolute maximum temperature (87·6) occurred in the months of August and November, and the absolute minimum (57·2) in March.

The total rainfall for the year amounted to 113·6 inches, being in excess of the average rainfall for several previous years.

The heaviest monthly rainfall (18·51 inches) occurred in July, and the lowest (3·18 inches) in March.

General Observations.

The year under report was a fairly prosperous one for the Colony, the crops having been good and the prices obtained, especially for cocoa and logwood, having been higher than the average for several previous years. The value of the cocoa and logwood exported in 1893 exceeded that of the exports of these articles in 1892 by 15,440*l.* and 34,041*l.* respectively. Compared with the previous year, there was an increase in 1893 in the number of vessels which entered the port of Castries amounting to 53, and in the tonnage there was an increase of 87,567 tons.

The revenue for the year exceeded that for 1892 by 3,301*l.* and on the transactions of the year there was a balance to the credit of the Colony of 2,327*l.*

The planting of cocoa, both in land formerly devoted to the cultivation of the sugar cane and in land hitherto uncultivated, continues to increase from year to year, but, although the increase so far as it goes is satisfactory, it is not of such amplitude as could be wished, and the quantity of cocoa at present grown falls far short of the potentialities of the island as a cocoa-producing country.

The year was unmarked by any destructive atmospheric or telluric disturbance, and, as I have already remarked, was a healthy and fairly prosperous one for the Colony.

V. SKIPTON GOULDSBURY,
Administrator.

GRENADA.

[For Report for 1892, *see* Colonial Report (Annual) No. 82.]

Sir CHAS. BRUCE to the MARQUESS of RIPON.

MY LORD, Grenada, October 27, 1894.

I HAVE the honour to transmit the Blue Book of the Colony of Grenada for the year 1893.

2. The Revenue of the year 1893 was raised from the same sources as in 1892 without additional taxation. It amounted to 59,210*l.*, as compared with 55,818*l.*, the revenue of 1892. The Expenditure was 58,039*l.*, as compared with 59,570*l.* in 1892. The surplus of Revenue was therefore 1,171*l.*; but this surplus was due to the fact that in the month of December duty was paid on all the available stock of rum in bond, in anticipation of an increase of duty, to take effect from the 1st of January 1894, by the substitution of the proof gallon for the liquid gallon as the measure of collection. The other heads of Revenue which showed improved receipts were Customs, Interest and Telephones.

3. The economy of expenditure was effected chiefly in the Department of Public Works, in which there was a decrease of over 2,800*l.* as compared with 1892. On the other hand, the charge on account of the Public Debt exceeded the charge of the previous year by about 900*l.* The balance of Assets over Liabilities on the 31st of December was 2,273*l.*

4. The Public Debt at that date amounted to 96,100*l.*, inclusive of loans secured on the General Revenue of the Colony, but for which Local Boards are responsible. During the year, debentures to the amount of 6,300*l.* bearing interest at 4½ per cent. were converted into Inscribed Stock bearing interest at 4 per cent., and a small balance of 475*l.*, 5 Per Cent. Debentures held in Grenada was redeemed.

5. The value of the Colony's exports rose to 316,063*l.*, as compared with 264,643*l.* in 1892. The average value of exports for the four years preceding 1892 was 232,000*l.* The export of cocoa amounted to 93,668 cwt., of the estimated value of 281,000*l.*, as compared with 75,369 cwt., of the value of 226,100*l.*, exported in 1892. In 1883 the export of cocoa was 46,351 cwt., of the value of 139,053*l.* In 1873 there were exported 24,151 cwt. of cocoa, of the value of 61,811*l.*

GRENADA. 1893.

6. The export of spice (nutmegs) in 1893 is returned at 2,086 cwt., of the value of 14,546*l.*, as compared with 2,235 cwt., of the value of 15,650*l.*, exported in 1892. In 1883 the export of spice was 957 cwt., of the value of 5,360*l.* In 1873, 170 cwt. of spice were exported, of the value of 1,275*l.* The present price of nutmegs has made proprietors cautious about the extension of this cultivation.

7. Sugar has ceased to be an export of significance. It is noteworthy that in a Colony in which sugar was a few years ago the staple export, the export in 1893 amounted to only 1,170 cwt., of the value of 731*l.*; while the import amounted to 2,061 cwt., of the reputed value in the local market of 2,564*l.* In 1892 the export was only 170 cwt. In 1883 the export was 36,995 cwt. of the value of 25,896*l.*; in 1873 there were exported 72,366 cwt. of sugar of the value of 56,386*l.* The sugar industry is at present almost exclusively confined to the manufacture of Muscovado for local consumption, molasses and rum. In 1893 local stills yielded 62,807 gallons of rum, of the reputed value of 7,851*l.*

8. The export of cotton and cotton seed, the principal produce of the Island of Carriacou, was less than in 1892, owing to an unfavourable season. The cultivation of coffee is extending, but the export of 1893 fell short of that of 1892.

9. Among the minor agricultural industries which appear to be of steadily growing promise may be mentioned the cultivation of fruit, plantains and kola. The export of fruit, chiefly to Trinidad, has increased five-fold during the last few years. The hope entertained that the subsidy given to a direct line of steamers to New York would open a flourishing fruit trade with America, has not been realised, but the direct steamer service gave a general stimulus to commerce with the United States. The volume of this trade in 1893 was, however, not quite equal to the trade of 1892.

10. The value of imports during the year amounted to 166,678*l.*, as compared with 158,702*l.* in 1892. The imports in detail show no variation of importance.

11. Aggregating exports and imports, the volume of foreign trade amounted to 482,741*l.* of which the United Kingdom claims 376,255*l.*, British Colonies 46,357*l.*, the United States 53,063*l.*, France and the French colony of Martinique 5,122*l.*

12. No Public Work of importance was commenced or completed during the year; but the telephone system was extended, and has proved a great success. When one of Her Majesty's Ships visits the port of St. George, an apparatus is placed on board, and within half an hour the Commander is placed in communication with every part of the Island. The Public Roads continued to be well maintained under the Road Boards.

13. The legislation of the year included three Ordinances of general interest. An Ordinance was passed to amend and consolidate the laws relating to Primary Education. The Board of Education constituted under this enactment is engaged on a

Revised Code of Rules for the management of Primary Schools. An Ordinance was also passed to adapt the law of the Colony to the Imperial Act relating to bills of exchange, cheques, and promissory notes. At the end of the year the tonnage due levied on vessels entering the Port of St. George was abolished, and a water-rate charged on water supplied to vessels in the Port.

14. The estimated population of the Colony on the 31st of December was 56,413, showing a natural increase at the rate of rather less than two per cent. per annum on the population enumerated by the census of 1891. The births of the year were almost exactly divided between legitimate and illegitimate. It is satisfactory to add that the illegitimate birth-rate has showed a steady decline for four years. The death-rate of the year was 24·96 per 1,000; the average rate for the last six years was 23·55 per 1,000. The health of the Colony was good throughout the year, with the exception of an outbreak of fever of malarial type in Carriacou in the autumn.

15. The criminal statistics for the year show an increase in the convictions for petty offences, but this appears to be due, to a large extent, to increased activity on the part of the Police. Convictions for using foul or abusive language materially swell the statistics under this head. I am inclined to think that the prison population of the Colony might with advantage be reduced by the adaptation of local legislation to the principles governing the treatment of first offences in England.

16. The transactions of the Savings Bank were disturbed in 1892 by circumstances connected with the system of police pensions and rewards; they have now resumed their regular course of progress. In 1888 the number of depositors was 277, with a balance at credit of depositors, on the 31st of December, of 5,632*l.*; in 1893 the number of depositors was 716, with a balance at their credit, on the 31st of December, of 7,994*l.*

17. On the whole, it may be said that the year 1893 was a year of prosperity and progress in Grenada.

I have, &c.

CHARLES BRUCE.

WINDWARD ISLANDS.

[For Reports for 1893 *see* Colonial Reports (Annual) Nos. 104, 124, and 128.]

Sir CHARLES BRUCE to the MARQUESS OF RIPON.

MY LORD, Grenada, June 8, 1895.

I HAVE the honour to submit my Report on the Blue Books of the Colonies included in the Government of the Windward Islands for the year 1894.

GRENADA.

Revenue and Expenditure.

1. The revenue of the year 1894 amounted to 63,062*l.* and was the largest on record; the expenditure was 59,594*l.* The revenue and expenditure for 1893, and the average of the five years 1888–92, were as follows:—

—	1893.	1888 to 1892.
	£	£
Revenue - - - -	59,210	52,185
Expenditure - - - -	58,039	53,577

Assets and Public Debt.

2. The surplus assets of the Colony at the end of the year amounted to 7,546*l.*, a satisfactory accumulation of over 5,000*l.*

WINDWARD ISLANDS. 1894.

having taken place since the 31st of December, 1893. The Public Debt at the close of the year was as follows:—

	£
4 per cent. stock - - -	- 87,400
4½ per cent. debentures - -	- 4,700
5 per cent. debentures - - -	- 4,000
	£96,100

By Ordinance 2 of 1894 a further issue of stock to the amount of 21,100*l.* was authorised, but no issue has yet been made, the necessary advances having been obtained locally and by the Crown Agents at advantageous rates of interest. The Colony has also guaranteed the repayment by the St. George's Town Board of a debt of 2,431*l.* The Public Debt of the Colony represents a little less than twice the revenue of the year, and an indebtedness of a little more than 2*l.* per head of the population.

Public Works and Roads.

3. It has been the consistent and successful policy of the Government of Grenada for some years to enhance the value of the lands of the Colony in every district by the construction and maintenance of serviceable roads, so that even out-lying estates may have facilities for bringing their produce to market. In pursuance of this policy, a sum of 8,496*l.* was expended during the year in the re-construction of roads and the construction of bridges and culverts. The construction of the works necessary to secure a supply of water to the town of Grenville was commenced and vigorously pushed forward during the year. The scheme will not only be of advantage in the way of providing the residents of the district with pure water, but will be of value to shipping, and promises such additional facilities for the protection of property against fire as will, it is hoped, enable proprietors to insure at easy rates of premium. The completion of the extension and partial reconstruction of the Lunatic Asylum provides an institution very creditable to the Colony, and sufficient at present to accommodate in ample comfort lunatics from all the Windward Islands.

Legislation.

4. The most important enactment of the year was an Ordinance to Consolidate and Amend the Customs Laws of the Colony.

Health and Vital Statistics.

5. The health of the Colony was good throughout the year; the death rate being 20·89 per 1,000, as compared with 24·96

in 1893 and an average rate of 23·55 for six previous years. The birth rate was 43·31 per 1,000. The estimated population at the end of the year was 57,692, showing an increase of 1,279 during the year. The percentage of legitimate compared with illegitimate births is steadily, if slowly, improving, as shown by the following figures:—

Percentage.

—	1890.	1891.	1892.	1893.	1894.
Legitimate - -	44·77	48·64	49·57	51·12	52·33
Illegitimate - -	55·23	51·36	50·43	48·88	47·67

The Yaws Hospital was reopened during the year.

Education.

6. The work of primary instruction was carried on by 34 schools with 6,723 children on the registers and an average attendance of 3,608. The number of children on the registers represents, therefore, nearly 12 per cent. of the population. The Government expenditure on primary schools amounted to 4,808*l.* or about 1*l.* 6*s.* 8*d.* per head of the children in average attendance.

On higher instruction the Government expenditure was limited to 593*l.* in the form of Grants-in-aid to the St. George's Grammar Schools for boys and two High Schools for girls.

Shipping.

7. The number and tonnage of vessels entered and cleared in 1894 was as follows:—

—	Entered.		Cleared.	
	Number.	Tons.	Number.	Tons.
Steamers - -	180	229,289	179	226,319
Sailing vessels - -	407	12,573	345	12,574
Totals - -	587	241,862	524	238,893

During the year a scheme was set on foot for coaling steamers in the inner harbour of St. George, which offers the advantages of

a free port perfectly secure in all weather, and of established healthiness; a plentiful supply of pure water; and cheap provisions. The first cargo of coal arrived on the 1st January, 1895, and ships are swiftly and economically coaled alongside.

Meteorology.

8. It was unfortunate that a year of drought, materially affecting the prosperity of the Colony, should have been signalised by extraordinary damage from rainfall. The rainfall for the year, registered at Richmond Hill, amounted to only 68 inches, compared with 84 inches in 1893 and 105 inches in 1892. On the 28th of September a rainstorm occurred which caused the rivers in the parish of St. Andrew's to swell with extraordinary violence, carrying away a considerable area of cultivated land and doing great damage to bridges and causeways.

Immigration.

9. With the decline of the Sugar Industry, immigration from the East Indies to Grenada ceased, and no indentured coolies have been received since 1885. By the terms of their indenture, Immigrant Coolies were entitled, after ten years' residence, to a return passage to India or to a bounty of 10*l.* in lieu of passage. In 1894 the last of the Immigrants who came to the Colony under indenture were repatriated or accepted bounty in substitution.

Imports and Exports.

10. The value and direction of the trade of the Colony for the five years ended 31st December, 1894, is exhibited in the following table:—

Imports.

Year.	United Kingdom.	British Colonies.	Foreign Countries.	Totals.
	£	£	£	£
1890 - - -	93,258	37,284	40,332	170,874
1891 - - -	97,895	31,512	47,523	176,930
1892 - - -	79,015	34,549	45,138	158,702
1893 - - -	83,175	37,729	45,774	166,678
1894 - - -	99,973	35,418	61,607	196,998

Exports.

Year.	United Kingdom.	British Colonies.	Foreign Countries.	Totals.
	£	£	£	£
1890 - - -	241,221	8,882	16,199	266,302
1891 - - -	218,600	8,672	9,371	236,643
1892 - - -	241,112	9,794	13,775	264,681
1893 - - -	293,080	8,629	14,354	316,063
1894 - - -	176,241	4,421	8,952	189,614

The increase of imports is, to a large extent, attributed to the increasing use of American foodstuffs in substitution of local produce in the form of plantains and the vegetables known under the general name of "ground provisions." The tendency was further promoted in 1894 by the excessive drought, which restricted the growth of local produce. The value of imports from the United States in 1894 amounted to 60,036*l.*, compared with 44,184*l.* in 1893. Of the total imports 50 per cent., were from the United Kingdom and 30 per cent. from the United States.

The drought, which increased the value of imports, and consequently the Revenue from duties of Customs, materially reduced the volume of exports. The value of the principal exports compared with the exports of 1893, was as follows:—

—	1894.		1893.	
	Quantity.	Value.	Quantity.	Value.
	Cwts.	£	Cwts.	£
Cocoa - - -	72,623	168,498	93,688	281,000
Spices (Nutmegs) -	1,917	9,583	2,087	14,546

General.

11. It is noteworthy that the largest Revenue on record, chiefly due to increased income from duties of Customs, has coincided with a decrease in the quantity of the principal staples exported and a considerable fall in price. In addition to the increased revenue from Customs, due to the substitution of American foodstuffs for local produce, the volume of imported foodstuffs has

been swelled to an appreciable extent by the money put in circulation by payment of wages in connection with the construction of the Grenville Water Works, and the extraordinary expenditure on roads and bridges. In comparison with the financial position and immediate prospects of Colonies mainly dependent on the sugar-cane, Grenada has been fortunate. In my report on the Blue Book for 1893, I showed that sugar had ceased to be an export of significance, the value of sugar exported having fallen from 56,386*l.* in 1873 to 731*l.* in 1893. In 1894 the value of the sugar exported fell to 50*l.* The sugar industry is now chiefly confined to the manufacture of muscovado and rum for local consumption, and for both of these commodities there is a sufficient local demand at very remunerative prices.

Notwithstanding the continuous fall in the price of cocoa, land under cultivation in cocoa and nutmegs sells at very high prices. The value of lands under cocoa promises to be maintained by the efforts made to meet falling prices by superior cultivation and more careful preparation, with a view to secure a higher market price for Grenada cocoa by a high and uniform standard of quality. As regards the lands of the Colony generally, their value is being steadily enhanced by the extension of subsidiary agricultural industries of coffee, fruit, plaintain, and kola cultivation. Attention is also being turned to logwood. All these industries, except logwood, were temporarily affected by the drought during 1894, but are of excellent promise for the future.

491

ST. LUCIA.

Revenue and Expenditure.

12. The Revenue of the year 1894 amounted to 56,590*l.*; the Expenditure to 54,500*l.* The Revenue and Expenditure of the year 1893, and the average Revenue and Expenditure of the five years, 1888 to 1892, were as follows:—

—	1893.	Average, 1888 to 1892.
	£	£
Revenue - - - -	51,598	47,523
Expenditure - - - -	49,271	48,706

The Revenue exceeded the Revenue of 1893 by 4,992*l.* There was an increase of 2,331*l.* under the head of Customs, and of 451*l.* from Excise and Licenses. The Revenue was swelled by a casual receipt of 1,637*l.*, being an instalment of the purchase money of the Dredger "Dolphin" sold to the Government of Guadeloupe.

The Expenditure of 1894 exceeded the Expenditure of the previous year by 5,129*l.* There was an increase of Expenditure under the head of Public Works, amounting to 4,500*l.*, exclusive of special expenditure on account of damage to roads and bridges, caused by a severe gale and floods in the month of October. An extraordinary expenditure of 1,738*l.* on Public Works and relief was due to this disaster.

Military Expenditure.

13. The Imperial Expenditure during the year for Military purposes amounted to 38,673*l.* The Colonial Expenditure was limited to 1,788*l.*, paid as an allowance to the troops in lieu of exemption from duties of Customs.

Assets and Public Debt.

14. The Statement of Assets and Liabilities of the Colony, on the 31st of December, shows a surplus of 4,655*l.* The Public Debt at the same date amounted to 179,280*l.*, of which 66,480*l.* were converted during the year into 4 per cent. Inscribed Stock at

a premium of 2*l.* 13*s.* 9*d.* The sum of 2,000*l.* was paid off by the redemption of drawn debentures. The Public Debt at the close of the year represented an indebtedness of a little over three times the Revenue of the year, and of 3*l.* 19*s.* 5*d.* per head of the population.

Savings Bank.

15. The deposits in the Savings Bank at the close of the year amounted to 9,548*l.*, showing an excess of 1,553*l.* over the deposits at the close of 1893.

Public Works.

16. In view of the increasing importance of St. Lucia as a fortified coaling station, the health of the Town of Castries, and its ability to supply ships with provisions and pure water, and to put coal on board with economy and despatch, are matters of the first public concern. It is fortunate therefore that the Town Board of Castries has shown itself to be a body of intelligent energy in the prosecution of many useful labours on behalf of the Town. Several recent visitors, and among them Mr. Osbert Chadwick, C.M.G., have assured me that they have been astonished at the improvement of the Town during the last few years. During the year 1894 the efforts of the Board to secure the healthiness of the Town have been assisted by the Government undertaking the reclamation of an area of swamp bordering the Botanic Garden. In the month of July, I had the pleasure of opening an admirable enclosed market, erected by the Board. The market is most conveniently situated for the supply of fresh provisions to the shipping, and the regulations made by the Board are designed to ensure the sound and healthy quality of the commodities offered for sale.

Throughout the year, and especially towards its close, the preliminary labours necessary for the carrying out of a scheme for the supply of pure water to the residents of Castries and the shipping were prosecuted with energy. The surveys and gaugings carried on during the year seem to prove conclusively that a sufficient and constant supply of water, of admirable purity, can be brought into Castries from the gathering grounds of La Sorciere and Piton Flore. Plans and estimates have since been prepared, and arrangements are being made for the early execution of the scheme. The fact of St. Lucia being now frequently visited by ships of the navies of European and American Powers has given additional reason for the construction of a suitable Government House where the colonists, the resident military officers, the naval officers on the station, the officers of Foreign powers and visitors generally may meet in friendly intercourse. I am glad, therefore, to be able to report that the building of Government House is proceeding with rapidity. Several minor but useful public works were carried out during the year.

Crown Lands.

17. Grants of Crown Lands, to the number of 40 in the country and 23 in towns and villages, were made during the year, the total acreage granted being 461 acres. According to the latest return made by the Crown Lands Department, the Crown Lands extend to 9,850 acres, and 8,548 acres are in process of escheat. The disposal and cultivation of these lands may be looked to as a reliable source of future prosperity. On this subject, I venture to transcribe from a local publication, "The Voice of St. Lucia," a passage which is not, I think, an exaggeration of fact:

"We have fertile land enough lying unproductive in the hands of the Crown in St. Lucia to support, without drawing anything from outside, twice the population of Barbados. When one realises that the plantain produces to the acre 44 times more food than the potato, and 131 times more than wheat; that cassava-meal (*farine manioc*) yields per acre six times more nutritive matter than wheat; that the banja-yam is more nutritious, bulk for bulk, than the potato; and when one at the same time reflects that the plantain can be grown practically over the whole island; that the cultivation of the cassava is simple and inexpensive, and the returns very large; that the bread-fruit literally covers the land; that Indian corn will give three crops a year; that the banja-yam grows in wild abundance in our woods, conviction will be compelled that our claim for the capacity of St. Lucia to support a large population solely with her own products is something more than mere boasting."

Health and Vital Statistics.

18. The health of the Colony was good throughout the year, the death rate being 20·4 per 1000. In 1893 the death-rate was 24·2, a rate slightly in excess of the average for the preceding six years. The birth-rate was 45·2 per 1000. The estimated population at the end of the year was 45,095, showing an increase of 895 during the year. The percentage of legitimate and illegitimate births during the last five years have been as follows:—

—	1890.	1891.	1892.	1893.	1894.
Legitimate - -	34·86	38·10	40·91	39·24	40·71
Illegitimate - -	65·14	61·90	59·09	60·76	59·24

Of 2,649 patients treated in hospital 27·1 per cent. were cases of malarial fever of the mild type of previous years, although the percentage of deaths, 2·23, was larger than in the two preceding years.

The Yaws Hospital was repaired during the year and 67 cases were treated. Of this number, 45 were discharged cured, and two died.

Immigration.

19. No new Immigrants were introduced from the East Indies during 1894, and in the month of September 450 immigrants, equivalent to 410 statute adults, were repatriated. The repatriated immigrants lodged in the treasury, for transmission through the usual channel to India the sum of 2,989*l.*, and the protector reported that the women were more than usually ornamented with jewellery. The time expired immigrants entitled to return passages during the year amounted to 889, but 317 accepted the usual bounty in substitution of a return passage; 36 remained in the Colony, but have not yet claimed bounty; the remainder, viz., 112, were the children of those who accepted bounty. At the close of the year there were in the Colony 708 indentured immigrants.

Education.

20. The work of primary instruction was carried on by 35 schools with 4,239 children on the registers and an average attendance of 2,607. The number of children on the registers represents, therefore, [illegible] of the population. The Government contribution to primary schools amounted to 2,572*l.*, or a little over 19*s.* 8*d.* per head of the children in average attendance. In the way of higher instruction, Government contributed 200*l.* in aid of St. Mary's College or Castries Grammar School.

Shipping.

21. The number and tonnage of vessels entered and cleared in 1894 was as follows:—

	Entered.		Cleared.	
	Number.	Tons.	Number.	Tons.
Steamers - - -	386	467,445	386	467,445
Sailing Vessels - -	247	22,473	252	24,431
Total - -	633	489,918	638	491,876

Of the 386 steamers entered and cleared 325 were British, 27 French and 19 Belgian. The amount of bunker-coal shipped may be taken as some indication of the extent to which the Port of Castries is used as a coaling station. In 1894 the shipment was 39,764 tons; in 1893 it was 37,580 tons.

495

Meteorology.

22. The total rainfall reported for the year amounted to 81·55 inches, less by 32 inches than the rainfull for 1893, notwithstanding that in the month of October 21·09 inches were recorded. In October there was a strong gale, accompanied by a very heavy downfall of rain, which caused destructive floods in several parts of the Colony.

Imports and Exports.

23. The value and direction of the trade of the Colony for the last five years are shown in the annexed table :—

Imports.

Year.	United Kingdom.	British Colonies.	Foreign Countries.	Totals.
	£	£	£	£
1890 - - -	129,683	24,555	52,455	206,693
1891 - - -	138,019	24,867	59,292	222,178
1892 - - -	103,859	30,360	38,806	173,025
1893 - - -	86,838	26,602	55,538	168,978
1894 - - -	93,780	31,933	61,425	187,138 *

* Exclusive of Wrecks (404*l.*).

Exports (Including Specie).

Year.	United Kingdom.	British Colonies.	Foreign Countries.	Totals.
	£	£	£	£
1890 - - -	61,087	6,071	74,600	141,758 †
1891 - - -	57,177	6,151	87,056	130,384 †
1892 - - -	44,757	7,153	84,446	136,356 †
1893 - - -	55,217	5,212	118,001	178,430 †
1894 - - -	43,062	11,297	91,535	145,894 †

† Exclusive of value of Bunker Coal supplied to shipping.

The value of Imports for the year was 187,542*l.*, exceeding the value of the Imports for 1893 by 18,564*l.* The average value of the Imports for the five years 1890 to 1894 was 191,602*l.*

WINDWARD ISLANDS. 1894.

To the value of Imports from British Colonies, amounting to 31,933*l.*, Barbados contributed 24,439*l.*, a little over three-fourths; Canada contributing 3,447*l.*; Saint Vincent 1,661*l.*; Jamaica 1,036*l.*

To the value of Imports from Foreign Countries, amounting to 61,425*l.*, the United States of America contributed 41,789*l.*; France 11,491*l.*; the Spanish West Indies 3,272*l.*; the French West Indies 1,982*l.*; Germany 1,600*l.*

Of Exports to British Colonies of the total value of 8,272*l.*, exclusive of specie, Canada took goods to the value of 5,365*l.*; Barbados to the value of 2,352*l.* The value of Exports to Canada more than doubled the value of the preceding year.

Of Exports to Foreign Countries of the total value of 91,535*l.*, France took goods to the value of 48,629*l.*; the United States to the value of 35,991*l.*

The following table gives a comparative statement of the value of the exports of the four principal staples of the Colony in 1894 and 1893, together with the average for ten preceding years:—

—	1894.	1893.	Average 1883 to 1892.
Sugar:—	£	£	£
Usine - - -	53,678	76,106	50,929
Muscovado - -	12,483	14,463	42,784
Molasses - - -	3,722	4,756	5,947
Cocoa - - . -	28,512	38,910	19,671
Logwood - - -	37,359	37,752	5,022
	135,754	171,987	124,353

The quantities exported in 1893 and 1894 were as follow:—

Year.	Usine.	Muscovado.	Molasses.	Cocoa.	Logwood.
	lbs.	lbs.	Gallons.	lbs.	Tons.
1893 -	8,011,200	1,928,400	253,680	1,037,300	6,292
1894 -	7,668,400	2,377,800	223,320	983,200	7,116

The aggregate export of sugar (Usine and Muscovado) in 1894 was 10,046,200 lbs.; in 1893 it was 9,939,600 lbs. It is evident that the serious decrease of the value of the staple products exported in 1894 was the result of falling prices and not of diminished production.

497

General.

24. In truth the great concern of the year in St. Lucia, as throughout the West Indies, was the depreciation of agricultural products, and especially sugar. The statistics recently published in several colonies prove conclusively that for some time the selling price of sugar has been generally below the cost of production. The continuance of such a state of things has, of course, only been possible owing to the system of subsidies adopted by foreign Governments, which guarantees the producer a margin of profit though selling below the cost of production. Independently of falling prices, the season of 1894 was not favourable to agriculture. A long period of drought was succeeded by a gale and disastrous floods in October, and although the consequences of these accidents do not fall within the range of the present report, they should not be lost sight of in reviewing the circumstances of 1894 in relation to their probable effect on the circumstances of 1895.

The effects of the drought, which was widespread throughout the West Indies, have been generally felt in a reduction of the yield of the sugar-cane. To what extent the reduction of the yield of the recently completed crop in St. Lucia may be assignable to the drought or to the subsequent flood respectively it may not be easy to determine. The measures which have been proposed to aid the agricultural industry of St. Lucia, in the peril of its existence, are still under consideration and need not be discussed in this Report.

From a Revenue point of view, the year 1894 was a good year. To whatever extent the general circulation of money may have been affected by the depreciation of staple products, the loss was largely made good by expenditure on Military Works and a comparatively large expenditure on Public Works by the Civil Government. Business connected with the growing activity of St. Lucia as a coaling station has also placed a good deal of money in circulation among the labouring population. The very considerable increase in Savings Bank deposits during the year seems to confirm this view of the case.

WINDWARD ISLANDS. 1894.

ST. VINCENT.

Revenue and Expenditure.

25. The Revenue of the year 1894 amounted to 28,574*l.*, and the Expenditure to 30,976*l.* The Revenue and Expenditure of the year 1893 and the average of the five years 1888 to 1892 were as follows :—

—	1893.	Average 1888 to 1892.
	£	£
Revenue - - - -	27,914	26,972
Expenditure - - - -	29,439	25,857

The Revenue fell short of the Expenditure by 2,402*l.*; but exceeded the Revenue of 1893 by 660*l.* There was a marked increase from Import Duties, chiefly from Flour, although the total value of Imports decreased.

The Expenditure exceeded that of 1893 by 1,537*l.* It included a sum of 772*l.*, expended on the reconstruction of stills for the protection of the Revenue, a part of which is recoverable.

Public Debt.

26. The Public Debt at the close of the year amounted to 19,380*l.*, having been increased since the 31st of December, 1893, by the following loans:—

	£
Kingston water supply - - -	1,000
Town of Kingston - - - -	1,500
Telephones - - - - -	2,200
	£4,700

The two first loans were raised to provide for the refund of advances made from the general revenue of the Colony; the last

for an extension of the telephone system. The Public Debt represented an indebtedness of a little over two-thirds of the revenue of the year, and of about 8*s.* 9*d.* per head of the population.

Public Works.

27. No public work of any importance was undertaken, except the reconstruction of stills already alluded to.

Legislation.

28. In connection with the reconstruction of stills, an Ordinance was passed to consolidate and amend the Excise Law. At the close of the year an ordinance was passed to repeal the provisions of the Sugar Duty Ordinance, 1892, by which an additional export duty of 3*s.* 8*d.* on the large hogshead was imposed to recoup the General Revenue for the loss incurred to meet the requirements of the McKinley Tariff Treaty arrangements; those arrangements have ceased to exist.

Health and Vital Statistics.

29. The health of the Colony was good throughout the year, the death-rate being 20·9 per 1,000. In 1893 the death-rate was 26·2, but this represented an excess over the normal rate caused by an epidemic of bilious remittent fever in the Grenadines. The birth-rate was 46·4. The estimated population at the end of the year was computed to be 44,000, showing an increase of 700 during the year.

Crown Lands.

30. The allotment of Crown Lands in small areas, under recent regulations, has been steadily proceeded with. These Regulations provide for the sale of blocks of not less than 5 acres (and as a rule not more than 20 acres are included in one allotment), subject to the condition, under penalty of forfeiture, that in three years not less than half of the area must be planted in cocoa, nutmegs, coffee or some other economic cultivation. The price at present charged is 2*l.* per acre, payable in five annual instalments, or 30*s.* per acre if paid in full on taking possession. I am informed that since 1891 between 2,000 and 2,500 acres have been allotted, and that some 75 per cent. of the allotments are believed to be in cultivation.

WINDWARD ISLANDS. 1894.

Imports and Exports.

31. The total value of imports during 1894 was 91,009*l.*, or 2,415*l.* less than in 1893. The Imports from the United Kingdom and British Colonies have fallen off, while there has been an increase of imports from Foreign Countries and, in particular, from the United States.

The value of exports has enormously decreased. In 1893 the value of exports amounted to 114,694*l.*, in 1894 a total value of 87,374*l.* shows a decrease of 27,320*l.*

The following table gives the quantities and values of the principal exports in 1893 and 1894 :—

—	1894.		1893.	
	Quantity.	Value.	Quantity.	Value.
		£		£
Arrowroot - Brls.	29,119	38,278	22,310	50,807
Sugar - - Hhds.	3,135	27,270	3,619	43,705
Rum - - Puns.	275	2,200	212	1,694
Cocoa - - Lbs.	174,519	3,272	130,854	3,271
Vegetables and Fruit (plantain) - -	—	2,965	—	2,445
Spices - - -	—	878	—	1,223

The table shows clearly that, although there is a decrease in the production of sugar, the great falling-off in the value of exports is due to low prices.

I annex a table prepared by Administrator Mr. Thompson at my request, showing the quantities and values of the principal exports for the year 1894 and for the quinquennial period from 1880. It gives the following total values of exports:—

	£
1880 - - - - -	158,946
1885 - - - - -	130,341
1890 - - - - -	104,744
1894 - - - - -	87,374

Table of Principal Exports in the year 1880, 1885, 1890 *and* 1894.

Meteorology.

32. The rainfall at the Botanic Garden Station was 91 inches, being 21 inches lower than any record during the last five years.

General.

33. In common with other West Indian Colonies, St. Vincent has suffered severely from the falling prices of its staple products. What I have said on the subject of sugar in my Report on St. Lucia, applies with equal force to St. Vincent and, indeed, I can find no better illustration of the position than the circumstance that the principal proprietor in St. Vincent assured me that his loss in working his estates during the year 1894 amounted to over 6,000*l.* St. Vincent has indeed suffered more seriously than many other Colonies, owing to the absence of such improved machinery as has elsewhere materially reduced the cost of production. In 1893 the sugar-cane was in some districts severely attacked by the disease *Trichosphœria Sacchari.* The curator of the Botanic Garden is of opinion that, however seriously the drought may have affected the yield of the sugar cane, it has kept down this disease.

The bounty system is not responsible for the fall in the price of arrowroot, the cultivation of which has very largely increased in St. Vincent. Presumably the great fall in the value of inferior qualities is due to a general improvement in the method of cultivation and preparation adopted in other countries; the result being a very large production, or perhaps over production, of arrowroot of superior quality. It is, therefore, satisfactory to be able to report that an important improvement has been effected in the preparation of arrowroot by the introduction of a self-emptying washing machine. It is said to work admirably and to lessen materially the cost of preparation.

Steady progress continues to be made in extending and improving the cultivation of cocoa, coffee, fruits and vegetables (sweet potatoes, yams, tannias, &c.,) spices, kola and other agricultural products in substitution of, or at least in supplement of, sugar. With reference to coffee, Mr. Powell, the Curator of the Botanic Garden, has frequently pointed out the suitability of the mountain lands of the Island for Arabian, and of the rich, moist low lands for Liberian, coffee, and he reports that extraordinary planting operations in this direction have latterly been undertaken. At present coffee figures for a considerable sum in the imports, and in an agricultural Colony, where the whole community is more or less dependent on the soil, no commodity should appear on the import list which the soil and climate of St. Vincent are admirably adapted to produce.

The present condition of St. Vincent certainly demands prudence and economy, but I see no reason for discouragement as regards

the future prosperity of the Colony. In the late Sir Robert Hamilton's Report on Dominica, there is a passage which has seemed to me not inappropriate to St. Vincent, and I venture to repeat it. He says:—"There is no royal road to increasing the "wealth and prosperity of the island. This can only come from "an increased production in it of articles for which there is a "constant demand. A beginning in this direction is already "observable, and when once the corner has been fairly turned "the increase will go on at an accelerated pace. With an "increase of production the revenue will increase, and means will "become available for improving and extending the means of "communication throughout the Island. The people are not "wanting in energy and resource, and they will have to exercise "both, in the present condition of the Island, in getting their "produce to market."

I have, &c.
CHAS. BRUCE.

WINDWARD ISLANDS. 1895.

WINDWARD ISLANDS.

(For Report for 1894, *see* No. 144.)

SIR CHARLES BRUCE to MR. CHAMBERLAIN.

SIR, Grenada, July 6, 1896

I HAVE the honour to submit my Report on the Blue Books of the Colonies under my government for the year 1895.

Before dealing with the Colonies individually, it will be convenient for me to refer to a few points touching the general interests of the Windward Islands.

The agricultural story of the year may be told in few words—short crops and low prices. The collective value of exports from the three colonies amounted to 340,868*l.*, against 422,882*l.* in the year 1894. The result was a restricted circulation of money and a diminished demand for imported goods. Consequently the collective value of imports in 1895 amounted to only 364,052*l.*, against 475,146*l.* in 1894. As a result, the collective Revenue of the Colonies amounted to 132,491*l.*, against 148,226*l.* in 1894.

Uniformity of legislation in matters relating to quarantine was secured during the year by the passing of practically identical Ordinances on the lines recommended by the British Guiana Conference in 1888, and generally followed by subsequent legislation in the West Indies. The laws relating to the custody and care of lunatics were also assimilated, a measure which necessarily accompanied the completion of the Central Asylum in Grenada where patients from all the Islands are maintained in ample comfort.

The rate of postage between all the Islands in the Windward group was reduced from 2½*d.* to 1*d.*

WINDWARD ISLANDS. 1895.

GRENADA.

Revenue and Expenditure.

The revenue of the year 1895 amounted to 58,468*l.*; the expenditure to 63,675*l.* The revenue and expenditure for 1894 and the average of the five years 1889–93 were as follows:—

—	1894.	Average 1889 to 1893.
	£	£
Revenue - - - - -	63,602	53,571
Expenditure - - - - -	59,594	55,700

Assets and Public Debt.

The excess of expenditure over the revenue of the year was covered by the Colony's surplus assets.

The year 1894 had closed with a surplus of 7,113*l.*, of which 4,000*l.* was appropriated to the redemption of 5 per cent. Debentures, held by the trustees of the Graham Bequest Fund in St. Vincent. The balance was fortified during the year by the transfer to Revenue of 2,000*l.* from a deposit known as the Fire Insurance Fund, no longer required in consequence of policies of insurance having been effected on the Government buildings. The year 1895 closed with a nominal surplus of assets of 587*l.* During the year 21,000*l.*, of 4 per cent. Stock were issued under authority of the Public Works Loan Ordinance, 1894, at a premium of 10 per cent., and 500*l.* of 4½ per cent. Debentures were converted into 4 per cent. Inscribed Stock at par. At the close of the year the Public Debt amounted to 113,000*l.*, and consisted of 109,000*l.*, of 4 per cent. Stock and 4,200*l.* of 4½ Debentures. The Colony was also liable at the close of the year for the repayment of 2,431*l.*, borrowed by the St. George's Town Board. The accumulated sinking fund invested by the Crown Agents amounted to 2,522*l.* The Public Debt represent a little less than twice the revenue of the year, and an indebtedness of a little less than 2*l.* per head of the population.

Imports and Exports.

The decrease of revenue was chiefly caused by diminished receipts from import duties, duty of excise on rum, and liquor licenses; and these diminished receipts were in the main due to causes which led to, and resulted from, a serious falling off in the value of exports. The revenue from Customs fell from 30,121*l.* in 1894 to 24,826*l.* in 1895.

In explanation of the following tabular statements, showing the value of the imports and exports of 1895 compared with previous

years, I must premise that the values for 1895 have, for the first time in this Colony, been computed with an additional percentage to represent, in the case of imports, the cost of freight, packages, and insurance; and in the case of exports, the cost of packages.

Imports.

—	Without percentages.			With percentages.
	Average 1890–4.	1894.	1895.	1895.
	£	£	£	£
United Kingdom -	90,663	99,973	63,929	78,079
British Colonies - -	35,299	35,418	34,567	42,151
Foreign countries -	48,075	61,607	45,792	55,482
Totals - -	174,037	196,998	144,288	175,712

Exports.

—	Without percentages.			With percentages.
	Average 1890–4.	1894.	1895.	1895.
	£	£	£	£
United Kingdom -	234,051	176,241	139,097	140,736
British Colonies - -	8,080	4,421	5,519	5,616
Foreign countries -	12,530	8,952	25,407	25,668
Totals - -	254,661	189,614	170,023	172,020

Leaving out of consideration, for the purpose of comparison, the added percentages, it will be seen that the value of exports in 1895 was 170,023*l.* as compared with 189,614*l.* in 1894, and 254,661*l.* the average value of exports in the quinquennial period 1890–94. This serious falling off was chiefly due to a short cocoa crop and low prices. The amount of the cocoa crop for the seasons from 30th September 1890 to 30th September 1895, was approximately as follows:—

1890–91 - - - -	71,979 Cwt.
1891–92 - - - -	72,053 „
1892–93 - - - -	79,758 „
1893–94 - - - -	89,462 „
1894–95 - - - -	68,829 „

WINDWARD ISLANDS. 1895.

It follows that the crop of 1894–95 fell short of the crop of 1893–94, which, however, was the largest on record, by over 20,000 cwt., and fell short of the average crop of the period 1890-94 by nearly 10,000 cwt.

The following figures have been given me as representing approximately the average prices of Grenada cocoa in the London market for the seasons 1890–95:—

	s. s.	
1890–91 - - -	59 to 63	per cwt.
1891–92 - - -	55 to 62	„
1892–93 - - -	76 to 79	„
1893–94 - - -	58 to 63	„
1894–95 - - -	44 to 48	„

Assuming 60*s.* and 46*s.* to have been the average prices for the last two crops respectively, the value of the cocoa crop of 1894–95 fell short of the value of the crop of 1893–94 by about 110,000*l.* The result was a restricted circulation of money, and the diminished revenue from import and spirit duties. I pointed out in my report on the Blue Book for 1894 that the large revenue from imports in that year was to a great extent attributed to the use of American flour and foodstuffs in substitution of local produce in the way of plantains and vegetables known under the general name of "ground provisions," sweet potatoes, yams, tanias, &c., and I observed that this tendency was promoted in 1894 by long-continued drought, which restricted the growth of local produce. The abundant rains of 1895 have enabled the small proprietors to resume the cultivation of ground provisions with success, and this movement has been encouraged by the restricted circulation of money for the purchase of imported foodstuffs. It is necessary to bear this in mind in considering the relative well-being of the population in 1894 and 1895. The want of purchasing power indicated by the falling off of revenue from imports and spirits has been to some extent compensated by a cheap and abundant supply of wholesome home-grown food.

The following comparative statement of imports of vegetable foodstuffs shows an all-round decrease in 1895.

Article.	1894.	1895.	Decrease in 1895.
	Lbs.	Lbs.	Lbs.
Bread - - - -	244,135	204,375	39,760
	Barrels.	Barrels.	Barrels.
Flour (Wheaten) - -	31,087	26,499	4,588
	Lbs.	Lbs.	Lbs.
Meal - - - -	385,987	202,890	183,097
Rice - - - -	1,361,244	1,021,368	339,876

After cocoa, spices, principally nutmegs, rank as an important export, and the volume and value of this export compare very favourably with the export of previous years:—

Year.	Quantity.	Value.
	Cwts.	£
1893 - - -	2,087	14,546
1894 - - -	1,917	9,583
1895 - - -	3,640	20,982

There was no material change in the volume and value of the exports of minor industries. These exports fluctuate annually.

Of 55,481*l.* value of imports from foreign countries, the United States claim no less than 54,735*l.* These imports consisted mainly of vegetable food supplies, salt meat, mineral oil, and oleomargarine.

The value of exports to the United States amounted to only 4,686*l.*, towards which cocoa contributed 3,874*l.*, and spices 567*l.*

Shipping.

The number and tonnage of vessels entered and cleared in 1895 were as follows:—

—	Entered.		Cleared.	
	Number.	Tons.	Number.	Tons.
Steamers - - - -	189	240,088	189	240,293
Sailing Vessels - - -	458	14,889	461	14,884
Totals - - -	647	254,977	650	255,177

In 1894 the number of steamers entered was 180, and the number of sailing vessels 407. The increased number of steamers was due to the facilities offered for coaling by the construction of a wharf alongside which 22 steamers were coaled.

Public Works and Road.

Two important public works were completed during the year, the Sendall Tunnel and the Grenville Water Works. The Sendall Tunnel joins the Carenage or inner harbour of St. George's with that part of the town in which the Market Square and the principal shops are situated. The harbour and Market Square were previously connected by precipitous streets and the substitution of a tunnel for the toilsome ascent and descent up

and down which goods had to be transported has conferred a boon on the community which is thoroughly appreciated. In order to complete the original scheme a new street has been opened between the eastern mouth of the tunnel and the streets leading to the Market Square. The new street is protected from the sea by a massive stone wall. The tunnel was commenced in 1889, but the works were suspended for some years.

The Grenville Water Works, commenced in 1894, were completed during the year and the scheme, besides furnishing an abundant supply of pure water to the residents of Grenville and the shipping, affords a provision for the protection of property against fire which will, it is hoped, enable proprietors to insure at easier rates of premium. Mr. Osbert Chadwick, C.M.G., the consulting engineer of the works, visited them shortly before their completion and reported that they were thoroughly well constructed, adding that when finished they would be as complete as those of any town in Europe. The service of the St. Paul's and Richmond Hill Water Works was during the year extended by laying a new supply pipe, and a considerable district was thus brought within the area of supply.

While these important works were being completed the necessary preliminary steps were taken with a view to carrying out further useful undertakings as soon as funds are available. Mr. Chadwick prepared reports on a scheme for supplying the town of Gouyave with water; on a scheme for lighting the town of St. George by electricity; and on the reclamation of the swamp-lands of Grenville. An examination of the harbour of St. George's was also undertaken by Mr. G. H. Stephens, and a scheme prepared for the construction of a wharf to enable vessels to discharge and load alongside, instead of by means of lighters. Such a wharf would materially increase the commodiousness of the port for coaling purposes. A large expenditure was incurred during the year in the repair and reconstruction of roads and bridges damaged by inundation in 1894 and 1895. A complete reconstruction of the streets of the town of St. George's was commenced and partly executed during the year by the Town Board.

The total expenditure on Public Works amounted to 21,004*l.*, of which 12,592*l*, was paid out of general revenue for roads and buildings, 6,054*l.*, out of loans for Colonial Public Works, and 2,358*l.*, out of loans for Parochial Public Works

Meteorology and Forestry.

A record of rainfall in each district of the Colony was for the first time obtained in 1895. The greatest rainfall gauged was 193 inches at the Grand Etang on the central ridge of the Island, 1,790 feet above mean sea level; the lowest, 78·75 inches, at the Richmond Hill Station, 506 feet above mean sea level. On the 30th of September a rainstorm of great severity visited the northern districts of Grenada and the Island of Carriacou. In

Grenada, roads, bridges, and telephone lines were swept away by the flood, the damage under these heads being estimated at over 5,000*l*. Many acres of cultivated land were also laid waste or carried away. A catastrophe of the same kind in 1894 had already called my attention to the necessity of providing against the denudation of the forest lands of the Colony by the extension of clearings for purposes of cultivation.

It is universally admitted that such clearings, if undertaken without proper precautions, are the fruitful cause of torrents and generally increase surface drainage to the detriment of springs and permanent water courses; and I cannot doubt that the extension of clearings on the slopes of the mountain ridges of Grenada is tending to produce such results. Mr. Hooper, of the Indian Forest Department, who reported on the forests of Grenada in 1887, advised the strict preservation under forest of so much of the central ridge of the Island as is included within the Crown lands and certain other portions in the immediate vicinity, of which it would be to the general interest for the Government to assume the ownership. The uncertainty prevailing concerning the limits of the Crown lands around the Grand Etang has been a difficulty in carrying out Mr. Hooper's proposal, but steps have now been taken to remove this difficulty by the determination and demarcation of the boundary of the Crown Lands.

Mr. Hooper's Report closed with the following paragraph :—

"The administration of the forests, in whoever's hands it is placed, to be successful, must command the cordial co-operation of the estate owners; and from short acquaintance with them, I am sure that, once the matter is understood by them, they will not withhold their active assistance both in resigning to the inalienable charge of Government the backlands, which in many instances are a source of expense rather than of profit (sixpence an acre being the annual assessment on uncultivated land) to their present owners, and in paying a careful attention to the preservation of their forests, in the management of which they might be assisted by the forest officer. By so doing they would confer a benefit on themselves and on the community at large."

The Government, while taking measures for the preservation of the Crown lands, has asked for the cordial co-operation of owners of estates in the matter, and there can be no doubt that it will be accorded. It is to be apprehended, nevertheless, that the great extension of clearings and cultivation on the higher slopes during the years succeeding 1887 will make the accomplishment of forest reservations less easy than it would have been at that time.

Agriculture.

Early in the year Professor Harrison, Government Analyst of British Guiana, visited Grenada to select and report on sample soils from different districts of the colony, with reference to the products for which they are best suited and the manures necessary to correct their deficiencies. The thanks of this Colony are due

to the Government of British Guiana for placing Mr. Harrison's services at our disposal, and to Mr. Harrison himself for the interest he took in the work and for his reports. The Curator of the Botanic Garden accompanied Mr. Harrison on his tour through Grenada and Carriacou, and had thus an excellent opportunity of meeting planters and proprietors and taking notes of the agricultural position of the Colony. A commission was appointed during the year to report on the measures which it might be advisable to take in the agricultural interests of the Colony in consequence of the serious fall in the price of cocoa. Sittings of the commission were held in the different parishes and much information collected. The report of the commission has now been received and published, and the recommendations made seem to be generally prudent and practicable. The Curator of the Botanic Garden reports that the proceedings of the commission drew the attention of planters to the cultivation of coffee, and in consequence the supply of young plants at the garden was insufficient to meet the demand. Strenuous efforts are being made to meet it in the near future. The Botanic Garden continues its efforts to encourage the distribution of good qualities of agricultural and horticultural plants in aid of the established staple products of the Colony. Among other minor industries the cultivation of kola is increasing. Experiments are being made in the cultivation of tobacco.

A short crop of cocoa and low prices have for the time arrested our prosperity. Propitious seasons will, it may confidently be hoped, restore the abundant measure of previous crops, but it would be imprudent to calculate on the certainty of a return to the superior prices of two years ago. What can be done, however, is to obtain for Grenada cocoa the highest possible market price by such improved methods of preparation as will give our cocoa a reputation for uniform superiority of quality. It seems probable that the establishment of central *boucans*, under the management of experts, might do much towards the attainment of this end. If this end can be attained there seems to be a future of excellent promise for cocoa in Grenada, but the experience of the year seems once more to enforce the lesson that the fortunes of the colony cannot be safely limited or restricted to the cultivation of one product. The recommendations of the commission to which I have referred are all in favour of adding new agricultural industries to the resources of the Island. This is a lesson which the Kew authorities have long taught, and through the agency of botanical stations and gardens they do much to make it possible to promote the encouragement of subsidiary industries in aid of, or it may be, in time, to take the place of, established staples. A long colonial experience has taught me to appreciate to the full the Imperial service done by the Director of the Kew Gardens and his staff.

Vital Statistics.

The population of the Colony on the 31st of December was estimated at 59,101, showing an increase of 1,409 over the previous

year. The number of births exceeded those of any previous year recorded by the Registrar, and indicated a birth rate of 44·9 per 1,000. The death rate, 20·8 per 1,000, was the lowest recorded for many years. The marriage rate, reflecting the industrial depression, fell from 7·25 per 1,000 in 1894 to 5·20. It naturally followed that the per-centage of illegitimate births was somewhat higher than in the previous year.

Education.

A consolidating and amending Education Ordinance was passed in 1895, but did not come into operation till the 1st of January 1896. A new Code of Regulations for elementary schools is being prepared under the Ordinance, by which it is hoped that the standard of education may be raised, so that the Government may secure greater efficiency in return for the public expenditure.

Elementary education was carried on during the year in 37 schools, with 7,025 children on the registers, and an average attendance of 3,569. The number on the registers represents nearly 12 per cent. of the population. The Government expenditure on elementary education amounted to 5,354*l.* On secondary education the Government expenditure was limited to 614*l.* in the form of grants in aid of the St. George's Grammar School for boys and two high schools for girls. The expenditure on education amounted to 6,723*l.*, nearly 11·5 per cent. of the whole revenue of the Colony.

Savings Bank.

A comparison of the following table with the tables in which I have given the amount of cocoa exported and the price for the last five years shows that the transactions of the Savings Bank sympathised with the depression of the year :—

Year.	Number of Depositors.	Amount of Deposits.	Amount of Withdrawals.	Balance at Credit of Depositors on 31st December.
		£	£	£
1893 - -	716	7,305	6,394	7,994
1894 - -	959	7,307	7,893	7,602
1895 - -	885	5,563	6,666	6,408

Legislation.

Several Ordinances relating to the public health of the Colony were passed; including the Quarantine Ordinance, the Public Health Ordinance, by which local authorities in sanitary matters have been established, the Streams Pollution Ordinance, the Grenville Water Supply Ordinance, and I may perhaps include

WINDWARD ISLANDS. 1895.

under this head the Lunatics Ordinance. An Ordinance was passed to consolidate and amend the Education Laws. By the St. George's Town Board Ordinance, a Board was created to administer the affairs of the town, in substitution of the old Parochial Board, half of the members being elected by the ratepayers and half nominated by the Governor. By the Ordinance the receipt and payment of all moneys are entrusted to the Treasury; the functions and powers of the Board being in this and other respects assimilated to those of the Castries Town Board of St. Lucia. For the protection of the town of St. George against fire, an Ordinance creating a Fire Brigade was passed.

SAINT LUCIA.

Revenue and Expenditure.

The revenue of the year amounted to 48,564*l.*; the expenditure to 57,579*l.*, the expenditure thus exceeding the revenue by 9,015*l.* The revenue and expenditure for the year 1894, and the average yearly revenue and expenditure for the years 1889–93, were as follows:—

—	1894.	Average, 1889 to 1893.
	£	£
Revenue - - - -	56,590	51,209
Expenditure - - - -	54,500	51,588

The revenue of the year was not affected by any alteration of duties or taxes. The payment of export duties was suspended during the year as a measure of relief to the estates which had suffered from damage done to crops by the gale and floods of October 1894; but these duties are paid as contributions to the Immigration Fund. The Customs' Tariff Ordinance, 1895, did not come into operation until the 1st of January of the present year. The effect of this Ordinance was in general a reversion to the rates of duty levied before the adoption in 1892 of a revised tariff to meet the requirements of the McKinley tariff treaty arrangements. The 1895 tariff nevertheless leaves the general *ad valorem* rate and the duty on spirits at the rates fixed in 1892. The Ordinance also imposes a duty of sixpence per ton on coal and coke, but the collection of this duty is, by a proviso in the Ordinance, suspended until the 1st of January 1897.

As in Grenada, the falling off of revenue was mainly due to diminished receipts from customs and excise duties. The receipts from Customs fell from 24,416*l.* in 1894 to 21,052*l.* in 1895; the receipts from excise fell from 15,455*l.* in 1894 to 12,671*l.* in 1895. These reduced receipts were the result of a decline in the volume and value of the staple exports.

Assets and Public Debt.

The year 1894 closed with a surplus of assets over liabilities, exclusive of Debenture and Inscribed Stock Loans, amounting to 4,655*l.* This surplus was absorbed by the excess of expenditure over revenue of 1895, and the year closed with a debit balance of

WINDWARD ISLANDS. 1895.

4,359*l.* The Public Debt on the 31st of December 1895, amounted to 185,380*l.* made up as follows:—

					£
6 per cent. Debentures			-	-	22,600
5	„	„	-	-	2,700
4½	„	„	-	-	77,600
4¼	„	„	-	-	8,000
3½	„	„	-	-	8,000
4	„	Inscribed Stock	-	-	66,480

Included in the amount of 66,480*l.* Inscribed Stock is a sum of 10,000*l.* raised by the Colony on behalf of the Castries Town Board, interest and sinking fund being payable by the board. The credit of the Colony is pledged for the loan. The sum of 1,900*l.* was paid off during the year in redemption of drawn debentures. The Public Debt at the close of the year, exclusive of the Town Board Loan, was equal to 3·6 times the revenue of the year and represented an indebtedness at the rate of 3*l.* 16*s.* 5*d.* per head of the population. The charges on account of the Public Debt absorbed more than one-sixth of the revenue of the year.

Military Expenditure.

The Imperial expenditure during the year for military purposes amounted to 45,174*l.* The Colonial expenditure was limited to 1,957*l.* paid as an allowance to the troops in lieu of exemption from duties of Customs.

Imports and Exports.

The following tables show the value and direction of the trade of the Colony for the last five years:—

Imports.

Countries from whence imported.	1891.	1892.	1893.	1894.	1895.
	£	£	£	£	£
United Kingdom - - -	138,019	103,859	86,838	93,780	74,512
British Colonies - - -	24,867	30,360	26,602	31,933	28,690
Foreign Countries - - -	59,292	38,806	55,538	61,425	51,720
Wrecks - - - -	—	—	—	404	23
Totals - - -	222,178	173,025	168,978	187,542	154,945

Of 51,720*l.*, value of imports from foreign countries, the United States claim 39,357*l.*

Exports.

Countries to which exported.	1891.	1892.	1893.	1894.	1895.
	£	£	£	£	£
United Kingdom - - -	37,177	44,757	55,217	43,062	24,269
British Colonies - - -	6,151	7,153	5,212	11,297	2,951
Foreign countries - - -	87,056	84,446	118,001	91,535	74,935
Totals - - -	130,384	136,356	178,430	145,894	102,155

* Including specie, but exclusive of value of bunker coal supplied to shipping.

Of 72,451*l.*, value of exports to foreign countries, the United States received 37,758*l.* exclusively in sugar.

The following table gives the quantity and value of the principal exports in 1895 compared with the two preceding years :—

Exports.	1893.		1894.		1895.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
Sugar:	lbs.	£	lbs.	£	lbs.	£
Usine - - -	8,011,200	76,106	7,668,400	53,679	7,362,200	46,014
Muscovado - -	1,928,400	14,463	2,377,800	12,483	763,700	3,341
Molasses - - -	Gall. 253,680	4,756	Gall. 223,320	3,722	Gall. 279,960	3,499
Cocoa - - -	lbs. 1,037,600	38,910	lbs. 983,200	28,513	lbs. 739,402	16,637
Logwood - - -	Tons. 6,292	37,752	Tons. 7,116	37,359	Tons. 5,086	25,430

The average price of the principal exports for 1895 compared with the two preceding years was approximately as follows :—

Export.	1893.	1894.	1895.
Sugar, per 100 lbs.:	£ s. d.	£ s. d.	£ s. d.
Usine - - -	0 19 0	0 14 0	0 12 6
Muscovado - -	0 15 0	0 10 0	0 8 9
Molasses, per gall. - -	0 0 4½	0 0 4	0 0 3
Cocoa, per 100 lbs. - -	3 15 0	2 18 0	2 5 0
Logwood, per ton - -	6 0 0	5 5 0	5 0 0

In my Report on the St. Lucia Blue Book for 1894 I showed that the serious decrease in the value of the staple products exported in that year was the result of falling prices and not of

WINDWARD ISLANDS. 1895.

diminished production. The figures I have now given show that in 1895 a further fall in price was accompanied by a diminished production. I also pointed out in my Report for 1894 that a long period of drought during that year followed by disastrous floods towards the close of the year would probably show their effect on the crops of 1895. The diminished yield of the year may be assigned chiefly to these causes.

The effect of the diminished yield and low prices of the principal products of the Colony was a restricted circulation of money and a reduced demand for the principal articles of import. The value of the principal food supplies imported showed a diminished value of nearly 6,000*l*; while in textile fabrics, haberdashery, and hardware, the falling off amounted to over 11,500*l*.

Shipping.

The number and tonnage of vesels entered and cleared in 1895 were as follows:—

	Entered.		Cleared.	
	Number.	Tons.	Number.	Tons.
Steamers - - - -	365	453,216	366	454,777
Sailing vessels - - -	307	19,294	308	20,381
Totals - - -	672	472,510	674	475,118

Of the 365 steam vessels entered, 308 were British, 27 French, and 19 Belgian. In 1894 the number of steam vessels entered was 386. Most of the steamers entering call for bunker-coal. The shipment of bunker-coal was 35,714 tons in 1895; 39,764 tons in 1894; 37,580 tons in 1893. The price of the bunker-coal shipped is returned at 23*s*. in 1893 and 1894, and at 20*s*. in 1895. As no rival coaling ports can compete with St. Lucia in facilities for coaling, or in the price at which coal can be put on board, this fall of price must presumably be the result of local competition. It seems certain that if local competition reduces the price of coal below the price necessary to compete with rival ports no gain, but rather loss, is the result to the Colony. A fall of 3*s*. per ton in the price of 35,000 tons of coal means a direct loss of 5,000*l*. to the local merchants, and a corresponding indirect loss to the Colony.

Public Works.

The works undertaken for the supply of pure water to the town of Castries and the shipping have made steady progress; a considerable length of pipe being already laid. The new Government House was so far completed that the Administrator

took up his residence in it before the end of the year. The construction of a telephone line round the island connecting the several towns and villages with Castries and with each other was commenced and the line is now nearly completed. Several other minor but useful works were carried out, and on roads and bridges the damage done by the gale and floods of 1894 necessitated unusually extensive and costly labour. The amount expended on public works by the Civil Government during the year was 20,890*l.*, of which 9,205*l.* was defrayed out of general revenue; 11,314*l.* from loans; and the balance from town and village local funds. The military expenditure for works amounted to 12,600*l.*

Meteorology.

The year was one of heavy rainfall. Observations taken at the Morne at an elevation of 745 feet above mean sea level recorded a rainfall of 121·29 inches. In 1894 the record showed 81·55 inches; in 1893 it indicated 113 inches. The rainfall exceeded the average for the five preceding years by over 27 inches. In September and November the monthly records showed a rainfall of over 17 inches. Rain fell on 250 days during the year; the greatest number of rainy days (27) occurring in September, and the least (11) in February. It seems worthy of note, as indicating the necessity for precaution among the troops quartered on the Morne, that the absolute maximum temperature recorded was 87·6 and occurred in the month of October; the absolute minimum was 60·2 and was recorded in the same month.

Agriculture.

The prosperity of St. Lucia was arrested during 1895 by the causes which have affected the West Indies generally, short crops and low prices. But the agricultural history of the year was marked by one incident of good promise, as showing that, even in exceptionally unfavourable circumstances, the resources of the soil may be exploited with profit by intelligent, scientific, and economical enterprise. Early in the year the mortgagees in possession of the estates of the Central Sugar Factory Company gave notice of their intention to withdraw from the property and to cease working the factory and estates. As the Company was entirely without funds, it seemed possible and even probable that the property would revert to the condition of jungle, while not only would the indentured immigrants have to be provided for under the terms of their engagements, but a large body of labourers belonging to the general community would be thrown out of employment. In these circumstances it was fortunate that a local syndicate came forward and took over, under an agreement with the Government, the working of the estates provisionally for a year. I understand that the estates have been worked with such superior energy, skill, and economy, as to realise an immediate profit and to justify the belief that the cultivation of the property

will be permanently maintained and extended, with profit to the undertakers and every advantage to the Colony.

Vital Statistics.

The population on the 31st of December was estimated at 45,906, showing an increase of 811 over the previous year. The birth-rate was 40·4 per 1,000; the death-rate 22·4. The number of marriages, as in Grenada, seemed to reflect the agricultural depression, being 280 compared with 339 in 1894. The percentage of illegitimate births remained nearly stationary at 59 per cent.

Immigration.

There were in the Colony at the end of the year 721 indentured East Indian immigrants, including 513 statute adults or immigrants over 15 years of age. There was no importation of East Indian immigrants and no repatriation of time-expired immigrants. The birth-rate and death-rate among the indentured immigrants was as follows:—

1895.	Percentage.	
	Indentured Immigrants.	General Population.
Birth rate - -	4·20	4·04
Death rate - -	2·24	2·22

There were four "East Indian Mission" Schools in operation during 1895, with 233 children on the registers.

Education.

The work of primary instruction was carried on by 37 schools, with 3,977 children on the rolls and an average attendance of 2,212. In 1894 there were 35 schools, with 4,239 children on the registers and an average attendance of 2,607. Not only was there a falling off in the general attendance, but the inspector's report indicates a falling off in the number presented for examination and in results. The number of children on the registers represents about 8·6 per cent. of the population. The Government contribution to primary schools amounted to 2,668*l.* or about 1*l.* 4*s.* 4*d.* per head of the children in average attendance. In the way of higher instruction, Government contributed 200*l.* in aid of the Castries Grammar School, known as St. Mary's College.

Savings Bank.

The deposits during the year amounted to 7,000*l.* compared with 9,548*l.* deposited in 1894; on the other hand, the withdrawals amounted to 7,162*l.* compared with 9,842*l.* withdrawn in 1894. The following figures seem to indicate that, while there has been a falling off in the saving power of a section of the community, saving habits have extended:—

Year.	No. of Depositors.	Amount of Deposits at 31 Dec.	Average sum per Depositor.
		£	£ s. d.
1890 - - - -	681	9,492	13 18 9
1891 - - - -	909	9,961	10 19 2
1892 - - - -	905	7,704	8 10 3
1893 - - - -	1,128	9,812	8 13 11
1894 - - - -	1,187	9,428	7 18 10
1895 - - - -	1,275	9,267	7 5 4

It appears from these figures that the Savings Bank in St. Lucia has not reflected the general depression in agriculture and trade so clearly as in Grenada. This is probably due to the large expenditure on Public Works by the Military as well as by the Civil Government.

Legislation.

The principal Ordinances passed during the year have been already referred to in this despatch, namely: the Ordinances to amend and consolidate the law relating to quarantine; to provide for the custody of lunatics; to fix a tariff of duties on goods imported into the Colony.

WINDWARD ISLANDS. 1895.

ST. VINCENT.

Revenue and Expenditure.

The revenue of the year 1895 amounted to 25,459*l.*; the expenditure to 28,911*l.* The revenue and expenditure for 1894, and the average of the five years 1889-93 were as follows:—

—	1894.	Average 1889 to 1893.
	£	£
Revenue - -	28,574	27,851
Expenditure -	30,976	26,926

The revenue was affected by various changes in import and export duties. At the close of 1894 the landed interest was relieved of the additional export duty imposed when the McKinley tariff treaty arrangements were entered into, and to meet this loss of revenue the excise duty on rum was raised from three shillings and sixpence to four shillings on the proof gallon. Early in the year the Customs tariff was revised and the duties antecedent to the McKinley treaty arrangements were, with some modifications, restored. It was anticipated that the revised tariff would fortify the revenue of the year by about 1,250*l.* The revenue, however, continued to fall, and in the month of November the duties on flour of wheat and tobacco were raised and an addition of 10 per cent. imposed on all duties. Before the additional duties came into force all goods in bonded warehouses were cleared, and the revenue of the year was therefore increased by an amount which would otherwise have fallen into the revenue of 1896. Nevertheless the revenue of 1895 showed a decline of 3,115*l.* compared with the revenue of 1894.

As was the case in Grenada and St. Lucia, the decline of revenue was due chiefly to diminished receipts from customs and excise duties; and these diminished receipts were due to causes which led to and resulted from a serious falling off in the value of the staple agricultural products. The revenue from import duties declined from 12,881*l.* in 1894 to 10,788 in 1895, and the revenue from excise from 4,552*l.* in 1894 to 3,694*l.*

Assets and Public Debt.

The year 1894 closed with an excess of liabilities (exclusive of the Debenture Debt) over assets amounting to 260*l.* and the excess of expenditure over revenue in 1895 increased the debit balance at the close of the year to 3,712*l.* The Public Debt, raised entirely by the issue of 5 per cent. debentures redeemable within short periods, amounted at the close of the year to 17,170*l.*, against 19,380*l.* at the close of 1894. Of this amount, 9,350*l.* represents money raised for municipal purposes, and repayable by the towns in which it has been expended; 1,750*l.* is the balance of the loan raised for immigration purposes, and is being redeemed by a special export tax appropriated to paying the interest and extinguishing this debt; 1,720*l.* was raised to meet initial expenditure on the Crown Lands scheme, and is a charge on the Crown lands; 4,350*l.* is the balance of loans raised for general Colonial purposes up to the 31st of December 1895.

Imports and Exports.

The direction and volume of the trade of the Colony for the last five years is shown in the following tables:—

Imports.

——	1891.	1892.	1893.	1894.	1895.
	£	£	£	£	£
United Kingdom - - -	44,448	49,313	41,388	39,193	27,687
British Colonies - - -	39,174	44,301	40,178	37,296	26,187
Foreign Countries - - -	14,217	9,366	11,859	14,521	10,968
Totals - - -	97,839	102,980	93,425	91,010	64,842

Exports.

——	1891.	1892.	1893.	1894.	1895.
	£	£	£	£	£
United Kingdom - - -	39,848	52,317	41,789	34,899	25,876
British Colonies - - -	12,790	25,914	25,142	21,395	19,577
Foreign Countries - - -	46,034	39,341	47,763	31,080	23,237
Totals - - -	98,672	117,572	114,694	87,374	68,690

Compared with 1894 the decrease of the import trade amounted to 28·7 per cent.; the decrease of the export trade was 21·3 per cent.

WINDWARD ISLANDS. 1895.

The following table gives the quantity and value of the principal exports in 1894 and 1895 :—

—	1894.		1895.	
	Quantity.	Value.	Quantity.	Value.
		£		£
Arrowroot - - brls.	29,119	38,278	25,695	26,959
Sugar - - - hhds.	3,135	27,270	2,782	18,962
Rum - - - puns.	275	2,200	152	883
Cocoa - - - lbs.	174,519	3,272	173,470	3,246
Vegetables and fruit (plantains) -	—	2,965	—	3,284
Spices - - - -	—	878	—	1,811

Of 10,968*l.* value of imports from foreign countries, the United States claim no less than 10,394*l.* The United States supplied most of the foodstuffs, kerosene oil, and tobacco. Of 23,236*l.* value of exports to foreign countries, the United States were customers to the amount of 18,796*l.*, this sum representing nearly the whole value of the sugar exported. The bulk of the arrowroot exported went to the United Kingdom.

Shipping.

The number and tonnage of vessels entered and cleared in 1895 were as follows :—

—	Entered.		Cleared.	
	No.	Tons.	No.	Tons.
Steamers - - - -	104	106,671	104	106,671
Sailing vessels - - -	390	12,199	399	12,369
Total - - -	494	118,870	503	119,040

In 1894 the number of steamers entered was 102, and the number of sailing vessels 323.

Public Works.

No public work of importance was undertaken during the year.

Crown Lands.

The low price of stock and agricultural produce seriously affected the revenue of the Crown Lands Department. Purchasers of small holdings under the Crown Lands scheme, which provides for payment by instalments, have been unable to meet their liabilities, the result being large arrears of instalments, dating back in many cases to the year 1893. The Superintendent of Crown Lands is of opinion that where instalments have been paid they have been, to a large extent, paid out of wages earned out of the Colony or by sale of stock and not out of the profits of the cultivation of the land. I am giving my attention to two important questions affecting the Crown Lands scheme, the opening of roads, and the instruction of the small holders in the art of turning their holdings to profitable account by improved methods of cultivation and the selection of the best qualities of economic plants. The Superintendent of Crown Lands and the Curator of the Botanic Gardens are giving every assistance to the settlers.

Meteorology.

The year 1895 was remarkable for heavy rainfall.

The rainfall recorded at the Botanic Garden station was nearly 130 inches, nearly 40 inches in excess of the rainfall for 1894. Over 30 inches of rain fell in the month of September, causing floods which severely damaged the roads and private property in many parts of the Colony.

Agriculture.

The position of the sugar industry in St. Vincent may be conveniently illustrated by the following figures showing the collective value of the export of sugar, rum, and molasses in 1895, compared with the export in the year 1894 and in the years 1880, 1885 and 1890.

1880.	1885.	1890.	1894.	1895.
£ 128,603	£ 86,341	£ 63,621	£ 30,482	£ 21,581

Up to 1894 the value of the export of arrowroot was on the ascending scale, but in 1895 it fell to 26,959*l.* from 38,278*l.* in the previous year.

The value of the export of cocoa rose steadily from 640*l.* in 1880, to 3,272*l.* in 1894. In 1895 it was 3,246*l.*

The decline of the sugar industry in St. Vincent is, of course, due, in the first instance, to the causes which have depressed the industry in other West Indian Colonies, and mainly to the system of subsidies adopted by foreign Governments which guarantee

WINDWARD ISLANDS. 1895.

their producers a margin of profit even when the price is below the cost of production. But, as I pointed out in my report last year, St. Vincent has suffered more severely than other Colonies owing to the absence of such improved machinery as has elsewhere met reduced prices by turning out a superior quality of sugar at a reduced cost of production. For the Muscovado sugar, forming a large part of the export of St. Vincent, there seems to be very little demand in any part of the world. Professor Harrison, whose visit to Grenada I have referred to, extended his visit to St. Vincent, and reported on samples of soils selected from different districts with reference to the products for which they are best adapted and the manures necessary to correct their deficiences. The results of Professor Harrison's visit seem to show that, if the natural fertility of the soil were aided by scientific methods of cultivation and improved machinery, St. Vincent might successfully compete with the most favoured of the sugar-producing Colonies. The causes which have led to the decline of the arrowroot industry seem to be over-production and the substitution of other farinaceous products, especially flour of rice, for the uses to which arrowroot has hitherto been applied. There is still a fair demand for well-prepared arrowroot of superior quality, and the price is sufficiently remunerative where the soil is suitable and not too heavy. At the present market price the cultivation of cocoa on the Crown lands, which are sold at a nominal price, or on private lands unproductive for want of cultivation, should yield a handsome margin of profit. And the same may be said of other products—coffee, fruit, and spices. Dr. Morris, Assistant Director of the Royal Kew Gardens, advises me that the resources of St. Vincent so exactly resemble those of Jamaica that every kind of cultivation which has been found profitable in Jamaica ought to be equally successful in St. Vincent. In considering the prospects of the development of agriculture in St. Vincent, the circumstances of the tenure of land have to be taken into account.

The lands of St. Vincent cover, according to the Blue Book, a total area of 85,000 acres. According to the land roll, which includes assessments on holdings of one acre and upwards, these lands are held approximately as follows:—

—	Acres.	No. of Holdings.
Crown lands - - - - -	40,000	—
In properties of less than 20 acres - -	1,360	351
In properties of over 20 acres and less than 50 acres.	1,060	34
In properties of over 50 acres - - -	42,000	134

I am unable to state accurately the area of cultivated land in the 42,000 acres in the hands of large proprietors, but I believe

that the area beneficially occupied cannot exceed 8,000 acres, or at the most 10,000. The area of Crown lands in cultivation is insignificant, probably not exceeding 1,200 acres. It is probable that the holdings under 50 acres are for the most part beneficially occupied. It should seem, therefore, that the successful development of the agricultural resources of the Colony must depend on two things: an extension of the area of cultivation of such products as have been found profitable in Jamaica over the large holdings in the hands of a few proprietors; and an extension of similar cultivation by small proprietors. These are the problems upon the solution of which the future prosperity of St. Vincent depends. It is difficult for Government to force the action of the proprietors of great estates, and this is not the place for me to consider the possibility of measures which might have such a result. But it may be allowed to say that it would be to the advantage of the Colony were some portion at least of the large estates now unprofitable to pass into the hands of proprietors who would work them as the unprofitable estates of the Central Sugar Factory Company in St. Lucia were worked during last year by the syndicate to which I have referred in my remarks on agriculture in St. Lucia. As regards the extension of the area of small holdings, a scheme, to which I have already referred, for disposing of the Crown lands was started some years ago. I have indicated the causes which have, for the time at least, retarded the success of the scheme.

Education.

The work of primary instruction was carried on by 45 schools, with 6,078 children on the register and an average attendance of 3,373. In 1894 the number on the register was 6,193 and the average attendance 3,567. Hard times and continued rainfall probably reduced the school attendance. The Government grants amounted in 1895 to 1,977*l.*, in 1894 to 2,021*l.*

Savings Bank.

The following table shows the transactions of the Savings Bank for the last five years :—

Year.	No. of Depositors.	Amount of Deposits.	Amount of Withdrawals.	At credit of Depositors at 31st December.
		£	£	£
1891 - -	938	5,216	5,474	8,715
1892 - -	946	4,843	4,751	8,957
1893 - -	1,001	4,514	5,154	8,317
1894 - -	1,021	5,772	5,165	8,925
1895 - -	1,012	4,509	4,460	8,973

WINDWARD ISLANDS. 1895.

Although the amount of deposits in 1895 fell considerably short of the deposits in 1894, it is satisfactory to observe that, in spite of adverse circumstances, the deposits on the 31st of December were slightly in excess of the deposits at the close of any previous year.

Legislation.

In addition to the Ordinances relating to quarantine and to the care and custody of lunatics, to which I have already referred, the Bills of Exchange Ordinance was passed, making the law relating to Bills of Exchange, Cheques, and Promissory Notes, uniform with the general provisions of Imperial legislation. An Ordinance was also passed to make provision for the preparation and publication of a revised edition of Statute Laws of the Colony, a measure which is being carried out *pari passu* with the revision of the Laws of Grenada.

I have, &c.

CHARLES BRUCE.

COLONIAL REPORTS—ANNUAL.

No. 209.

GRENADA.

ANNUAL REPORT FOR 1896.

(For Report for 1895, *see* No. 179.)

Presented to both Houses of Parliament by Command of Her Majesty.
October 1897.

LONDON:
PRINTED FOR HER MAJESTY'S STATIONERY OFFICE,
BY DARLING & SON, LTD., 1-3, GREAT ST. THOMAS APOSTLE, E.C.

And to be purchased, either directly or through any Bookseller, from

MISCELLANEOUS.

No.	Colony.	Subject.
1	Gold Coast	Economic Agriculture.
2	Zululand	Forests.
3	Sierra Leone	Geology and Botany.
4	Canada	Emigration.
5	Bahamas	Sisal Industry.
6	Hong Kong	Bubonic Plague.
7	Newfoundland	Mineral Resources.
8	Western Pacific	Solomon Islands.

No. 209.

GRENADA.

(For Report for 1895, *see* No. 179 of this Series.)

GOVERNOR SIR ALFRED MOLONEY to MR. CHAMBERLAIN.

Grenada,
28th August, 1897.

SIR,

I HAVE the honour to transmit the Report on the Blue Book for 1896 of the Colony of Grenada which has been prepared by Mr. Leslie Probyn, the Acting Colonial Secretary.

I have &c.,

ALFRED MOLONEY, Governor.

ACTING COLONIAL SECRETARY'S REPORT ON THE BLUE BOOK OF 1896.

During the year 1895 the fall in the price of cocoa, combined with the effects resulting from a short crop, led to a withdrawal of advances upon cultivation. Other effects took place in sympathy, with the result that the position of many became trying, if not critical. The statistics for 1896 have a special interest as showing in many ways the manner in which the Colony has met the strain.

ASSETS AND LIABILITIES.

The year 1896 started with a surplus of £587 and closed with a deficit of £1,182.

The Assets comprise three items which require comment, viz.: (*a*) Other Advances, (*b*) Arrears of Revenue (Parochial Board), (*c*) Stores.

"Other Advances" include a sum of £221 repayment of which is improbable as the amount is an advance in connection

14672—6—9/97 Wt 20613 D & S—5 (B)

with a scheme for electric lighting which is not being proceeded with. (*b*) "Arrears of Revenue" include arrears of interest due from the Grenville Parochial Board amounting to £1,117 which it is feared will have to be treated as a bad debt. (*c*) "Stores" shown in the assets as worth £1,373 are in reality of less value as the total given is based upon the original cost of the stores when purchased.

PUBLIC DEBT.

The Public Debt at December 31st, 1896, amounted to £127,770 as against £113,190 at December 31st, 1895. Of this amount £26,205 is owing by the Parochial Boards.

With the exception of £4,100 secured by debentures carrying 4½ per cent. interest, the whole debt of the Colony is at 4 per cent. and is secured by stock issued under the authority of Ordinance No. 5 of 1891, which compels such stock to be issued in accordance with the Colonial Stock Act (Imperial) 1877.

REVENUE.

The Revenue for the year was £56,274, being £6,097 less than the estimated Revenue.

Comparison with the revenue of previous years shows :—

	£
Average Revenue for five years 1889-1893 -	53,751
Revenue for 1894 (highest on record) -	63,021
Revenue for 1895 - - - - -	58,467

Thus it will be noticed that, although the revenue of 1896 was £2,193 less than that of 1895, it was nevertheless £2,523 higher than the average revenue for the five years previous to 1894. On the other hand it has to be remembered that during the period 1889-1893 the import duties were lower and that during the last two months of 1896 the Export Duties Ordinance was in operation.

The decrease in revenue as compared with 1895 (£2,193) is shown chiefly under the head of land sales, in which occurs a decrease of £1,206 due to the fact that there were no important sales of escheated land, the balance of the decrease, viz. £987, being very evenly distributed amongst all the remaining heads of revenue.

EXPENDITURE.

The expenditure for the year was £60,523, being £795 less than the estimated expenditure and £3,152 less than the expenditure in 1895, but £4,248 in excess of the actual revenue.

Comparison with previous years shows :—

	£
Average expenditure for five years 1889-1893 -	55,700
Expenditure in 1894 - - - -	59,594
Expenditure in 1895 - - - -	63,675

Reverting to the figures quoted above in connection with the revenue during the period 1889-1893, it will be remembered that the revenue in 1896 was £2,523 greater than the average revenue during the years 1889-1893. The expenditure in 1896, however, was £4,822 greater than during the period named, thus showing a disproportionate increase in expenditure of £2,299.

This increase is, of course, due to several causes.

The "Charge on account of Public Debt" was £4,504 in 1894, £5,246 in 1895, and £6,385 in 1896, thus accounting for an increase of £1,881 in 1896 as compared with 1894.

The "Charge on account of Public Debt" includes, however, the Sinking Fund, which was increased in 1896 by £1,231.

The expenditure in 1895 was abnormal, being the highest on record. For the purpose of comparison it is better to compare the figures of 1896 with those of 1894.

The expenditure upon personal emoluments amounted to £1,293 more in 1896 than in 1894 in spite of there being a decrease (due in part to the amalgamation of the departments) of £307 in the Treasury and £167 in the Post Office. The largest increase is under Head "Legal," due in part to an increase of £300 in the salary of Attorney General, the other chief increases being £383 in "Police" and £365 in the Medical Service.

The expenditure upon "other charges" (*i.e.* all expenditure other than on personal emoluments) in 1896 was £34,849, being £365 less than the corresponding expenditure in 1894. But for the already alluded to increase (£1,881) in the charges for the public debt, there would therefore have been a considerable decrease in the expenditure upon "other charges" in 1896 as compared with 1894, and this in spite of there being an increase of £1,008 upon Education.

The increase in "Miscellaneous" and the decrease in "Post Office" is apparent only, being due to the mail contract being debited to the former account in 1896 instead of, as in 1894, to the Post Office.

The real cause of there being a decrease of £365 upon "other charges" in 1896 as compared with 1894, in spite of the large increase in Public Debt charges and in Education, is due to there having been a saving of £603 in the charges against the Medical Department, £220 in Prisons, and £1,550 in Public Works.

Although, however, the expenditure of 1896 is in some respects satisfactory as compared with that of 1894, it must be borne in

mind, as already pointed out, that it is considerably in excess of the average expenditure during the period 1889-1893, a result due chiefly to the increase in debt charges and to increased expenditure upon Roads and Education, and lastly, to a minor extent, to an increase on "personal emoluments."

IMPORTS AND EXPORTS.

The correctness of these returns is largely beyond Government control from the fact that the materials from which they are made are supplied by the importing and exporting firms. Another source of error arises from the possibility of miscalculation in the percentages which are added to the imports and exports to represent freight, packages, &c.

Assuming, however, the accuracy of the returns for 1895 and 1896, a comparison between the two is of interest and would be of greater value were it not for the big proportion of "unenumerated" goods which is shown in both returns.

The imports in 1896 were £21,308 less than in 1895, while the exports were greater by £9,384.

The totals of imports and exports between the Colony and other British Colonies show little variation during the two years 1895 and 1896, although there are changes in the direction of the trade. For example, the imports from British North America amounted in 1896 to £1,658 as against *nil* (according to the returns) in 1895, the imports from Barbados increased by £1,500, while those from Trinidad diminished by £1,000.

A very great change, however, occurs in the returns of imports and exports from and to the United Kingdom and Foreign Countries. Thus, while the imports from the United Kingdom diminished £11,593 or 14·8 per cent., those from Foreign Countries diminished £10,066 or 18·1 per cent.

The exports were still more favourable to the United Kingdom, as they amounted to £169,499 in 1896, showing an increase of £28,763 over those of 1895, while the exports to Foreign Countries fell to £8,593, a diminution of no less than £17,074.

These results may, however, be in part due to error; for example, imports from the United States declined in 1896 by £9,863, and it is possible that the trade from British North America (showing an increase from *nil* in 1895 to £1,658 in 1896) was included in 1895 in that from the United States.

Imports.—Of the £21,308 decrease in the 1896 imports £14,071 is due to the decrease in Class I.—"food and drink supplies, live animals, &c." (being about 16·5 per cent. upon the 1895 figures), and £5,675 is due to the decrease in Class II.—"raw materials" (being a decrease of about 33·2 per cent.).

With the exception of tea, wines, and jewelry (the imports of which in 1896 vary but little from those in 1895) and of "books"

(which show an increase of £257 in 1896 as compared with 1895), all luxuries show a decrease. Accepting the accuracy of the figures, as a wide generalization it may therefore be said that there has been no diminution in the luxuries of the luxurious but a marked diminution in the luxuries of the poor.

In point of fact, with the exception of an increase under about 12 heads, a decrease shows itself all down the import list, the items in which the diminution exceeds £1,000 being—

	£
Horses, mules, &c.	1,015
Flour (wheaten)	3,879
Meat (dried)	1,637
Molasses	1,104
Sugar	2,348

The diminution in molasses and sugar is noteworthy, and that it is probably due to an increase in local production is indicated by the fact that the quantity of rum manufactured in the Colony rose to 52,897 gallons, being an increase of 9,530 gallons.

The imports of coffee in 1895 amounted to £222 and were practically *nil* in 1896, a fact which, coupled with an increase of £150 in the exports of that commodity in 1896, indicates that the latter is likely to take its place permanently amongst the exports of the Colony.

The list of decreases in the imports of 1896 as compared with 1895 shows a total of over £27,000. From this total, however, has to be deducted the increases in certain imports, the chief items being :—

	£
Fish (dried)	938
Timber	309
Soap	406
Boots	817

There is also an increase of no less than £3,623 in "manufactured leather other than boots and shoes." Probably, however, this class of imports was included in 1895 in the unenumerated class.

The details shown in the import returns show a considerable contraction in the trade with the United States. Thus there was a diminution in the following imports from that country: butter, flour (wheaten), lard oil, pease, rice (trade extinct), spirits (trade extinct), sugar, tobacco, coal (large diminution), petroleum, timber (large diminution), and soap. On the other hand the imports from the United States increased under the following heads, dried fish, lard, oats (slight), rope, books (slight), although in each of the imports named the trade from the United Kingdom diminished. The large amount of transhipment at Barbados and Trinidad makes it, however, impossible to draw from these isolated figures any deduction as to the true direction of trade.

GRENADA. 1896.

Exports.—The *net* increase in exports amounts as already stated to £9,384. The chief increase was in cocoa and amounted to £20,999, against which has to be set a decrease of £8,561 in spices and £1,352 in logwood.

The increase of £150 in coffee has already been alluded to.

The exports to France in 1896 diminished by £18,567 and those to the United Kingdom increased by £28,763. This change is partly accounted for by the higher prices obtainable in the United Kingdom for the better class of cocoa. Many charters optional on London or Havre are, however, entered into, and some of the decrease in the exports to France may be due to want of information as to the option having been exercised in favour of a port in that country.

SHIPPING.

There has been a decrease in the tonnage of shipping, both steam and sailing, as shown by the following figures :—

	1894.	1895.	1896.
Steam (tons) -	229,289	240,088	210,740
Sailing (tons) -	12,573	14,889	10,655

An interruption in the coaling contracts made by Messrs. Otway Bros., in 1895, has resulted in the disappearance of foreign steamers from the returns.

In sailing vessels, also, foreign vessels show a marked decline, as shown by the following figures :—

	1894.	1895.	1896.
Foreign vessels entered (tons)	2,565	3,730	768
Foreign vessels cleared (tons)	2,565	3,431	730

A notable point, especially in the case of steam vessels, is the very great increase in shipping with cargoes and a like diminution in shipping in ballast. Thus the shipping (steam) both cleared and with cargoes was greater in 1896 than in either 1894 or 1895 :—

	1894.	1895.	1896.
Steam vessels—With cargoes entered (tons)	151,286	123,821	167,821
" With cargoes cleared (tons)	116,263	106,346	154,195
" In ballast entered (tons)	78,003	116,267	43,611
" In ballast cleared (tons)	110,056	133,947	59,452

In the case of sailing vessels cleared the same tendency is shown as is also the case with sailing vessels entered in 1896 and 1895. Fewer of such vessels, however, were entered in ballast in 1894 than in 1896.

AGRICULTURE.

The non-existence of an Agricultural Society and the fact that the Land Tax returns do not contain information as to

the area of cultivated lands make it impossible to ascertain the increase or decrease in the various cultivations.

According to the export returns the cocoa crop was the largest on record, 57,691 bags (equal 90,193 cwt.) having been exported, being an increase of 2,026 bags over the quantity exported in 1894, hitherto regarded as the record year.

Comment has already been made in connection with the imports and exports upon the progress in coffee cultivation. Although accurate figures are not obtainable there is no doubt that there has been a considerable quantity of coffee planted, and that the Liberian thrives better than the Arabian plant.

Considerable efforts have been made, notably upon the Annandale Estate, to plant rubber, but sufficient time has not elapsed to enable any opinion to be formed as to whether the undertaking will be successful.

Botanical Gardens.—During the year tobacco (grown from Havana seed obtained from Jamaica) was cut, cured, and sold locally at 10*d.* per pound. There is of course no doubt that tobacco can be readily grown in the Colony, but no opinion can be formed upon the quality until the art of curing is better understood.

Two agricultural apprentices have been enrolled at the gardens and are reported to be making good progress.

Savings Bank.

The Government Savings Bank returns are not altogether unsatisfactory when compared with those of 1895, as the number of depositors increased and the withdrawals diminished. The amount of deposits, however, shows a continued decrease.

Year.	Number of Depositors.	Amount of Deposits.	Amount of Withdrawals.	Balance at credit of Depositors at 31st December.
		£	£	£
1891	637	6,112	5,356	7,610
1892	904	5,994	6,672	6,886
1893	716	7,305	6,394	7,994
1894	959	7,307	7,893	7,602
1895	885	5,563	6,666	6,408
1896	895	4,854	5,035	6,391

In consequence of the remuneration of all Savings Bank Officials being included in their pay as public officers there was a gain of £42 on the year's transactions, which, however, is apparent only, as the value of the work done by the officers would exceed that sum.

Of the balance to credit of depositors, £4,000 is invested in 4 per cent. South Australia Stock and £2,000 is on deposit with the Colonial Bank at 3 per cent.

Post Office.

The returns show an increase of 7,008 in the number of letters, parcels, &c., despatched and received, and an increase is also shown in the volume of business transacted by the Money Order Department.

Roads and Public Works.

During the year £16,091 was spent upon Public Works, of which £7,014 was spent upon Loan Works, £7,502 upon works annually recurrent, and the balance £1,575 upon Public Works exceptional (other than Loan Works).

Of the £7,502 spent upon works annually recurrent, £6,795 was spent on the maintenance of roads, being nearly one-eighth of the revenue of the Colony. This large outlay is largely the result of heavy rains, and is exclusive of the cost of maintaining and repairing bridges.

Excluding Carriacou, there are in the Colony 101 miles of main roads, 70 miles of first class byeways, and 179 miles of second class byeways, the cost of maintenance of which (excluding overseers) is respectively £25, £20, and £8 per mile.

During the year the Birch Grove Bridge, the Gouyave River Works, and the Florida embankment (all Loan Works) and the House Surgeon's Quarters were completed; £3,285 was spent upon the reconstruction of the Colony Hospital (Loan Work). The reconstruction was not, however, completed during the year. A survey was made of the Crown Lands surrounding the Grand Etang. The Telephone system has been worked without any loss.

Hospitals and Asylums.

Hospitals.—Throughout the year both the Colony Hospital and the Yaws Hospital continued in the temporary quarters provided in 1895. There were 731 inmates as against 649 in 1895, the death rate being 7·85 as compared with 6·70 in 1895 and the percentage of cases cured 60 per cent. as against 69 per cent. in 1895.

The increase in the death rate is partly due, as the House Surgeon points out, to deaths from Tuberculosis, and would have been 7·1 only, had the deaths from that disease been the same in number as in 1895. Of malarial fever 109 cases occurred in the Colony Hospital amongst the patients and officers as against 84 in 1895, while in Carriacou Hospital no less than 75 per cent. of the patients became thus affected. The Colonial Surgeon states that the prevalence of this fever is, in the case of Carriacou, caused by the vicinity of undrained swamps. It will be of interest to note whether the number of such cases in the Colony Hospital will be reduced when the temporary quarters are abandoned.

The observations of the Colonial Surgeon and the House Surgeon with reference to the Yaws Hospital are of importance as indicating that compulsory treatment is not necessary to prevent an increase in the disease.

The return of the St. Andrew's Hospital is very significant as showing both a remarkable extension in the out-patient department and also that a profit has been made in the dispensary.

Of free prescriptions 8,060 were issued during the year.

Lunatic and Poor Asylums.—The admissions into the Lunatic Asylum again show an increase, there having been 5 more admitted than in 1895, in spite of the fact that during the latter year 8 more were admitted than in 1894. The Colonial Surgeon in his report expresses the opinion that insanity is slowly but steadily increasing in the Windward Group, and this opinion is apparently shared by the Acting Medical Superintendent, as he states that the accommodation for lunatics will probably soon have to be increased.

Primâ facie the increase in admissions is disproportionately large as compared with the natural increase in population. Having regard, however, to the re-admissions and to the smallness of the numbers upon which the proportions are based, and lastly to the fact that until two years ago the other colonies did not send all cases to Grenada, it is open to doubt whether the figures above referred to can be regarded as reliable evidence of an increase in insanity.

The death rate amongst the inmates of the Lunatic Asylum was 6·8 per cent. as compared with 10·92 per cent. in 1895 and the percentage of cases cured 11·2 as against 7·6 in 1895. By law a coroner's inquest has to be held respecting every death in the Asylum. In one case the verdict was that death arose from "starvation." Enquiry has shown that the deceased had been for some days in the infirmary and had been ordered special diet and stimulants, but that for three days before his death he refused his diet and would not even drink water.

The Poor Asylum (which would be more aptly called a Hospital for Incurables) shows a very marked increase in the death rate, the percentage being 41·1 in 1896 as against 29·6 in 1895.

GRENADA.
1896.

EDUCATION.

Primary Education.—The number of schools open during the year was 37, composed of 10 Government Schools and 27 denominational schools of which there were 14 Roman Catholic, 7 Anglican, 4 Wesleyan, and 2 Presbyterian.

The Happy Hill (Government) School was closed at the end of October, it having been decided that the Roman Catholic School there sufficiently met the requirements of the district.

The Government "Contributions" show an increase of £438, of which about £350 is due to the fact that the result grants for both 1895 and 1896 were paid to the Schools in the parish of St. George during the year.

There was an increase of 103 scholars on the roll, the total being 7,128. There was a slight decrease in the attendance, due to an epidemic of measles and mumps.

The following table shows that there has been a steady decline in the amount of fees collected and an equally steady increase in the expenditure by the Government upon Education.

Year.	On Roll.			Average attendance.	Attendance on examination day.	Scheduled for examination.	School fees paid.			Cost to tax-payers from Treasury Chest.		
	Boys.	Girls.	Total.				£	s.	d.	£	s.	d.
1890	3,227	2,582	5,809	3,056	4,728	2,595	690	17	5	3,545	6	8
1891	3,368	2,787	6,155	3,246	4,504	2,565	568	18	6	4,132	10	8
1892	3,422	2,825	6,247	3,248	4,715	2,952	471	17	4	4,202	1	4
1893	3,394	2,858	6,252	3,300	4,721	2,957	478	7	7	4,599	2	11
1894	3,612	3,111	6,723	3,608	4,843	3,366	481	17	4½	4,808	15	2
1895	3,825	3,200	7,025	3,569	5,229	3,532	390	10	8	5,354	6	4
1896	3,817	3,311	7,128	3,527	5,060	3,359	341	8	4½	5,792	15	6

The salary and allowances of the Inspector of Schools are not included in the returns.

The decrease in fees does not directly affect the Government, as the amount when collected is distributed amongst the teachers.

In the denominational schools the books, school furniture, &c., are supplied by the management and the latter make no charge for the rental of the buildings. With these exceptions the whole cost of a school when once established is borne by the Government, as no part of the education revenue is derived from voluntary contributions.

A great difference exists between the cost of education in the various schools calculated per scholar on the roll, and

is shown in the following table which is based upon the figures for 1896.

	No. of scholars on the roll.	Cost per annum for each scholar on the roll.		Expenditure on first class teachers.	Expenditure on assistant teachers.	Capitation Grant.	Result Grant.
		s.	d.	£	£	£	£
Government Schools	1,721	18	1	550	40	88	282
Roman Catholic ...	3,274	13	4	670	274	141	421
Anglican	1,161	20	10	390	185	66	215
Wesleyan	756	22	2	220	116	44	171
Presbyterian ...	216	23	5	100	Nil.	12	52
	7,128			£1,930	£615	£351	£1,141

The expenditure shown in the above table amounts to £4,037 out of the £5,792 total amount of the Government expenditure, the balance £1,755 being spent on pupil teachers, sewing mistresses, sewing result grants, miscellaneous expenditure, and in caretakers, rentals, and books in Government schools.

The figures above given show, it will be noticed, that money spent on high class teachers usually brings about an increase in the result grant.

A new Education Code was brought into operation in November, too late therefore to affect the returns for the year.

Under the new Code the amount spent upon the staff in salaries will be less, and the capitation grant lessened by half, but the result grants will be considerably increased. It is estimated that the net result will be a saving of about £800 per annum.

The Code provides a stricter system in calculating the attendance, an improved system for the examination of scholars, and lastly by it persons cannot become teachers until they obtain certificates from the College of Preceptors.

Prisons and Crime.

The number of persons sentenced to imprisonment was 260 as compared with 263 in 1895 and 245 in 1894.

Of the 260 persons sentenced 96 had already suffered previous conviction, the corresponding numbers for 1895 and 1894 being 107 and 94 respectively.

24 persons were sentenced to be flogged for larceny of cocoa, but 8 escaped that punishment in consequence of being certified as medically unfit. There was no case of flogging for breach of prison discipline.

The health of the Richmond Hill Prison was exceptionally good, there having been but two of those cases of diarrhœa,

dysentery, and fever which were so numerous in 1894 and 1895. During the rainy season, however, malarial fever was prevalent in the Female Prison in St. George's.

The discipline was satisfactorily maintained, and the estimated value of the work done by the prisoners exceeded the cost of maintaining the prisons by £117 17*s.* 8*d.*

Criminal Statistics.

Four persons were found guilty of serious crimes and were sentenced to imprisonment for periods exceeding five years. Although no such sentences were necessary in 1895 there is no reason for thinking that there is in the Colony any increased tendency to commit such crimes.

Population and Vital Statistics.

The estimated population at the end of the year was 60,367, being an increase of 7,158 over the population as recorded by the census of April 1891, and 1,266 over the estimated population at the end of 1895.

The rates per 1,000 mean estimated population were, for births 41·02, for marriages 5·87, and for deaths 19·82.

As compared with 1895 the birth rate diminished in every district in the Colony, the decrease being greatest in the island of Carriacou, in which latter place and also in the parish of St. George's the decline was accompanied by an increase in the death rate. The death rate for the whole Colony, however, shows a slight decrease and the marriage rate an increase from 314 marriages in 1895 to 351 in 1896.

During the year the Infirm Paupers and Immigrants Ordinance came into operation, a fact which should be noted in connection with the census of 1901.

Local Revenues.

The financial position of the St. George's Town Board constituted by Ordinance 5 of 1895 is very satisfactory. There is no reason to conclude that the Hillsborough, Sauteurs, and Victoria Parochial Boards are not perfectly solvent, as a very slight increase in revenue will result in each having a surplus instead of the slight deficit which occurred last year. The Gouyave Parochial Board, although heavily burdened by its loans, cannot be by any means regarded as foredoomed to the condition of hopeless insolvency which characterizes the account of the Grenville Parochial Board.

LEGISLATION.

Considerable progress has been made in the work of consolidating and revising the law; 37 Ordinances were passed during the year and a special committee of the Legislative Council considered and reported upon Bills introducing a Criminal Code, a Criminal Procedure Code, and an Evidence Code.

The chief changes in the law were effected by the Jury Ordinance (No. 16 of 1896) which enables majority verdicts to be given in all cases except murder, by the Cocoa and Nutmegs Ordinance (No. 21 of 1896), which repeals the former law in so far as the latter made flogging an unavoidable consequence of conviction for theft of cocoa, &c., and thirdly by the Excise Ordinance (No. 36 of 1896), which transfers excise work from the Treasury to the Police.

The Export Duties Ordinance (Ordinance 22 of 1896) is probably the most important Ordinance which was passed during the year. It imposes export duties upon certain produce, *inter alia* 5*d*. per cwt. on cocoa and 1*s*. per cwt. on spices. The Ordinance came into force at the end of October, since which date the price of cocoa has advanced in London several shillings per cwt. The facility with which the tax is collected is very notable when compared with the Land and House tax, for the enforcement of which four Orders in Council were found to be necessary during the year.

METEOROLOGICAL OBSERVATIONS.

The average mean temperature throughout the year was 79.0.

The coolest months were, as usual, January, February, March, and the hottest, also as usual, August, September, and October.

The rainfall was exceptionally heavy in Grenada, but not in Carriacou.

During the last three years the early months have been dry, the rain beginning in May and lasting till the end of the year, the greatest fall taking place in September and November, the intervening October being comparatively dry.

At the Grand Etang the rainfall during the year was no less than 200·69 inches, of which 38·72 inches fell in November. The accuracy of these figures is borne out by the observations made at Annandale and Belvidere, at both of which places the rainfall was very heavy, being especially so in November.

ESTABLISHMENT.

Several important changes took place under this head. Mr. H. R. Pipon Schooles was promoted to be Attorney-General of

GRENADA. 1896.

Jamaica, and Mr. Leslie Probyn was appointed to the Attorney Generalship of Grenada from British Honduras.

Mr. E. Pakenham Brooks, Treasurer, died in the month of August. The opportunity was taken to effect a reduction in the cost of the Treasury and Post Office departments. Mr. C. Falconer Anton, Registrar of the Supreme Court, was placed at the head of both Treasury and Post Office departments as Postmaster as well as Treasurer, Comptroller of Customs, &c., and Mr. C. H. Collymore, the Postmaster, was made Registrar of the Supreme Court. As noticed under Legislation the excise division of the Treasury was transferred to the Police Department at the close of the year.

Mr. L. B. Otway, Magistrate of the Western District and District Registrar of Births and Deaths for the parishes of St. John's and St. Mark's, retired on pension on the 31st December 1895. To the offices vacated by Mr. Otway, Mr. W. E. Haynes, Revenue Officer at Grenville, &c., was appointed, and to Mr. Haynes's combined offices Mr. H. W. Sharpe (Chief Revenue Officer) as Assistant Treasurer of Grenville, Mr. Sharpe's place as Chief Revenue Officer being filled by Mr. G. E. Gumbs, from the Revenue Staff.

The Auditor of the Windward Islands, Mr. L. J. Bertram, was transferred to the Leeward Islands, and the vacant auditorship was conferred upon Mr. W. Cuddeford, Auditor of the Sierra Leone Government.

GENERAL.

During the year there were five bankruptcies (as against *nil* in 1895) and a large increase in foreclosure suits and actions for debt; there being no important manufactures in the Colony, it seems probable that the decrease in the imports is due to efforts at retrenchment made by those anxious or compelled to repay loans, it being obvious that with a substantial increase in the exports the purchasing power of the Colony cannot have been lessened.

If, therefore, the increasing expenditure upon upkeep of roads and bridges can be checked, there is good reason to conclude that the Colony will pass successfully out of the period of strain which began in 1895.

LESLIE PROBYN,
Attorney General and Actg. Col. Secretary.

(For Report for 1895, *see* No. 179 of this Series.)

GOVERNOR SIR ALFRED MOLONEY TO MR. CHAMBERLAIN.

Grenada,
14th September, 1897.

Forwarded.

ALFRED MOLONEY,
Governor.

Government House,
2nd September, 1897.

SIR,

I HAVE the honour to forward herewith the Report on the Blue Book of the Colony for the year 1896.

I have, &c.,

P. J. K. FERGUSON.

His Excellency,
Sir Alfred Moloney, K.C.M.G.,
Grenada.

REPORT ON THE BLUE BOOK FOR 1896.

REVENUE AND EXPENDITURE.

The revenue of the year amounted to £55,331, and the expenditure to £56,060, the expenditure being in excess of the revenue by £729.

14764—750—10/97 Wt 20613 D & S—5 (B)

ST. LUCIA. 1896.

The revenue and expenditure for the years 1891-95 were as follows :—

—	1891.	1892.	1893.	1894.	1895.
	£	£	£	£	£
Revenue ...	49,326	48,297	51,598	55,971	48,564
Expenditure ...	53,906	54,934	49,271	53,766	57,579

A new Customs Tariff came into force on the 1st January 1896. It was mainly a reversion to the rates of duty levied before the adoption in 1892 of a revised tariff to meet the requirements of the McKinley tariff arrangements.

The total revenue for the year appears to exceed that of 1895 by £6,767, but this is due to the interest and sinking fund on the guaranteed loans being included for the first time on the revenue side of the account. £1,000 also were transferred to the General Revenue from Land Sales Fund.

The receipts from Customs fell £273, and the receipts from Excise fell £700. These reduced receipts were the result of a decline in the amounts spent on military and other public works.

There was also a decrease in the collections from Road Tax of £245 in consequence of the departure of a number of people to the goldfields of Cayenne in French Guiana.

There was, however, an increase of £560 under the head of Port and Harbour dues, on account of the development of the coaling trade.

ASSETS AND LIABILITIES AND PUBLIC DEBT.

The year 1895 closed with a debit balance of £4,359, and it was increased at the end of 1896 to £5,088. This excess of liabilities over assets is exclusive of Debenture and Inscribed Stock Loans.

The Public Debt, on the 31st December 1896, amounted to £202,280, made up as follows :—

	£
6 per cent. Debentures - - -	21,500
5 „ „ do. - - -	2,600
4½ „ „ do. - - -	76,700
4¼ „ „ do. - - -	8,000
3½ „ „ do. - - -	8,000
4 „ „ Inscribed Stock - -	85,479

Included in the amount of £85,480 Inscribed Stock is a sum of £17,000 raised by the Colony on behalf of the Castries Town Board, interest and sinking fund being payable by the Board.

The credit of the Colony is pledged for the loan. The sum of £2,100 was paid off during the year in redemption of drawn debentures. The Public Debt, at the close of the year, exclusive of the Town Board loan, was equal to 3·34 times the revenue of the year, and represented an indebtedness at the rate of £3 19*s.* 4*d.* per head of the population. The charges on account of the Public Debt absorbed more than one-fourth of the revenue of the year.

Savings Bank.

The deposits during the year amounted to £7,396, and the withdrawals to £6,853. These figures compare favourably with those for 1895, which were £7,000 deposits and £7,162 withdrawals. The following table shews the number of depositors, the amount of deposits, and the average sum per depositor for the five years :—

Year.	No. of Depositors.	Amount of Deposits at 31st December.	Average sum per Depositor.
		£	£ *s.* *d.*
1892	905	7,704	8 10 3
1893	1,128	9,812	8 13 11
1894	1,187	9,428	7 18 10
1895	1,275	9,267	7 5 4
1896	1,277	9,810	7 13 9

The increase in the amount of deposits is due chiefly to the sums expended by the Military Authorities and Civil Government on public works ; and also to some extent to the return to the Colony with their earnings of natives who had emigrated to the Cayenne goldfields.

Military Expenditure.

The Imperial expenditure during the year for military purposes was £43,549. The Colonial expenditure amounted to £2,020, this amount being paid to the troops in lieu of exemption from Customs duties.

Public Works.

The works for supplying Castries with pure water made considerable progress during the year 1896; a supply from the new sources was brought into the town in the month of July, by means of a temporary pipe line connecting the new main with the old reservoir. The construction of a telephone line round the island, connecting the several towns and villages with Castries, was completed during the year, and a considerable number of instruments were put up for use. The new Government House was finally completed in the early part of the year. A sum of £3,448 was expended on the repairs and maintenance of the roads of the island during the year. In this amount is included the sum of £294 spent on the reconstruction of the Ravine Claire Road which had been destroyed by the floods in October 1894. River embankments for the protection of the town of Soufriere and the villages of Canaries and Choiseul were undertaken, and in the case of Canaries and Choiseul were completed during the year.

The amount expended on public works by the Colonial Government during 1896 was £33,916, of which £5,344 was defrayed out of general revenue and the remainder from loans. The military expenditure for works amounted to £10,493.

Legislation.

Twenty Ordinances were passed during the year, of which the most important were :—

"An Ordinance to make provision with respect to the establishment, registration, incorporation, and management of Friendly and other societies."

"An Ordinance to protect the telephone lines erected in this island."

"An Ordinance to amend the Customs Tariff Ordinance 1895."

By this Ordinance a duty of 15 per cent. was imposed on all the duties leviable under the Customs Tariff Ordinance 1895, coal only being excepted from the 9th December 1896 to the 31st December 1897. The object of the Ordinance was to aid in making up the anticipated deficiency in the General Revenue.

"An Ordinance to require owners of land to furnish returns in respect of the lands owned by them."

The object of the Ordinance was to ascertain the quantity of land other than Crown land, cultivated and uncultivated in the island, and the names of the owners thereof.

"An Ordinance to encourage the introduction of capital into this Colony for agricultural purposes and with a view to enable

proprietors to develope the resources of their estates by means of loans at moderate rates of interest."

This Ordinance provides for the establishment of a company with a capital of not less than £100,000 for the purpose of making loans to proprietors of land at a rate of interest not to exceed 6 per cent., the duration of such loan to be for any period not exceeding 20 years, the Colony guaranteeing to the company, under certain conditions, interest at the rate of 3 per cent. on loans made. The Ordinance also provides for the levying of a tax of three-pence per acre on every acre of land outside the towns and villages, in the event of the Colony having to pay interest beyond such amount as it may be possible to meet out of the General Revenue.

CIVIL ESTABLISHMENT.

His Excellency Sir Charles Bruce was present in the Colony from the 16th to the 20th March, and from the 4th November to the 12th December, during which period he administered the Government of the Colony.

His Honour Lieut. Colonel V. Skipton Gouldsbury obtained six weeks leave of absence from the 8th October; he left the Colony on the 16th October and died on the 12th November.

Lieut. Colonel C. L. Dale, Officer Commanding Troops, as senior member of the Executive Council, assumed the administration of the Government on the 8th October and continued to administer the affairs of the Colony up to the 3rd November. On the departure of Sir Charles Bruce on the 12th December, he again assumed the administration and continued to the end of the year.

The Honourable D. G. Garraway, Treasurer, was appointed to act as Colonial Secretary during Sir Charles Bruce's stay in the Colony from the 4th November to 12th December.

Mr. L. J. Bertram, Auditor of the Windward Islands, was appointed Auditor-General of the Leeward Islands on the 6th February. Mr. William Cuddeford was appointed Auditor of the Windward Islands on the 6th May. During the interval between the departure of Mr. Bertram from and the arrival of Mr Cuddeford at Grenada, Mr. C. F. Anton acted as Auditor of the Windward Islands.

LEGISLATIVE COUNCIL.

During the absence on leave for six months of the Honourable Emmanuel DuBoulay, his seat in the Council was occupied by Mr. G. Graf.

The Honourable E. G. Bennett was appointed a member of the Council in the place of Mr. S. H. Battam resigned.

VITAL STATISTICS.

The population on the 31st December was estimated at 46,671, shewing an increase of 765 over that for 1895. The birth rate was 38 per thousand and the death rate 21 per thousand. The number of marriages was 293, being an increase of 13 over that for the preceding year. The percentage of illegitimate births was 60·15, shewing a slight increase over 1895.

IMMIGRATION.

There were in the Colony at the end of the year 149 indentured Indian immigrants, of which number 125 were adults. There was no importation of Indian immigrants nor was there any repatriation of time-expired immigrants during the year. The following table shows the birth rate and death rate among the indentured immigrants.

1896.	Percentage.	
	Indentured Immigrants.	General Population.
Birth rate	6·2	3·84
Death rate	3·2	2·17

There were four "East Indian Mission" schools with 211 children on the registers.

PRIMARY EDUCATION.

There were at the beginning of the year 37 schools of primary education, one of which was closed at the end of May, and two others on the 31st December.

At the end of the year 4,182 children were on the rolls, with an average attendance of 2,256; the figures for the previous year being 3,977, and 2,212, respectively. The Inspector's report, although showing an increase of 107 presented for examination in 1896, as compared with the number presented in 1895, nevertheless, shows a decrease of 39 in the number of passes. This is chiefly due to a change in the syllabus, which only came into operation about three months before the examinations began in September. The number of children on the registers represents 8·96 per cent. of the population.

The Government contribution to primary schools amounted to £2,694 18*s.*, or £1 3*s.* 10½*d.* per head of the children in average attendance.

A Government grant in aid of secondary education was, as in previous years, made to St. Mary's College.

IMPORTS AND EXPORTS.

The following tables shew the value and direction of the trade of the Colony for the last five years :—

Imports.

Countries from whence Imported.	1892.	1893.	1894.	1895.	1896.
	£	£	£	£	£
United Kingdom	103,859	86,838	93,780	74,512	101,983
British Colonies	30,360	26,602	31,933	26,690	25,177
Foreign Countries	38,806	55,538	61,425	51,720	63,070
Wrecks	—	—	404	23	303
Totals...£	173,025	168,978	187,542	154,945	190,533

Of the total value of imports from foreign countries £45,543 were from the United States.

Exports.

Countries to which Exported.	1892.	1893.	1894.	1895.	1896.
	£	£	£	£	£
United Kingdom	44,757	55,217	43,062	24,269	24,144
British Colonies	7,153	5,212	11,297	2,951	4,842
Foreign Countries	84,446	118,001	91,535	74,935	64,734
Totals...£	136,356	178,430	145,894	102,155	93,720*

* Including specie, but exclusive of bunker coals supplied to shipping, which amounted to £42,575.

Of the £64,734 value of exports to foreign countries, the United States received £46,481, almost entirely in sugar.

ST. LUCIA. 1896.

The following table gives the quantity and value of the principal exports in 1896, compared with the two preceding years :—

Exports.	1894.		1895.		1896.	
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
	lbs.	£	lbs.	£	lbs.	£
Sugar, Usine ...	7,668,400	53,679	7,362,200	46,014	6,843,920	56,096
,, Muscovado	2 377,320	12,483	763,700	3,341	1,105,608	5,860
	gals.		gals.		gals.	
Molasses	223,320	3,722	279,960	3,499	105,000	1,444
	lbs.		lbs.		lbs.	
Cocoa	983,200	28,513	739,402	16,637	1,136,843	15,403
	tons.		tons.		tons.	
Logwood... ...	7,116	37,359	5,086	25,430	1,904	4,285

The average price of the principal exports for 1896, compared with the two preceding years, was approximately as follows :—

Exports.	1894.	1895.	1896.
	£ s. d.	£ s. d.	£ s. d.
Sugar, per 100 lbs., Usine ...	0 14 0	0 12 6	0 16 5
,, ,, Muscovado...	0 10 0	0 8 9	0 10 7
Molasses, per gallon	0 0 4	0 0 3	0 0 3
Cocoa, per 100 lbs.	2 18 0	2 5 0	1 7 0
Logwood, per ton...	5 5 0	5 0 0	2 5 0

SHIPPING.

The following table shews the number and tonnage of vessels entered and cleared in 1896 :—

	Entered.		Cleared.	
	Number.	Tonnage.	Number.	Tonnage.
Steamers	435	574,244	435	574,244
Sailing vessels	287	20,827	293	21,475

Of the 435 steamers entered, 357 were British, 32 French, 18 Belgian, 15 German, and 9 Norwegian. The number of steam vessels entered in 1896 shews an increase of 70 as compared with that in 1895. Most of the steamers entering call for bunker coal. The shipment of this article was, in 1896, 44,816 tons. In 1895 it was 35,714 tons, and 1894, 39,764 tons. The price of bunker coal in 1896 is returned at 19*s.* per ton, as against 20*s.* in 1895, and 23*s.* in 1894. This fall in price is due entirely to local competition.

METEOROLOGY.

From observations taken at the Morne, at an elevation of 745 feet above mean sea level, the rainfall during the year was 114·29 inches. This, though somewhat less than the rainfall for 1895, was still considerably above the average. The heaviest rainfall was 17·45 inches in the month of November, and the lowest 2·92 in February. Rain fell on 280 days during the year; the greatest number of rainy days (29) occurring in July and the least (16) in October. The absolute maximum temperature recorded was 89·2° in October; the absolute minimum was 66° in January, February and March.

AGRICULTURE.

During the year 1896 agriculture suffered from the same causes which affected it in 1895, namely, short crops and low prices. The Central Sugar Factory at Grand Cul-de-Sac, referred to by Sir Charles Bruce in his report on the Blue Book for 1895, as having been taken over provisionally for a year by a local Syndicate, was brought to Judicial sale on the 19th September 1896, at the suit of the Colonial Treasurer against the St. Lucia Central Factory Company, Limited, and bought in for the local Syndicate for £4,000, the Syndicate having come to terms with the Mortgagees who held claims of over £30,000. The Syndicate have continued to work the property, from all accounts, with success.

The export of cocoa increased considerably during the year 1896, and the cultivation of coffee was extended.

P. J. K. FERGUSON,
Administrator.

No. 212.

ST. VINCENT, 1896.

ST. VINCENT.

(For Report for 1895 *see* No. 179 of this Series.)

GOVERNOR SIR A. MOLONEY to Mr. CHAMBERLAIN.

Grenada,
15th September, 1897.

Forwarded.

ALFRED MOLONEY,
Governor.

Government House,
St. Vincent, 7th September, 1897.

SIR,

IN submitting to your Excellency at this late period of the year the usual annual report on the Colony in respect of the year 1896 it is right that I should state, in explanation of the delay in its appearance and in transmitting the Blue Book, that I found some difficulty in arriving at facts in the absence of annual administrative reports from the several departments which, with some exceptions, have not been hitherto required here.

FINANCES.

The deficit at 1st January, 1896, was £3,712 and the transactions of the year reduced that deficit at its close to £816. This resulted, not from any improvement in the revenue, which, as in recent years, failed to cover the expenditure, but from

reduction of the deficit by £4,000, obtained pending the issue of debentures under an Ordinance passed in June to provide £5,000, repayable in 10 years, with the object of meeting the excess of liabilities over assets.

Revenue.

£26,487 were received, being £1,027 more than the revenue of 1895, but £1,281 less than the average of the four years 1892-95. The improvement on the preceding year was due entirely to increased import duty imposed by legislation at the close of 1895, to additional taxation of land and incomes resorted to in June, 1896, and to abnormal sales of postage stamps. But for these exceptional causes the revenue would probably have been more than £2,000 less than 1895.

Expenditure.

£27,591, being £1,320 less than in 1895 and £1,859 less than the average of the four years 1892-95, was the expenditure of 1896, but it nevertheless exceeded the revenue by £1,104. In this respect however it was an improvement on the three preceding years, as will be seen from the following figures :—

Year.	Expenditure.	Revenue.	Deficiency.
	£	£	£
1893	29,439	27,914	1,325
1894	30,545	28,574	1,971
1895	28,911	25,460	3,451
1896	27,591	26,487	1,104

This result is attributable to reduced expenditure on public works and to economies enforced in the several departments.

Public Debt.

Opposite in tabular form is a statement of the public debt of the Colony, which amounted at the end of 1896 to £19,160, or about 8*s.* 4*d.* per head of the population.

Nature of Loan.	When incurred.	Original Amount.	Repaid.	Balance due.	Rate of interest.	Rate of annual repayment.	Date of extinction.
		£	£	£		£	
Government House Loan	1882—88	3,280	2,240	1,040	5 per cent.	160	February 1903
Immigration Loan	1889	4,750	3,500	1,250	"	500	" 1899
Crown Lands Loan	1887 & 1891	1,920	400	1,520	"	200	March 1904
Telephone Loan	1894	2,200	400	1,800	"	200	February 1905

Do. Water Works Loan (No. 1) ...	1889—93	8,000	2,100	5,900	"	300	February 1913
Do. do. do. (No. 2) ...	1894	1,000	200	800	"	100	June 1904
Georgetown do. do.	"	1,000	150	850	"	50	November 1913
Public Loan (No. 1)	1888	3,600	2,800	800	"	350	August 1899
Do. do. (No. 2)	1896	4,000	*Nil.*	4,000	3½ per cent.	218	1907
Totals ... ... £	—	31,250	12,090	19,160	—	2,228	—

ST. VINCENT. 1896.

The general revenue is in the first instance liable for the interest and repayment of these debentures, but £10,000 of the total amount is paid from local rates and the Immigration Fund, and if the Telephone System of the Colony fully paid its way £1,800 would be similarly provided for. The actual debt, therefore, chargeable on the general taxpayer was only £7,360.

TRADE AND SHIPPING.

Imports and Exports.

In 1896 the imports and exports were for the first time systematically classified and their value for statistical purposes arrived at by adding to the original values percentages to represent, in the case of imports, the cost of freight, packages, and insurance, and in the case of exports, the cost of packages. So as to secure a fair comparison, therefore, between the trade of 1896 and its immediate predecessors, the subjoined statement shows the values both with and without those percentages.

Imports.

Country.	Without Percentages.					With Percentages.
	1892.	1893.	1894.	1895.	1896.	1896.
	£	£	£	£	£	£
United Kingdom ...	49,313	41,388	39,193	27,687	26,396	29,847
British Colonies ...	44,301	40,178	37,296	26,187	25,834	31,667
Foreign Countries ...	9,366	11,859	14,521	10,968	7,799	9,975
Totals £	102,980	93,425	91,010	64,842	60,029	71,499

Exports.

	£	£	£	£	£	£
United Kingdom ...	52,317	41,789	34,899	25,876	19,237	21,131
British Colonies ...	25,914	25,142	21,395	19,577	15,123	15,851
Foreign Countries ...	39,341	47,763	31,080	23,237	27,297	30,410
Totals £	117,572	114,694	87,374	68,690	61,657	67,392

It will be observed that in the last five years the volume of the Colony's trade has decreased nearly 50 per cent., the shrinkage of that with the mother country being a marked feature. The bulk of the Colony's trade is at present with the United States of America, for not only did nearly all the imports in 1896 shown as received from foreign countries come from thence, and more than two-thirds of the exports to such places go there, but the greater quantity of goods imported from British Colonies consists of American foodstuffs, &c., imported through Barbados and Trinidad.

The serious downward tendency of the trade of St. Vincent in late years is, of course, largely attributable to the very low prices realised by the Colony's chief staples, which are the products of the sugar cane and arrowroot. Other causes of a local nature, to which reference will be made later on, are, however, responsible to a great extent for this regrettable decadence. Two marked features in the export trade of late years are the steady falling off of sugar, both in quantity produced and value realised, and the increased output of arrowroot in face of a steady fall in its value. The following statement of the principal exports for the last five years shows these facts clearly :—

[*For tabulated Statement see p.* 8.]

Year.	Sugar.		Rum.		Molasses.		Arrowroot.		Cocoa.	Cotton.	Spices.	Fruit and Vegetables.	Peas.	Whale Oil.	Ground Nuts.	Live Stock and Poultry.
	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.								
	Hhds.	£	Puns.	£	Puns.	£	Brls.	£	£	£	£	£	£	£	£	£
1892	3,884	33,366	566	4,530	1,366	4,158	23,433	61,313	2,700	1,029	785	3,596	584	340	216	1,887
1893	3,619	43,705	242	1,694	749	1,988	22,310	50,807	3,271	727	878	2,445	432	676	281	2,726
1894	3,135	27,270	275	2,200	405	1,012	29,119	38,278	3,272	530	1,223	2,965	336	473	506	3,903
1895	2,782	18,962	152	892	691	1,728	26,695	26,960	3,247	411	1,812	3,285	541	475	598	3,672
1896	2,726	21,512	309	1,892	1,117	3,396	20,122	22,007	3,209	255	686	2,690	500	726	422	2,814

Some caution is necessary, however, in connection with these figures, for faulty Customs supervision has in the past allowed returns of exports (particularly those in respect of which an export duty is levied) to be made in many cases far below correct quantities and values.

Shipping.

The number and tonnage of vessels entered and cleared in 1896 at Kingstown, the sole port of entry, were as follows :—

—	Entered.		Cleared.	
	No.	Tons.	No.	Tons.
Steamers	94	123,612	94	123,612
Sailing vessels	414	12,435	413	13,586

All of the steamers were British, and of the sailing vessels entered, 41 belonged to the United States of Venezuela, 4 to the United States of America, and 4 to the Netherlands, the remainder being British. Port and tonnage dues are still levied at Kingstown for purposes of General Revenue, and £799 were received during the year. There is a great necessity for the establishment of ports of entry at the towns of Georgetown and Chateaubelair, as the trade of the out-districts is carried on at present under many difficulties, in consequence of there being only one port. It is also desirable that arrangements should be made for vessels going through the Grenadines to Trinidad to finally clear at Carriacou, as many breaches of the Customs law occur under existing circumstances.

AGRICULTURE.

1896 was a year of severe trial for the agricultural interests of St. Vincent. Notwithstanding the steady downward course of the sugar cane industry, the planters of this Colony have clung to it, always hoping for the advent of better prices and a larger demand for the class of sugar produced on their estates. The only real competitor admitted at any time to favour has been arrowroot, to the production of the best grades of which local conditions are most propitious. Here, however, there has been a failure to realise that there is only a limited demand for this starch, and the result has been over-production, with the inevitable consequence of a rapid fall in prices. In 1892 the arrowroot exported was 23,433 barrels, worth £61,313 ; in 1896, 20,122 barrels were exported, worth only £22,007. The downfall of the

local sugar industry is evidenced by the fact that in 1880 the products of the sugar cane (sugar, molasses, rum) exported were worth £128,603, whereas in 1896 the value of such exports was only £26,800, while the 9,168 hogsheads of sugar despatched in 1880 dwindled in 1896 to 2,726 hogsheads.

The soil and climate of St. Vincent offer every inducement to the cultivation of other tropical products, such as coffee, cola, spices, rubber, and tobacco, but local conditions affecting the land have unfortunately so far proved an effectual bar to progress in this direction. There are about 44,000 acres of cultivable land in the island, and of these no less than 30,000 acres are in the hands of only ten proprietors, one of whom owns 11,936 acres. The agricultural policy of the Colony is, therefore, that which is adhered to by these ten landowners, and as they, with one or two exceptions, adhere to a restricted cultivation of the sugar cane and an over-production of arrowroot, in face of the stubborn facts already referred to, and as the land is absolutely the sole source of income in St. Vincent, the Colony will remain impoverished until either their views change or their absorption of the land ceases. Meanwhile, in isolated cases, cocoa, coffee, and nutmegs are being planted, and the labouring class, wherever they are so fortunate as to obtain land for rent, devote themselves to the cultivation of ground provisions, peas, and ground nuts, and to the rearing of live stock and poultry, the value of which (excluding local consumption), amounted in 1896 to about £6,500. If suitable lands were available for the peasantry, as their own property, and greater facilities for transport of these commodities to Barbados and Trinidad afforded, this source of income would largely develope, and permanent products of the type usually styled "minor industries" in these colonies would infallibly be taken up by them successfully.

In the Botanical Station, with its skilful and energetic Curator, Mr. H. Powell, there exists the nucleus of a Department of Agriculture, which, judiciously applied for the dissemination of plants and information to the peasants, and for instruction in methods of cultivation, cannot fail to secure satisfactory results.

Meteorology.

The rainfall registered at the Botanical Station in 1896 was 128 inches, the average for the last six years being 116 inches; the highest temperature was 87·5°, and the lowest 66·5°, the average for the year being 79.5°. There is a need of rainfall records in the out districts of the Colony, as the only place whence reliable returns are now received is Penistons, in the Buccament Valley on the Leeward coast; the rainfall there for the year was 138 inches.

On 28th to 29th November a severe rainstorm, following upon continuous rains for many days, visited the Northern half of the island, and the flood occasioned thereby has in many cases

completely altered the face of that part of the island known as the "Carib Country." The effects are of such magnitude as to encourage the supposition that the damage must have been caused by the bursting of a waterspout on the central ridge. Roads, bridges, houses, and acres of land, cultivated and uncultivated, were swept away, and 25 lives were lost. The damage done was greatly augmented by thousands of enormous trunks of trees, the result of felling the virgin forest on parts of the Crown lands, which were brought down by the rivers, and proved to be formidable weapons of destruction. The danger of deforesting the Crown lands is matter for serious consideration.

Roads and Works.

Only ordinary repairs and maintenance of buildings &c. were carried out during the year. The reconstruction of the Bellair-Gommier Byeway, which had been seriously damaged by a flood in 1895, and the construction of a road connecting the Crown lands allotments in the Perseverance Valley with the Windward Highway, were commenced. This latter road was begun on too large a scale, only a pack road being necessary.

The roads of the island require to be taken in hand and systematically dealt with if the agricultural resources of the Colony are to be developed with any hope of success. At present, with the exception of the highways to Windward and the Marriaqua Valley, and parts of the Leeward highway, their condition is scandalous. The system which obtains of attempting to maintain the byeways by assessment of residents in their vicinity is quite unsuited to present wants and not reconcilable with recent taxation. There is no proper supervision, and, as regards the byeways, absolutely no control of expenditure. A scheme having for its object the opening up by means of loan funds of the back lands by reconstructing the byeways and connecting such portions of the Crown lands as are accessible and cultivable by pack roads leading to the byeways, is essential to future prosperity.

Vital Statistics.

According to estimate, based upon the natural increase since the census of 1891, the population at 31st December, 1896, was 45,334: this estimate, however, takes cognisance only approximately of emigration and immigration, and of the former there has unfortunately been a considerable quantity, as numbers of adult males have left in search of employment elsewhere, being quite unable to support themselves locally in the existing condition of the labour market.

The birth rate per 1,000 of this population was 43·5 and the death rate 22·8. The health of the Colony was fairly good throughout the year, and there was no epidemic disease.

EDUCATION.

A tabular statement of the statistics relating to education in 1896, as compared with 1895, is subjoined.

Primary Schools.

Description of School.	No. of Schools.	Number of Scholars.				Income.		Expenditure.
		No. on Roll.	Average attendence.			Government Contributions.	Voluntary Contributions.	
			Boys.	Girls.	Total.			
						£	£	£
Government Schools	1	145	73	50	123	46	—	46
Assisted Schools—								
Anglican	21	3,018	886	767	1,653	820	15	835
Wesleyan... ...	19	2,827	833	787	1,620	836	16	852
Roman Catholic...	4	512	154	117	271	136	—	136
Totals for 1896 ...	45	6,502	1,946	1,721	3,667	1,838	31	1,869
Totals for 1895 ...	45	6,078	1,812	1,561	3,373	1,986	954	2,930
Increase in 1896 ...	—	424	134	160	294	—	—	—
Decrease in 1896 ...	—	—	—	—	—	148	923*	1,061

* £800 expended in erection of a new School House.

The principal features of the year under review were the increased number of scholars and the decreased income and expenditure of the schools consequent upon the enforcement of rigid economy by the Government. The bye-laws of the Board of Education require to be revised in the direction of simplification, the system they provide for being in many respects too elaborate and complex for a small and impoverished Colony.

CRIME AND PRISONS.

In the table which follows, the criminal statistics for 1896 are compared with the average results for the three preceding years, and a decrease is apparent under every head except praedial larceny, and "other offences" convicted in the Supreme Court. This decrease is no doubt due to the large emigration of adult males already referred to, combined with the reduced means of

those who remain, who cannot afford to prepay fees for the trial of cases in the Magistrates' Courts. Prosecutions for robbery from provision grounds and cane fields of estates, however, still continue, so that praedial larceny convictions maintain their normal figures.

——	1896.	Average 1893-95.	Increase.	Decrease.
Persons apprehended by Police or summoned before Magistrates...	1,279	1,506	—	227
Summary Convictions :				
Offences against the person	185	213	—	28
Praedial Larceny	55	45	10	—
Offences against property other than Praedial Larceny	99	117	—	18
Other offences	370	488	—	118
Convictions in Supreme Court :				
Offences against the person	3	8	–	5
Praedial Larceny	—	2	—	2
Offences against property other than Praedial Larceny	—	9	—	9
Other offences	7	1	6	—
Persons acquitted :				
In Inferior Courts	167	172	–	5
„ Supreme Court	4	5	—	1

The daily average in the Kingstown Prison for the year was 34, the total number of persons committed being 231 ; the corresponding figures for 1895 were 38 and 201. In February, two convicts, whom it was found difficult to control locally, were transferred to the Grenada Prison to work out their sentences there. The total cost of the prison for the year was £637.

INSTITUTIONS.

Colonial Hospital.

The number of patients admitted during the year was 490, of whom 229 were cured and 145 relieved ; there were 43 deaths, and the daily average in hospital was 59 ; 224 operations were

performed, and the gross cost of the institution was £1,299. A house surgeon is much wanted for this hospital, as, apart from the manifest advantage of having a resident medical man, the Colonial Surgeon would then be enabled to attend to duties more properly within his sphere and more in need of his attention than discharging the regular routine of hospital work as he is now compelled to do.

Georgetown Hospital.

34 patients were admitted, 24 being cured, and 4 relieved; there were 4 deaths, and the daily average was 2; 17 minor operations were performed. This institution, as soon as funds are available, ought unquestionably to be made more useful, and to serve the purpose of a District Hospital for the Carib Country. The Colonial Hospital is at such a distance from this district, and transport of sick persons thither so difficult, that numbers of cases requiring hospital treatment in this part of the island never get it.

Lunatic Asylum.

The lunatics of the Colony are sent to Grenada for treatment, and in 1896, 6 were despatched thither, the number remaining there for treatment at end of the year being 21. Religious mania is prevalent among the women of the lower classes.

Pauper Asylum.

In this institution incurable cases of ulcers, &c., are domiciled along with those admitted on ground of pauperism, the latter class of cases being steadily on the increase owing to the wide-spread poverty in the Colony. A radical change in this and other details of the poor relief system is desirable. 93 cases were admitted in 1896, the daily average being 99 against 80 in the preceding year, and 74, the average of the three years 1892-94. The institution cost £954 to maintain, besides which £400 was otherwise expended by the Government on Poor Relief.

Leper Asylum.

Two cases were admitted, and two died in the year, the daily average being 16; the Colonial Surgeon reports that the disease is not on the increase in the Colony. The cost of the institution was £219.

Savings Bank.

Subjoined is a statement of the working of the Bank for the last five years :—

Year.	Number of Depositors.	Amount of Deposits.	Amount of Withdrawals.	Balance at credit of Depositors at December 31st.
		£	£	£
1892	946	4,843	4,751	8,958
1893	1,001	4,514	5,154	8,317
1894	1,021	5,583	5,165	8,925
1895	1,012	4,316	4,460	8,974
1896	1,062	4,451	5,350	8,455

The fact that the general depression in the Colony does not reflect itself more clearly in these figures is probably because there are few small investments in landed property in St. Vincent, and owners of small savings deposit them at 2½ per cent. interest in the Bank in default of anything better to do with them. As soon as District Banks are established, arrangements for which are now in progress, the working of the Bank will show even better results. £7,000 of the funds are held by the Crown Agents on investment in England.

LEGISLATION.

Ten Ordinances were enacted, the most important of which were those authorising the raising of loans of £5,000 to cover the Colonial deficit, and of £3,000 to provide and improve communication by road with the Crown Lands allotments, and that consolidating the Licence laws of the Colony and removing all exemptions from taking out licences previously existing.

OFFICIAL CHANGES.

His Excellency the Governor paid seven visits to the Colony in the year, assuming the direct administration of the Government for 53 days altogether.

In the Executive and Legislative Councils Mr. Ormond Hazell took his seat as Acting Attorney General consequent upon the departure of Mr. S. L. Thornton on leave from which he did not return. Dr. Newsam, Colonial Surgeon, was provisionally appointed an official member of Legislative Council consequent

St. Vincent. 1896.

upon the Treasurer's absence on leave, and Mr. W. C. D. Proudfoot was similarly appointed an unofficial member for such time as Mr. Hazell (who holds an unofficial seat) acts as Attorney General.

Chief Justice Trafford was absent on leave from 3rd April to the end of the year, and Mr. G. P. St. Aubyn, magistrate of the Kingstown District, was appointed to act for him.

Mr. F. B. Griffith, the treasurer, retired on pension at the end of the year, after 17 years local service.

General.

The Colony is passing through a severe crisis, which became more acute in 1896 than in preceding years, as the causes, both local and external, to which reference has been made in this report, more fully developed their evil effects. No one, however, who has studied the resources of the island can doubt for a moment that, if a radical change is made in existing local conditions, which retard its progress, there will be a gradual return of prosperity. With a more equitable distribution of the land, a proper system of roads, provision for rapid and safe transport of produce to suitable markets, and a decentralisation of the interests, both public and private, now concentrated in Kingstown, a future, perhaps not of great affluence, but certainly of solvent prosperity, lies before this beautiful but so far unfortunate possession of the Crown.

I have, &c.,

Edward Drayton.

His Excellency,

Sir Alfred Moloney, K.C.M.G., &c.

Governor of Grenada.

1897.

(For Report for 1896, *see* No. 212.)

GOVERNOR SIR ALFRED MOLONEY to MR. CHAMBERLAIN.

Grenada,
7th July, 1898.

SIR,

I HAVE the honour to forward Administrator Thompson's despatch of the 23rd ultimo, advising the transmission of the Blue Book for the Colony of St. Vincent for 1897 and embodying his Report thereon.

2. I have decided to allow this Report to go to the Colonial Office as it stands, thinking that in its separate form it will prove to be of greater public interest and more convenient as dealing exclusively with a Colony which now attracts so much notice than if embodied in one general Blue Book report on the Windward Islands, as was contemplated.

I have, &c.,

ALFRED MOLONEY,

Governor.

295—750—7/98 Wt 21620 D & S—5 (B)

ADMINISTRATOR TO GOVERNOR.

Government House,
St. Vincent,
23rd June 1898.

SIR,

I HAVE the honour to submit the following Report on the Blue Book for 1897, which I am transmitting to your Excellency by this mail.

The sources of Revenue remained substantially the same as they were in 1896, with the exception of a slight change in the rate of Income Tax with a view to making the incidence of that Tax slightly more equitable.

Some change was also made in the licences by abolishing the fee of 1*s.* which was levied on every licence issued and substituting for it an increase of 6*d.* for a dog licence, and making animals and carts used for estates' purposes, which had hitherto been exempt, liable for the tax.

REVENUE AND EXPENDITURE.

The total Revenue for the year was £24,844 17*s.* 2*d.*, as compared with a Revenue in 1896 of £26,487 2*s.* 0*d.*, and an estimated Revenue of £28,304.

Every important head of Revenue shows a falling off, chiefly due to the general depression from which the Colony has suffered; but I will refer specially to some of the more important items.

Licences for the sale of Intoxicating Liquors fell off by more than £100 and the Excise Duty on rum by more than £500, both chiefly due to depression and shortness of money, but the latter in part due to the spread of illicit distillation.

The Dog Tax realised about £75 less than was anticipated, owing to a fatal disease which broke out and caused much mortality among them.

The effect of the extension of the Tax on Horses to those used for estates' purposes was over-estimated and produced £100 less than was anticipated.

The increased Income Tax did not produce as much as was anticipated, and about £100 of Land Tax did not reach the Treasury until after the close of the year.

The decrease in Post Office receipts was due to a falling off in the abnormal demand during 1896 for St. Vincent stamps by dealers.

The Expenditure in 1897 was £27,865 19*s.* 0*d.*, against £27,591 2*s.* 1*d.* in 1896, and an estimate of £27,462 15*s.* 4*d.*

This expenditure included the cost of the administration of Crown Lands, which had hitherto been charged to a separate fund, and also an increased debt charge to provide for the deficits of past years.

In addition to these items of expenditure, the cost of making good some of the damage caused by floods at the end of 1896 had to be borne, and a heavy bill for police clothing supplied in 1896 was met in 1897.

All these items more than absorbed the money which it was hoped to save by the very considerable economies effected in the public establishments at the beginning of the year.

The net result of the year's transactions, after wiping out the balance of the old Crown Lands Account, £1,707 5*s.* 8*d.*, and borrowing £1,000 to fortify the Revenue, was that the Colony had an excess of liabilities over assets of £4,544 7*s.* 4*d.*

Public Debt.

The Public Debt, which stood at £19,160 at the end of 1896, was £19,100 at the end of 1897.

As already stated, £1,000 was borrowed during the year to fortify the Revenue, and this completed the whole sum of £5,000 authorised by "The Loan Ordinance, 1895." The Sinking Fund on this debt amounted to £610 at the end of the year.

Another £1,000 was borrowed under the provisions of "The Crown Lands Roads Loan Ordinance, 1896," but only £182 was spent, as will be explained later.

Local Revenues.

These, I think, call for no comment. The various local bodies raised about sufficient to meet their ordinary expenditure, and no more.

Public Works.

Beyond the ordinary expense of maintaining the various highways and public buildings, the only important works undertaken during the year were the completion of the new line of byeway

in the Belair Valley, and the completion of the road in the Perseverance Valley to Crown Lands, both of which were referred to in the Report for 1896, and making good some of the damage caused by the floods in 1896. The latter involved, besides the repairs to the surface of roads, and removal of land-slips, the virtual re-building of three retaining walls, re-building one bridge and effecting extensive repairs in another, and this was all done for £410.

Extensive repairs were carried out on one of the old Ordnance buildings, for which a permanent tenant was found.

LEGISLATION.

The number of Ordinances passed during the year was very considerable.

The legislation to bring into effect the many changes contemplated in 1898 involved the passing of a number of short Ordinances at the end of the year to transfer duties to other officials, but the actual details of these changes will be more conveniently dealt with in the Report for 1898, when the changes were effected.

The most important Ordinances were the two dealing with Income and Land Tax ; the former imposed the increased taxes for a year, and the latter made them permanent.

"The Excise Ordinance" was required to strengthen the hands of the Police in dealing with the spread of illicit distillation.

Ordinance No. 4 was a most important Ordinance, having for its object the regulation of the payment of wages to labourers. It makes an ordinary day labourer's wages payable fortnightly in cash, instead of monthly as had been the custom, and stops, as far as it is possible to do so, the various forms of the "Truck" system, which had begun to be practised.

"The Charcoal Ordinance" repealed the old laws which were nominally supposed to check the illicit making of charcoal, but really did not do so, and only imposed irritating fees and restrictions on those who had every right to make it. It is now a penal offence to make charcoal on any land without the owner's permission.

"The Kingstown Board Ordinance" establishes a corporate body, partly elected and partly nominated, to superintend the affairs of the town. The Board was not constituted until late in the year, and its real work may be said to have begun this year. It is, no doubt, a step in the right direction that the inhabitants of the town should have the responsibility of managing its affairs. The Ordinance consolidates no less than eleven Acts and Ordinances.

"The Infirm Paupers and Immigrants Regulation Ordinance" is one which all the neighbouring Colonies have found it necessary to pass, and St. Vincent, for its own protection, had to do the same.

"The Land Credit Ordinance" is in the same form as the Ordinances passed in the other Colonies of the Windward Islands to encourage the introduction of capital.

"The Trustee Ordinance" and "the Probates (British and Colonial) Ordinance" are useful pieces of legislation on the subjects with which they deal.

OFFICERS.

I was absent from the Colony from the 1st of February to the 7th September; until the 28th May at Grenada, as Administrator of the Windward Islands, and from the 29th May on leave of absence in England.

During that time the administration of the local Government was carried on by Mr. Drayton, the Colonial Secretary of Grenada, to whom my acknowledgments are due.

Mr. Griffith, the Treasurer of the Colony, was retired on a pension from the 1st January 1897, and the duties of Treasurer were added to those of the Administrator, Colonial Secretary, and Registrar General.

On the abolition, from the 1st January 1897, of the separate staff for the administration of Crown Lands, Mr. Musgrave reverted from his temporary post of Superintendent of Crown Lands to his substantive post of Chief Clerk in the Government office, and the Colonial Engineer became Superintendent of Crown Lands, in addition to his other duties, thus reverting to an arrangement which existed some years ago.

The post of Supernumerary Clerk in the Government office was done away with, and Mr. Hutchinson acted as clerk to the Colonial Engineer.

The experiment was tried of amalgamating the duties of Inspector of Schools and Audit Clerk, and Mr. F. W. Griffith was appointed to the combined offices; Mr. Mackie, the former audit clerk, became clerk in the Treasury, in place of Mr. H. A. Lewis, who was transferred to the Magistrate's office, replacing Mr. W. E. Davis, for whom employment was provided as a landing waiter.

Mr. L. O. Chitty, the Inspector of Schools, for whom no place could be found in St. Vincent under the new arrangements, was transferred to Jamaica.

To increase the efficiency of the Treasury a new office of Supervisor of Customs was provisonally created, to which the Chief of Police was appointed. This virtually divided the Treasury Department into an indoor and outdoor branch, both under the supervision of the Treasurer.

Mr. Trafford, the Chief Justice, retired on a pension on the 3rd November 1897, with a view to a combination of offices, which took effect in 1898, and Mr. Hazell, who had been acting for some time, was appointed Attorney General at a reduced salary.

The general effect of all these changes is apparent in the reduction of expenditure on "personal emoluments" from £12,660 12*s.* 4*d.* in 1896 to £11,982 18*s.* 1*d.* in 1897.

Pensions.

The pension list is increased by the addition of the Chief Justice's Pension at the rate of £544 8*s.* 11*d.* per annum, and that of the Treasurer at the rate of £228 8*s.* 3*d.*

Population.

The estimated population is put down as 46,112, after allowing for the natural increase since the census in 1891, but we have no records of emigration, and I feel sure that the population is over-estimated in those figures, though I have no data from which to give correct ones.

Education.

In the elementary schools the full effects of the rules passed in 1893 were felt in the Government contributions, which amounted to £2,019.

There was much complaint from the teachers that they were not being paid as much under the new rules as they were under the old; and this was so for the first year or so after the new rules came into operation, but now the grants earned by the schools have become so large that the Board of Education has had to take steps to reduce them.

Imports and Exports.

The total value of the Imports into the Colony was £70,823 11*s.* 10*d.*, as compared with £71,489 11*s.* 9*d.* in 1896, or a falling off of less than one per cent. The imports from the United States of America appear to have decreased, while those

from the British West Indies have increased, but this is due to the fact that American goods were received through Barbados and other Colonies, instead of by direct importations from America.

The increase of trade with British North America is noticeable. It was represented in 1896 by an importation of pitch-pine valued at £991 and an export of 53 puncheons of molasses. In 1897 the imports from British North America are valued at £1,704, and are composed of some food-stuffs, in addition to various kinds of lumber, while the value of exports amounted to £4,513, composed of sugar, molasses and arrowroot, and 18 per cent. of the sugar and molasses exported went to Canada.

The various items on the import list, as a rule, follow the items of 1896 so closely that they require but little comment.

Most food-stuffs show a slight increase, with the exception of flour, of which nearly 1,000 barrels less was imported than in 1896. The import of whisky shows no falling off, but gin and other wines are less. Unmanufactured tobacco, which is the kind usually smoked by the pocrer people, shows a slight increase in quantity.

The total Export trade was valued at £68,935, against £67,392 in 1896, or an increase of rather more than 2 per cent.

Besides the increase of trade with British North America to which I have already drawn attention, the only noticeable feature is the decrease in the trade with Venezuela, which shows a falling off of nearly 73 per cent. It is a precarious trade and, as far as the vessels engaged in it are concerned, not quite legitimate, and probably stricter supervision in Venezuela has checked it.

The exports of sugar rose in value from £21,512 to £25,591, and sugar and its products represented nearly 43 per cent of the total exports of the Colony.

In arrowroot there was a decrease, both in quantity and value, due to a rather half-hearted attempt on the part of producers to regulate the supply of arrowroot rather more in accord with the demand for it. The effect for a time was to raise the price to a slight extent in the English market.

The export of fruit, vegetables, and live stock shows a tendency to decrease in value, which is unfortunate. It means that the poorer classes are getting smaller prices in other colonies for their produce, and that their means of livelihood is therefore less.

The most satisfactory feature in the returns is the continued steady increase in the production of cocoa and nutmegs.

The export of cocoa increased from 194,037 lbs., valued at £3,209, to 264,192 lbs., valued at £4,514, and that of nutmegs from 15,026 lbs., valued at £685, to 24,628 lbs., valued at £1,084.

Of the other staple products of the Colony, whale oil shows a considerable increase in quantity, but not so satisfactory an increase in value, while cotton and cotton seed are both less. Cassava starch has increased both in quantity and value.

SHIPPING.

The tonnage of vessels entered and cleared during the year was 248,877 tons, compared with 273,245 tons in 1896. The decrease is in steamers, of which 82, with a tonnage of 111,422 tons, visited the Colony, against 94, with a tonnage of 123,612 tons, in 1896. A great part of this decrease was due to the less frequent visits of the Quebec Line of steamers from New York, which, as a rule, deposited their St. Vincent cargo at Barbados, to be brought from there by sailing vessel.

AGRICULTURE AND GRANTS OF LAND.

The only satisfactory feature in agriculture is the gradual increase in the production of commodities other than sugar and arrowroot, and especially of cocoa and nutmegs, to which I have already referred.

Although the planting of cocoa has not been going on by leaps and bounds, there has been a steady increase in the trees planted year by year for some years past, both on the large estates and in such small holdings as there are. The reports from the Curator, which have been submitted from time to time, give many encouraging examples of the success of these plantations.

Tobacco has been cultivated with success, on a small scale, in several places, and in the Botanical Garden a considerable experiment was made. The "mole cricket" was the greatest enemy the Curator had to deal with, but a large number of plants were reaped and cured, and the whole crop found a ready local market.

That more than £600 is now paid for imported tobacco of the coarsest kind shows that there is a local market for tobacco, which should be remunerative, while growers are learning how to cure tobacco sufficiently well to make it an article for export.

The cultivation of coffee is also gradually increasing, but our imports of coffee for local consumption are still worth more than £400, and there is no export of it at present.

At the end of 1896 no canes were planted for the 1898 crop, but towards the end of 1897 a considerable area of land was put under cultivation for the crop of 1899. This afforded

a considerable amount of employment to labourers, and the Revenue felt the benefit of it in improved collections for Import Duty in the later months of the year.

As I have already noted, an attempt was made to restrict the output of arrowroot, but it was but a small one, and on the first symptom of a rise in price everyone rushed to take advantage of it. Whether arrowroot shall be a remunerative crop or not seems to be entirely in the hands of the St. Vincent growers, and it only requires a little agreement between them to effect it. For the present it seems likely that the English buyer will reap all the advantages of the local competition among half-a-dozen individuals.

The production of Cassava starch continues to be remunerative to the small growers who produce it, and there is considerable demand for it in the neighbouring Colonies.

But little has been done in the Crown Lands Department during the year. A few new grants were made, but nothing was done towards getting in the large arrears of instalments of purchase money, and the holders of the land received but little supervision. The disastrous floods of 1896 disheartened a good many of the cultivators, but most of those who did not lose everything are again taking an interest in their holdings.

Proposals for new regulations for grants for Crown lands were under consideration at the beginning of the year, but the visit of the Royal Commissioners and their subsequent recommendations rendered it advisable to postpone dealing with the matter until the whole question of Peasant Proprietors has been gone into.

The Crown Lands scheme has been the subject of much criticism, and the inaccessibility of most of the land has been one of the fairest points of that criticism. To remove this objection, it was proposed to connect the most important areas of Crown Lands with the existing communication by roads adapted to the country which they would traverse. The estimated cost was £3,000, and, as a first instalment, £1,000 was borrowed and one road was completed in 1897. It is rather more than two miles in length and cost £182. Other work in connection with this scheme has been suspended pending the consideration of the whole question of Crown Lands.

Whatever may be the disadvantages of Crown Lands from the point of view of suitability of soil and accessibility, there is no doubt that they met a crying want when the scheme was first started, and, in face of opposition from many quarters, a large number of people are now enjoying the fruits of their own labour, and have at least been able to provide themselves with some of the necessaries of life, while the more prudent and industrious are receiving a certain amount of money, which is annually increasing, by the sale of their more permanent products.

Prisons and Crime.

Partly owing to the cause mentioned in the Report for 1896, —the emigration of adult males—the admissions to prison show a large decrease. The average daily number in prison was 24·29 only, against 34 in 1896, and the number of persons committed 171, against 231.

The number of offences reported to the police is rather higher than it was in 1896, and the number of persons acquitted is also higher.

Prædial larceny shows no diminution in the statistics, and I fear that these figures represent but a small percentage of the cases which occur. It may be that people will respect the produce of a small holder more than they do that of a large land owner, but, unless they do so, I fear that one of the chief difficulties with which peasant proprietors will have to contend will be the protection of their holdings from the devastations of those who "reap where they have not sown."

Hospitals.

The work of the Colonial Hospital continued to increase, and the difficulty of providing for the deserving applicants for admission was greater than ever.

The daily average in hospital was 62·92, against 58·82 in 1896, and the average stay of the patients in hospital was longer than in 1896. Many of the cases were aggravated by faulty and insufficient diet, and a large part of the hospital treatment consisted mainly in building them up with nutritious food. The ulcer cases showed a considerable increase, and they, too, are to a large extent caused by unnutritious diet.

The Pauper Asylum is now chiefly devoted to providing a shelter for those who have received all the benefit they are likely to get from hospital treatment but have no place to go to when they are discharged. In many instances they are incurable cases, and they never leave the asylum alive.

The daily average in the asylum was 100·22, compared with 90·68 in 1896. The overcrowding in the building is a serious question, but we have no money to provide increased accommodation, and it requires a hard heart to refuse admittance to deserving persons who have no other possible shelter.

The Georgetown Casualty Hospital continued to do good work on a small scale, but want of money prevented anything being done towards improving the accommodation and appliances there. I should much like to see the utility of the institution increased.

METEOROLOGICAL STATISTICS.

The total rainfall for the year was 109·62 inches, which is slightly below the average of the last seven years (114·68 inches). I am able to record that it is the only year during my three years' residence in the Colony that no damage was done in any part of the Colony by floods caused by excessive rainfall.

The only disaster to be recorded is the small cyclone which visited a portion of the north-east part of the Colony in June, and within a limited area did some damage.

The latter part of the year was abnormally hot, and the maximum thermometer at the Botanical Garden recorded 88 degrees, which is the highest record for some years past.

SAVINGS BANK.

The total amount to the credit of Savings Bank Depositors at the end of the year was £8,771, divided among 1,047 depositors, against £8,455, divided among 1,062 depositors, in 1896.

GENERAL.

The year through which we have passed has been a critical one, and there is certainly no progress to record. It is said that in these days things cannot stand still, and that they must go forward or backward, and there is much that is true in this of communities and countries, as well as of commercial and other undertakings.

Were it not for this, I should be inclined to say that in 1897 St. Vincent had been more or less stationary. There has certainly been no progress, but I cannot see that in the main there has been any retrogression.

That this state of stagnation, if stagnation it be, cannot last is only too evident, and, unless the opportunity for progress shortly arises, it is terrible to contemplate what the condition of the country may become.

The visit of the Royal Commissioners was one of the leading events of the year, and their recommendation for the amelioration of the existing state of affairs are before the public and Her Majesty's Government. It would be presumptuous on my part to make any recommendations for dealing with the problems which face us in St. Vincent, when these problems have been so thoroughly grasped and ably dealt with by Her Majesty's Commissioners.

Many of their recommendations are now in course of being given effect to, and I have every hope that they will bring back to this Colony a portion, at least, of that prosperity it once enjoyed.

I cannot close this report without referring to the celebration of Her Majesty's Jubilee, which was observed by all classes of the community with every demonstration of loyalty and thankfulness.

I have, &c.,

HARRY THOMPSON,

Administrator.

His Excellency Sir ALFRED MOLONEY, K.C.M.G.,
&c., &c., &c.

GOVERNOR SIR A. MOLONEY to MR. CHAMBERLAIN.

Grenada,

31st July, 1898.

SIR,

I HAVE the honour to transmit Administrator King-Harman's despatch of the 9th inst., covering his Report on the Blue Book of the Colony of St. Lucia for the year 1897.

I have, &c.,

ALFRED MOLONEY,

Governor.

Government House, St. Lucia,

9th July, 1898.

SIR,

I HAVE the honour to transmit herewith my Report on the St. Lucia Blue Book for the year 1897.

I have, &c.,

C. A. KING-HARMAN,

Administrator.

480—750—8/98 Wt 21620 D & S—5 (B)

ST. LUCIA.
1897.

REPORT ON THE BLUE BOOK FOR 1897.

REVENUE AND EXPENDITURE.

	£
The total Revenue for the year 1897 was ...	60,639
The total Expenditure	56,743
Leaving a balance to credit of the Colony of	£3,896

The Revenue and Expenditure for the five preceding years is shewn as follows :—

—	1892.	1893.	1894.	1895.	1896.
	£	£	£	£	£
Revenue	48,297	57,598	55,971	48,564	55,331
Expenditure...	54,934	49,271	53,766	57,579	56,060

The year 1897 opened with a debit balance amounting to £5,088 8*s.* 0*d.*, which on the 31st December was reduced to £3,114 15*s.* 8*d.* The actual excess of Revenue over Expenditure for the year was £3,896 4*s.* 3*d.*, but as £1,922 11*s.* 11*d.* of this sum was appropriated towards the closing of the Accounts for Materials and Stores, which had hitherto figured in the Balance Sheet as an Asset of the Colony, only £1,973 12*s.* 4*d.* was available to be used towards the liquidation of the floating debt.

PUBLIC DEBT.

The Public Debt of the Colony on the 31st December, 1897, was £191,979 11*s.* 0*d.* The debt was reduced during the year by £10,300. Included in the total amount of the debt is a sum of £17,000 raised by the Colony on behalf of the Castries Town Board. The interest and Sinking Fund are paid by the Board. There is also included in the debt a sum of £20,800 which was raised for Immigration purposes. Certain export duties on sugar, cocoa, and molasses, and import duties on tobacco are appropriated by law towards the payment of interest and sinking fund on this loan. The credit of the Colony is pledged for all loans.

IMPORTS AND EXPORTS.

Hereunder is shown in tabular form the value of each class of Imports during the years 1896, 1897 :—

Year.	Class I. Live Animals, Food, Drinks, and Narcotics.	Class II. Raw Materials.			Class III. Manufactured Articles.			Class IV. Coin and Bullion.	For Army and Navy, Colonial Goverment and the Church.	Total.
		Textile.	Metal.	Other.	Textile.	Metal.	Other.			
	£	£	£	£	£	£	£	£	£	£
1896	58,729	—	1	51,431	19,172	5,609	24,131	404	31,057	190,534
1897	65,655	—	9	66,709	25,176	26,687	50,617	10,400	—	245,253

The articles imported for the Army and Navy, and for the Colonial Government and the Church, were classified according to their nature under their proper headings in the 1897 returns.

The following will shew the chief articles which contributed towards the increases in the 1897 figures over those of 1896 under the several heads of classification :—

Articles.	1896.		1897.	
	Quantity.	Value.	Quantity.	Value.
CLASS I.		£		£
Ale, Beer, &c.	2,243 doz. 29,218 gals.	2,620	1,792 doz. 37,629 gals.	2,964
Butter	22,650 lbs.	1,055	32,312 lbs.	1,377
Oleomargarine	82,195 „	1,605	98,099 „	1,830
Flour	14,011 brls.	14,269	14,320 brls.	17,764
Medicines	—	674	—	1,438
Rice	560,034 lbs.	2,388	577,466 lbs.	3,216
Whiskey	2,471 gals.	877	3,152 gals.	1,127
Wines	—	2,187	—	2,806
Tobacco, manufactured	10,445 lbs.	841	14,785 lbs	1,035
„ unmanufactured	34,691 „	676	50,226 „	919
CLASS II.				
Coal	47,307 tons	40,601	63,902 tons	53,809

SHIPPING.

The shipping of this Port is steadily increasing, and during the year under report 620 trading steamships entered and cleared, as compared with 435 during the previous year. Besides these trading vessels 24 ships of war visited the Port, as against 13 in 1896.

Of these ships of war, 6 were British, 4 American, 2 Dutch, 1 Austrian, and 1 Russian.

Of the trading steam vessels, 501 were British, 58 French, 19 Belgian, 16 Norwegian, 15 German, 7 American, 2 Dutch, 1 Venezuelan, and 1 Brazilian.

Besides the steam vessels, 327 sailing vessels entered, and 325 cleared, as against 287 and 293 in 1896.

The total tonnage entered and cleared during 1897 amounted to 1,780,560 tons, as compared with 1,190,790 tons in 1896.

Not only was 1897 conspicuous for the large number of vessels which entered the Port, but also for the increased tonnage size of the vessels generally. Two of the largest mercantile marine vessels afloat entered the harbour, and were berthed and coaled at the wharves.

The following Tables will be found interesting :—

Year.	Steam Vessels.			Sailing Vessels.			Total.		
	Vessels.	Tons.	Crews.	Vessels.	Tons.	Crews.	Vessels.	Tons.	Crews.

SAVINGS BANK.

	£	s.	d.
The amount at credit of the Savings Bank Fund at 31st December, 1896, was	9,809	13	10
The deposits during the year amounted to ...	8,497	13	7
The interest credited to depositors was	236	15	3
Total ...	£18,544	2	8
The withdrawals during the year amounted to ...	8,161	15	11
The amount due depositors at 31st December, 1897, was	£10,382	6	9

This is the largest balance that has been shown since the Savings Bank was established. The number of depositors at 31st December, 1897, was 1,294, as against 1,277 at the close

of 1896. The following investments on account of the funds of the Bank were held at 31st December, 1897, the same as at the close of the previous year :—

	£
Canadian Government 3½ per cent.	2,000
New South Wales Government 3½ per cent. ...	2,000
Western Australia 3 per cent.	1,500
Government of Trinidad 3 per cent.	1,500
Government of Barbados 4 per cent.	1,000
On deposit at Colonial Bank 3 per cent. ...	1,000
Total	£9,000

The sum of £286 0*s.* 6*d.* was received during the year under report for interest on the investments.

POST OFFICE.

	£	*s.*	*d.*
The revenue derived from postal transactions during the year amounted to	1,879	8	5½
The expenditure for the upkeep of the Department, and the charges for conveyance of mails to England, America, and Canada, was	1,139	7	7
There was also paid to the Royal Mail Steam Packet Company, for a local service on the leeward coast...	1,000	0	0
Total expenditure	£2,139	7	7

The number of letters, postcards, newspapers, book-packets, &c. sent and received from abroad during the year was as follows :—

Sent Abroad.	Received from Abroad.	
Letters and Post-cards, 72,718.	Letters and Post-cards, 85,574.	Newspapers, Book-packets, &c. 50,896.

3,250 registered letters were dealt with, and no loss has been reported.

The number of steam vessels that brought mails to the Colony was 231, and the calling of steamers for coal on their way to New York afforded 247 opportunities for the despatch of mails from the Island.

The money orders issued on foreign places amounted to £4,891 6*s.* 4*d.*, and the amount received from abroad was £978 8*s.* 7*d.* The Colony's share of commission on these orders was £82 12*s.* 3*d.*

By the parcel post service 1,445 parcels were received, yielding in customs dues £201 2*s.* 8*d.* to the credit of the general revenue. The number of parcels despatched from the office was 459.

The return of inland postal transactions shew that 44,801 letters and postcards and 11,475 newspapers, book-packets, &c. were exchanged between the central office in Castries and the four sub-offices in the country districts.

CIVIL ESTABLISHMENT.

His Excellency Sir Alfred Moloney, K.C.M.G., who had been appointed Governor and Commander-in-Chief of the Windward Islands, on 25th January 1897, in succession to Sir Charles Bruce, arrived in St. Lucia and assumed the Administration of the Government on 3rd August.

Mr. C. A. King-Harman was appointed Administrator on 29th January 1897, and arrived in the Colony and assumed the Administration on 16th November.

From the beginning of the year up to the arrival of the Governor on 3rd August the Government was admininistered by Lieutenant-Colonel C. L. Dale, officer commanding the troops, being senior member of the Executive Council. From the departure of the Governor on the 20th August to the arrival of Mr. King-Harman on the 16th November, Mr. P. J. K. Ferguson, the Attorney-General, being then the senior member of the Executive Council, assumed the Administration.

LEGISLATION.

The year was not fruitful in legislation, only seven Ordinances being passed, the principal of which were :—

An Ordinance to amend the Immigration Ordinance 1891, Amendment Ordinance 1896, whereby Indian immigrants who have completed a continuous residence of ten years in the Colony, and Indian immigrants who are destitute or disabled, and the wives and children of such immigrants may, in certain cases, be provided with a return passage to India.

An Ordinance to authorize the raising of a loan of five thousand pounds, for the purpose of making up a deficiency in the general revenue of the Colony for the year 1896.

This Ordinance was not presented for Her Majesty's allowance, a surplus of revenue over expenditure at the close of the year being available towards the reduction of the floating debt of the Colony.

An Ordinance to continue the Customs Tariff (Amendment) Ordinance 1896.

Under this Ordinance the additional duty of fifteen (15) *per centum* on all duties leviable under the Customs Tariff Ordinance 1895, coal only being excepted, was continued for another year.

MILITARY EXPENDITURE.

The Imperial expenditure during the year for military purposes amounted to £31,815, as against £43,549 for the previous year.

The Colonial expenditure in the nature of allowances in lieu of exemption from customs duties amounted to £2,236, as against £2,020 in 1896.

VITAL STATISTICS.

The births and deaths of the year numbered respectively 1,824 and 1,163, thus yielding a natural increase to the population of 661.

This increase raised the population on 31st December 1897 to 47,332 (22,995 males and 24,337 females), being equal to 203 persons to the square mile.

Exclusive of still-births the birth-rate of the Colony was 3·57 per cent. against 3·84 in 1896, 4·04 in 1895, and 4·11 in 1894.

The birth-rate has therefore been steadily decreasing, a circumstance due in all probability to rural depression and the voluntary expatriation of numbers of the virile population. During the days of agricultural prosperity the rate averaged 4·28, rising in one year to 4·76.

The year under report shows no improvement in respect to the proportion of illegitimate to legitimate births, the former averaging 60·25 and the latter 39·75 of the total.

The net death-rate was 2·15 per cent. In 1896 it was 2·17, in 1895 2·24, and in 1894 2·09. The great majority of the deaths were due to zymotic diseases, and two persons are reported as having died from the bite of the fer-de-lance, now becoming rare in the Island.

CRIMINAL STATISTICS.

In 1897 there were three Sessions of the Royal Court for the trial of indictable offences; 17 persons were tried, of whom 5 were acquitted and 12 convicted. In 1896 the number of convictions was 7.

The returns from the Magistrates' Courts shew a decrease in the number of summary convictions, the number in 1897 being 1,013 as against 1,096 in the previous year.

The Attorney-General reports that there has been in the last four years a gradual and steady diminution in the number of convictions for summary offences, but that the number is still large, a fact due, in his opinion, to the influx from other Islands of persons, chiefly of the lower classes, attracted to St. Lucia by the increased coaling trade and by the employment to be obtained on military works and in the garrison.

PRISON AND CRIME.

The prison population in 1897 shewed an increase of 83 admissions as compared with the previous year, and the convictions for the year were 15 in excess of those in 1896.

The admissions to the Royal Gaol were :—

1897.		1896.	
Males ...	481	Males ...	395
Females...	226	Females...	229
Total ...	707	Total ...	624

The convictions in 1897 amounted to 544 as against 529 in 1896, but there is little serious crime in the Colony, the returns shewing that only 10 sentences were passed for periods in excess of 12 months.

The daily average number of prisoners during the year was 51·48, and the largest number confined in the prison at one time was 73.

The general health of the prisoners was good, the daily average on the sick list being 0·89, the lowest number on record. There was one death during the year from chronic diarrhœa, aggravated, according to the Medical Officer's report, by mental depression.

Corporal punishment was administered on three occasions, one by order of the Royal Court and two for prison offences.

IMMIGRATION.

The Protector of Immigrants reports that the number of adult Indian immigrants under indenture in the Colony on 31st December 1897 was 124, namely, 85 males and 39 females. Six births occurred during the year and one death.

The health of the immigrants is reported to be good, despite the unseasonable weather that prevailed during a great part of the year; the predominant maladies of malarial fever and malignant ulcers have been treated by the Colonial Surgeon and his assistant, Doctor Galgey, with excellent results, by the employment of thymol in the one case and iodoform in the other. The immigrants appear to have been on the whole contented and peaceable throughout the year, and a sum of £25 5*s.* 4*d.* was remitted by them to their relatives in India.

The Immigration Fund shewed a balance to credit on 31st December of £1,840 11*s.* 7*d.*, the receipts being principally derived from export duties levied on sugar (4*d.* per 100 lbs.), cocoa (1*s.* 3*d.* per bag) and molasses (1*s.* per puncheon), from an import duty of 1*s.* per lb. on unmanufactured tobacco, and from indenture fees. The expenses borne by the fund were principally on account of interest and Sinking Fund on loans amounting to £2,952; bounties paid to time-expired coolies, £62, and salary of Emigration Agent, Calcutta, £89 8*s.* 0*d.*

EDUCATION.

Primary.

Thirty-four primary schools were open during the year 1897; the number of children on roll was 4,447; the average attendance was 2,577, and the Government grant-in-aid amounted to £2,620 13*s.* 9*d.* Of the 34 schools, 3 were managed by the Government, 2 by the Anglican Church, 1 by the Wesleyan, 4 by the East Indian Mission, and 24 by the Roman Catholic priesthood. In the previous year, 1896, 3 Government schools were closed, but the number on the roll was increased in 1897 by 265 and the average attendance by 261. These figures shew that there has been greater regularity among the children attending school during the year under report. The number presented for examination was 419 more than in the preceding year, and the increase in the number of passes was 581. The numbers in both cases are the highest ever recorded in St. Lucia.

The cost to the Government per head of the children at school was £1 0*s.* 10*d.*, as compared with £1 3*s.* 1*d.* in 1896.

Secondary.

In 1890 St. Mary's College was established by the Vicar General, the Reverend Father Tapon, with the object of supplying education of a higher standard, and in the following year a grant of £200 was made by the Government from the General Revenue of the Colony in support of this school.

This grant has since been annually renewed, and, in addition, 10 scholarships each of the value of £6 per annum have been established by the Government in order to enable boys from the primary schools to enter the College, and to profit by the superior instruction for a period of five years. The College may therefore be considered to be assisted by the Government to the extent of £260 per annum.

The College, which is divided into three classes, was annually examined by Masters from Harrison College, Barbados, up to the year 1895, since which date no examination has been held; but boys from the 1st or most advanced class have been sent up for the Cambridge Local Examination.

In 1895 two boys were presented for this examination and both passed, one with honours.

In 1896 seven were presented and all passed, three with honours.

In 1897 eleven were presented, all passed, four obtaining honours.

The annual examination of the two lower classes will be resumed.

PUBLIC WORKS.

In carrying out the ordinary recurrent repairs to Public Buildings a sum of £795 11*s.* 11*d.* was expended, plus £106 16*s.* 11*d.* for repairs and renewal of Government furniture.

On dredging in the Castries Harbour £467 13*s.* 3*d.* was expended.

On the maintenance and repair of the public roads £3,496 19*s.* 6*d.* was expended.

Land was purchased for a new cemetery at Choc, the total area acquired being about 10 acres. The work of enclosing, fencing, draining, and the construction of roads was commenced, and an amount of £683 12*s.* 6*d.* spent up to 31st December.

Petty repairs were executed on all the jetties, two light timber bridges for the rivers at Soufriere were begun, and a water tank for the village of Gros Islet was put in order for £123 0*s.* 6*d.*

During the year the sum of £8,110 7*s.* 6*d.* was expended on the new water works, thus making a total expenditure of £23,822 12*s.* 1*d.* The principal work consisted of the completion of the following:—

Bocage Reservoir, capacity 450,000 gallons. Cast Iron Main 6in., connecting Bocage Reservoir with Entrêpot works and Town main.

Entrêpot works. Filter beds and service Reservoir, the latter holding 300,000 gallons. Cast Iron Mains, 6in. and 7in., from Entrêpot to Town boundary.

Castries Town Mains.

The subsidiary works at Piton Flore and Louisie, consisting of five dams with straining chambers and settling channels, were commenced and completed, and the mains laid ready for joining on to the principal main from La Sorciere at any time that a failure of water from the latter source may render it necessary to do so. From this subsidiary source a minimum supply of 120,000 gallons a day can be depended upon, and this can be either held in reserve, as at present, or in case of necessity could be added to the supply now being drawn from La Sorciere, and which for the present is more than sufficient for the needs of the town and the shipping.

AGRICULTURE.

Sugar.

The sugar made in St. Lucia is chiefly of a high class, and is manufactured in four Central Factories at Grand Cul-de-Sac, Roseau, Vieuxfort, and Dennery. The output of these four factories in 1897 aggregated 3,962 tons as against 3,698 tons in 1896, and of this amount 3,400 tons were exported in 1897 and 3,055 tons in 1896. The value of the sugar exported in 1897 was £55,497, and in 1896 £56,095.

In addition to the four central factories, several small mills, driven chiefly by wind or horse power, are maintained for the purpose of making Muscovado sugar, the export of which in 1897 amounted to 457 tons, value £3,900, as against 493 tons, value £5,859, in 1896. Syrup, an article of favourite local consumption, is also largely made in these primitive mills. The amount produced cannot be ascertained.

The trade in the bye-products of sugar during the years 1896 and 1897 was as follows :—

	1896.		1897.	
	Gallons.	Value.	Gallons.	Value.
		£		£
Molasses	105,000	1,443	135,120	1,858
Syrup...	100	5	455	23
Rum	1,280	91	10 107	588

The rum manufactured in 1896 was 39,460 gallons, of which 37,360 were consumed locally, and 63,637 gallons in 1897, of which 37,344 went into local consumption. The large increase in the manufacture in 1897 is chiefly due to the importation of 22,480 gallons of molasses in that year, no such importation having occurred in the previous year.

Much difficulty is at times experienced by the proprietors of the central factories in getting a sufficient supply of labour, the population within easy distance from Castries being tempted away by the military works and by the money to be made on the coaling wharves, while from the more distant parts of the island a constant emigration to the gold fields of Cayenne often hamper agricultural operations. Much of both field and factory work is done by labourers from Antigua, St. Vincent, St. Martin's, and Barbados, from which last named island efforts are being made to induce families of the labouring class to come and settle in the fertile valleys of St. Lucia. The central factories are fitted with the latest machinery for the production of sugar crystals for the English and American markets. Grand Cul-de-Sac is capable of making 2,500 tons in five months, working during the day; Roseau in the same time can produce 1,500 tons; Vieux-fort, 2,000 tons; and Dennery, 2,000 tons. In each case the bulk of the sugar is grown by the factory, but much is contributed by peasant proprietors.

Cocoa.

The crop for 1897 was a small one, owing to the heavy rainfall and wind experienced during the flowering period of May and June. The cultivation is slowly increasing, and it is hoped that the excellent results obtained by the few planters who apply intelligent methods to the treatment of their crop may, together with the sound advice tendered by the Curator of the Botanic Station when on his lecturing tours, induce the petty proprietors to improve on the primitive system to which they obstinately cling.

Coffee.

Liberian coffee is proving to be well adapted to the soil and climate of St. Lucia, and its culture is being extended. The demand for seeds and plants is increasing, and improved machinery for curing the crop is being imported.

Kola.

The cultivation of kola is being slowly extended and one shipment has been made to the London market, where good prices were obtained.

Ginger.

The cultivation of this spice is at present being tried by one or two planters only, but a shipment which was made in the month of June realized 70– per hundred weight, and the profitable nature of the undertaking is being brought to the knowledge of the people.

The estimated acreage of the products cultivated in the Colony is given in the following return :—

—	Sugar Cane.	Cocoa.	Coffee.	Spices.	Provisions.	Other Cultivation.	Pasture.	Total Cultivation.
Acres	5,234	3,940	104	11	3,944	323	12,234	25,790

The estimated acreage of the Colony is 152,320.

BOTANIC STATION.

Much activity has prevailed in connection with the Botanic Station, in which an increasing interest is shown by the general public. Plants were distributed throughout the Island to the number of 21,138, exclusive of 9,000 ginger sets given gratis to purchasers of Crown lands, and an impetus has been given to the cultivation of Liberian coffee, cocoa, nutmegs and kola, the number of each disseminated by sale, exchange or free gift being as follows :—

—	Sale and Exchange.	Free.	Total.
Liberian coffee	10,942	5,994	16,936
Cocoa	44	1,302	1,346
Nutmegs	444	463	907
Kola	214	704	918

The following table, shewing the number of economic plants distributed during the last three years, affords satisfactory evidence that the station is increasing in favour with the public, and that its sphere of usefulness is being constantly enlarged :—

Year.	No. of Plants Distributed.
1895	4,380
1896	19,504
1897	22,179

In addition to the assistance given to the planting community at the station itself, the Curator is paying periodical visits to the several districts of the Island for the purpose of giving lectures and practical demonstration upon agricultural topics, in the hope of encouraging an extended cultivation of the most useful and valuable economic plants upon rational and scientific principles.

The site of the present station leaves unfortunately much to be desired, and with a larger area and more suitable land the advantages now offered will be brought home with greater force to the general public.

The rainfall during the year as recorded at the station was 106·43 inches ; April with 1·53 inch being the driest, and May with 20·44 inches being the wettest.

METEOROLOGY.

At the station on Morne Fortune, at an elevation of 745 feet above mean sea level, the absolute maximum temperature recorded was 89·0 in October ; the absolute minimum was 67·0 in February and March. In 1896 the greatest heat registered was 89·2 in October, the minimum being 66· in January, February and March. The rainfall on the Morne for the year was 111·26 inches as against 114·29 in 1896, the wettest month being May, 18·91 inches, and the driest, April, 1·88 inches. Rain fell on 271 days as against 280 days in 1896.

No. 247.

GRENADA.

(For Report for 1896, *see* No. 209.)

GOVERNOR SIR A. MOLONEY to MR. CHAMBERLAIN.

Grenada,
13th September, 1898.

SIR,

I HAVE the honour to transmit the Report of the Colonial Secretary on the Blue Book of the Colony of Grenada for 1897.

I have, &c.,

ALFRED MOLONEY,
Governor.

COLONIAL SECRETARY'S REPORT ON BLUE BOOK FOR 1897.

FINANCES.

As in the preceding year, the accounts of the Colony closed in 1897 with a deficit, which had increased in amount from £1,183 at 1st January to £4,040 at 31st December. Special causes contributed to this result, the value of the Public Works Stores (including their estimated depreciation in value), £1,616, having been written off the colonial assets, and an abnormal expenditure for consolidation of the laws, and for surveys and preliminary expenses in 1892-3 in connection with a scheme for lighting St. George's by electricity, having been brought to account during the year. It should here be noted that 1896 was the first year since 1883 in which there was a deficit.

Revenue.

2. The revenue collected amounted to £56,973, which was £698 more than in 1896 and £1,134 less than the average of the

GRENADA, 1897.

five years 1891-95: it failed to reach the estimate by £4,113. This latter result is attributable to a too sanguine forecast of the receipts from import duty, and to the revision of stamp duties at the end of 1896, combined with the suspension of certain court fees pending the enforcement of fresh legislation under the new edition of the laws, which was completed later in the year than was anticipated.

3. Much difficulty was experienced in collecting the Land and House Tax. Owing in part to laxity of the collecting officers, and in part to "tightness" of money consequent upon the general financial depression, a large proportion of these taxes fell into arrear for two years, and it required careful and tactful supervision on the part of the Government to secure that, without unduly pressing the peasantry, this important branch of the revenue was collected in 1897. It is satisfactory to record that these efforts were attended with a large measure of success, and the concomitant enquiry having disclosed many defects in the system and also some unfairness in the incidence of the House Tax, important changes were introduced towards the end of the year which are having their effect in the current year.

Expenditure.

4. £58,549 were expended in 1897, being £1,974 less than in 1896 and £917 less than the average of the five years 1891-95. Notwithstanding supplementary votes, and the abnormal charges referred to in the first paragraph, which were not provided for on the estimates, the disbursements were so carefully controlled that the original estimate of expenditure was not exceeded. As compared with 1896, the only items of interest are the decreases of £1,423, due to the amalgamation of the Treasury and Post Office and reductions in the combined department, and of £987, caused by the working of the new Education Code.

Public Debt.

5. No change was made in the amount of the Public Debt during the year, £127,770, of which £123,670 is held in 4 per cent Inscribed Stock, and £4,100 in 4½ per cent Debentures. Towards the redemption of this in due course sinking funds of £4,446 and £87, respectively, had accumulated at the end of 1897 in the hands of the Crown Agents for the Colonies as Trustees.

6. The Colony is also liable for the repayment in March 1903 of a loan of £1,000 made for the St. George's Water Works in 1879. The present Town Board of St. George's are laying by a proper sinking fund in the hands of the Government for this payment.

Trade and Shipping.

7. As 1897 was the third year in which the imports and exports of the Colony were correctly classified and the cost of usual charges added to their value, it is possible to institute a comparison between the three years, and tables are appended accordingly.

8. In the first table are shown the volume and direction of the trade for the three years :—

—	Imports.						Exports.		
	1895.	Percentage of Total.	1896.	Percentage of Total.	1897.	Percentage of Total.	1895.	1896.	1897.
	£		£		£		£	£	£
United Kingdom ...	78,079	44·43	66,485	43·06	78,893	48·00	140,736	169,499	138,656
British Colonies ...	42,151	23·99	42,504	27·52	40,126	24·41	5,616	5,790	4,283
Foreign Countries ...	55,482	31·58	45,416	29·42	45,337	27·59	25,668	8,594	11,500
Totals ...	175,712	—	154,405	—	164,356	—	172,020	183,883	154,439

9. In the year under review the Colony's trade was affected by three important factors—(1) the exceptionally low prices received for cocoa and cotton; (2) the consequent unwillingness of capitalists to advance money to cultivators on the usual scale, and (3) the almost entire cessation of expenditure by the Government on extraordinary public works and on reconstruction of roads from loan funds. Fortunately, towards the close of the year, a marked and satisfactory change took place in regard to the price of cocoa, which from the lowest point it had yet reached in the London market rose rapidly to a price which placed it on a footing with Trinidad cocoa, hitherto at the head of the market for West Indian cocoa. The last quarter of the year, therefore, saved the situation, or the record of 1897 would have been a gloomy one.

10. It will be seen that in 1897 48 per cent. of the imports came from the United Kingdom, 24½ per cent. from British Colonies, and 27½ per cent. from Foreign Countries. This is the result as exhibited by the import returns, but, so far as Foreign Countries are concerned, it is misleading, as the bulk of the imports from British Colonies comes from Barbados and Trinidad and consists chiefly of foodstuffs from the United States of America. 88 per cent. of the imports from British Colonies in 1897 came from these neighbouring islands:—Barbados contributing £25,311, and Trinidad, £10,212: the corresponding figures in 1885 were £38,300 and £16,654. Since that year the direct import trade with the United States of America has increased, under the stimulus of a good service of steamers, from £17,325 to £44,529, but at the out-ports of Grenville and Carriacou, whither goods imported to the chief town direct from New York still have to be transported by water after being landed at St. George's, it is evidently still found convenient to import by small sailing vessels, which bring their cargo direct to those ports from the neighbouring islands.

11. While it is probable that, if the returns disclosed with accuracy the country of origin of all goods, the imports from Foreign Countries would appear on an equal footing with those from the United Kingdom, it is clear that Great Britain is the consumer of by far the larger portion of the Colony's produce, as £138,656 (or about 90 per cent.) of a total value of £154,439 was sent there, the United States of America coming next with £8,106, and France and her colonies after that with £3,026.

12. The second table exhibits the value and direction of the trade with Foreign Countries according to the returns.

Average value 1890–94, £13,678—1895 abnormal.

FOREIGN COUNTRIES.	IMPORTS.			EXPORTS.		
	1895.	1896.	1897.	1895.	1896.	1897.
	£	£	£	£	£	£
United States of America...	54,735	44,873	44,529	4,687	6,300	8,106
France and French Colonies	404	264	381	20,664	2,107	3,026
Holland and Dutch Colonies	110	168	67	—	—	9
Danish Colonies	28	21	360	—	—	—
Venezuela	201	89	—	278	146	59
Italy...	4	1	—	—	—	—
Germany	—	—	—	39	41	300
Totals	55,482	45,416	45,337	25,668	8,594	11,500

The beginning of an export trade with Germany, chiefly in cocoa, is a feature of these statistics.

13. The next table divides the imports and exports for the triennial period into the usual four classes, and a further examination of Class I of the imports in 1897 discloses that 78 per cent. of the imports from the United States of America, and 45 per cent. of those from the United Kingdom belong to that class, which comprises live animals, food, drink, and narcotics.

—	IMPORTS.			EXPORTS.

Totals	138,520	159,519	132,642	20,984	12,424	13,503	4,563	4,474	2,720

15. It is believed that the exports to France, as shown in the 1895 statistics, are incorrect, being quite abnormal and without known cause. The error may perhaps be due to the fact that cocoa is sometimes shipped for Havre with the option of being taken on to England if so desired, and it is possible that such shipments may in 1895 have been booked as exported to France, whereas a large proportion is always carried on to England.

16. The trade with the sister colonies of the Windward Islands Government, which has never been extensive, appears, from the following figures, to be steadily dwindling :—

—	Imports.			Exports.		
	1895.	1896.	1897.	1895.	1896.	1897.
	£	£	£	£	£	£
St. Vincent	2,247	1,470	1,229	265	177	84
St. Lucia	103	52	101	420	38	36

Shipping.

17. The subjoined table compares the figures of the last three years, and shows that there was but a slight decrease in 1897 in the tonnage entered and cleared as compared with the preceding year, although there was a marked falling off when contrasted with 1895. In that year, however, the number of steamers entered and cleared was abnormal, because of 22 steamers having coaled at the then newly established coaling wharf of Messrs. Otway Brothers, the work of which has since been suspended.

AGRICULTURE.

Cocoa.

18. The weather of the year was on the whole favourable to agriculturists, the rainfall being average, and the crop of the chief staple, cocoa, for the year ending 30th September reached a total of 54,597 bags, being the largest since 1893-4, when the record crop (55,666 bags) was gathered. Unfortunately for the planters, the London market, although in the end highly satisfactory, showed such varying results during the year that the full pecuniary advantage of this fine yield was not experienced. The year commenced with a good demand, but with poor prices, which fell in the spring to the lowest point yet reached. At this juncture an extraordinary increase of consumption appears to have taken place in the United Kingdom, (the Board of Trade returns show an increase of 13 per cent. in *raw cocoa alone*), and the stock being unequal to the demand, prices steadily rose until at the end of October from 15*s*. to 17*s*. more per cwt. than in April was realised, and, as has been already remarked, Grenada cocoa attained the same position in the market as that of Trinidad.

Many improvements are taking place in Grenada in regard to both the cultivation and the curing of cocoa. It is being borne in upon the peasant proprietor by degrees that he must fork, drain, and manure his cocoa patch in order to secure the best results and keep pace with the large estates in his neighbourhood. If it were possible to devise some practical arrangement whereby he could ferment and dry the beans as successfully as his better equipped neighbour, there is no reason why a sensible diminution in quantity of the "common" grade of Grenada cocoa which now finds its way into the market should not take place.

Spices.

19. Although it is well known that a large area of young nutmeg cultivation is gradually reaching the bearing stage, the returns do not disclose the increase of output which might be expected in the circumstances. The quantity of spices (chiefly nutmegs and mace) exported in the last five years was as follows :—

Year.	Cwt.
1893	2,086
1894	1,916
1895	3,639
1896	2,516
1897	2,505

The nutmeg crop of 1895 was altogether exceptional, 3,220 cwt. being exported ; that of 1897 was about an average crop, and prices in the London market were not so good as in preceding

years. Nutmeg cultivation is chiefly carried on by large proprietors in Grenada, and much care and attention are bestowed on all details.

Coffee.

20. The area of land under cultivation in coffee, although not accurately known, has undoubtedly much increased of late years, and, as a large proportion is consumed locally, the actual output cannot be traced. In 1897 only 31 cwt. were imported, while 63 cwt. were exported, and this in face of an exceptionally bad market abroad, prices falling so low that it was possible to import coffee from Brazil viâ New York and sell it in Grenada cheaper than the local product. This state of affairs has unquestionably discouraged cultivators from further efforts, and it is to be hoped that it may not be permanent, as the Colony is well suited to the growth of coffee, especially Liberian.

Sugar Cane.

21. No sugar left the Colony in 1897, and this, coupled with the fact that 91,892 lbs. of muscovado sugar were imported as against 68,946 lbs. in the preceding year, points to the conclusion that the local over-production of 1896 was succeeded by a period of comparative inaction in growth of the sugar cane in 1897. The sugar made in the island is mostly of such a low grade that it is questionable whether it would not be better for the labouring class to consume imported muscovado altogether. 57,406 gallons of rum were manufactured in the year, being an increase of 4,511 gallons on 1896, and of 13,956 gallons on 1895.

Botanic Station.

22. With Governor Sir Alfred Moloney's arrival in June a period of active propaganda in connection with the Botanic Station was inaugurated. The Curator was required to pay periodical and frequent visits to the out-districts with the object of visiting and instructing the peasant proprietors in proper methods of cultivation, leaflets with a similar object were freely distributed, monthly lists of plants and seeds available at the Station for sale were published, and every effort was made to induce on the one hand the local cultivators to take an interest in the work and objects of the Station, and on the other to ensure that that institution fulfils the purpose of its creation. At the same time experimental shipments of fruit and other products have been made with the view of testing the markets, and the results of such proceedings have been published widely in the Colony. The vital question of Forest Conservancy has also been taken up with vigour, and good progress made towards establishing a reserve on the Crown Lands in the centre of the island. It is perhaps too early to note any marked results from this energetic and timely action, but of the future outcome there can be but one opinion.

Meteorological.

23. The rainfall at the Richmond Hill Observatory was 82·49 inches, that is to say, about normal : the highest amount recorded was at the Grand Etang, 181 inches, and the lowest at Carriacou, 56 inches. At Richmond Hill the mean pressure for the year was 29·906, and the mean temperature 79·7°, the highest reading being 89·8° on the 28th March, and the lowest 69·2° on the 4th December. Rain fell there on 236 days of the year.

On the 8th November there were heavy rains in St. John's Parish, which flooded the Gouyave River and damaged the recently constructed protecting bank of boulders. Again on the 6th November, there was a heavy downpour both in that parish and in St. Mark's and St. Patrick's. On this occasion the boulder banks, both at Gouyave and Victoria, were seriously damaged, being altogether demolished in places, and the stone bridge at the mouth of the Gouyave River was nearly entirely destroyed. 1897 was, therefore, the fourth consecutive year in which destructive floods have occurred in the Colony.

Agricultural Society.

24. On 6th October a public meeting, Sir Alfred Moloney presiding, was held in St. George's, and that much needed body, an Agricultural Society, was formed. One or two abortive attempts to float such a society had been made in previous years, and the credit of the present so far successful movement is due to the Honourable D. S. De Freitas, endorsed by the Governor's cordial support and sympathy. There is a large field for good work open to the society in the Colony.

ROADS AND WORKS.

25. The only works of importance commenced in the year were two iron bridges over the rivers at Madeys and Florida, to replace stone structures irretrievably damaged by the flood of 1895. Both bridges have been satisfactorily completed in 1898. The work on the face of the Mabouya Cliff rendered necessary by the great landslip there in November 1895 was completed at a cost of £318, and the main road at its foot thereby rendered fit for traffic. The erection of a sea wall protecting the main road to Gouyave in the same neighbourhood was continued, and extensive repairs to the Jetty at Victoria, which was seriously damaged by high seas in March 1896, were successfully carried out at an outlay of £417, which was advanced from General Revenue pending final adjustment with the Parochial Board.

The reconstruction of the Colony Hospital buildings, commenced in July 1895, was completed at a cost of £3,825, and on the 18th of June the new commodious structure was formally opened by Sir Alfred and Lady Moloney in the presence of a large gathering.

POPULATION.

26. By estimate, based on the natural increase since the Census of 1891, the population of the Colony at the end of 1897 was 61,299, or 8,090 more than at that Census. This estimate takes no account of emigration or immigration, there being no reliable records. Of the former, however, there is little of a permanent nature, and the latter has much decreased since the passing of the measure restricting pauper immigration which will be referred to in the next section.

The birth rate was 38·10, and the death rate, 22·78 per thousand. The average birth rate for the last 10 years is 44·63, so that a distinct decrease is shown in 1897, although, when compared with the 1896 rate (41 per thousand) the drop is not so marked. Since 1891 the birth rate has declined; in that year it reached 46 per thousand. The death rate was up to the average for the last ten years, but showed an increase on the figures of 1896 (19·82 per thousand), which was the lowest on record.

CRIME AND PRISONS.

27. The following analysis of the statistics relating to crime in the last four years shows that the year under review compares favourably with its immediate predecessors :—

—	1897.	Average 1894–96.	Increase.	Decrease.
Magistrates' Courts :—				
Persons brought before the Magistrates	2,628	2,697	—	69
Convictions	1,239	1,300	—	61
Acquittals	453	460	—	7
Discharged	887	896	—	9
Committed for trial in Supreme Court ...	49	41	8	—
Total	2,628	2,697	8	77
Supreme Court :—				
Number of persons tried ...	53	41	12	—
Convictions	36	25	11	—
Acquittals	15	9	6	—
Not prosecuted	2	7	—	5
Total	53	41	17	5

CRIME AND PRISONS—*continued.*

—	1897.	Average 1894–96.	Increase.	Decrease.
Nature of offences for which convictions were obtained :—				
Offences against the person	331	335	—	4
Prædial Larceny	40	47	—	7
Other offences against property	254	272	—	18
Other offences	650	670	—	20
Total	1,275	1,324	—	49

The Attorney-General remarks in his annual report :—" The " statistics do not disclose any marked variation respecting the " commission of any special crime ; they also show that increase " in crime is not keeping pace with the increase in population."

28. A noteworthy feature of the prison returns for 1897 is the marked decrease in the daily average of prisoners while the number of persons committed to prison has not fallen off. The average number of committals in the four years 1893–96 is 300, and the daily average in prison for those years, 76 : in 1897, 301 persons were committed, but the daily average in prison was only 63, to which it has fallen from an average of 84 (the highest on record) in 1894. This result is attributable to the change made in length of sentences by the Supreme Court since 1895. Before that year long sentences were frequently passed by the Chief Justice ; they have now become the exception.

29. Another feature of the returns is the diminishing number of persons convicted who are not natives of the Colony : in 1895, 35 per cent. of the convictions were persons not born in Grenada ; in 1897, the percentage had fallen to 18. This is most probably due to the working of the law regulating the landing of infirm paupers and destitute immigrants which commenced to operate in 1896, and is having a salutary effect in other directions.

30. It is satisfactory to record that, from enquiry which has been made, it appears that at least 14 discharged prisoners are now earning an honest livelihood in the Colony at trades taught to them while in prison. There are probably many others, but they cannot be traced at present.

EDUCATION.

31. The chief statistics relating to education in the Colony in 1897 are presented below in tabular form, and a comparison is made with the similar figures for 1896.

Primary Schools.

Description of Schools.	No. of Schools.	Number of Scholars on the Roll.				Income.			Expenditure.
		Boys.	Girls.	Totals.	Average Attendance.	School Fees.	Government Contributions	Voluntary Contributions.	
						£	£	£	£
Government Schools	9	925	838	1,763	925	108	1,338	Nil.	1,446
Grant in Aid Schools :—									
Anglican	7	771	562	1,333	727	99	892	No returns	991
Roman Catholic	14	1,791	1,822	3,613	1,743	96	1,793	Do.	1,889
Wesleyan	4	382	292	674	437	45	590	Do.	635
Church of Scotland	2	119	83	202	111	6	170	Do.	176
Miscellaneous receipts and disbursements ...	—	—	—	—	—	—	78	Do.	78
Totals for 1897	36	3,988	3,597	7,585	3,943	354	4,861	—	5,215
Do. 1896	37	3,817	3,311	7,128	3,527	341	5,793	—	6,134
Increase in 1897	—	171	286	457	416	13	—	—	—
Decrease in 1897	1	—	—	—	—	—	932	—	919

SECONDARY SCHOOLS.

DESCRIPTION OF SCHOOLS.	NUMBER OF SCHOLARS ON THE ROLL.				INCOME.			EXPENDITURE.
	Boys.	Girls.	Totals.	Average Attendance.	School Fees.	Government Contributions.	Voluntary Contributions.	
					£	£	£	£
Grant in Aid Schools :—								
St. George's Grammar School	38	—	38	34	210	415	25	591
Girls' High School...	—	33	33	30	166	58	—	236
St. Joseph's Convent School	5	54	59	57	90	100	20	86
Totals for 1897	43	87	130	121	466	573	45	913
Do. 1896	48	106	154	134	502	591	38	1,068
Increase in 1897	—	—	—	—	—	—	7	—
Decrease in 1897	5	19	24	13	36	18	—	155

32. It will be observed that while an increase took place in the number of scholars on the roll and in average attendance at the primary schools, there was a marked decrease in the expenditure and in the amount of Government grant. In 1896 no less than £5,793 was contributed by the general revenue of the Colony towards primary education, but in November of that year the new Education Code came into operation, and 1897 exhibits the first year's working of that code, which has effected an undoubted improvement not only in this direction but also by raising the standard of education required of the primary schools, and in other respects.

Nearly all of the primary schools in the Colony were visited and inspected by the Governor during the latter half of the year.

HOSPITALS AND ASYLUMS.

33. The principal statistics relating to hospitals and asylums in 1896 and 1897 are given below :—

INSTITUTION.	No. of Admissions.	Daily Average.	Patients discharged.			No. of Deaths.
			Cured.	Relieved.	Not Improved.	
Colony Hospital	654	80	414	161	—	55
Yaws Hospital	57	29	56	—	—	—
St. Andrew's Hospital ...	162	12	144	26	—	5
Carriacou Hospital	105	13	58	37	6	4
Total Hospitals ...	978	134	672	224	6	64
Lunatic Asylum	27	104	16	3	—	16
Poor Asylum	25	44	—	6	—	22
Totals	1,030	282	688	233	6	102
Total for 1896 ...	950	273	587	208	6	107

34. The number of admissions and daily average at the Colony Hospital increased in 1897 in consequence of the reconstructed buildings being occupied for the latter half of the year. Of these the House Surgeon reports :—"The internal condition of the building can now be characterised as excellent throughout, and though the bed area has only been increased to 100, the

cubic space has been raised to 1,003 feet per patient, an extremely high point indeed." The patients under treatment for Yaws remained in their temporary hospital throughout the year, so that no increase was possible in the number treated : the former Yaws Hospital has been reoccupied in 1898.

35. At the St. Andrew's District Hospital there was a marked increase in the number of patients during the discharge of the Medical Officer's duties by Dr. N. S. Durrant, and 7,484 prescriptions were compounded at the dispensary, as against 5,686 in the preceding year. The accommodation at the Carriacou Hospital was increased by four beds, and the ventilation improved by a rearrangement of the interior partitions decided upon in 1896. 4,714 prescriptions were made up at the dispensary there, as compared with 3,081 in 1896.

36. The death rate at the Lunatic Asylum was the highest recorded since 1881 : of this the Medical Superintendent remarks :—"One half of the number succumbed to diseases of a serious organic nature, and some of the deaths were sudden." From a return prepared by this officer it appears that since 1880, when the Grenada Asylum became the Central Asylum for the Windward Islands, the daily average has increased from 49 to 104, while the percentage of recoveries on the admissions has risen from 34·77 to 59·25. Of the number admitted (27) during the year under review, 10 were from St. Lucia, and 6 from St. Vincent ; and of the 100 patients under treatment at the end of the year, 35 belonged to the former and 15 to the latter Colony. There are still in the Asylum two patients from the Island of Tobago.

SAVINGS BANK.

37. The improved financial conditions which manifested themselves in the Colony in the latter half of the year are evidenced in the transactions of the Savings Bank, as will be seen from the following statement of its work for the last five years :—

Year.	Number of Depositors.	Amount of Deposits.	Amount of Withdrawals.	Balance at credit of Depositors at 31st December.
		£	£	£
1893	716	7,305	6,394	7,994
1894	959	7,307	7,893	7,602
1895	885	5,563	6,666	6,408
1896	895	4,854	5,035	6,391
1897	968	6,301	5,500	7,370

38. The steady growth of the Savings Bank is a satisfactory indication of the progress of the Colony. Ten years ago, in 1888, the number of depositors was 277, and the deposits were of comparatively large amounts, the balance at credit of each depositor at the end of that year averaging £20·33 : in 1897 we find a total of 968 depositors with an average balance of £7·61 each, showing that the peasants are largely availing themselves of the convenience of the Bank. This growth is attributable in a large measure to the policy initiated in 1888 of establishing branches of the Bank in the out-districts of the Colony, as is evidenced by the subjoined return of depositors in the branches and the balances to their credit for each year since 1889 when they were first opened.

Year.	No. of Depositors.	Balances to Credit.
		£
1889	81	292
1890	136	814
1891	175	1,086
1892	196	1,483
1893	280	2,030
1894	279	2,379
1895	243	1,888
1896	268	2,038
1897	317	2,434

In 1897 a new branch was established in the parish of St. David's, and £111 were deposited therein during the year by 13 depositors.

LEGISLATION.

39. As the revision of the laws of the Colony undertaken in 1895 by Sir Joseph Hutchinson, Chief Justice, reached its final stage in 1897, there was much consolidating legislation passed in the year, no less than 35 Ordinances being enacted, among the most important of which were an Evidence Code, a Criminal Code, and a Code of Criminal Procedure. The new edition of the laws was brought into operation on the 20th of January, 1898.

GRENADA, 1897.

LOCAL AUTHORITIES.

40. The general financial position of the several town authorities at the close of the year was as follows :—

Town.	Revenue.	Expenditure.	Surplus Assets.	Deficit.	Loan Debt.	Sinking Fund paid up.
	£	£	£	£	£	£
St. George's	3,049	3,021	603	—	6,981	288
Grenville ...	919	829	—	2,755	13,270	19
Sauteurs ...	463	412	—	25	1,100	330
Victoria ...	270	260	10	—	1,424*	69
Gouyave ...	557	604	—	341	3,304†	131
Hillsborough	132	125	46	—	600	23
Totals ...	5,390	5,251	659	3,121	26,679	860

41. While the position of some of the smaller towns is unsatisfactory, it is gratifying to note the great improvement which has been effected in St. George's by the semi-elective Board established there in 1895 in place of the former wholly elected body, which had proved a complete failure. The heavy current liabilities of the old Board have been wiped off, the finances placed on a satisfactory footing, and much good work on town improvements done. It is an interesting feature of the success of this Board, which deserves to be noticed, that while it retains full control over its finances, its officers have no direct connection with the collection and disbursement of its revenue ; all details connected with cash and accounts being conducted on its behalf by Government Departments and under the scrutiny of the Colonial Auditor. Under the old system, to quote one instance of the great improvement which has resulted, the collection of arrears of rates was rarely enforced, the dishonest ratepayer being thus maintained at the expense of his neighbour who elected to pay his rates : under the new, no less than £334 of unpaid rates were collected in 1897 out of a total of £341 overdue.

* Besides an advance of £417 for Jetty repairs.

† Not including £270 due to Government for purchase of Old Court House.

OFFICIAL CHANGES.

42. Governor Sir Charles Bruce left the Colony on the 22nd January to assume the Government of Mauritius, and his successor, Sir Alfred Moloney, assumed the Government on the 2nd of June. In the interval, with two short breaks in which the Windward Islands Government was administered by the Colonial Secretary of Grenada, Mr. H. L. Thompson, Administrator of St. Vincent, administered the General Government, his place at St. Vincent being taken by Mr. Edward Drayton, Colonial Secretary of Grenada.

43. During Mr. Drayton's absence for seven months on this duty, Mr. Leslie Probyn, Attorney-General, acted as Colonial Secretary in addition to the duties of his substantive office.

44. Sir Joseph Hutchinson, Chief Justice, was absent in England on duty connected with the consolidation of the laws for ten months, his place being filled by Mr. W. S. Comissiong, Q.C., who was again appointed to act upon Sir Joseph's final departure from the Colony on 10th December to assume the duties of Chief Justice of Cyprus, to which he was transferred.

45. Mr. C. H. Collymore, Registrar of the Supreme Court, a hard-working and reliable public officer, died on 17th June, but the vacancy was not filled up during the year. Mr. H. A. Martin, Treasury Accountant, and Mr. H. B. Walcott, Audit Clerk, were promoted to offices in Ceylon and British Honduras, respectively.

GENERAL REMARKS.

46. The Colony was visited in February by the West India Royal Commissioners, and in their report, which was presented to Her Majesty in August, Grenada was classed with Jamaica and Trinidad as the islands which were found by them to be in the best position among the British West India Colonies, and they further reported that "with careful administration we see no ground for special apprehension regarding the future" of the Colony.

47. Her Majesty's Diamond Jubilee was celebrated with enthusiastic loyalty throughout the Colony in June, two special holidays being granted, and an address from the Legislative Council, on behalf of the colonists, was presented to the Queen.

48. As will be gathered from the record of the year which has been set forth in the foregoing pages, the affairs of the Colony in 1897 began to show an improvement on the conditions which

GRENADA, 1897.

have obtained since 1895. There is evidence that the period of stress through which the agriculturists have passed has had a beneficial effect in the direction of enforcing economies and improving cultivation, while a distinct effort has been made by the smaller proprietors to free themselves from the burden of their mortgage debts by more punctual payments. The practical cessation of expenditure by the Government from loan funds has, of course, been keenly felt, but it cannot fail to lead to more attention being given to cultivation of the soil by the labouring class, whose efforts in this direction will no longer be distracted by an abnormal expenditure on road work.

EDWARD DRAYTON,

Colonial Secretary.

Grenada,

ADMINISTRATOR THOMPSON to MR. CHAMBERLAIN.

St. Vincent,
20th June, 1899.

[Forwarded.]

HARRY THOMPSON,
Administrator,
Windward Islands.

Government House,
St. Lucia,
7th June, 1899.

SIR,

I HAVE the honour to transmit herewith to Your Excellency my Report on the Blue Book for the year 1898.

I have, &c.,

C. A. KING-HARMAN,
Administrator.

His Excellency,
Sir ALFRED MOLONEY, K.C.M.G.,
Grenada.

3312—800—7/99 Wt 21935 D & S—5 (B)

St. Lucia, 1898.

REPORT ON THE BLUE BOOK FOR 1898.

Financial.

Revenue and Expenditu

The net revenue for the year was £67,627 16*s.* 2*d.*, being £10,368 7*s.* 11*d.* more than the estimated revenue £57,259 0*s.* 3*d.* The net revenue for the five years ended 31st December 1898 stood as follows :—

	£
1894	55,937
1895	48,564
1896	55,331
1897	60,639
1898	67,628

The increase in the revenue as compared with 1897 amounted to £6,988 17*s.* 8*d.*, and occurred chiefly under heads of Customs, Port and Harbour Dues, Post Office (sale of postage stamps), and unestimated sources under the head of Miscellaneous, which included the sum of £3,114 15*s.* 8*d.*, the amount of the Colony's deficit at the 31st December 1897, received from the Imperial Government, which, by direction of the Secretary of State, was credited to general revenue.

The following comparative statement of revenue for the year ended 31st December 1898 will furnish more detailed figures of the increased receipts during the year under report :—

Head of Revenue.	Estimate 1898.	Actual revenue to 31st Dec. 1898.	Revenue for same period in 1897.	Increase.	Decrease.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Customs	29,000 0 0	32,260 14 9	29,844 3 10	2,416 10 11	—
Port and Harbour	4,500 0 0	5,638 11 8	4,988 6 9	650 4 11	—
Licences and Excise	14,250 0 0	14,818 14 11	14,824 19 6	—	6 4 7
Fees of Court, &c.	3,904 0 0	3,929 14 3	4,336 1 4	—	406 7 1
Post Office...	1,444 0 0	2,842 13 0	1,540 2 1	1,302 10 11	—
Telephone...	450 0 0	483 15 10	431 4 8	52 11 2	—
Miscellaneous	120 0 0	3,865 11 0	640 11 4	3,224 19 8	—
Interest	1,735 10 3	1,932 10 9	2,177 19 0	—	245 8 3
Repayment of loans	1,855 10 0	1,855 10 0	1,855 10 0	—	—
Total	57,259 0 3	67,627 16 2	60,638 18 6	7,646 17 7	657 19 11

189.

The increased revenue as shewn in the above statement is to be attributed to increased activity in the coaling trade and to the general prosperity of the Colony prior to the disastrous hurricane in September. A change in the rate of ocean postage, prematurely made from 2½*d.* to 2*d.* per half ounce, which obtained from the 9th May to the 11th June, resulted in the abnormal sale of the 2*d.* and 2½*d.* denomination of stamps, apparently for collecting purposes, to the amount of £1,160.

The estimated expenditure during the year was £57,623 2*s.* 8*d.* and the actual disbursements amounted to £60,975 3*s.* 1*d.*, or £3,352 0*s.* 5*d.* in excess of the estimates, but £6,652 13*s.* 1*d.* less than the actual revenue.

The following statement shews in detail the expenditure for the two years 1897 and 1898 :—

Heads of Expenditure.	Estimate 1898 and Supplementary Votes.	Actual Expenditure to 31st Dec. 1898.	Expenditure same period preceding year.	Increase.	Decrease.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1. Charges on account of Public Debt ...	13,168 9 4	13,177 3 9	13,418 10 0	—	241 6 3
2. Pensions	333 18 4	373 11 3	337 9 2	36 2 1	—
3. Governor and Legislature	2,567 12 0	2,496 0 11	2,272 2 7	223 18 4	—

21. Public Works, Recurrent	6,535 0 0	5,883 5 7	5,199 5 9	683 19 10	—
22. Public Works, Extraordinary	6,697 5 4	4,803 3 7	1,093 10 0	3,709 13 7	—
Total	65,165 4 10	60,975 3 1	56,742 14 3	5,273 4 2	1,040 15 4

191

The expenditure to 31st December on account of the damage done by the hurricane in September amounted to £4,566 0*s.* 7*d.*, and may be classified as follows:—

	£	*s.*	*d.*
Roads	2,948	16	6
Jetties	159	10	1
River Works	780	5	0
Public Works	677	9	0
Total ...	£4,566	0	7

Assets and Liabilities and Public Debt.

The balance-sheet of the Colony at the close of the year shows a surplus of £3,537 17*s.* 5*d.*, as shown by the following figures:—

	£	*s.*	*d.*
Deficit at 31st December 1897 ...	3,114	15	8
Net excess of Revenue over Expenditure for 1898	6,652	13	1
Surplus at 31st Dec. 1898	£3,537	17	5

The Public Debt of St. Lucia at the 31st December 1898 amounted to £189,579 11*s.*, as against a sum of £191,979 11*s.* at the close of 1897. The debt is divisible as follows:—

Inscribed Stock—

	£	*s.*	*d.*
Colony's share for Public Works...	50,579	11	0
" " Water Works...	12,000	0	0
Castries Town Board share ...	17,000	0	0
Colony's share for Immigration purposes	5,900	0	0
Total Inscribed Stock ...	85,479	11	0
Debentures	104,100	0	0
Total Debt at 31st Dec. 1898 ...	£189,579	11	0

The amount due to debenture holders at the end of 1897 was £106,500. During the year under report £2,400 debentures were redeemed, thus leaving the outstanding amount £104,100 as shown above.

The sinking funds of the Colony for the repayment of the above mentioned loans stood as follows at the 31st December 1898:—

	£	s.	d.
For Stock	2,462	4	10
For Debentures	5,599	12	1
Total ...	£8,061	16	11

As compared with the 31st December 1897—

	£	s.	d.
For Stock	1,709	8	3
For Debentures	3,830	6	6
Total ...	£5,539	14	9

The charges on account of the Colony's debt (including interest and sinking fund) amounted to the sum of £13,177 3*s.* 9*d.*, against which a sum of £3,788 0*s.* 9*d.* has been recovered from the Immigration Fund and the Castries Town Fund, being their share of interest and sinking fund on loans raised on their behalf on the general security of the Colony.

Castries Town Board.

The net revenue and expenditure of the Castries Town Fund for the five years ended the 31st December 1898 stood as follows:—

Year.	Revenue.			Expenditure.		
	£	s.	d.	£	s.	d.
1894	3,495	1	5	3,732	12	3
1895	3,726	18	8	3,507	6	8
1896	3,978	6	0	3,626	1	11
1897	4,397	15	6	3,928	10	0
1898	5,276	12	10	4,718	2	8

The gradual yearly increase in the revenue appears to have been chiefly attributable to the prosperity of the market, and latterly to the improved water supply, which enables the town to meet the increased demand from the shipping. A sum of £782 10*s.* 4*d.* was placed by the Colonial Government to the credit of the Castries Town Fund in February 1898 as its share of the premium realised under the issues of the loans for the market, &c., and water works.

Trade.

Imports and Exports.

Hereunder is a return of the chief articles imported during 1898 as compared with those imported in 1897:—

Soap, common	313,919 lbs.	279,808 lbs.	2,472 14 4	2,319 15 0

The large increases shown in the importation of cattle, ale, bacon and hams, and ordnance stores are due to the presence of the military.

The increase in the importation of coal may be taken as an indication of the steady development of the port of Castries as a coaling station.

All the other increases are due to general improvement in trade.

The decrease in the importation of coffee may be accounted for by the fact that the local cultivation of coffee is being extended.

The decrease in the importation of manure is a sign of the parlous condition of the planting community through the unremunerative results of their labours.

All the other decreases may be accounted for by the ordinary fluctuations of the markets.

The following is a return of the total value of the imports for the last five years :—

Year.	United Kingdom.	British Colonies.	United States.	France.	Other Foreign Places.	Total.
	£	£	£	£	£	£
1894 ...	93,780	31,933	41,789	11,491	8,550	187,543
1895 ...	74,512	28,690	39,358	6,809	5,577	154,946
1896 ...	101,983	25,177	45,543	6,930	10,900	190,533
1897 ...	119,355	52,639	57,478	8,899	6,882	245,253
1898 ...	140,329	34,843	82,938	6,514	7,371	271,995

It will be observed that the imports have increased in value within the period shewn in the return by 45 per cent.

This increase amongst the several countries of origin would be in the following proportions, namely :—

United Kingdom increased by 50 per cent.
British Colonies „ „ 9 „ „
United States „ „ 98 „ „

On the other hand there was a marked decline in the values of importations from France and other foreign places.

France decreased by 43 per cent.

Other foreign places decreased by 14 per cent.

The following is a list of the articles which are preferably imported from foreign countries, and the reasons why these articles of foreign manufacture are superseding the goods of British make :—

Articles.	Foreign Countries whence Imported.	Reasons for not importing such goods from England.
Boots and shoes (low priced).	America.	Cheaper freight ; better style ; cheaper ; no charge for packing.
Grey ducks and cotton canvas.	do.	Good quality and low price ; no charge for packing.
Hardware hinges ...	do.	Good quality and finish.
Watches	do.	Low price.
Soap	do.	Low price and low freight.
Chairs	do.	Cheapness.
Locks, knobs	do.	Very much cheaper and freight less.
Bolts	do.	Do. do. do.
Furniture	do.	Very much cheaper and freight much less.
Axes	do.	Finish of American better and charge less.
Plated ware	do.	Cheaper and better value and charge less.
School slates	do.	Better finish, cheaper and better value and charge less.
Dyed yarns	do.	Cannot get same quality in England.

ST. LUCIA, 1898.

Articles.	Foreign Countries whence Imported.	Reasons for not importing such goods from England.
Tools in general ...	America.	Better steeled.
Matches	Germany.	Low price.

Usine	7,617,332 "	7,722,800 "	55,497 14 0	49,370 15 1½

Articles.	Quantity.		Value.	
	1897.	1898.	1897.	1898.
			£ s. d.	£ s. d.
CLASS I.—*continued.*				
Vegetables :—				
Unenumerated	15 packages	898 packages	8 1 0	414 15 10
Hides	714 cwts.	464½ cwts.	599 15 3	591 12 2¾
Turtleshell...	150 lbs.	—	106 1 0	—
Fuelwood	2,381½ cords	1,790 cords	1,131 4 3	850 5 0
Logwood	165¼ tons	58 tons	247 17 6	87 0 0
Pimento sticks	27,250	5,909	227 1 8	49 4 10

The output of cocoa is steadily increasing, and the figures were largely enhanced by the greater value of the article in the European markets.

The fruit season was prolific, and the mangoes found ready sale at Barbados.

203

An attempt, which proved partially successful, was made during the year to establish an export trade in rum between this Colony and French Ports. The high protective duties, however, which are levied in France are barriers to complete success in this direction.

The market for molasses in the Island of Martinique, where the rum industry is prosecuted on a large scale, was re-opened in the year by the reduction of a hitherto exorbitant duty, and the export of this article to that place consequently increased.

The manufacture of Muscovado sugar continued to decrease steadily. There was a sensible increase, however, in the quantity of Usine sugar exported.

There was no turtleshell exported in 1898. For some unexplained reason the natives do not prosecute this industry with any degree of steadiness. Fishermen from the neighbouring islands actually come to this island and enjoy the gains to be made from this source.

The decrease in the quantity of woods exported is attributed to the low prices reached by these articles throughout the year.

With regard to the decrease in the exports of cattle and horses it should be explained that in 1897 many of these animals were shipped to French Guiana by speculators, but as a general rule this Colony is not in a position to export any number of them.

A return of the total value of exports for the last five years is given hereunder :—

Year.	United Kingdom.	British Colonies.	United States.	France.	Other Foreign Places.	Bunker Coals.	Total.
	£	£	£	£	£	£	£
1894 ...	43,062	11,297	35,991	48,629	6,915	45,729	191,623
1895 ...	24,269	2,951	37,760	32,718	4,457	35,714	137,869
1896 ...	24,144	4,842	46,481	14,719	3,534	42,575	136,295
1897 ...	38,042	3,176	98,924	11,461	2,664	76,177	230,444
1898 ...	11,154	6,625	49,054	22,691	3,891	73,093	166,508

The decrease in the value during that period has been at the rate of 13 per cent. It should be, however, noted that in 1894 the values of exports were largely affected by the exportation of logwood which was then bringing record prices.

On an examination of the return it appears that there was an increase in the value of the exports to the United States at the rate of 36 per cent., but that there were decreases in all the others as follows :—

	per cent.
United Kingdom	74
British Colonies	41
France	53
Other Foreign Countries...	44

The deliveries of bunker coal have increased in the five years by 60 per cent. The higher level reached in 1897 was not however overtopped last year, in fact there was a slight decline in the figures, due it is considered to the disturbance of trade by the Spanish-American war which existed for a few months of the year.

The wide difference in the figures shewn between 1897 and 1898 is due to the fact that in the previous year the return included the value of a cargo of wool which was landed at this port from a shipwrecked vessel and re-exported.

Botanic Station.

The Curator reports that good work has been done during the year by the dissemination throughout the Colony of useful and economic plants, and by the giving of information on the best methods of planting and cultivation.

The number of plants distributed during the year was 18,200 as compared with 22,179 in the previous year, the falling off being attributed to the smaller demand for coffee plants, owing probably to the low prices ruling in the market, and also to the fact that the planters and small growers were too much occupied in the latter months of the year in endeavouring to repair the damage done by the hurricane of the 11th September to be able to give their attention to anything else. Among the plants sold or exchanged or given free to the purchasers of Crown Lands were 5,119 cocoa plants, 7,937 coffee plants, 1,862 rubber

205

(*castilloa elastica*), 695 nutmeg, and 304 kola. During the last ten years the distribution of plants from the station has been as follows :— ST. LUCIA 1898

From 1889 to 1894	60,000
In 1895	4,380
In 1896	19,504
In 1897	22,179
In 1898	18,200
Total in ten years ...	124,263

The amount received from the sale of plants, seeds, fruit, and flowers during the year and paid into the Colonial Treasury was £50 10*s.* 0*d.*

Besides giving his attention to the Botanic Station, the Curator has done useful work during the year in giving lectures and practical demonstrations in planting, pruning, grafting, draining, and other field operations in the country districts. These lectures have been, as a rule, well attended, and the people are learning to take an interest in the visits of the Curator and to profit by the opportunities offered to them of improving on their primitive methods of cultivation.

During the months of October and November the Curator was also employed in visiting different parts of the Island for the purpose of advising proprietors as to the best means of restoring cocoa and other cultivation damaged by the hurricane of the 11th September.

CROWN LANDS.

The Crown Lands and Survey Office was established in 1889 as a branch of the Public Works Department. It was instituted with the object of facilitating the settlement of the Crown and vacant lands in the Colony, and of securing the formation of an independent class of peasant proprietors. These objects are being gradually attained, and the value of the office is becoming more and more recognized and appreciated by those in whose interest it was primarily established. The work of the office and its good influence among the peasants and small holders have been much interfered with by frequent changes of personnel, and it is only

within the last two years that any marked progress in its operations has been observed. During the year under report, much was done in the publication and escheat of vacant lands, the allotment of Crown lands, the survey of Crown boundaries and the keeping open of already established lines, the detection of squatters, and the general supervision of Crown lands for the prevention of illicit wood cutting and forest spoliation.

Eighty-seven applications for land were received representing 965 acres, of which 30 applications were dealt with representing 213 acres, the remainder being carried forward to be dealt with in 1899. The number of applications were 43 in excess of those received in 1897. 39 lots containing 381 acres, valued at £368 15*s.*, were alienated. One village lot and 10 estates containing 1,598 acres were escheated to the Crown, and 14 estates representing 2,621 acres were published for escheat, all of which are expected to fall in uncontested during 1899.

Over 7,000 plants for economic culture were distributed free during the year to purchasers of Crown land, many of whom are beginning to exhibit more advanced methods of cultivation.

The settlement of the Crown and vacant lands received a further impetus by the energetic action of the Road Boards of the several districts in obtaining the proclamation of many public byeways, much needed for the improvement of communication, and the consequent opening up of the uncultivated portions of the Island.

The amounts received for survey fees, deposits on account of purchase, and instalment of purchase money, which in 1898 amounted to £633 3*s.* 0*d.* as against £504 7*s.* 3*d.* in 1897, are paid to the credit of the Land Sales Fund which at the close of 1898 amounted to £1,454.

Crown land is sold at an upset price of £1 per acre, payable under ordinary circumstances in four annual instalments.

SHIPPING.

The number of steam vessels entered and cleared at Port Castries during 1898 was 1,113, or less by 126 than in 1897. The number of sailing vessels entered and cleared was 661, or 9 more than in 1897. The total difference therefore in the two years was 117 against 1898.

It must be explained, however, that the number of vessels entered and cleared in 1897 was exceptionally large in comparison with previous years, and, although the figures in 1898 are below

207

those of 1897, they are far in excess of those of the preceding years. The shipping trade of the Port was also injuriously affected by the Spanish-American war and by the coal strike in Wales.

Of the total number of trading vessels entered and cleared during the year 1898, 80 per cent. were British and 20 per cent. were foreign. Of the foreign vessels, 49 per cent. were French, 16 per cent. were Dutch, 11 per cent. were Belgian, and the remaining 24 per cent. were German, American, and Norwegian.

In the last five years the increase in the number of vessels entered and cleared amounts to 40 per cent. The number of ships of war which called for coal and other purposes during the year under review was 59, an increase of 35 as compared with the previous year. Of these, 34 were Her Majesty's ships, 9 were American, 7 Italian, 2 French, 2 German, 3 Dutch, 1 Russian, and 1 Austrian. The increase was probably due to the hostilities between America and Spain, and also to a state of general political unrest.

The total tonnage entered and cleared during 1898 amounted to 1,557,677 tons as compared with 1,780,560 tons in 1897.

The following comparative table gives the total shipping inwards and outwards for the last five years :—

Return of Shipping for the Five Years from 1894 to 1898.

Years.	Steam Vessels.									Sailing Vessels.									Grand Total.		
	With Cargoes.			In Ballast.			Total Steam Vessels.			With Cargoes.			In Ballast.			Total Sailing Vessels.

209

LEGISLATION.

During the year 13 Ordinances were passed and assented to. Of these, the principal were—

1. "The Quarantine Ordinance, 1895, Amendment Ordinance, 1898," the objects of which are to extend the period of incubation of yellow fever from ten days to 14, and to provide for the burial of bodies of persons dying from an infectious disease on board of an infected vessel.

2. "The Public Works and Roads Ordinance, 1889, Amendment Ordinance, 1898," under which the Road Boards are entrusted with the care of the bye-ways in the Island.

3. "The Crown Grants Registration Ordinance, 1898," which provides for the proper registration of all grants of Crown lands together with the diagrams attached thereto.

4. "The Customs Tariff (Amendment) Ordinance, 1896, Continuance Ordinance, 1898," whereby an additional charge of 15 per cent. of the amount formerly levied on goods paying *ad valorem* duties was continued for another year.

EDUCATION.

Primary.

During the year under report there were 39 primary schools in operation, an increase of five as compared with the preceding year. These schools were divided into the following classes:—Mixed 20, combined 9, juvenile 5, and infant 5. The number of children on the roll was 5,280, as against 4,447 in 1897, and the average number in attendance was 2,787, an increase of 210 over the attendance in the preceding year.

The number of children examined was 2,512, and the number of passes in two or three subjects was 2,124. This shews an increase of 186 in the number examined and of 85 in the number of passes as compared with 1897.

The total cost of the schools to the Government was £2,904 19*s.* 1*d.*, equal to an expenditure of £1 0*s.* 10*d.* per head in average attendance. In 1897 the amount paid per head was also £1 0*s.* 10*d.* and the total cost was £2,620 13*s.* 9*d.*, or £284 15*s.* 4*d.* less than in 1898.

Special attention was given during the year to the teaching and study of the English language, in the knowledge of which good progress has been made.

Secondary.

St. Mary's College for boys, founded in 1890 by the Vicar General, the Reverend Father Tapon, and subsidized by a grant of £200 per annum from the general revenue of the Colony,

furnishes the only higher education for boys in the Colony. In addition to this annual grant the Government has established ten scholarships, each of the annual value of £6, in order to assist boys from the primary schools to enter the college and to profit by the higher education for a period of five years.

The number of boys on the roll of the college in 1898 was 53 with 43 in average attendance. In 1897 the roll shewed 52 with 46 in average attendance.

The more advanced boys at the college have been recently sent up for the Cambridge Local Examination, with the following results:—

In 1895 two were presented and both passed; one with honours.

In 1896 seven were presented and all passed; three with honours.

In 1897 eleven were presented and all passed; four with honours.

In 1898 eleven were presented, but at the time of writing this report the results were not known.

The examination of the lower classes of the college which had fallen into abeyance was resumed in 1898, with satisfactory results.

At the Convent of St. Joseph, under the energetic management of the Reverend Mother Superior, a higher education is provided for girls. The number on the roll in 1898 was 66 with 61 in average attendance. In 1897 the roll shewed 56 scholars with average attendance 47. This school does not yet receive any financial support from the Government.

There are as yet no schools in the Colony where industrial, technical, and agricultural teaching is afforded.

Government Institutions.

Hospitals, &c.

The Victoria Hospital at Castries is an excellent building containing nine wards, six male and three female, and having good accommodation for 130 patients. Branch hospitals also exist at Soufriere, where in two good wards 26 beds are provided; at Vieuxfort containing 21 beds; and at Dennery with accommodation for 30 patients. There is also a hospital for the exclusive treatment of yaws, which is isolated on a small Island a quarter of a mile from the shore, and has ample accommodation for over 100 patients.

Besides these hospitals, there is a poor asylum in Castries for the reception of infirm and chronic cases, and there is a Government dispensary in each of the smaller villages in the Island.

There is no lunatic asylum and all cases of insanity are sent for detention and treatment to the Central Asylum at Grenada.

The Colonial Surgeon, in his annual report for 1898 on the Medical Institutions of the Colony, shews that the general health of the people and the sanitary condition of the Island were nearly all that could be desired, and states that during the year no case of contagious disease occurred.

At the yaws hospital it has been clearly established that the disease, so long considered to be incurable, yields satisfactorily to treatment, and out of 79 admissions during the year 72 were discharged cured.

SAVINGS BANKS.

In addition to the principal bank at Castries there were opened during the year 1898 two branch savings banks at Soufriere and Vieuxfort.

	£	s.	d.
The balance to the credit of depositors in the principal bank on 1st January 1898 was	10,382	6	9
The amount deposited during the year and accrued interest was	10,505	7	3
Total ...	£20,887	14	0

	£	s.	d,
The amount withdrawn during the year was	£9,118	7	8
The amount remaining to credit of depositors on 31st December 1898 was	£11,769	6	4

so that the deposits were increased during the year by £1,386 19*s.* 7*d.*

The following table shews the transactions of the bank during the last five years :—

Year.	No. of Transactions.	Amount of Deposits.	Amount of Withdrawals.	No. of Depositors at 31st Dec.	Total Amount at Credit of Depositors at 31st Dec.
		£	£		£
1894	3,376	9,458	9,842	1,187	9,428
1895	3,201	7,000	7,162	1,275	9,267
1896	3,351	7,165	6,953	1,277	9,810
1897	3,635	8,498	8,162	1,294	10,382
1898	5,113	10,244	9,118	1,477	11,769

ST. LUCIA, 1898.

From this table it will be seen that within the last five years the transactions have increased over 50 per cent. and nearly 25 per cent. of deposits have been added to the balance in the bank.

The following table gives a comparative classification of the deposits for the two years 1897, 1898 :—

Year.	Deposits of £10 and over.	Deposits of £40 and over.	Deposits of £70 and over.	Deposits of £100 and over.
	£ s. d.	£ s. d	£ s. d.	£ s. d.
1897 ...	2,204 4 2	1,877 16 3	1,341 15 3	4,958 6 1
1898 ...	2,666 11 5	3,057 1 8	1,346 18 3	4,698 15 0

Of the depositors during the year under report, 78 per cent. of the total number were employés and of the labouring class generally.

The following investments on account of the funds of the bank were held at 31st December 1898 :—

		£	s.	d.
Canadian Government ...	3½ per cent. ...	2,000	0	0
New South Wales Government	3½ „ „ ...	2,000	0	0
Western Australia Government	3 „ „ ...	1,500	0	0
Trinidad Government ...	3 „ „ ...	1,500	0	0
Barbados Government ...	4 „ „ ...	1,000	0	0
Colonial Bank, on deposit	3 „ „ ...	500	0	0
	Total	£8,500	0	0

The sum of £293 0*s.* 4*d.* was received for interest on the investments, and the interest (3 per cent.) which accrued to depositors' accounts during the year amounted to £281 6*s.* 11*d.*

At the district bank at Soufriere, which was opened on 1st March 1898, the transactions during the year were as follows :—

	£	s.	d.
Deposits	554	4	5
Withdrawals	368	14	0
To credit of depositors, 31st December ...	£185	10	5

At the district bank at Vieuxfort, opened also on the 1st March, the transactions to 31st December were :—

	£	s.	d.
Deposits	192	17	0
Withdrawals	66	2	0
To credit of depositors, 31st December ...	£126	15	0

JUDICIAL STATISTICS.

Police.

The police force in 1898 consisted of a chief of police, 3 sergeants, 4 corporals, and 51 privates. The Island for police purposes is divided into three districts, each district having three stations. To the first district, including the town of Castries and the villages of Gros Islet and Dennery, were apportioned 2 sergeants, 3 corporals, and 34 privates; in the second, including the town of Soufriere and the villages of Anse-la-Raye and Choiseul, there were 1 corporal and 10 privates, and in the third, comprising the villages of Vieuxfort, Laborie, and Micoud, there were 1 sergeant and 7 privates.

The force is supplemented by a body of about 100 rural constables selected from among the peasantry, and paid 2*s.* a day when employed.

The cost of the police force for 1898 was £3,303 9*s.*

Prisons.

Several improvements were made during the year; a supply of pure water being laid on, with baths for males and females, a new shed erected for the accommodation of stonebreakers, and general repair effected.

The number of prisoners received during the year was 694, namely, 484 males and 210 females. This shews an increase of 3 males and a decrease of 16 females as compared with the previous year.

The general health of the prisoners is reported as not having been quite so good as during 1897, influenza having been prevalent during the early part of the year.

The expenditure during the year amounted to £1,015 17*s.* 3*d.*, of which the cost of the establishment came to £614. The revenue derived from the sale of coffins, macadam, sifted earth, baskets, and concrete blocks, together with the scraping of ginger,

amounted to £158 8*s.* 5*d.*, and the value of the labour performed outside the prison, together with the washing done for public institutions in the female prison, is estimated at £103 17*s.* 8*d.*

There were no deaths, no flogging, nor any escapes.

Criminal Statistics.

For the trial of indictable offences there were in 1898 three sittings of the Royal Court (Criminal Jurisdiction). Twenty-three cases were tried; in 18 of which the accused were convicted and in 5 acquitted.

The number of convictions was greatly in excess of that in the previous year, when out of 17 cases tried 12 were convicted.

An increase in the number of summary convictions as compared with 1897 is also apparent from the returns submitted from the Magistrates' Courts. In 1897 the number was 1,013; in 1898 it was 1,056. The figures for 1898 include 74 cases of prædial larceny, representing an increase of 53 over the previous year.

It is perhaps premature to determine whether the decided increase in the records of crime for the year under report as compared with 1897 is due to the growth of crime among the hitherto fairly law-abiding population of the Colony, or to increased vigilance on the part of the police; but there can be no doubt that the large influx of people from the other Islands, attracted to St. Lucia by the military works, the central factories, and the coaling trade, does contribute to this increase.

Vital Statistics.

On the registers for 1898 were entered 1,858 births and 1,214 deaths, giving a natural increase of 644 to the population.

The total population on the 31st December 1898 was 47,976, of which 23,311 were males and 24,665 females; equal to 205·65 to the square mile. In 1897 the total population was 47,332 (22,995 males and 24,337 females), and at the last census taken in 1891 the figures were 42,220 (20,461 males and 21,759 females). The population to the square mile was 205 as compared with 203 in 1897. The natural increase of 644 was slightly under that of 1897 which was 661.

The still-births numbered 167, which deducted from the total births left a net birth-rate of 3·57 per cent. of the population. The rate for 1897 was exactly the same. It was 3·84 per cent. in 1896, 4·04 in 1895, and 4·11 in 1894. The causes which, as pointed out in the report for 1897, operate to keep down the birth-rate, namely, rural depression and the voluntary expatriation of numbers of the virile population, still exist.

Legitimacy represented 42·41 per cent. of the total births and illegitimacy 57·59. In 1897 the rates were respectively 39·75 and 60·25.

The deaths entered on the registers numbered 1,214. Eliminating the still-births (167) there results a death-rate of 2·21 per cent. of the population. The rate was 2·15 in 1897, 2·17 in 1896, 2·24 in 1895, and 2·09 in 1894.

There were no epidemic diseases during the year, and the endemic were not in any special degree fatal.

Only one death from snake-bite was recorded. In 1897 two such deaths occurred, and, going back 30 years, the records of 1869 shew 22 fatal cases in that year.

METEOROLOGY.

From the observations taken during the year at the Botanic Station in Castries 10 feet above sea level, it results that the mean daily height of the barometer was 29·982; the mean annual temperature was 80·1, and the total rainfall was 107·49. A maximum temperature of 90·1 in the shade was recorded in May, a minimum of 69·9 in March. The heaviest rainfall was in September, when 25·28 inches were measured; the driest month was May, when only 2·48 inches fell. Rain fell on 271 days during the year. The greatest quantity falling in any one day was 13·18 inches on the 11th of September, when the rain gauge at the station was found to be overflowing. The Curator estimates that at least 16 inches fell on that occasion in the 24 hours.

The hurricane of the 11th September was not very seriously felt in Castries, and the Botanic Station escaped with the loss of several trees, but in other parts of the Island the damage done by the wind and more especially by the heavy rains was most deplorable. The steep hill sides, surcharged with water, slid away in all directions carrying away plantations, houses, roads, and bridges, and leaving rock and rubbish behind. The injury done to public property amounted to nearly £10,000, and the losses of proprietors and other cultivators are estimated after minute and careful enquiry at £50,000. A promising cocoa crop was in great part completely swept away, and the hopes of the people in view of a brisk market and high prices were destroyed. So complete was the disappearance of many fine plantations that even where the soil has not been entirely washed away a delay of from 5 to 10 years in the re-establishment of the trees is inevitable. The loss of life was fortunately but small, but the injury to property was very great involving hundreds of peasant proprietors in total ruin.

Postal.

The revenue and expenditure in connection with the postal transactions of the years 1897, 1898 were as follows :—

Revenue.

1897.	1898.
£ s. d.	£ s. d.
1,879 8 5½	3,027 12 9½

Expenditure.

1897.	1898.
£ s. d.	£ s. d.
2,139 7 7	2,148 6 9

The revenue therefore for the year under report was £879 6*s.* 0½*d.* in excess of the expenditure for the same year, and exceeded the receipts of 1897 by £1,148 4*s.* 4*d.* The following tables represent the work of the Post Office during the above-mentioned years :—

Received from Abroad.

Year.	Letters and Post-cards.	Papers and Books.
1897	85,574	50,896
1898	85,201	50,757

Sent Abroad.

Year.	Letters and Post-cards.	Papers and Books.
1897	72,718	6,324
1898	82,531	7,837

Parcel Post.

Year.	Received.	Sent.
1897	1,445	459
1898	1,744	509

Money Orders.

Year.	Amount Received.	Amount Sent Abroad.
	£ s. d.	£ s. d.
1897	978 8 7	4,891 6 4
1898	1,235 15 5	5,809 13 8

The Customs dues collected on the contents of the parcels amounted to £233 12*s.* 11*d.*, an increase of £32 10*s.* 3*d.* on the amount taken in the previous year.

The Colony's share of commission on money orders amounted to £98 11*s.* 11*d.*, an increase of £15 19*s.* 8*d.* on the amount of the previous year.

Inland Services.

There was an increase in the business of the inland service in the year under report. The number of letters exchanged between the central and branch offices was 45,966, an increase of 3,587 as compared with the previous year. The number of papers and books was 11,932,—616 more than in 1897.

The number of vessels which brought mails to the Colony during the year was 254 as compared with 231 in 1897, and the vessels which took away mails numbered 296 as against 247 in the previous year.

Telegraph and Telephone Services.

St. Lucia is connected by the West India and Panama Company's cables with Santiago de Cuba in the north, from which place communication with the United States and the rest of the world is obtained, and with British Guiana in the south. In each case a duplicate system has been laid down.

A telephone system connecting Castries with the seven small towns or villages in the Island was completed in 1896. The seven country exchanges are worked by the police, and 120 miles of trunk line are open for traffic. The lines are run on wooden poles which, owing to the effects of the climate and wood-eating insects, are not found satisfactory, and are being replaced by iron rails. The revenue derived from the system in 1898 was £483 15*s.* 10*d.* as against £431 4*s.* 8*d.* in 1897. The expenditure in 1898 was £376 13*s.* 10*d.*, and in 1897 £330 13*s.* 2*d.*

The system is in the hands of the Government.

Military Forces and Expenditure.

The total military expenditure for the year was £54,385 7*s.* 4*d.* as compared with £31,815 8*s.* 2*d.* in 1897.

Public Works.

Necessary repairs to public buildings, wharves, and lighthouses were executed during the year, involving an expenditure of £743 14*s.*

The new cemetery at Choc was completed at a total cost of £1,431 8*s.* 10*d.*

Dredging operations in the harbour were confined to the removal of obstructions to traffic, no fresh ground being broken.

Sanitary works were commenced at the villages of Dennery and Gros Islet, and good progress made in the reclamation of the swamps to the windward of both places.

A sum of £3,212 0*s.* 6*d.* was expended on the maintenance of the roads throughout the Island. One new highway and eleven bye-ways were also taken in hand. The hurricane of the 11th September caused much damage to both roads and bridges, involving an extraordinary expenditure up to the 31st December of £3,236 16*s.* The opening of new tracks where the roads had disappeared, the excavation of the silted rivers, the removal of landslips and general repairs were promptly commenced and carried on in a satisfactory manner.

On the 1st July the maintenance of the waterworks became a charge on the general revenue of the Colony pending a decision as to the handing over of the concern to the municipal authorities. A meter house with 3 meters was erected; a supply of water was laid on to the Royal Gaol; and the reservoir, filter beds, town mains, pipe lines, and head works were maintained in an efficient condition.

Considerable damage was done to the works by the hurricane and floods in September, but the whole was repaired at a cost of £200.

House connections with the mains in Castries not having yet been made, the revenue for the works was derived solely from the water supplied to the shipping, from the sale of which £1,338 17*s.* 3*d.* was received.

IMMIGRATION.

On the 10th December 1898 the 158 indentured coolies remaining in the Colony under their first term of service, namely, five years, completed their term of indenture and were then free to dispose of their labour as they pleased, although still bound to remain in the Island for a further period of five years.

The total coolie population in the Colony is estimated at from 2,000 to 2,500, and of these, some 740 are still bound by their contracts to remain in the Island for periods varying from two to five years.

St. Lucia, 1898.

The Protector reports that the general health of the people under his care was satisfactory. On the 31st December 1897 the indentured coolies numbered 153, namely, 85 male and 39 female adults, 1 male and 1 female minors, and 27 infants. During the year 1898 there were 7 births, or a rate of 4·57 per cent., and 2 deaths, a rate of 1·25 per cent., leaving 158 alive on 10th December when their period of indenture came to an end.

The Immigration Fund was credited during the year with the following amounts :—

	£	s.	d.
Duty on exported sugar	1,518	19	8
" " " cocoa	370	8	6
" " " molasses	67	16	6
" " imported tobacco (unmanufactured)	3,283	15	0
Total	£5,240	19	8

Coal.

The coaling trade of St. Lucia is increasing slowly but surely, and quick despatch coupled with comparative immunity from dues is inducing steamers in want of bunker coals to give the Port of Castries the preference over other coaling stations in the West Indies.

In 1897, 63,902 tons of coal were imported and 78,600 exported.

In 1898, 76,046 tons were imported and 73,411 exported. On every ton or fraction of a ton of coal discharged a harbour due of 6*d.* (sixpence) is levied and paid by the ship discharging. A duty of 6*d.* (sixpence) per ton is in addition paid by the importer.

The revenue derived from this source in 1897 was £3,195 ; in 1898, £3,802.

Of the 73,411 tons shipped in 1898, 13,985 were put on board men-of-war and transports and 59,426 on trading vessels.

Agriculture.

Sugar.

The Usine sugar crop of the year 1898 was an improvement on that of 1897, and the output from the four central factories at Cul-de-Sac, Roseau, Vieuxfort, and Dennery being 4,513 tons as

against 3,962 tons in 1897 and 3,055 tons in 1896. The production of Muscovado sugar is still on the decline; the exports for 1898 being 680,900 pounds as against 1,025,360 pounds in 1897 and 1,104,300 pounds in 1896.

Cocoa.

The year opened full of promise to the cocoa planters; the preliminary or "small" crop being almost unexampled in quantity, the prices good, and the prospects for the main crop in November—December most encouraging. Owing to the dry weather continuing till the end of May the main crop was later than usual, and when the hurricane occurred in September there was a larger quantity of young pods and flowers on the trees than is customary at that time of year. The destruction caused by the force of the wind, the landslips, and the overflowing streams was in many places distressingly complete, and the general crop throughout the Island is estimated to have perished to the extent of at least one-third.

Coffee.

The extension of this cultivation has received a decided check owing to the depressed state of the home and the local markets which have been flooded with low class Brazilian coffees. The experimental growings in St. Lucia will not be extended under existing conditions.

Other Minor Products.

The cultivation of nutmegs, kola, turmeric, musk seed, annatto, vanilla, tea, sarsaparilla, tobacco, india-rubber, rice, and ginger is still in the experimental stage. The reports on ginger and tobacco are alone encouraging; the small markets available for some of the other products, and the length of time before others could become remunerative, being deterrent to the enterprise of small cultivators.

GENERAL REMARKS.

Generally speaking, the prospects of the Colony are good; and although the effects of the disastrous hurricane of the 11th September will continue to be felt for many years, yet, with the prospect of a continuation of the present prices of sugar and cocoa, with the certainty of an increased demand for local produce in the Castries market, owing to the augmentation of the garrison and the increasing popularity of the port, and with the assistance to be given by the Imperial Department of Agriculture, the outlook may be regarded with some confidence. The efforts of the local Government are being steadily directed towards the encouragement of the settlement of the Crown lands by the

industrious peasantry, and a distinct advance in this direction is being made. The counter attractions of the gold mines in French Guiana, the employment on the sugar estates, the high wages to be gained on the military works, and the remunerative trade of the coal carriers still interfere to a large extent with the permanent settlement of peasant proprietors, and the fear of a land tax is a powerful deterrent to many who would be otherwise desirous of purchasing their own holdings.

Want of capital, so common a feature in West Indian Islands, is a serious hindrance to the development of this small estate of the British Empire; and in the purchase of the virgin lands of the Colony, in the cultivation of those tropical products for which a remunerative market may exist, and in the raising of stock on the good pasture which can be easily established, there exists undoubtedly a good opening for the investment of capital. The labour market is at present restricted and is barely sufficient for the agricultural needs of the Colony; but any serious undertaking backed by a sufficiency of capital to ensure continuous and remunerative employment would find no difficulty in attracting the superabundant labouring population of the neighbouring Island of Barbados. The climate and conditions of life are not favourable to the employment of white labour. In addition to the settlement of the Crown lands, the energies of the Government are specially devoted to the improvement of communications between the several country districts and the market towns. New roads have been constructed, and a marked improvement has been effected in all the existing routes. There is much yet to be done, but in the still critical condition of the Colony's finances, progress must continue to be slow. A most gratifying feature in the improvement in the social condition of the people is the well-marked advance in the knowledge of the English language, especially in the country districts, where for so long the uncivilized patois has been the only known means of verbal communication. Special efforts are being made to extend the knowledge of English, with the result that among the rising generation it is becoming more familiar.

Under existing impoverished conditions the development of the undeniable resources of the Island must of necessity be slow; but if for the next few years St. Lucia is spared from those awful visitations of flood and tempest wherein in a few hours the labours of a life-time are destroyed, the material progress of the Colony, although slow, will be, under a Divine Providence, distinctly marked.

No. 280.

GRENADA.

(For Report for 1897, *see* No. 247.)

ACTING-GOVERNOR THOMPSON to MR. CHAMBERLAIN.

St. Vincent,
29th September 1899.

Forwarded.

HARRY THOMPSON,
Administrator,
Windward Islands.

Government Office, Grenada,
28th September 1899.

SIR,

I HAVE the honour to forward herewith, for transmission to the Secretary of State for the Colonies, the Blue Book relating to this Colony for the year 1898, together with my Report thereon.

I have, &c.,

EDWARD DRAYTON,
Administrator.

His Honour
The Administrator of the
Windward Islands, &c., &c., &c.,
St. Vincent.

3931—800—10/99 Wt 21935 D & S—5 (B)

GRENADA. 1898.

BLUE BOOK REPORT FOR THE YEAR 1898.

FINANCIAL.

Revenue.

The revenue of the year 1898 was £62,875, being £5,902 more than in 1897 and £3,352 more than the average of the last five years' revenue, which was as follows :—

Year.	Amount.
	£
1894	63,022
1895	58,468
1896	56,275
1897	56,973
1898	62,875

2. The following comparative statement of the revenues of 1897 and 1898, under the principal heads of account, shows that the satisfactory results of last year were chiefly attributable to the receipts from Customs duties, which exceeded those of 1897 by £6,421, and, it may be added, the estimate for the year by a corresponding amount, the increase being in import duties. The decrease shown under Licences, Excise, and Internal Revenue does not indicate the loss of that amount, but is traceable to a change made in the period for the collection of the land and house tax, which carried uncollected arrears into the transactions of the current year, when they have been fully dealt with.

Head of Revenue.	1898.	1897.	Increase.	Decrease.
	£	£	£	£
1. Customs	32,713	26,292	6,421	—
2. Licences, Excise, &c.	24,757	25,793	—	1,036
3. Fees of Office, &c.	1,250	1,002	248	—
4. Post Office	1,140	1,188	—	48
4A. Sale of the 4th Centenary Commemoration Stamp.	528	—	528	—
5. Telephone	1,094	1,054	40	—
Carried forward ...	61,482	55,329	7,237	1,084

Head of Revenue.	1898.	1897.	Increase.	Decrease.

8. Miscellaneous Receipts ...	186	50	136	—
9 Land Sales	70	29	41	—
Total	62,875	56,973	7,457	1,555
	56,973	—	1,555	—
Increase in 1898 ...	5,902	—	5,902	—

Expenditure.

3. The expenditure of 1898 amounted to £57,612, being £937 less than in 1897 and £2,379 less than the average of the last five years, the total results of which were as follows :—

Year.	Amount.
	£
1894	59,594
1895	63,675
1896	60,523
1897	58,549
1898	57,612

4. Comparing details with those of 1897, as below, it will be seen that, as the result of enforced economy, savings were effected under nearly every head, the exceptions, Treasury and Post Office and Public Works Extraordinary, being due to the periodical payment of transit charges under the Postal Union falling due in 1898, and to the execution, at a total cost of £1,441, of important and absolutely necessary works for the protection of the towns of Gouyave and Victoria from flooding by the rivers adjacent thereto, the previous embankment walls of boulders having been destroyed by a flood in December 1897.

GRENADA. 1898.

The expenditure under "Agricultural" only represents the disbursements up to the 30th of September, as the cost of the Botanic Station for the last quarter of the year, £128, has been refunded by the Imperial Government. In future this refund will be shown under revenue as a grant-in-aid.

Head of Expenditure.	1898.	1897.	Increase.	Decrease.

	—	57,612	—	1,803
Decrease in 1898 ...	—	937	—	937

Changes in Taxation.

5. Important changes in the incidence of the house tax, and in the method of levying and collecting that and the land tax, came into operation and were on their trial during the year, although, as the collection of arrears was necessarily carried into the current year, their full effect was not realised in 1898. Briefly stated, these changes had for their object (*a*) the exemption from taxation of the huts of labourers of the poorest class; (*b*) the creation of a progressive scale of house taxation so that the contributions of all classes to general revenue under this head should be more adequately proportioned to their means than hitherto; (*c*) the alteration of the time of payment of the tax from the early months to the concluding months of the year, when it is known that the proceeds of the cocoa crop are more likely to be in circulation; (*d*) the allowing of payment by two instalments within the prescribed time; (*e*) the assessment of house values and land extent by actual inspection of an officer upon the spot instead of only from the returns of the proprietors themselves; and (*f*) a rigid enforcement of payment of arrears against those who are able to pay and will not, by providing that, notwithstanding an abortive sale of a defaulter's property, arrears may be treated as a judgment debt to the Crown, and enforced accordingly by the legal process usual in such cases.

6. It is gratifying to record that, except in one district where details have not been satisfactorily attended to, these measures have been crowned with success. The final returns now being made indicate that the margin of irrecoverable arrears is very small, that the tax has been willingly paid in most cases, and that the changes have not resulted in loss of revenue. Comparing these results with those of 1895 and 1896, there is good cause for satisfaction.

Assets and Liabilities.

7. In the course of the year, which opened with a deficit of £4,040, the Colony emerged from the financial difficulties of 1896 and 1897, and the transactions of 1898 closed, according to the subjoined statement, with a surplus of assets of £985.

[*For tabulated Statement see p.* 8.]

N.B.—The value of Stores at the Public Works Department is estimated at £1,046 16*s.* 10*d.*

* £2,000 Savings Bank Funds; £306 1*s.* 6*d.* Sinking Fund, St. George's Town Board. † Savings Bank Funds. ‡ £6,000 invested (*see* Assets).

It is to be noted that if in this statement, as has hitherto been customary, account had been taken of the arrears of revenue of 1898 payable at the end of the year by local authorities, the surplus would be £2,265.

Public Debt.

8. The public debt of Grenada at the end of 1898 stood at £127,670, of which £123,670 was in 4 per cent. inscribed stock and £4,000 in 4½ per cent. debentures. The sinking fund for the redemption of the stock amounted at the same date to £6,497, and of the debentures to £28. In the latter case £200 worth of debentures have been already redeemed from the fund.

9. The Colony is also liable for the repayment in March 1903 of a loan of £1,000 borrowed in 1879 for the St. George's Water Works. The sinking fund in the hands of the Government for its redemption amounted at the end of the year to £306.

10. Although the general revenue is primarily chargeable with the repayment of the whole of the public debt of £127,670, local authorities are responsible for £26,205 of the amount. With one exception, the debt charges are fairly well paid by these Boards, although delay sometimes occurs in refunding them to Government.

Revenue and Expenditure of Town Boards.

11. A comparative statement of the revenue and expenditure for the last five years of the Boards charged with the administration of the several towns of the Colony is subjoined :—

[*For tabulated Statement see p.* 10.]

—	Revenue.					Expenditure.				
	1894.	1895.	1896.	1897.	1898.	1894.	1895.	1896.	1897.	1898.
	£	£	£	£	£	£	£	£	£	£
St. George's	2,355	2,298	2,477	3,049	2,158	2,423	1,470	1,978	3,021	2,033
Grenville	1,313	1,024	885	919	946	1,267	1,129	905	829	953
Sauteurs...	519	433	449	463	480	547	395	465	412	556
Victoria	286	337	262	270	281	289	381	300	260	291
Gouyave	544	500	623	557	529	550	551	562	604	477
Hillsborough	196	175	133	132	128	168	156	202	125	147

Debts of Town Boards.

12. The debts of the Town Boards are as follows :—

	£
St. George's	6,981
Grenville	13,270
Sauteurs	1,100
Victoria	1,414
Gouyave	3,564
Hillsborough	600
Total	£26,929

In the case of St. George's, Sauteurs, and Hillsborough, provision is fully made by sinking fund contributions for the repayment of the town debt; £3,304 of the Gouyave debt is similarly provided for, and £260 is being repaid by annual instalments of £10; at Victoria, £1,384 is arranged for by sinking fund, and £30 by annual instalments of £10; in regard to Grenville, however, only £950 of the debt, a loan incurred for repair of the jetty, can be said to be satisfactorily provided for, as although, nominally, provision is made for repayment either by sinking fund or instalments of the remainder of the debt, these are only partially paid up. The finances and working of these Boards are at present the subject of an enquiry by a Commission, whose report will soon be presented.

TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and Exports.

13. A statement showing the total value of the imports and exports of the Colony in the last four years, classified as usual, is appended, 1898 being the fourth year in which the statistical value of the trade was arrived at by adding customary charges to prime values :—

[*For tabulated Statement see p.* 12.]

Classes.	Imports.				Exports.			
	1895.	1896.	1897.	1898.	1895.	1896.	1897.	1898.
	£	£	£	£	£	£	£	£
CLASS I.								
Live animals, food, drink, and narcotics...	85,115	71,043	76,598	89,0[illegible]	162,944	175,647	148,907	252,263
CLASS II.								
Raw materials	17,089	11,410	10,656	16,467	7,705	6,458	4,314	4,754
CLASS III.								
Manufactured articles	73,508	71,952	77,102	102,028	1,171	599	274	185
CLASS IV.								
Coin and bullion	—	—	—	3,260	200	1,179	944	72
Totals	175,712	154,405	164,356	210,783	172,020	183,883	154,439	257,274

14. It will be seen that the imports exceeded those of the preceding year by £46,427 in value, an increase appearing under every class, but most noticeable under manufactured articles, which exhibit an increase of £24,926 over the results of 1897. The following list of principal articles imported in the two years indicates the chief directions in which this increase took place :—

Chief Articles.	Value.	
	1897.	1898.
CLASS I.	£	£
Butter	1,177	869
Fish (dried or preserved, including salmon, mackerel, &c.).	10,550	12,687
Flour (wheaten)	23,158	26,874
Meat (salted or preserved)	6,192	7,624
Oats	2,030	2,590
Oleomargarine, &c.	2,483	2,822
Rice	5,022	4,880
Spirits	2,296	3,291
Sugar	3,121	4,958
Tobacco, cigars, &c.	2,329	2,513
Wines	1,762	1,795
CLASS II.		
Petroleum oil...	1,892	2,540
Timber and shingles...	6,754	9,165
CLASS III.		
Textile manufactures, other than rope and cordage.	50,921	55,833
Metal manufactures	7,398	19,834

Chief Articles.	Value.	
	1897.	1898.
CLASS III.—*cont.*	£	£
Boots and shoes	4,765	4,373
Earthen and glass ware	1,941	2,437
Soap	2,162	2,921
CLASS IV.		
Coin and bullion	—	3,260

15. While the increase in the amount of imports, particularly under Class III., may be taken as the result of the return of the Colony to prosperity coincidently with the good cocoa crop and high prices realised for that staple in 1897–98, it is believed that the increase under Class I., so far as foodstuffs from the United States of America are concerned, is evidence of a change in local conditions which is gradually but effectively taking place. With the extension of cocoa and nutmeg cultivation less land in the interior is available for the labouring class to cultivate ground provisions, the quantity of which in the local market is consequently diminishing while the price rises, and the people are thus compelled to resort more and more to imported food. With a population increasing at the rate of about 1,200 per annum, and bearing in mind that the nature of the staple cultivation permanently absorbs the land as soon as it is established in full growth, it is not improbable that a few more years will witness a migration of the people within the island the converse of that which has taken place under the influence of the cultivation of cocoa and nutmegs, that is to say, from the interior to the lands lying along the southern, eastern, and northern seaboard, which were formerly beneficially occupied as sugar estates, but which, being only partially suited for cocoa, are now for the most part uncultivated.

16. The value of the exports for the year was £257,274, being £102,835 more than in 1897, and higher than in any year since 1893, when they reached (without the addition of usual charges) £316,063. The following comparative statement of the principal articles produced by the Colony which were exported in the last four years shows that a marked increase took place under cocoa and spices, the chief staples, the result of good crops

and satisfactory prices. It will be observed, on the other hand, that the export of kola nuts, coffee, and logwood is dwindling under the influence of prices which offer no inducement to cultivators :—

—	1895.	1896.	1897.	1898.
	£	£	£	£
Cocoa	138,520	159,519	132,642	227,655
Spices	20,984	12,424	13,503	22,107
Cotton and cotton seed ...	4,563	4,474	2,720	3,134
Live stock...	1,385	1,304	1,230	1,211
Firewood	466	538	605	476
Fruit	584	880	540	427
Poultry	204	235	226	166
Turtle and turtle shell ...	265	291	270	406
Kola nuts	133	180	88	43
Coffee	66	217	283	59
Logwood	1,733	372	302	54

17. The next table shows the volume and direction of the Colony's trade in the four years under review, and indicates that no change worthy of notice took place in 1898 in the normal division of the trade between the United Kingdom, British Colonies, and Foreign Countries:—

—	Imports.				Exports.			
	1895.	1896.	1897.	1898.	1895.	1896.	1897.	1898.
	£	£	£	£	£	£	£	£
United Kingdom ...	78,079	66,485	78,893	98,626	140,736	169,499	138,656	243,574
British Colonies ...	42,151	42,504	40,126	55,254	5,616	5,790	4,283	3,307
Foreign Countries ...	55,482	45,416	45,337	56,903	25,668	8,594	11,500	10,393
Totals ...	175,712	154,405	164,356	210,783	172,020	183,833	154,439	257,274

18. The foreign countries with which the Colony trades, and the amount of trade with each such country in each of the last four years, are shown below:—

Foreign Countries.	Imports.				Exports.			
	1895.	1896.	1897.	1898.	1895.	1896.	1897.	1898.

Totals	55,482	45,416	45,337	56,902	25,668	8,594	11,500	10,269

AGRICULTURAL INDUSTRIES.

Cocoa.

19. The weather of the year prevented the realisation of such a large crop as in 1896–97, a severe drought being experienced from March to June, which seriously affected the estates on the lowlands. For the year ended 30th September 1898 the crop was 53,384 bags, or 1,213 less than in the preceding year. Prices were, however, satisfactory throughout the year, never falling below 68*s*. per cwt., and once, in January, going as high as 83*s*. for the best grades.

20. As remarked in last year's report, greater attention is being paid to cultivation of cocoa in Grenada than formerly, and this year Dr. Morris, the Imperial Commissioner of Agriculture, has done good service by drawing attention to the best methods of treating the older trees, which from neglect no longer yield the results to be expected from them.

Spices.

21. The same cause which reduced the cocoa crop proved beneficial to that of nutmegs and mace, as the higher lands on which these staples are mostly grown suffer frequently from excess of moisture, and the dry weather removed this drawback. The result was the exceptional export of 4,373 cwt. of spices, as against 2,505 cwt. in 1897 and an average of 2,533 cwt. in the five preceding years.

Sugar Cane.

22. The cane crop of 1898 almost entirely failed owing to the spell of drought. There never is a large area under cultivation in cane, as the sole objects are to provide sugar and to manufacture rum for local consumption by the labouring class. The collapse of the cultivation in 1898 resulted in the importation of 397,740 lbs. of muscovado sugar as against 91,892 lbs. in 1897, and of 3,256 gallons of rum, the latter being the first importation of the kind for many years. Only 32,662 gallons of rum were manufactured locally in the year, a decrease of 24,744 gallons as compared with 1897, and this was chiefly distilled from imported molasses, 8,190 gallons of which were brought into the Colony, as compared with 419 gallons in the preceding year.

Botanical Station.

23. Great efforts were made during the year to instruct the peasantry in sound methods of cultivation, and with this object 61 days were spent by the Curator in the rural districts giving lectures on agricultural subjects and practical hints on the spot as

to the cultivation of economic plants. Large quantities of valuable plants were distributed to planters in different parts of the Colony, and in this connection should be mentioned the attempt made to plant up swampy areas with eucalyptus and melaleuca trees, the seeds being imported by the Governor from Australia for the purpose; altogether 1,008 of these trees were planted under the superintendence of the Curator of the station, besides numerous plants distributed to planters. Interesting leaflets on grape culture, cocoa cultivation, and other subjects were freely distributed in the Colony.

24. On the 1st of October the direct control of the work of the station passed into the hands of Dr. Morris, the newly-appointed Imperial Commissioner of Agriculture for the West Indies, and the cost of the station became a charge upon the Imperial grant-in-aid, which is to be made for ten years to this and other British Colonies in the Caribbean Sea.

SHIPPING.

25. The following comparative statement of the total shipping inwards and outwards for the last five years shows that the results of the year under review were less than in the preceding year and below the average. This falling off is difficult to understand, bearing in mind the increase of the Colony's trade in 1898; and no satisfactory explanation is forthcoming:—

Year.	Entered.	Cleared.
	Tonnage.	Tonnage.
1894	241,862	238,893
1895	254,977	255,177
1896	221,395	224,333
1897	220,179	223,629
1898	216,192	218,006
Average ...	230,921	232,008

A table is subjoined distinguishing the nationalities of the vessels in 1897 and 1898:—

Nationality.	Tonnage Entered.						Tonnage Cleared.					
	1897.			1898.			1897.			1898.		
	Steamers.	Sailing Vessels.	Total.	Steamers.	Sailing Vessels.	Total.	Steamers.	Sailing Vessels.	Total.	Steamers.	Sailing Vessels.	Total.
British	209,922	9,563	219,485	200,581	8,874	209,455	213,421	9,457	222,878	202,500	9,052	211,552
Foreign, viz. :—	—	694	694	5,091	1,646	6,737	—	751	751	5,091	1,363	6,45[illegible]
United States of America.	—	282	282	5,091	1,233	6,324	—	282	282	5,091	953	6,044
Holland ...	—	307	307	—	323	323	—	364	364	—	320	320
Venezuela ...	—	105	105	—	90	90	—	105	105	—	90	90

A feature of this return is the appearance for the first time of steam tonnage under the flag of the United States of America, caused by the registration for a part of the year of an American vessel as a regular trader with the island.

LEGISLATION.

26. Nine Ordinances were passed in the year, the most important of which were measures regulating the issue of patents in the Colony, and assimilating the local law respecting landlord and tenant more closely to the English law. Under the first mentioned law it is now possible for a patent to be taken out both easily and cheaply, and the previous lengthy and expensive procedure of passing a separate Ordinance for each patent applied for is rendered unnecessary; the second simplifies the procedure between landlord and tenant, and brings the colonial law up to date in this respect.

27. A new edition of the Statute Laws of the Colony, compiled by Sir Joseph Hutchinson when Chief Justice, was brought into operation on January 20th. This work is of the greatest importance and benefit to the community, for apart from the convenience resulting from consolidation of numerous short and scattered enactments (there having been no compilation since 1875, and that most imperfect), useful and much needed measures are now included, such as a criminal code, a code of criminal procedure, an evidence code, &c.

EDUCATION.

28. The principal figures relating to primary education in Grenada in the year 1898 are tabulated below and compared with the results of the preceding year. It will be observed that while another school was added last year, and while a marked increase in the number of scholars took place, the expenditure and Government contribution were much less than in 1897. Compared with the figures of 1896, when the Government contributed £5,793 to the expenditure, the marked effect of the operation of the education code of that year in the direction of much needed economy will be seen :—

[*For tabulated Statement see p.* **22.**]

Increase in 1898	10	24	34	11	76	25	1	85

30. It will be noticed that Government contributes two-thirds of the cost of the boys' grammar school, but, although this is the case, there is no Government control of the expenditure or of the management of the school. If, as is the wish of the governing body, the institution could be taken over by the Government, it would largely conduce to its efficiency.

31. There are no industrial, technical, or agricultural schools in the Colony at present, but the question of the latter is engaging the earnest consideration of the Government, and it is hoped that some arrangement may be arrived at in connection with the primary schools which will secure the inculcation of at all events the rudiments of scientific agriculture among the rising generation of the peasantry.

GOVERNMENT INSTITUTIONS.

Colony Hospital.

32. The number of patients treated during the year was 792, of whom 442 were discharged cured, 179 relieved or not improved, 74 died, and 97 remained in hospital at end of the year; the daily average was 91, and the daily cost per patient about a shilling. The general health of the institution was good with the exception of the last two months of the year, when there was an outbreak of diarrhœa, which the house surgeon is inclined to attribute to intermittent water supply. The provision of a tank with a reserve supply of water is engaging consideration.

Yaws Hospital.

33. The old ordnance store, formerly used for this hospital, was re-occupied on the 7th of March 1898, so that more accommodation became available than at the smaller building used since 1896 during the reconstruction of the Colony Hospital buildings. 113 patients were treated, of whom 55 were cured, 10 relieved, 2 died, and 46 remained in hospital; the daily average was 38, and the daily cost per patient 7¼*d*. The treatment of the disease by thyroid was adopted in certain cases, but no definite opinion as to its merits was formed.

St. Andrew's District Hospital.

34. Only 109 cases were treated, as the institution was closed for about a month to be painted. Of these, 67 were cured, 25 relieved, 2 not relieved, 6 died, and 9 remained in hospital. The daily average was 10.

Carriacou District Hospital.

35. 161 cases were treated, of which 109 were discharged cured, 25 relieved, 7 not improved, 3 died, and 22 remained at end of the year; the daily average was 14. The accommodation at this hospital was increased by four beds by a slight

rearrangement of the partitions, the addition being necessary as this institution is also occasionally used by the people of the southern Grenadine Islands attached to St. Vincent, with whose medical supervision the District Medical Officer at Carriacou is now entrusted. The situation of the building unfortunately renders it accessible to malaria from adjacent swamps, and its removal to a more salubrious locality is under consideration.

Lunatic Asylum.

36. 135 patients were under treatment, 35 of whom were admitted in the year, being 14 from Grenada, 11 from St. Lucia, and 10 from St. Vincent; 7 of these 35 were persons who had formerly been under treatment in the institution. There were 7 patients discharged, 5 as cured, 1 relieved, and 1 not improved; and there were 7 deaths, as against 16 in 1897. The sanitary condition and health of the institution are reported to have been excellent throughout the year. The north wing of the asylum was re-roofed and repaired.

37. A large number of the patients were usefully employed in work, such as washing and repairing clothing, cooking, cultivating provisions for food, and procuring wood for fuel. The value of their work is estimated at £173.

38. The increased number of inmates has brought about a reduction in cost of maintenance of each individual, which has enabled the Government to further reduce the annual charge made to the other islands of the Windward group for the treatment of their lunatics here. This increase of the lunatic population, which continues in the present year, will soon necessitate extensive structural additions to the existing buildings, as they only accommodate 120 patients in comfort, whereas 132 are at this date in the institution, and there are several lunatics in St. Lucia and St. Vincent who cannot yet be received.

Poor House.

39. At the commencement of the year there were 44 inmates, and 21 paupers were admitted during the year. Eight inmates left voluntarily, and there were 15 deaths; the daily average was 41, and the cost of each inmate for the year £8 7*s.* 1*d.* It is a curious feature of this institution that there are nearly always vacancies in the female ward, while it is by no means uncommon for extra cases to be admitted to the male ward.

Savings Bank.

40. As is shown by the following statement of the work of the bank for the last five years, the improvement which began in the latter half of 1897 continued in 1898, and at the close of the year the bank was in a better position than before the period of financial depression through which the Colony has

GRENADA. 1898.

passed. The average balance at credit of each depositor was £8·25 as compared with £7·61 in 1897. The district branches are largely made use of by the peasants, and the number of depositors therein increased from 317. with a balance of £2,434, in 1897 to 354, with a balance of £2,425, in 1898. Of the funds of the bank £6,000 were invested at the end of 1898 :—

Year.	Number of Depositors at 31st December.	Amount of Deposits (including Interest capitalised).	Amount of Withdrawals.	Balance at credit of Depositors at 31st December.
		£	£	£
1894	959	7,523	7,915	7,602
1895	885	5,552	6,728	6,426
1896	895	5,026	5,062	6,390
1897	968	6,498	5,518	7,370
1898	1,053	7,803	6,722	8,451

JUDICIAL STATISTICS.

Police.

41. The Colonial Police Force consists of a chief and sergeant-major of European birth and military training, and 63 West Indian non-commissioned officers and privates. In addition to their civil duties they are drilled and trained to the use of arms, and are armed with Martini-Henry rifles. The conduct and discipline of the force in 1898 were good, and they were put through their first course of musketry early in the year with very satisfactory results. In August they were inspected on parade and in barracks by Major-General Fowler-Butler, commanding the troops at Barbados, and he recorded that he was much pleased with all he saw, and that there was a marked advance in drilling up to date. In the principal town the detachment on duty is also responsible for extinguishing fires in the town, the Town Board supplying the necessary apparatus. The police are also charged with the supervision and control of rum distillation on which an excise duty is levied. For these purposes a Superintendent of Excise is attached to the staff under the direction of the chief.

Prisons.

42. 258 persons were committed to prison in 1898, being 43 less than in 1897 and 39 below the average of the last three years. The daily average in prison was 46, as against 63 in 1897, the

highest record being 84 in 1894. The cost of the prisons, according to the Treasury accounts, was £1,001, and the estimated value of the work done by prisoners £1,185. Satisfactory discipline was maintained, and the sanitary condition was excellent.

43. The great success of the Mark System introduced on 1st February 1888 deserves more than a passing notice. It aims at securing classification of the prisoners and remission of sentences on lines approximating to the English system, and the quality and quantity of the labour enforced are also regulated by the same means. All convicted prisoners (except first class misdemeanants, non-criminal debtors, and surety prisoners) whose sentences exceed one month are awarded marks daily in proportion to their industry, and are allowed, according to their earnings in marks, to progress through certain classes which regulate the nature of their work and confer on them trivial privileges. The lowest class, in which no privileges are allowed and in which the labour is the hardest and most monotonous, is composed of prisoners whose sentences do not exceed one month, and of those who by misconduct either do not earn enough marks to rise to a higher class or have been degraded. Prisoners sentenced to two years and upwards are in addition allowed to earn a remission not exceeding one-fourth of their sentences according to their record as shown on the mark sheets.

44. This system has fully justified its introduction. It has not only secured what it was designed to do, but its effect on the prisoners themselves has been noticeable. The interest that is taken by all but a few hardened offenders in their marks' register and in its effect upon their position and treatment in prison is most gratifying, and forfeiture of marks as a punishment is usually more dreaded by a "long sentence man" than the dark cell. In the ten years of its operation 112 licences for remission of sentences have been issued under its provisions, and of these only 32 persons (about 28 per cent.) have been subsequently reconvicted, many of those so reconvicted being of the recidivist class with previous convictions varying in number from three to thirteen.

Criminal Statistics.

45. A table is appended showing the statistics relating to crime in 1898 as compared with those in the previous four years, and it will be seen that a marked reduction is apparent under every head except offences against the person and prædial larceny, where there are slight increases. On the whole the improved financial conditions in the Colony, producing harmony and contentment among the lower classes, may be taken to have been the cause of this satisfactory result. In the case of the Magistrates' Courts the operation of the new criminal code, and of the improved tariff of fees introduced with it, have been

GRENADA. 1898.

factors in the reduction of cases, tending as they do to prevent frivolous litigation. The trivial nature of the majority of offences committed will be realised when it is seen that out of 1,094 persons convicted in the year only 222, about 20 per cent., were sent to prison :—

	Average 1894–96.	1897.	1898.

Other offences	670	650	546
Total	1,324	1,275	1,094

VITAL STATISTICS.

Population.

46. The estimated population at 31st December, based upon the natural increase, and without considering emigration or immigration, of which there is little of a permanent nature, was 62,622, being an increase of 9,413 since the census of 1891. The natural increase in the year was 1,323, and the average for the previous ten years, 1,169. The birth rate per thousand of the mean estimated population was 42·17, and the death rate, 20·85.

Public Health.

47. Apart from whooping cough and a mild visitation of influenza the Colony was free in 1898 from epidemic disease, and the general health was good.

Sanitation.

48. There is a General Board of Health for the Colony and the several Town and Road Boards control under its direction sanitation in the towns and rural districts respectively. On the whole their work is satisfactorily done, although there are instances of neglect which might be remedied. In the towns, sanitary conditions, although largely open to improvement, are at all events kept in view, and an effort is made to sustain them in efficiency, but, except in isolated and special cases, little attention is paid to such matters in the country. Fortunately, the natural conditions are excellent, and the mountainous nature of the island is of itself a great aid to proper drainage.

Climate.

49. The rainfall for the year, although up to the average, was most uneven in its incidence. At the meteorological station in the south of the island 81·77 inches were recorded as compared with 83·64 in the previous year, but in March, April, and May there was a spell of drought, only ·77 inches of rain being recorded in the last mentioned month against 5·88 inches in 1897, while in August no less than 19·11 inches were recorded, 8·16 inches being the previous year's record. At Carriacou, in the extreme north of the Colony, the rainfall was 80·28 inches, and in the centre of Grenada, 166·45 inches.

50. The mean temperature was normal, being 78·9°, the maximum, 88·2°, being recorded in March and September, and

GRENADA. 1898.

the minimum, 68·4°, in August. This, it should be stated, is the temperature at the meteorological station, 506 feet above sea level and a cool breezy site; in the lowlands the temperature is higher, but 93° is about the average highest record there.

51. The direction and force of the wind in the year were normal, the prevailing wind being the north-east trade. The 11th of September, the day of the great hurricane in St. Vincent, was stormy, the wind varying from north-west to west, but no damage was done here. As hurricanes are usually formed in the Atlantic to the north of 12° of north latitude, which passes through the south of Grenada, there seems to be some reason for hoping that the island is likely to escape a severe visitation of that kind. The records indicate that none of the hurricanes which were experienced in other parts of the West Indies in the past did serious damage here, the great storm of 1780, which took place during the second French occupation, being apparently the one most felt.

POSTAL AND TELEPHONE SERVICES.

52. In the work of the Post Office taken altogether there was an increase of business in the year, the only noticeable decrease being under inland money orders, which were £142 less than in 1897. The revenue of the office was £1,140 against £1,188 in the preceding year, a slight falling off, which was caused by the issue in August of a special 2½*d.* stamp, designed by Lady Moloney, to commemorate the 400th anniversary of the discovery of the island by Columbus. The sales of this issue, which amounted to £528, diminished the sale of the ordinary 2½*d.* stamp.

53. An exchange of money orders with the Dominion of Canada through the intermediary of the Barbados Post Office was arranged in May, and on Christmas Day the Imperial Penny Post came into operation with the Mother country and those Colonies who adopted it, as also the improved triple scale of parcel post with the United Kingdom.

54. The revenue of the Telephone Department was £1,094, and the expenditure (including the charges on loan for construction) was £1,054. Eight new installations were supplied in the year, and at its close there were 157 connections to the exchanges, using 172 instruments. Tortuous roads, abundant vegetation and overhanging trees, heavy rainfall inducing frequent landslips, and the great distances to be travelled by the inspectors between the centres and the numerous country residences supplied with instruments, render it anything but an easy task to maintain the system in efficiency, but that satisfactory results are on the

whole obtained is evidenced by the steady demand for new connections and the adherence of old renters, notwithstanding grievances and complaints both imaginary and genuine.

MILITARY FORCES AND EXPENDITURE.

55. There is no military force, either of the regular army, militia, or volunteers, in the Colony. As mentioned above, the police are drilled and trained to the use of arms, so as to be available in emergencies. A Bill was introduced by the Government in the Legislative Council in the course of the year with the view to enrolling a volunteer force, and the measure is under the consideration of the Council.

GENERAL OBSERVATIONS.

56. Three fine iron bridges were completed during the year, one over the Madeys River in St. Patrick's, one over the river at Florida in St. John's, and the third over the Gouyave River, at a spot within the town of that name near to the mouth of the stream. All of these were in replacement of stone structures either irretrievably damaged or swept away by floods in the years 1895–97. Embankment walls of masonry were constructed at Victoria and Gouyave to protect those towns from the adjacent rivers during floods; the work at Gouyave was not completed in 1898, and has been continued in the current year.

57. The fourth centenary of the discovery of the island by Columbus was celebrated in August, two special holidays being granted for the purpose.

58. Mr. Charles James Tarring, who was appointed Chief Justice, *vice* Sir Joseph Hutchinson promoted to Cyprus, arrived on the 12th of January and assumed his duties.

59. The year was one of prosperity for the Colony, which under the satisfactory conditions affecting its staple products, accompanied by rigid economy in regard to its public expenditure, emerged from the financial embarrassment of the years 1895–97. One lesson to be derived from the experience of those years is that in a Colony whose chief staple is liable to such fluctuations in quantity and value a reserve fund should always be maintained as a provision for bad years.

60. The period of depression, now happily ended, has had a salutary effect on the agriculturists of the Colony, both by inducing a greater attention to cultivation and by impressing

GRENADA. 1898.

the necessity for careful expenditure in years of plenty, inasmuch as they may be followed by years of stress. An indication of this may be seen in the increased use being made by the peasants of the Savings Bank, which is being even more strongly evidenced in the current year, when the balance at credit of depositors has advanced from £8,451, as shown in paragraph 40 of this report, to £11,068.

EDWARD DRAYTON,

Total	27,674	2	0	27,865	19	0

During the year under review there was a further expenditure of £3,663 4*s.* 5*d.* on various services rendered necessary by the hurricane. This was defrayed from the Imperial grant of £25,000, which was placed at the disposal of the Colony, and to give an accurate total of the actual receipts and expenditure of the year this sum should be added to both statements. The figures given represent the normal expenditure, and are therefore more useful for the purposes of comparison.

The Customs receipts were £1,200 in excess of those for the former year, and this is due to import duties collected on increased quantities of lumber and food-stuffs which were required after the hurricane. Food-stuffs required to alleviate actual distress were admitted free of duty. The total duties so remitted would

have amounted to about £700. Had these duties been collected, the revenue and expenditure of the year would very nearly have balanced.

In the revenue return the item of interest and in the expenditure return the item for charges on account of public debt show a large increase. This is due to the fact that all the loan charges for which the Colony is responsible are now included in the expenditure, and a corresponding refund of those charges which are paid by local bodies is included in the revenue.

Until this year a separate account was kept of loans for which local bodies were primarily responsible.

The reduction in the amount received under the head of Fees of Office, &c., is largely due to the smallness of the receipts for hospital fees. Very few patients were able to pay anything towards their maintenance.

The fees of the Supreme Court and the Magistrates' Courts have also diminished. This is partly due to general stagnation of work, and partly to the practical suspension of all but the most urgent business during the last four months of the year in consequence of the hurricane.

Telephone receipts have decreased owing to reduced numbers of subscribers, and also because practically a quarter's rent had to be remitted while the lines were being repaired after the storm.

The receipts from rents in 1897 were abnormal, but in 1898 many rents were irrecoverable, and with the destruction of buildings we lost the rent on them.

The increase on charges on account of public debt is explained above, and, when that paper transaction is allowed for, the total normal expenditure of the Colony is far below what it has been for many years past.

The expenditure on pensions is enormous in proportion to our revenue. One pensioner in receipt of £340 a year died, and two pensioners in receipt of smaller amounts. One of them had been in enjoyment of a pension since the year 1832, but the other, who lost his life in the hurricane, had drawn it only from the 1st February.

On the other hand the Colony became liable for two large additional pensions.

With but few trifling exceptions, every head of expenditure shows a decrease on the expenditure for the preceding year, and the reduction of the expenditure on personal emoluments from £11,982 8*s.* 1*d.* in 1897 to £10,976 in 1898, is a fair criterion of the efforts at economy in administration which have recently been made.

The following table gives the revenue and expenditure of the Colony for the last five years :—

Year.	Revenue.			Expenditure.		
	£	s.	d.	£	s.	d.
1894 ...	28,574	9	0	30,545	2	7
1895 ...	25,459	14	2	28,911	6	6
1896 ...	26,487	2	0	27,591	2	1
1897 ...	24,844	17	2	27,865	19	0
1898 ...	26,900	15	2	27,674	2	0

The deficit of £773 6*s.* 10*d.* on the transaction of the year has been met partly by the balance of the Imperial grant made towards the deficit at the end of 1897, and, partly, by a further grant of £300.

The only change in taxation during the year has been a reduction in the amount payable for a licence for the sale of intoxicating liquors in country districts. It was hoped that this measure might operate as a check on the illicit trade in spirits by increasing the number of licensed houses. It has only been partially successful. The increased income and land taxes which it was found necessary to impose in 1896, and which had hitherto been imposed from year to year, were made permanent taxes, and the addition of 10 per cent. to the Customs duties was continued for the year.

The export duties payable to general revenue on sugar and its subsidiary products were, by the Secretary of State's instructions, suspended during the year.

The excess of liabilities over assets shown in the return is £5,317 14*s.* 2*d.*, but from this should be deducted the amount of the Imperial grant-in-aid towards the deficit at the end of 1897. Pending instructions, which have now been received, this amount was treated as an advance to the Colony. The actual deficit of the Colony on the 31st December was £208 19*s.*

The total public debt for which the Colony was liable on the 31st December 1898 was £17,040. Provision has, however, been

ST. VINCENT. 1898.

made by an Imperial grant for the repayment of £5,000, which was borrowed in 1897 to provide for the deficit in 1896. The debenture holders were unwilling to be paid off before the debentures were due, and the money has been invested by the Crown Agents for the Colonies until repayment can be made. The actual debt for which the Colony is responsible is therefore £12,040 only.

This sum is sub-divided as follows :—

		£
Repayable from General Revenue	...	4,240
" " Immigration Fund	...	250
" " Kingstown Fund	...	6,800
" by town of Georgetown	...	750
Total	...	£12,040

The sum repayable from General Revenue is being repaid by annual instalments of £560, and, with the exception of £1,000 borrowed in 1897, will all be repaid in 1905.

The Immigration Loan has been repaid during 1899, and it is hoped that the special taxes levied for the purpose during the year will be found to have produced a sum sufficient to cover the amount.

The Kingstown debt is being repaid in annual instalments of £550 and will be extinguished in 1913.

The Georgetown debt is being repaid in annual instalments of £50 and will be extinguished in 1913.

The municipal accounts of the small towns are in some confusion owing to the hurricane, which occurred about the time that it is usual for the Town Wardens to bring pressure for the recovery of the rates. The destruction of all property rendered any such steps impossible.

The expenditure of the town of Kingstown was in excess of its revenue, but included some items for the repair of storm damages, which have since been refunded from the sum allowed by the Imperial Government to provide for such repairs.

The Kingstown Board has some difficulty in keeping its expenditure within the amount of the revenue while it is saddled with a heavy debt charge, but it has a valuable asset in the Water Works, and I regard it as being in a sound position so long as the finances are carefully managed.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

IMPORTS AND EXPORTS.

In the return of imports the only noticeable feature is the considerable increase in the imports of almost every kind of food-stuffs and of timber. This is already explained as due to the large quantities of these articles required after the hurricane to replace the ordinary local food supplies, and to restore the damage to buildings of all kinds. The imports of white pine and pitch pine amounted to 1,458,141 feet of a value of £7,894 9*s.* 11*d.*, as compared with 609,406 feet of the value of £3,395 9*s.* 10*d.* in 1897.

When it is considered that St. Vincent has hitherto been looked upon as a sugar producing country, the statistics of the imports and exports of sugar and its subsidiary products as compared with those of 1897 are startling :—

IMPORTS.

Muscovado Sugar.

Year.	Quantity.	Value.
	Lbs.	£ *s.* *d.*
1897 ...	115	0 16 6
1898 ...	202,747	1,151 10 3

		£ *s.* *d.*
1897 ...	Nil.	Nil.
1898 ...	—	73 10 3

Rum.

	Gallons.	£ *s.* *d.*
1897 ...	78	15 4 2
1898 ...	155	31 12 10

EXPORTS.

Muscovado Sugar.

Year.	Quantity.	Value.		
	Lbs.	£	s.	d.
1897 ...	6,411,564	25,591	18	3
1898 ...	4,176,492	14,610	5	5

Molasses.

	Gallons.	£	s.	d.
1897 ...	97,446	2,954	15	2
1898 ...	38,314	1,028	10	0

Rum.

	Gallons.	£	s.	d.
1897 ...	6,050	490	12	0
1898 ...	2,460	120	0	0

The sugar had practically all been exported before the storm, but what was left was not sufficient for local consumption and the imports were required to meet the deficiency.

The exports of our other staple product (arrowroot) show a large falling off:—

Year.	Quantity.	Value.		
	Lbs.	£	s.	d.
1897 ...	4,195,218	21,858	7	8
1898 ...	2,601,972	14,517	18	4

In consequence of the destruction of all the arrowroot works and the damage to the crop on the 11th September, just at the time when preparations were being made for reaping the new crop, there was but a small export of arrowroot of the 1898 crop before the end of the year, and a small quantity only obtained the benefit of the increased prices which were immediately quoted. The average price, as shown by the returns, was only very slightly in excess of that for 1897.

By the end of the year most of the works had been put in order, but the crop was a short one, owing partly to direct damage done by the storm and partly to the indirect damage caused by having to leave the arrowroot undug long after it was ripe.

The export of cocoa shows a decline from 264,192 lbs. to 186,766 lbs. entirely due to the storm. The exports shown were almost entirely made during the early part of the year, and there was a splendid crop on the trees when the storm came and destroyed not only the crop but in most cases the trees themselves.

To the same cause is to be attributed the falling off in the intercolonial trade in live stock and ground provisions, on which a large number of the poorer classes depended for their livelihood

The following table gives the value of imports and exports for the last five years :—

Year.	Imports.			Exports.		
	£	s.	d.	£	s.	d.
1894 ...	91,009	7	9	87,374	0	9
1895 ...	64,842	2	0	68,690	9	1
1896 ...	71,489	11	4	67,392	7	7
1897 ...	70,823	11	10	68,935	5	7
1898 ...	95,551	12	11	44,666	11	2

In the value of imports for 1898 I have included the sum of £7,243 7*s.* 7*d.*, the value of food-stuffs and clothing imported free of duty for relief purposes.

There is not much to call attention to in the course of trade.

The exports to all countries show a large falling off owing to the causes to which I have called attention. The trade with Venezuela was not brisk, owing to more stringent measures taken by the Venezuelan authorities to check smuggling, and our direct trade with Canada, to which I referred last year, has this year disappeared. I understand that the shipment of sugar which was made in 1897 brought no larger price than if it had been sent to New York, and that it was not so easily disposed of.

The imports from the United Kingdom show a slight decrease on those of 1897 (£27,290 compared with £28,357).

The most noticeable increase in the imports are those from the United States of America. They have increased from £6,736 14*s.* 9*d.* to £15,460 14*s.* 3*d.*, or nearly 130 per cent., and this is not the full measure of the increase, as most of the increased

St. Vincent. 1898.

imports from the British West Indies are due to products of the United States which have reached us through Barbados and other Colonies.

The increase is due to the large importations of food-stuffs and timber to which I have already referred.

The only manufacture which calls for any note is that of arrowroot. As I have said all the works were destroyed, but I think I may safely say that they have, in almost every case, been replaced by better equipped and more suitable premises and appliances. The result of these will more properly form a subject for report in the current year.

From the 1st October, the Botanical Station was taken over by the Department of the Imperial Commissioner of Agriculture for the West Indies.

There was, however, but little change to note up to the 31st December 1898, and the benefit derived from the increased expenditure on it only becomes apparent in the increased efficiency during the current year.

Much useful work was done by the Station in the distribution of plants, to assist in some measure in the restoration of agricultural industries which were almost wiped out by the storm.

Shipping.

87 steamers with a tonnage of 117,577 tons entered and cleared during the year, as compared with 82 of 111,422 tons in 1897. In both years all the vessels were British. The slight increase is due to more frequent calls by the steamers of the Quebec Line.

350 sailing vessels of 9,922 tons entered and 346 vessels of 9,749 tons cleared, as compared with 384 of 12,515 tons entered and 391 of 13,518 tons cleared in 1897.

The falling off is partly due to the fact that of the small crop of sugar a larger proportion than usual was shipped by steamers.

Almost all the shipping was British. The following table gives the total shipping inwards and outwards for the last five years :—

Years.	Tons.
1894	204,099
1895	237,910
1896	273,245
1897	248,877
1898	254,825

III.—LEGISLATION.

The only important Ordinances passed during the year besides those dealing with the revenue were "The Patents Ordinance" and "The Savings Bank Ordinance."

The former makes permanent provision for the granting of patents on the lines of the English Acts in lieu of the procedure by private bills which was before necessary, and the latter consolidates and amends the law under which the Government Savings Bank is administered.

IV.—EDUCATION.

The work in country schools was practically brought to an end by the destruction of all the schools. The town schools were much damaged, but were used as temporary shelters for refugees. The masters were utilised in assisting in the distribution of relief until temporary arrangements could be made for re-opening the schools.

These temporary arrangements were made as soon as possible, but the accommodation was in most cases primitive and the schools were only useful in keeping the children together.

Serious efforts towards economy were made by the Education Board, which resulted in the number of aided schools being reduced from 44 to 36.

The Grammar School made satisfactory progress during the year.

V.—GOVERNMENT INSTITUTIONS.

The work in the Colonial Hospital and all the Government charitable institutions was abnormal during the year.

In the Hospital the daily average number in Hospital of 96·32 as against 60·92 in 1897 gives some idea of the work done. Up to the 10th September the daily average was about the same as in 1897, and the increase is due to the enormous numbers who were admitted after that date.

The main building of the Hospital was unroofed by the storm and the others were much damaged. Until they could be temporarily repaired much difficulty was experienced in providing accommodation for the patients.

In the out-patient department up to the 10th September 270 cases had been attended to, and after that date up to the end of the year there were 800.

After the storm temporary hospitals were opened at all important centres for the treatment of the sick and injured, but it was finally decided to open a temporary establishment in the old military hospital at Low Point, and to this were transferred all the cases from out-districts which had to be provided for.

In the pauper asylum at Fort Charlotte accommodation had to be found for a large number of people who could not otherwise be provided for. At the end of the year there were about 130 inmates, which is nearly double the number who can be properly accommodated. We have no other means of providing for them.

Savings Bank.

The Savings Bank figures show an actual increase in the number of depositors, and while the deposits were only slightly less than in 1897, the withdrawals were less by more than £600. The nett result was that at the end of the year there was £9,282 14*s.* 11*d.* to the credit of depositors, as against £8,771 3*s.* 3*d.* at the end of 1897.

It would naturally be supposed that after a disaster such as the hurricane there would be a run on the bank by depositors to withdraw their savings to help replace their losses. So far from this being the case, the Savings Bank shortly after the storm received several considerable deposits, which it is to be presumed the depositors had up to that time stored away in some place which the hurricane had rendered no longer safe.

The general conclusion to be drawn, which is borne out by an examination of the accounts, is that the bulk of the money deposited belongs to the better classes who use the Savings Bank as a temporary but safe investment for their money.

VI.—JUDICIAL STATISTICS.

The ordinary force of police, which consists of 52 non-commissioned officers and men, was temporarily increased during the last three months of the year by 10 men to meet the increased work thrown upon the police as a consequence of the hurricane.

The statistics of crime do not compare unfavourably on the whole with other years, though under some heads the cases brought before the courts are but a small proportion of the offences actually committed.

Many persons I regret to say availed themselves of the confusion after the storm to help themselves to the wreckage which was lying about in every direction. It was impossible to protect it and there were but few prosecutions.

The most noticeable figures in the returns are those which show the increase of summary convictions for prædial larceny from 52 in 1897 to 119 in 1898. Even these latter figures do not, I fear, give a true idea of the amount of crime of this class, and there is not much doubt that the offenders have not confined their depredations to the property of the large owners. It must be disheartening for an industrious man to find the result of his labour absolutely destroyed in a night by one of these enemies of society, and to an uneducated mind such a misfortune would tend to make the sufferer follow similar courses himself. The general spread of education and a return of greater prosperity may check an evil over which the ordinary processes of law can have but little control.

The cases tried in the Superior Courts are slightly more numerous than in past years, but I do not think they are excessive. Most of the persons convicted were old offenders, whose return to prison after their release is only a question of time.

VII.—VITAL STATISTICS.

Owing to the absence of any records which would give an idea of the emigration and immigration, it is impossible to estimate the population at the 31st December, 1898, with any approach to accuracy, but I believe the figure put down—44,000—is a fair approximation.

That emigration is not reducing the natural increase of population to any very large extent is, I think, clear from the statistics of births, which have not shown any great variation in the past few years, and in 1898 were actually higher than they were in 1897.

The large increase in deaths is due to the loss of life by the hurricane. Nearly 300 persons lost their lives, and the number of deaths indirectly caused by injuries and exposure will never be known. It must, however, have been very large.

A form of dysentery was very prevalent all over the Colony after the hurricane, which was attributed to the decaying vegetation which polluted the streams. It did not last long and was not of a dangerous type.

There was the usual outbreak of a pernicious form of malarial fever in the Grenadines in the dry weather, but it was not so bad as it sometimes is.

Owing to the destruction of the observatory shed in the hurricane, the meteorological statistics are, unfortunately, incomplete. The rainfall was slightly less than was recorded last

year (104·05 inches against 109·62) but, had full records been obtainable, I think that it would not have fallen far short of last year's figures.

The actual maximum temperature recorded was 88·5° on the 30th May, and the actual minimum was 65° on the 8th and 19th March.

There was abnormal drought in the early part of the year, which caused some fears for the water supply of Kingstown, but, by judicious management, there was never any failure of the supply, and on almost the last day of the dry weather there was ample water to extinguish what might have been a dangerous fire in the centre of the town.

An interesting and valuable report of observations taken during the hurricane was prepared by the Curator of the Botanic Station, and has been published, and I do not therefore deal fully with them. The barometer fell from 29·539 at 10 a.m. to 28·509 at 11.40. This was the duration of the storm from the north. During the storm from the south, from 12.25 to 3 p.m., the barometer rose steadily.

VIII.—POSTAL.

It is to be recorded that on Christmas Day the penny scale of postage with almost every part of the Empire was brought into force.

GENERAL OBSERVATIONS.

The event in the records of St. Vincent for the year 1898 which overshadows all others is the hurricane which passed over the Colony on the 11th September. The damage that it caused, and the steps which were taken to deal with the situation which resulted from it, have formed the subject of special reports, and I do not propose to refer to it in much detail.

Its immediate effects were so far reaching that I have had to refer to it in almost every head of this report, and its ultimate effect on the future of the Colony no one can yet foresee.

Briefly stated, the hurricane left not less than 30,000 persons homeless, and, for a time, dependent on public charity for their maintenance.

The damage to property was estimated at not less than £225,000.

Owing partly to the fact that Kingstown was more substantially constructed, and partly to the fact that it was somewhat removed from the centre of the storm, the buildings in that town were not as a rule so hopelessly wrecked as in the country districts, and they afforded shelter to large numbers of refugees.

The storm came at a time when a large proportion of the population was going through a period of much suffering, owing to the failure of ground provisions in consequence of the drought in the early part of the year.

The additional distress caused by the storm, made it imperative to take immediate steps for relief, and this was done partly by providing work for those able to perform it, and partly by distributing food to those unable to work or for whom work could not be found.

Temporary shelter was provided as far as possible, and the medical staff was temporarily increased to provide attendance for the injured and suffering. Building material in small quantities was distributed, and carpenters employed in re-erecting houses.

A committee was appointed to distribute more systematically all the money which could be made available for the more permanent repair of houses, and this work is approaching completion.

The destruction of works and crops on the estates caused the proprietors for a time to consider the situation, and it was some time before they decided what work they would be justified in undertaking. The employment that might have been expected from the large estates was not, therefore, immediately available, and in the meantime the whole responsibility for employing and feeding the people was thrown upon the Government.

The funds to enable us to do this were liberally supplied by the Mother country and by the neighbouring and other colonies. Up to the 31st December subscriptions to the amount of £28,187 16*s.* 11*d.* had been received, of which £18,000 was from the Mansion House Fund, and a further sum of £25,000 was placed at our disposal by the generosity of Her Majesty's Government.

The latter sum was chiefly expended in the restoration of public works and buildings, of which a full detail will more properly appear in the Blue Book for 1899, as but few works were actually completed during the year under review.

Of the general relief fund a sum of £9,216 10*s.* 8*d.* remained unexpended at the close of the year, and almost the whole of this has now been absorbed in providing assistance in the erection of private homes and in giving relief to the sick and infirm.

Though there is still much want and distress, most districts are returning apparently to their normal state. In the lower lands the vegetation has again assumed its usual tropical luxuriance. In the centre of the Island, in the virgin forest, nature has not shown the same powers of recuperation, and the hill-sides are still brown and in parts bare where before nothing but green was to be seen.

St. Vincent. 1898.

A beginning was made of the system of settling small holders on the land in accordance with the scheme recommended by the Royal Commissioners. An inspection of suitable sites was made by Mr. Cradwick, of the Department of Public Gardens and Plantations in Jamaica, and the Commissioner of the Imperial Department of Agriculture for the West Indies recommended which of these estates should be acquired for the purpose. Over 4,000 acres of land were so chosen and negotiations were begun for their acquisition. In no case, however, were these negotiations brought to a conclusion during the year, and details of the scheme will therefore more properly form a subject for the report for 1899.

Perhaps the most important direct result of the hurricane, and one which may have an even more important indirect effect on the future of the Colony, is the practical extinction of what remained of the sugar industry in St. Vincent. The crop of sugar in the ground was so seriously damaged that there was not sufficient for local consumption.

The destruction of the sugar works cleared the way for a reformation in the antiquated processes hitherto in vogue, but there does not seem much probability that central factories on a large scale will be instituted.

In one or two cases proprietors are contemplating the introduction of somewhat improved machinery, but without one or more properly equipped central factories, I believe that the production of sugar, except on a small scale for local consumption, must cease to be the staple industry of the Colony.

The industry has been in a moribund condition for many years, but, had it not been for the hurricane, it might have dragged on for a few more years and so made the transition from the old to the new order of things less abrupt than it must now be.

For the moment, the good prices for arrowroot will help both large and small proprietors, but the downward tendency in the price has already begun, and the reaping of the new crop must cause a heavy fall.

The ordinary labourers, both male and female, who form the majority of the inhabitants, derive but little benefit from arrowroot, beyond the wages for digging the crop when it is ripe. For a large part of the year the cultivation requires but little attention, and, during that time, there is no occupation for them.

The immediate outlook for the Colony is by no means hopeful, but I do not even now take a despondent view of its ultimate progress if those who have the largest monetary staple in the Colony fully appreciate their interests and responsibilities.

The ultimate prosperity of the Colony, in the absence of central sugar factories, must be looked for in the establishment of small holders supplemented by working estates. The difficulty in establishing small holders is that large areas of land are unsuited for the production of a variety of products, but there is hardly an estate in which there is not suitable land for this purpose of which no use is made for estate purposes. If proprietors would dispose of these to small holders, they would, in time, have around them a prosperous and contented body of men, whose labour would always be available for the estate, but who would not be absolutely dependent on it.

A social revolution of this sort is far more easily and effectually carried out by voluntary effort on both sides than by Government interference, with all the formalities and safeguards which are necessary, but which must check its healthy development.

No. 311.

ST. LUCIA,
1899.

SAINT LUCIA.

(For Report for 1898, *see* No. 267.)

ADMINISTRATOR EGERTON to GOVERNOR SIR C. A. MOLONEY.

Government House,
Saint Lucia,
28th August, 1900.

SIR,

I HAVE the honour to transmit to Your Excellency my Report on the Blue Book for St. Lucia for the year 1899.

I have, &c.,

R. EGERTON, Lieutenant-Colonel,
Administrator.

His Excellency
Sir Alfred Moloney, K.C.M.G.,
&c., &c., &c.,
Grenada.

7043—800—10/1900 Wt 24000 D & S—5

REPORT ON THE BLUE BOOK FOR 1899.

FINANCIAL.

Revenue and Expenditure.

The net Revenue for the year was £71,479 3*s.* 8*d.*, being £12,219 8*s.* 4*d.* in excess of the estimated Revenue, £59,259 15*s.* 4*d.* The following table shows the net Revenue for the five years ended 31st December, 1899:—

Year.	Amount.
	£
1895	48,564
1896	55,331
1897	60,639
1898	67,628
1899	71,479

As compared with 1898, the Revenue for 1899 showed an increase of £3,851. This increase occurred chiefly under the heads of "Customs" and "Licences, Excise and Internal Revenue."

The following is a comparative statement of Revenue for the year under review:—

STATEMENT OF REVENUE.

Heads of Revenue.	Estimate for 1899.	Actual Revenue to 31st Dec. 1899.	Revenue for same period of preceding year.	Increase.	Decrease.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1. Customs	30,100 0 0	35,865 0 4	32,260 14 9	3,604 5 7	—
2. Port, Harbour, &c. Dues	4,600 0 0	4,716 5 9	5,638 11 8	—	922 5 11
3. Licences, Excise, and Internal Revenue not otherwise classified.	14,435 0 0	17,037 0 3	14,818 14 11	2,218 5 4	—
4. Fees of Court or Office, Payments for Specific Services, and Re-imbursements in aid.	3,827 8 0	4,073 13 4	3,929 14 3	143 19 1	—
5. Post Office	790 0 0	1,005 0 1	2,842 13 0	—	1,837 12 11
6. Telephone	486 12 0	526 0 9	483 15 10	42 4 11	—
7. Miscellaneous	220 0 0	3,244 16 2	3,865 11 0	—	620 14 10
8. Interest	1,735 5 4	2,030 17 0	1,932 10 9	98 6 3	—
9. Repayment of Loans	1,855 10 0	1,855 10 0	1,855 10 0	—	—
	58,049 15 4	70,354 3 8	67,627 16 2	6,107 1 2	3,380 13 8
10. Imperial Dept. of Agriculture	1,210 0 0	1,125 0 0	—	1,125 0 0	—
Totals ... ... £	59,259 15 4	71,479 3 8	67,627 16 2	7,232 1 2	3,380 13 8

It will be seen from the foregoing statement that, while there were substantial increases under the heads of "Customs and Excise," there was a considerable falling off under "Port and Harbour Dues" and "Post Office." The receipts under the latter head in 1898 were, however, quite abnormal, and have been fully explained in Sir C. A. King-Harman's Report for that year. The net increase in the Revenue of £3,851 is attributable to larger importations of foodstuffs and increased consumption of rum, due to greater circulation of money in connection with Military works.

The estimated Expenditure for the year was £58,670 19*s.* 1*d.*, and the actual Expenditure amounted to £63,820 15*s.* 9*d.*, or £5,149 16*s.* 8*d.* in excess of the Estimates, but £7,658 7*s.* 11*d.* less than the actual Revenue.

The following is a detailed statement of Expenditure for the years 1898 and 1899:—

STATEMENT OF EXPENDITURE.

Heads of Expenditure.	Estimate for 1899 and Supplementary Votes.	Actual Expenditure to 31st Dec. 1899.	Expenditure for same period of preceding year.	Increase.	Decrease.

23. Public Works, Extraordinary	3,220 17 6	2,829 11 6	4,803 3 7	—	1,973 12 1
Totals ... . £	67,331 12 10	63,820 15 9	60,975 3 1	6,970 12 5	4,124 19 9

In the expenditure under head "Public Works Extraordinary" is a sum of £1,832 8*s.* 5*d.*, on account of damage done by the hurricane of 1898, and an amount of £715 14*s.* 5*d.*, being the Colony's contribution towards the cost of a new cemetery for Castries.

Assets and Liabilities and Public Debt.

The balance-sheet of the Colony at the close of 1899 shows a surplus of £11,196 5*s.* 4*d.*, as shown by the following figures:—

	£	s.	d.
Surplus at 31st December, 1898 ...	3,537	17	5
Net excess of Revenue over Expenditure for 1899	7,658	7	11
Surplus at 31st December, 1899	£11,196	5	4

The Public Debt of the Colony at 31st December, 1899, amounted to £187,179 11*s.* 0*d.*, as compared with £189,579 11*s.* 0*d.* at the close of 1898.

The Debt is divisible as follows:—

	£	s.	d.
Inscribed Stock—Colony's share—for Public Works	50,579	11	0
Inscribed Stock for Water Works ...	12,000	0	0
Inscribed Stock — Castries Town Board's share	17,000	0	0
Inscribed Stock—Colony's share—for Immigration purposes ...	5,900	0	0
Total Inscribed Stock ...	£85,479	11	0
Debentures	101,700	0	0
Total Debt at 31st December, 1899 ...	£187,179	11	0

During the year under review £2,400 Debentures were redeemed, leaving the outstanding amount at £101,700, as against £104,100 at the end of 1899.

At 31st December, 1899, the Sinking Funds of the Colony for the repayment of the above loans stood as follows:—

	£	s.	d.
For Stock	3,241	18	6
For Debentures ...	7,465	0	0
	£10,706	18	6

At the end of 1898 they were:—

	£	s.	d.
For Stock	2,462	4	10
For Debentures	5,599	12	1
	£8,061	16	11

The charges on account of the Colony's Debt, including Interest and Sinking Fund, amounted to £13,103 7*s.* 9*d.*, against which a sum of £3,562 has been recovered from the Immigration Fund and the Castries Town Fund, being their share of Interest and Sinking Fund on loans raised in their behalf on the security of the Colony.

Castries Town Board.

The net revenue and expenditure of the Castries Town Fund for the five years ended the 31st December, 1899, were as follows:—

Year.	Revenue.			Expenditure.		
	£	s.	d.	£	s.	d.
1895	3,726	18	8	3,505	6	3
1896	3,978	6	0	3,626	1	11
1897	4,397	15	6	3,928	10	0
1898	5,276	12	10	4,718	2	8
1899	4,992	5	2	6,026	19	9

TRADE.

Imports and Exports.

Hereunder is a return of the chief articles imported during 1899 as compared with those imported in 1898:—

The increase in the importation of flour, fresh fruit and vegetables, peas and beans, and rice are no doubt due to the hurricane which swept over the island at the latter part of 1898, destroying the provision gardens. The labouring class had therefore to depend on the imported stuffs.

The large increase shown in the importation of cattle, sheep, pitch pine, building materials, and arms and ammunition are due to the presence of the garrison and the extensive Military works under progress.

The importation of manure shows an increase. This is due to the fact of the sugar factories having a larger area of canes under cultivation and enjoying somewhat better prices.

The increases shown under the other articles are due to general improvement in trade.

The decrease in the value of Ordnance stores is due to smaller importations by the Military.

The decrease as shown under coal is due to fewer steamers having called at Port Castries to replenish their bunkers. This coaling trade depends largely on conditions outside of the Colony.

All the other decreases may be accounted for by the ordinary fluctuations of the markets.

The following return shows the total value of the imports for the last five years:—

Year.	United Kingdom.	British Colonies.	United States.	France.	Other Foreign Places.	Total.
	£	£	£	£	£	£
1895 ...	74,512	28,690	39,358	6,809	5,577	154,946

Logwood	58 tons	114¼ tons	87 0 0	171 7 6
Pimento sticks	5,909	7,673	49 4 10	63 18 10

The comparatively small increase in the output of cocoa may be attributed to the effect of the hurricane which passed over the island at the latter end of the year 1898. The same reason can be set down for the decrease in the quantity of mangoes exported.

The decrease in the quantity of rum exported is no doubt due to the high protective duties levied on this article at the French ports.

The large decrease in the quantity of molasses exported may be accounted for through the manufacture of Muscovado sugar so steadily decreasing year by year.

The marked increase in the output of Usine sugar is due to there being a larger area under cultivation and better returns.

The decrease in the quantity of firewood exported is due to the low price obtained for this article at Barbados, the port to which it is chiefly exported.

A return of the total value of exports for the last five years is given below:—

Year.	United Kingdom.	British Colonies.	United States.	France.	Other Foreign Places.	Bunker Coal.	Total.
	£	£	£	£	£	£	£

1898 ...	11,154	6,625	49,054	22,691	3,891	73,093	166,508
1899 ...	20,424	4,696	53,006	16,824	3,623	72,095	170,668

Botanic Station.

The Curator of the Botanic Station has been occupied during the year chiefly in extending and in carrying out much needed

improvements in the Garden. Bridges have been made across the drains, a new office has been erected, garden seats have been imported and established in suitable places, land has been reclaimed and renewed, the nurseries have been improved, and the greater part of the Garden has been enclosed with a strong barbed wire fence. Orders were placed in England for iron palings and gates for the entrances, and arrangements made for the introduction of a good water supply. In addition to the work at the Garden, much has been done in assisting cultivation by distributing economic plants, and in the giving of personal attention and advice to planters in different parts of the island.

During the year a course of instruction in the principles of Agriculture to the teachers of the Primary Schools was given by the Assistant Professor of Chemistry, from Harrison College, Barbados. The course consisted of 15 lectures, and were supplemented by demonstrations in practical gardening by the Curator. Much intelligent interest was manifested by the 34 teachers who attended the course.

Mr. G. S. Hudson, who had been appointed to the post of Agricultural Instructor, assumed the duties of his office in the month of November. The total expenditure on the Station for the year amounted to £699 13*s.* 9*d.*, of which £37 19*s.* 2*d.* was recouped by the sale of plants, fruits, and flowers.

CROWN LANDS AND SURVEYS.

The Crown Lands and Survey Department accomplished much good work during the year in the settlement of boundaries, the escheat of vacant lands, and the allotment and alienation of the Crown lands. The confidence of the peasantry in the Department is becoming more assured, as is evidenced in the increased desire to purchase lands for settlement, and during the year 102 applications were received for an aggregate area of 995 acres, including eight town and village lots. In the previous year 87 applications were received for an aggregate area of 965 acres. The number of lots alienated during the year was 64, dealing with an area of 476½ acres, valued at £573 14*s.* 0*d.* In 1898, 39 lots, containing 381 acres and valued at £368 15*s.* 0*d.*, were alienated. This steady increase in the acquirement of landed property by the peasantry is a gratifying indication of the increase of thrift and prosperity.

In 1898, 14 vacant estates, comprising 2,621 acres, were published for escheat, and of these 13, representing 2,257 acres, were vested in the Crown during the year under review.

In addition to the ordinary work of the Department, special attention has been given to the detection and suppression of illicit woodcutting, and there is every reason to believe that the additional supervision is having a good effect.

The revenue of the Crown Lands Department during the year was £1,085 9*s.* 6*d.* and the expenditure £526 5*s.* 9*d.* A further sum of £648 15*s.* 6*d.* was spent on the opening of a new road through forest land, connecting the capital town with the Windward coast. The balance to the credit of the Land Sales Fund at the 31st December, 1899, was £1,364 19*s.* 9*d.*

SHIPPING.

The following comparative table gives the total shipping inwards and outwards for the last five years:—

Year.	Steam Vessels.									Sailing Vessels.									Grand Total.		
	With Cargoes.			In Ballast.			Total Steam Vessels.			With Cargoes.			In Ballast.			Total Sailing Vessels.					
	Vessels.	Tons.	Crews.	Vessels.	Tons.	Crews.	Vessels.	Tons.	Crews.	Vessels.	Tons.	Crews.	Vessels.	Tons.	Crews.	Vessels.	Tons.	Crews.	Vessels.	Tons.	Crews.
1895	261	304,787	11,666	470	603,206	15,435	731	907,993	27,101	543	28,032	3,062	72	11,643	485	615	39,675	3,547	1,346	947,668	30,648
1896	312	387,076	11,448	558	761,412	17,714	870	1,148,488	32,162	440	27,157	2,922	140	15,145	1,011	580	42,302	3,933	1,450	1,190,790	36,095
1897	330	429,978	11,139	909	1,308,647	26,762	1,239	1,738,625	40,901	500	26,481	3,234	152	15,454	1,114	652	41,935	4,348	1,891	1,780,560	45,249
1898	329	399,598	11,711	784	1,112,938	23,889	1,113	1,512,536	38,600	455	24,985	2,957	206	20,156	1,458	661	45,141	4,415	1,774	1,557,677	43,015
1899	343	424,016	15,347	614	832,160	20,240	957	1,456,176	35,587	422	15,200	2,773	119	7,877	819	541	23,177	3,592	1,498	1,279,353	39,179

The total number of steam vessels entered and cleared at Port Castries during 1899 was 957, or 156 less than in 1898. The total number of sailing vessels entered and cleared was 541, or 120 less than in 1898.

The total tonnage entered and cleared during 1899 amounted to 1,279,353, or 278,324 tons less than the previous year.

During the year under review the number of ships of war which called for coal and other purposes was 48, a decrease of 11 as compared with the previous year. Of these, 24 were Her Majesty's ships, 12 American, seven Dutch, four German, and one French.

LEGISLATION.

During the year 21 Ordinances were passed, of which 20 were assented to. Of these, the most important were:—

1. The Castries Water Supply Ordinance (No. 3).
2. The Castries Town Board (Vesting of Cemetery) Ordinance (No. 10).
3. The Police Ordinance, 1887, Amendment Ordinance, 1899 (No. 12).
4. The Patents Ordinance, 1899 (No. 14).
5. The Minor Products Protection Ordinance, 1899 (No. 16).

The Castries Water Supply Ordinance, 1899, vests in the Castries Town Board, as the Water Authority for Castries, the Water Works lately completed under the direction of Mr. Chadwick, and provides for the proper management of the works by the Board.

The Castries Town Board (Vesting of Cemetery) Ordinance, 1899, vests in the Castries Town Board, for the purposes of a public cemetery for Castries, certain portions of land acquired by the Government along Choc Bay and a portion of the Queen's Chain adjoining them. It provides for the repayment into the Treasury of the cost of the lands so acquired, and for the efficient management of the new cemetery by the Board.

The object of the Police Ordinance, 1887, Amendment Ordinance, 1899, is (*a*) to limit the period of enrolment of a constable to two years, (*b*) to reduce to sixpence the daily stoppage from the pay of constables in hospital, (*c*) to give to constables retiring from the Police Force after five years or more service the right to a refund of monies contributed by them to the Police Reward Fund otherwise than by fines, (*d*) to prevent the loan of money to constables, and (*e*) to introduce certain minor modifications in the Police Law of the Colony.

The Patents Ordinance, 1899, deals generally with the registration and protection of patents, and does away with the

necessity existing hitherto of introducing a separate Ordinance in respect of every patent sought to be protected in the Colony.

The Minor Products Protection Ordinance, 1899, is intended to regulate the sale and purchase of certain agricultural products, such as cocoa, logwood, and any other product of the Colony which may be proclaimed to be a minor product by the Governor-in-Council. It provides for the registration of estates and lands upon which minor products are grown, and establishes a system of permits, with a view of checking the dishonest removal of minor products from the place where they are grown to the place where they are sold or disposed of.

EDUCATION.

During the year 1899 Primary Education was being carried on in 42 schools, all assisted by the Government, and in three others not receiving Government aid. The number on the rolls of the Assisted Schools was 5,735, the average attendance being 3,188. The percentage of children attending school to the whole population was 11·7.

The amount of the Government grant was £3,079 9*s.* 1*d.*, and the cost per child was 19*s.* 6*d.*

One school, belonging to the East Indian Mission, was closed during the year, and of the 41 remaining, 19 were "mixed," or attended by both boys and girls, and 22 were "separate," confined to one or other of the sexes.

An attempt was made during the year to enforce in Castries the provisions of an Ordinance passed in 1889 relating to compulsory education, but the law proved to be unworkable, and the attempt was abandoned pending the introduction of an amending Ordinance.

The average Government grant per school was at the rate of £76 2*s.* 4*d.* per annum, and the average salary of the head teachers was £57 16*s.* 0*d.*

Special attention was given during the year to the teaching of English, and the results of the first examination in that subject were, on the whole, satisfactory.

A course of lectures on the "Chemistry of Plant Life" were delivered to teachers of Primary Schools by an officer of the Imperial Department of Agriculture. The lectures were attended by 34 teachers and were highly successful, the teachers showing much intelligent interest and a manifest desire to profit by the instruction afforded them. Practical demonstrations in the Botanic Station by the Curator accompanied each lecture.

The results of the annual examination of the schools were eminently satisfactory; 2,923 children were examined, and of these 2,722 passed in two subjects, the percentage of passes being 93·1.

ST. LUCIA, 1899.

From an interesting report by the Inspector of Schools I gather the following results of the working of his Department for the year as compared with the previous year, and with the year 1889:—

Year.	1889.	1898.	1899.	Increase for 10 years.
Population ...	43,124	47,976	48,650	5,526
Number of schools	27	39	42	15
Number on rolls ...	3,416	5,280	5,735	2,319
Average attendance	1,865	2,787	3,188	1,323
Number examined	1,370	2,512	2,923	1,553
Number passed in two subjects.	1,011	2,124	2,722	1,711
Percentage of children to whole population.	7·9	11·0	11·7	3·8
Government grant	£ s. d. 1,427 18 4	£ s. d. 2,904 19 1	£ s. d. 3,079 9 1	£ s. d. 1,651 10 9
Cost per unit ...	15 4	1 0 10	19 6	4 2

Secondary education was continued at St. Mary's College for boys and at the Convent of St. Joseph's for girls. At the College the number of boys on the rolls was 70, the average attendance being 63. At the Convent the number of girls on the rolls was 100, the average attendance being 90.

As in former years, the more advanced boys at the College were prepared for the Cambridge Local Examination. Eleven were presented and all have passed, four with honours.

For the last four years no failure in passing this Examination has been recorded.

There are no technical or industrial schools in the Colony.

GOVERNMENT INSTITUTIONS.

Hospitals, &c.

There are five hospitals in the Colony, *i.e.*, the Victoria Hospital in Castries, with accommodation for 130 patients; the

Soufriere Hospital, containing 26 beds; the Vieuxfort Hospital, with 21 beds; and the Dennery Hospital, with accommodation for 30 patients. There is also a hospital for the exclusive treatment of yaws, which is situated about three miles from Castries, on an island about ½ mile from the shore, and in which accommodation is provided for over 100 patients.

In addition to the hospitals, there is a Poor Asylum in Castries for the reception of infirm and chronic cases, and there is a Government Dispensary in each of the smaller villages in the island.

There is no Lunatic Asylum in the Colony. All cases of insanity are sent for detention and treatment to the Central Asylum at Grenada.

The Colonial Surgeon in his report for 1899 on the Medical Institutions of the Colony states that the general health of the people was satisfactory. No case of contagious disease occurred during the year.

There were 55 cases under treatment in the Yaws Hospital during the year; of these 22 were discharged cured.

SAVINGS BANK.

	£	s.	d.
On the 1st January, 1899, the balance in the Savings Banks at Castries, Soufriere, and Vieuxfort to credit of depositors was	12,081	11	9
The amount deposited during the year and accumulated interest was ...	14,916	15	9
Total ...	£26,998	7	6
Withdrawn during the year	13,113	17	7
Leaving a balance to credit of depositors at 31st December, 1899 ...	£13,884	9	11

hing company, inc.

ST. LUCIA. 1899.

The subjoined table shows the transactions of the Bank during the last five years:—

Year.	No. of Transactions.	Amount of Deposits.	Amount of Withdrawals.	No. of Depositors at 31st Dec. 1899.	Total Amount to Credit of Depositors at 31st Dec. 1899.
		£	£		£
1895	3,201	7,000	7,162	1,275	9,267
1896	3,351	7,165	6,953	1,277	9,810
1897	3,635	8,498	8,162	1,294	10,382
1898	5,113	10,991	9,553	1,516	12,081
1899	7,027	14,567	13,114	1,263	13,884

The decrease in the number of depositors at 31st December, 1899, as compared with the number at the corresponding period of the previous year is due to the closing, after due advertisement had been made for the depositors, of the accounts with small balances, principally accrued interest, which had remained unclaimed for over three years.

The following investments on account of the funds of the Bank were held at 31st December, 1899:—

	£
Canadian Government 3½ per cent.	2,000
New South Wales Government 3½ per cent...	2,000
Colonial Bank 3 per cent.	2,500
Western Australia Government 3 per cent. ...	3,000
Trinidad Government 3 per cent	1,500
South Australia Government 3 per cent. ...	1,500
Barbados Government 4 per cent. ...	1,000
Total	£13,500

The sum of £361 1*s.* 9*d.* was received for interest on the investments, and the interest which accrued to depositors' accounts during the year amounted to £349 19*s.* 5*d.*

FRIENDLY SOCIETIES.

The Registrar of Friendly Societies, in submitting his report on the second year's working of the Friendly Societies Ordinance, 1896, states that, to the four societies in existence on the 31st December, 1898, were added two more in 1899, by registration. The total membership at the close of 1899 was 491, as against 324 in 1898, and the aggregate funds at the end of the year under report amounted to £405 6*s.* 7*d.*, as compared with £230 16*s.* 9*d.* in 1898.

These statements clearly indicate the progress and prosperity of the societies, and the resultant benefits to individuals, and to the general community.

POLICE.

The authorised strength of the Police during the year was 57, namely, three sergeants, four corporals, and 50 privates, of first, second, and third classes. Of this number, two sergeants, two corporals, and 29 privates are stationed in Castries. The Chief of Police complains, and I think with good cause, that the strength of the Force, especially in Castries, is insufficient for the duties which they should perform. In the last five years the numbers of cases before the courts of the island have increased from 684 in 1893 to 1,145 in 1899.

In addition to their ordinary duties, the services of the Police are utilised in assisting to enforce the quarantine regulations in respect of ships coaling alongside the wharves. The cost of the Police Force during the year was £3,287 1*s.* 1*d.*

PRISONS.

The number of prisoners received during the year was:—Males 587, females 205, total 792; the daily average being 58·94.

The numbers in 1898 were:—Males 484, females 210, total 694; the daily average being 53·69, as against 51·48 in 1897.

The increase in the Prison population is due to the large influx of people of the labouring class attracted to Castries by the employment to be obtained on the Military works and in the coaling trade. The present accommodation is insufficient for the numbers received, and an extension of the prison is under consideration.

Of the 587 male prisoners received during the year, 387 were convicted, and of these 146 were Road Tax defaulters and 73

St. Lucia, 1899.

were Military prisoners. The great majority of sentences were short—from eight days to three months, 15 being from one to five years, and four for five years or more.

One hundred and thirty-one convicted prisoners were natives of St. Lucia, 46 were Barbadians, 28 were coolies, 23 (all Road Tax defaulters) were from Dominica, 14 from St. Vincent, 13 from Antigua, eight from Trinidad, six from Montserrat, six from Demerara, five from Martinique, 11 were merchant seamen, and 17 came from other colonies.

The following classification is interesting:—

Natives of St. Lucia	131
Military prisoners	73
Merchant seamen	17
Indian coolies	28
West Indian immigrants ...	138
Total convicted prisoners ...	381

Of the 205 female prisoners, 158 were convicted, and of these 102 were natives of St. Lucia, 28 were from Barbados, 10 from Dominica, one was an Indian coolie, and 17 from other Colonies.

The total expenditure of the Prison was £1,056 12*s.* 9*d.*, of which £614 were paid as salaries to the staff; the daily average cost per head of feeding the prisoners was the same as in 1898, namely, 3½*d.*

The health of the prisoners was fairly good, the daily average on the sick list being 2·25. There were no deaths during the year.

Corporal punishment has not been inflicted in the Prison for the last two years.

There were no escapes during the year.

Criminal Statistics.

The statistics for the year show an increase in the number of criminal offences as compared with the previous year.

The following comparative table is instructive:—

Year.	Number of offences reported to Police.	Number of Persons apprehended.	Number of Summary Convictions.	Number of convictions in Superior Court.
1896	1,309	1,874	1,096	7
1897	1,365	1,834	1,013	12
1898	1,461	1,985	1,056	18
1899	1,750	2,270	1,257	26

The convictions in the Royal Court were for the following offences:—

Cattle stealing	7
Housebreaking	4
Burglary	2
Causing wounds	5
Causing grievous harm	2
Common assault	1
Larceny	1
Manslaughter	1
Arson	1
Unnatural offence	1
Falsification of documents by a Public Officer	1

The nationality of the offenders in the above-cited cases were:—St. Lucia 12, East Indians seven, other countries seven.

In the Cause list of summary convictions it is satisfactory to note that the number of cases of prædial larceny were but 44, as compared with 62 in the previous year.

In his report for the year, the Attorney-General points out that although the records of the last four years do show an increase in the number of criminal offences, yet this increase cannot be regarded as being out of proportion to the growth of the population, seeing that this growth has been materially aided by a steady flow of immigration, and that a high percentage of the immigrants is made up of the more shifty and

turbulent element among the labouring classes of the neighbouring colonies.

Vital Statistics.

The registered births during the year 1900 were 1,865 as against 1,858 in 1899, the birth rate being 3·54 per cent. of the population as against 3·57 in the previous year. Of the children born, 942 were males and 923 females, the legitimate births numbering 853 and the illegitimate 1,030.

These figures show an improvement in the general morality of the population, the rates per cent. in the last three years being as follows:—

Year.	Legitimate rate.	Illegitimate rate.
1897	39·73	60·25 } Per cent. of the population.
1898	42·41	57·59
1899	44·77	55·23

The registered deaths were 1,191, or 23 less than in 1898, the rate per cent. being 2·14 as against 2·17 in the previous year. One death from snake bite was recorded during the year.

The natural increase of the Colony was 674, or 30 more than in 1898, and the total population on the 31st December, without taking into account accession by immigration, was 48,650, of whom 23,621 were males and 25,029 females, equal to 208 to the square mile.

Meteorology.

Observations taken during the year at the Botanic Station in Castries, 10 feet above sea level, show that the mean daily height of the barometer was 29·998, the mean annual temperature was 79·2, and the total rainfall was 84·64 inches. A maximum temperature of 91·1 in the shade was recorded in May and a minimum temperature of 68·5 in December. The highest rainfall was in August, when 17·33 inches were recorded; the lowest in April, when only 1·31 inches fell. Rain fell on 262 days during the year, the greatest quantity falling on any one day being 6·92 inches, on the 30th August.

POST OFFICE.

The Post Office statistics for 1899 show that the business of the department is increasing:—

Received from Abroad.

Year.	Letters and Post-cards.	Papers and Books.
1897	85,574	50,896
1898	85,201	50,757
1899	108,901	58,343

Sent Abroad.

Year.	Letters and Post-cards.	Papers and Books.
1897	72,718	6,324
1898	82,531	7,837
1899	109,045	15,586

Parcel Post.

Year.	Received.	Sent.
1897	1,445	459
1898	1,744	509
1899	2,025	613

Money Orders.

Year.	Amount Received.	Amount Sent.
	£ s. d.	£ s. d.
1897	978 8 7	4,891 6 4
1898	1,235 15 5	5,809 13 8
1899	1,291 8 0	7,600 13 2

But although the transactions of the department were so largely augmented, the receipts for the year were considerably below those of 1898, the decrease being due to the reduction of postage from 2½*d.* to 1*d.* and to the large stock of 2*d.* stamps purchased in 1898 for speculative purposes and remaining in the hands of dealers and private parties.

The revenue and expenditure for the years 1897, 1898, and 1899 were as follows:—

Revenue.

1897.	1898.	1899.
£ s. d.	£ s. d.	£ s. d.
1,879 8 5½	3,027 12 9½	1,439 18 5

Expenditure.

1897.	1898.	1899.
£ s. d.	£ s. d.	£ s. d.
2,139 7 7	2,148 6 9	2,120 19 11

The effect of the reduction of postage from 2½*d.* to 1*d.* has been as follows (the letters despatched in 1898 being taken as averaging 2½*d.* per half-ounce, and those in 1899 as averaging 1*d.* per half-ounce):—

	£	s.	d.
In 1898, 82,531 letters yielded a revenue of	859	13	11½
In 1899, 109,045 letters yielded a revenue of	454	7	1
Approximate loss of revenue ...	£405	6	10½

TELEGRAPH AND TELEPHONE SERVICES.

St. Lucia is connected by the West India and Panama Telegraph Company's cables with Santiago de Cuba in the north, from whence communication with the United States, Europe, and other parts of the world is obtained, and with British Guiana in the south, touching at St. Vincent, Grenada, Barbados, and Trinidad. In each case a duplicate cable has been laid down. Communication may also be had with the United States and Europe over the cables to Jamaica, and thence by the lines of the Bermuda Cable Company.

A telephone system, completed in 1896, connects Castries with the small towns and villages in the island. One hundred and twenty miles of trunk line are open for traffic. The exchanges at Castries, Soufriere, and Vieuxfort are in charge of paid operators, those at the five villages are worked by the police. The wooden poles on which the line was originally erected are gradually being replaced by iron rails, which are not only better, but will eventually prove cheaper.

The revenue derived from the system for the year under review amounted to £526 0*s.* 9*d.*, as compared with £483 15*s.* 10*d.* in 1898. The expenditure in 1899 was £442 14*s.* 9*d.*, as against £376 13*s.* 10*d.* in 1898. The system is in the hands of the Government.

MILITARY FORCES AND EXPENDITURE.

The total Military expenditure for the year was £79,459 5*s.* 3*d.*, as compared with £54,385 7*s.* 4*d.* in 1898.

PUBLIC WORKS.

The ordinary expenditure in 1899 on repairs of public buildings and wharves, and on a few minor works of construction,

amounted to £2,193 1*s.* 0*d.* Besides this amount, a further sum of £1,832 8*s.* 5*d.* was expended on works in respect of damage due to the hurricane in September, 1898.

The Public Workyard was carried on during the year at a profit, many important repairs to shipping being successfully accomplished. The balance in the Treasury to the credit of the yard at the 31st December amounted to £572 18*s.* 9*d.*

The total ordinary expenditure on the roads of the island was £4,206 7*s.* 0*d.* In addition to this amount, a sum of £1,969 12*s.* 1*d.* was expended from the Mansion House Fund, affording employment and relief to sufferers from the hurricane.

In the First District 15 miles of new roads were opened at an average cost of £57 14*s.* 5*d.* per mile, in the Second District nine and a half miles at an average cost of £29 16*s.* 7*d.*, and in the Third eight miles at an average cost of £36 9*s.* 4*d.* per mile.

The cost of maintenance was:—

	£	s.	d.	
First District	20	16	10	per mile.
Second „	12	3	2	„
Third „	13	0	10	„

The road mileage in the island maintained during the year was:—

—	Highways.	Byeways.	Total.
	Miles.	Miles.	Miles.
First District	53	39½	92½
Second District	37¼	29	66¼
Third District	32	28½	60½
Total	...	...	219¼

The work done is excellent, and reflects great credit on the Road Boards and on their surveyors.

IMMIGRATION AND EMIGRATION.

The indentured service of the coolies remaining in the Colony came to an end at the close of 1898, and the work of the Immigration Department during the year under report was more of a

paternal than a protective nature. The Office of Protector and the Medical Officers were all abolished during the year, and the department was practically closed.

A tolerably regular stream of emigration to the goldfields in French Guiana continued throughout the year. No official record is kept of such emigration, but, as near as can be ascertained, some 1,400 people attempted to better their condition in this direction. The policy of the Government is opposed to the exodus of the inhabitants, and no official sanction is accorded to recruiting.

COAL.

The quantity of coal imported during the year was 61,487 as compared with 76,046 tons in 1898; the exports amounted to 76,417 tons as against 73,411 tons in the previous year.

On every ton or fraction of a ton of coal discharged in Castries a harbour due of sixpence (6*d.*) is levied, and paid by the ship discharging. A duty of sixpence (6*d.*) per ton is in addition paid by the importer.

Of the quantity of coal imported in 1899, 801 tons were imported for the manufacture of sugar, and were exempt from the payment of both of the dues mentioned in the preceding paragraph.

Of the 76,417 tons exported during the year, 14,467 tons were supplied to men-of-war and transports, 61,422 tons were put on board merchant steamers, and 528 tons were exported to other colonies.

The revenue derived from coal in 1899 amounted to £3,034. In 1898 the revenue was £3,802.

AGRICULTURE.

Sugar.

The Usine sugar crop of the year amounted to 4,176 tons, being less than that of 1898 by 337 tons. This decrease was due to the severe shaking which the canes received in the hurricane of September, 1898. The production of Muscovado sugar continues to steadily decline, the exports for 1899 being only 101,200 lbs., as compared with 680,900 lbs. in 1898.

Cocoa.

The trees appear to have quite recovered from the shaking received in the hurricane of 1898. The small, or spring crop,

of cocoa was to a large extent lost through the drought on the drier districts, such as Soufriere, but the main crop of November and December was universally regarded as a fair one in these districts. In the more humid localities both the spring and winter crops yielded moderately. The prevalence of high prices has done much to obviate financial difficulties occasioned by the hurricane, yet cocoa planters can hardly be said to have had the benefit of a "good year" since 1895, and, taking into consideration the several hundred acres of young cultivation that have come into bearing since that date, we may confidently look forward to an increased export in the future. Apart from extensions of the smaller proprietors' plantations, the six largest cocoa estates in the Colony can show an increased bearing area of about 400 acres, while their younger plantations are on a considerable scale. Greater attention is now being given to pruning, manuring, and cultivation, and the model cocoa plots which the Imperial Department of Agriculture proposes to establish throughout the island cannot fail to exercise a beneficial effect on this cultivation, when added to the other practical work carried out by this department's local officers.

Nutmegs.

There does not appear to have been any very appreciable extension of this cultivation during the past year, but nevertheless there are some fair plantations in the island that have made considerable progress.

Liberian Coffee.

This cultivation is now somewhat in disfavour in consequence of low prices and a depressed market. In fact, it may be conceded that the present high price of cocoa had had a deterrent effect on the introduction of all lesser known products, planters arguing that they are quite content with cocoa without going further afield. Scale blights have decreased in severity, but are still "en evidence" in the drier districts. The production of Liberian coffee for export would hardly be profitable at current prices (say 30*s*. per cwt.), but local sales were possible at 42*s*. per cwt., which price should prove sufficiently remunerative to keep existing areas in cultivation.

Other Minor Products.

The cultivation of kola, turmeric, annatto, ginger, vanilla, rice, tobacco, india rubber, and muskseed is still carried on. The reports on ginger and rice are very encouraging, and the area under cultivation of these two products is rapidly increasing. The price of kola is not sufficiently remunerative to warrant new plantations of this product being put in.

GENERAL REMARKS.

The year 1899 was a prosperous one for the Colony. On those plantations on which the cocoa trees were not destroyed by the disastrous hurricane of 1898 the trees are rapidly recovering the severe shaking which they received, and the outlook for the 1900 crop is good. There is also a marked increase in the cultivation of this product, many young plantations having been started. The opening up of fertile tracts of Crown lands by the construction of roads, and the communication thus afforded with the several towns, has been of great benefit to the Colony, and accounts in great measure for the increase in the number of applications for the purchase of land.

Although the sugar crop for the year was slightly less than that for 1898, yet the prices realised were higher than those for the previous year. Encouraged by the better prices, the cultivation of the sugar cane by the Usine sugar factories is being extended.

It is satisfactory to record that the general health of the Colony was good. There were no cases of a contagious or infectious nature, and the death rate was lower than that of the previous year.

R. EGERTON, Lieutenant-Colonel,

Administrator.

No. 312.

ST. VINCENT.

(For Report for 1898, *see* No. 281.)

ADMINISTRATOR DRAYTON to GOVERNOR SIR ALFRED MOLONEY.

Government House,
St. Vincent,
24th October, 1900.

SIR,

I HAVE the honour to forward, for transmission to the Secretary of State for the Colonies, the Blue Book Report for this Colony in respect of the year 1899.

I have, &c.,

EDWARD DRAYTON,
Administrator.

His Excellency,
Sir ALFRED MOLONEY, K.C.M.G.,
&c., &c., &c.,
Grenada.

7343—800—12/1900 Wt 24600 D & S—5

BLUE BOOK REPORT FOR THE YEAR 1899.

FINANCIAL.

Revenue.

The Revenue of the year 1899 from local sources was £29,218, being £2,317 more than in 1898, and £2,636 more than the average of the last five years' Revenue from such sources, which was as follows:—

Year.	Amount.
	£
1895	25,460
1896	26,487
1897	24,845
1898	26,901
1899	29,218

2. The total Colonial Revenue for the year was, however, £63,293, Imperial Grants-in-Aid amounting to £31,075, and an appropriation of £3,000 from the Hurricane Relief Fund in support of abnormal expenditure on Poor Relief and Hospitals consequent upon the hurricane of September, 1898, having been credited to the General Revenue during the year.

3. The following comparative statement of the Revenues of 1898 and 1899, under the principal heads of account, shows that the satisfactory results of the latter year were due chiefly to receipts from import duties, large importations of food-stuffs and lumber, &c., taking place in consequence of the hurricane; while Post Office Revenue shows a large increase owing to the introduction of a new issue of combined postage and revenue stamps. The decrease under Internal Revenue is attributable chiefly to the fact that a large portion of the Land and Income Taxes was not collected until the current year.

Head of Revenue.	1899.	1898.	Increase.	Decrease.
	£	£	£	£
1. Customs...	15,846	13,140	2,706	—
2 Port and harbour dues ...	794	856	—	62
3. Licences, Excise, &c.	7,693	8,460	—	767
4. Fees of office, &c.	609	526	83	—
5. Post Office	2,281	1,691	590	—
6. Telephones	429	390	39	—
7. Rent of Government property	45	81	—	36
8. Interest	1,361	1,606	—	245
9. Miscellaneous receipts... ...	123	79	44	—
10. Sales and leases of Crown lands	37	72	—	35
Total Local Revenue ...	29,218	26,901	3,462	1,145
PARLIAMENTARY GRANTS.				
Grant for Botanical Station and Agricultural School.	775	—	775	—
Grant for damage caused by Hurricane.	25,000	—	25,000	—
Grant made in 1898 in aid of General Revenue.	5,000	—	5,000	—
Grant to meet estimated deficit for January, February, and March, 1899.	300	—	300	—
Appropriation from Hurricane Relief Fund for Hospital and Poor Relief.	3,000	—	3,000	—
Total General Revenue ...	63,293	26,901	37,537	1,145

St. Vincent. 1899.

4. The expenditure in 1899 from sources of revenue other than Parliamentary Grants amounted to £30,322, being £2,648 more than in 1898, and £1,849 more than the average of the last five years; the total expenditure in each of which was as follows:—

Year.	Amount.
	£
1895	28,811
1896	27,591
1897	27,866
1898	27,674
1899	30,322

5. On examination of the details in comparison with those of 1898, as shown below, it will be seen that the increased results of 1899 were due chiefly to the heavy expenditure on Poor Relief and Hospitals, almost the whole of the labouring class of the Colony having been reduced by the hurricane to a state of destitution. As has been explained in paragraph 2, this abnormal expenditure was met by an appropriation from the funds raised in England and elsewhere to relieve the widespread distress caused by the storm.

6. In addition to the expenditure of £30,322, as shown above, £847 was disbursed from the Imperial Grant-in-Aid of the Botanical Station and Agricultural School, and £16,686 from the Imperial Grant of £25,000 towards the damage done by the hurricane, making a total expenditure for the year of £47,855.

St. Vincent 1899.

7. As affording a measure of relief to the prostrate sugar industry of the Colony, the export duties on sugar and its products, molasses and rum, levied for purposes of General Revenue which had been suspended during 1898 by direction of the Secretary of State for the Colonies, were finally repealed in 1899, leaving in force only such duties on these exports as were raised in re-payment of the Immigration Loan. These also have been repealed in the current year, so that only export duties on starches, cotton, and cocoa are now in force.

8. As in previous years since 1895, an additional import duty, of ten per cent. on duties payable was levied in 1899 in support of General Revenue.

Assets and Liabilities.

9. The year opened with a deficit of £5,318, towards which an Imperial Grand of £5,000 was made in 1898, but not brought to account until 1899; it closed with an apparent surplus of assets of £10,120, but this includes an unexpended balance of £8,314 of the Imperial Grant-in-Aid of the damage done by the hurricane, so that the actual surplus is £1,806; and inspection of the returns of revenue and expenditure given above will show that the existence of this surplus is due to the presence in the revenue accounts of funds derived from other than local sources. A tabulated statement of the assets and liabilities at the end of the year is subjoined.

The Public Debt is £15,710, of which £5,000 is provided for by an Imperial Grant, held by the Crown Agents for the Colonies.

* £12,618 7*s.* 9*d.* of the Imperial Grant-in-Aid for these purposes is on deposit with the Crown Agents for the Colonies.

† Exclusive of £72 8*s.* 4*d.* advanced for Botanic Station and Agricultural School in excess of payments at 31st Dec. from the Imperial Grant.

‡ This surplus includes £8,313 17*s.* 1*d.*, unexpended balance of Imperial Grant of £25,000 in aid of damage done by the hurricane of 1898.

Public Debt.

10. The Public Debt of the Colony at the end of 1899 stood at £15,710 in debentures, of which £9,710 are at 5 per cent., £1,000 at 4 per cent., and £5,000 at 3½ per cent. This last issue of 3½ per cent. debentures is provided for by an Imperial Grant, held on deposit by the Crown Agents for the Colonies, to extinguish them at due date, so that Colonial Revenue was, at 31st of December, 1899, only liable for £10,710 of the debt, of which £6,950 is repayable from the funds of Kingstown and Georgetown. The debt of £3,760, for which the Colony's Revenues are solely responsible, is being repaid at the rate of £560 per annum, and all but £1,000 in 4 per cent. debentures will be repaid by February, 1905, when a payment of £200 for five years will extinguish the balance.

11. The Immigration Loan of 1889—£4,750—was finally repaid during 1899.

Revenue and Expenditure of Towns.

12. A comparative statement of the total revenue and expenditure of the several town authorities for the last five years is subjoined.

Revenue.

—	1895.	1896.	1897.	1898.	1899.
	£	£	£	£	£

13. The debts of the Towns are as follows:—

Debts of Towns.

	£	£
Kingstown Water Supply ...	5,500	
„ Town Improvement	750	
		6,250
Georgetown Water Supply ...		700
		£6,950

Provision for repayment of these loans is made by rates levied annually on the townspeople, and the debts are secured on the General Revenue of the Colony. The Kingstown Water Supply Loan is being repaid at the rate of £400 per annum, and will be finally retired in 1913; the Town Improvement Loan at the rate of £150 per annum, and will be retired in 1904. The Georgetown Loan is being repaid by instalments of £50, and will be extinguished in 1913.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

IMPORTS AND EXPORTS.

14. 1899 being the fourth year in which the statistical value of the trade of the Colony was arrived at by adding customary charges to prime values, a statement is appended showing the total value in the four years of the imports and exports under the usual classes:—

Imports.

Classes.	1896.	1897.	1898.	1899.
	£	£	£	£
I. Live animals, food, drink, &c.	31,838	32,684	40,931	50,765
II. Raw materials	10,020	9,044	14,399	15,391
III. Manufactured articles ...	29,632	29,095	32,979	37,471
IV. Coin and bullion*... ...	—	—	—	—
Totals	71,490	70,823	88,309	103,627

Exports.

Classes.	1896.	1897.	1898.	1899.
	£	£	£	£
I. Live animals, food, drink, &c.	61,528	63,705	40,008	28,418
II. Raw materials	2,308	1,632	1,054	3,133
III. Manufactured articles ...	3,556	3,598	3,604	2,024
IV. Coin and bullion*	—	—	—	—
Totals	67,392	68,935	44,666	33,575

* No returns, entries not having been required of importers and shippers until 1900.

15. The imports in 1899 exceeded those of 1898 by £15,318 in value, although 1898 was itself a year of abnormal importations, valued at £17,586 more than in 1897. The chief increases are under classes I. and III., and the details are shown in the following comparative statement:—

Chief Articles.	Value.	
	1898.	1899.
Class I.	£	£
Biscuits	2,099	1,856
Butter	1,599	1,636
Fish, Salted, &c.	5,997	5,836
Flour, Wheaten	11,341	17,280
Flour, other kinds	850	2,151
Pork, Salted, &c.	2,635	2,326
Rice	3,331	3,114
Salt	595	1,627
Sugar, Muscovado	1,152	2,555
Tobacco, Cigars, &c.	1,023	1,010
Class II.		
Manures	1,182	490
Petroleum Oil	1,052	943
Timber and Shingles	9,389	11,804
Class III.		
Textile manufactures, other than Rope, Cordage, and Canvas.	15,406	16,113
Metal, manufactured	6,293	7,039
Boots and Shoes	799	1,013
Cement	520	1,628
Soap	1,466	1,316

16. Importations of food-stuffs, necessitated by the destruction of the ground provision crop by the storm of September, 1898, and of lumber and other articles to reconstruct the buildings swept away thereby, are the chief causes of the unusual figures of 1898 and 1899. A noticeable feature of the table is the increased quantity of imported muscovado sugar; in 1897 the value of this import did not reach £1, in 1899 it amounted to £2,555; a sad testimony to the devastation of sugar works and cane cultivation wrought by the cyclone.

17. The value of the exports for the year was £33,575—the lowest on record, and less than half the value of those in the year preceding the hurricane. As will be seen from the following comparative statement of the principal products exported in the last four years, this lamentable result is attributable to the practical disappearance of sugar, molasses, cocoa, and spices from the returns, as the result of the hurricane. The other staple of the Colony, arrowroot starch, under the stimulus of causes to which reference will be made later on, kept up its normal figure of value in the period under review.

Article.	1896.	1897.	1898.	1899.
	£	£	£	£
Sugar (Muscovado)	21,512	25,592	14,610	415

18. The volume and direction of the Colony's trade in the four years 1896-9 are shown in the following table. Trade with the United Kingdom was about the same as before the year of the hurricane, while the increased imports from Foreign Countries and British Colonies are explained by the importations of American food-stuffs and lumber, to which reference is made above; a large proportion of these imports passes through the neighbouring Islands of Barbados and Trinidad.

Imports.

—	1896.	1897.	1898.	1899.
	£	£	£	£
United Kingdom	29,847	28,358	27,291	29,241
British Colonies	31,667	34,908	44,812	52,046
Foreign Countries	9,975	7,558	16,205	22,340
Totals	71,489	70,824	88,308	103,627

Exports.

—	1896.	1897.	1898.	1899.
	£	£	£	£
United Kingdom	21,131	20,432	14,176	19,383
British Colonies	15,851	21,945	14,260	10,812
Foreign Countries	30,410	26,557	16,230	3,380
Totals	67,392	68,934	44,666	33,575

Agriculture.

19. From the agricultural point of view the year may be described as one of partial recovery from the effects of the hurricane of 1898, which absolutely stunned for awhile both proprietors and cultivators of the soil. It was gradually realised that the destruction wrought by the storm had not been so complete as was at first feared, and this applied more forcibly to arrowroot than to other products. The prospect of better prices,

arising from the limited outpu of arrowroot in 1898, stimulated effort, and the result was an exportation of this staple which, although less in quantity, was worth a little more than in the year before the hurricane. It is, however, matter for regret that the general body of cultivators failed to grasp that only special conditions had created the better prices, and the inevitable consequence has been a reversion to over-production in 1900.

20. Sugar-cane cultivation had apparently received its death-blow in the hurricane, but so deeply rooted is the attachment of the people to this industry that it already shows signs of a certain amount of revival, and, apart from sugar exported, considerable quantities of syrup are being made for local consumption.

The output of rum during the year was seriously affected by the storm, as only two distilleries were able to continue operations, and these manufactured 5,735 gallons. The destruction of illicit distilleries by the hurricane, and the plentiful circulation of relief funds in the island, caused an increased demand for the lawfully made article, so that the stock was soon exhausted, and rum had to be imported to meet the local consumption. It is to be regretted that towards the end of the year illicit distillation again made its appearance, and, although several successful raids have been made by the police, resulting in the capture of stills, and the punishment of offenders, the facilities afforded to smugglers by the difficult and mountainous nature of the country, and the sympathies of the common people are so great that the task of suppression is no easy one.

21. The damage to nutmeg trees is irretrievable, and it is doubtful, after their severe experience, whether cultivators will ever again be rash enough to attempt such a cultivation in this hurricane region. In regard to cocoa, however, the damage has proved to be comparatively partial, for even the fallen trees have in many cases recovered themselves, and where the injured ones have received careful attention directly after the storm there can be no doubt of their ultimate recovery. On estates where efficient windbreaks had been established this is more marked than in other cases; and where this precaution is taken in the future, it would seem that the risk of a hurricane—which after all is in these latitudes only an occasional visitor—may be faced as other risks are.

22. The greatest assistance was rendered by the Hurricane Loan to planters made from the Imperial Treasury. £50,000 was considerately offered by Her Majesty's Government as a loan at 3 per cent., with the object of assisting the planters to rebuild their works, but the peculiar conditions obtaining locally in regard to the ownership of the land (most of the larger owners not requiring such capital) operated to prevent the full amount being issued. It was, nevertheless, gladly taken advantage of by those really in need of it, and during 1899 loans to the

extent of £5,638 were made, and work vigorously pushed forward therewith. The total loans issued to date amount to £13,320. In nearly every case improved buildings and machinery have resulted, and the money put into local circulation in payment of labour on the work done has been invaluable.

23. The scheme for settling small proprietors on their own holdings, the land for this purpose being acquired by an Imperial Grant-in-Aid made towards the end of 1898, was proceeded with during the year. Several estates were purchased, and surveys commenced, dividing them up into allotments of about five acres each, for sale to settlers on a liberal system of instalments extending over sixteen years. The absence of an adequate number of surveyors delayed this work somewhat, but progress was nevertheless made, and in the current year the scheme is being put on a sound working basis, and is proceeding rapidly and satisfactorily. The ultimate good to the Colony from this scheme cannot be over-estimated. It strikes at the root of the conservatism of the typical land owner in St. Vincent, and, by establishing a solid nucleus of peasant proprietors with a variety of cultivable products, will destroy that too exclusive devotion to particular industries which has proved the bane of the Island in the past. It is not to be doubted that the example thus set by the Government of breaking up the land, hitherto held by a few, among many owners, will be followed before long by others who now find their properties a burden rather than a blessing; and although changes of this kind do not work miracles in regard to the prosperity of a colony, it requires little foresight to predict that in the situation thus evolving lies the only chance St. Vincent has of a prosperous future in view of the altered conditions of West Indian products in the markets of the world.

Botanical Station.

24. Good work was done by the staff during the year in issuing plants free of charge to cultivators who had suffered loss in the hurricane, and also in advising the new peasant settlers in connection with their holdings. The station itself was much improved, it becoming for the first time practicable to expend on it a sufficient sum of money for its needs, the Imperial Grant-in-Aid for this purpose taking effect from 1st October, 1898. The projected Agricultural School, connected with the Station, did not become a fact during the year, although the Agricultural Instructor for it was sent out in June; it has been fully established in the current year.

SHIPPING.

25. The following comparative statement of the total tonnage inwards and outwards for the last four years shows that the results of the year under review were less than in the preceding

year, and than the average; this is attributable to the large influx of shipping in 1898 after the hurricane, bringing supplies, &c.; and to the loss of local craft in the storm.

Year.	Tonnage Entered.	Tonnage Cleared.
1896	136,047	137,198
1967	123,937	124,940
1898	127,499	127,326
1899	122,853	122,735
Average ...	127,584	128,050

The total shipping entered and cleared in 1899 was 245,588 tons, of which 224,182 was steam tonnage, and all British; the sailing tonnage was 21,406 tons, of which 14,315 was British. Forty-five foreign vessels visited the island, 27 being Venezuelan, 12 Hollander, 5 American, and 1 French.

LEGISLATION.

26. Nine Ordinances passed into law during the year, the most important being the Land Settlement and the Hurricane Loan Ordinances, the objects of which are explained in paragraphs 22 and 23 above. Next in importance is the Ordinance abolishing export duties on sugar and its products, referred to in paragraph 7.

EDUCATION.

27. The results of Primary Education in 1898 and 1899 compare as follows:—

—	1898.	1899.
Number of Schools	36	33
Number on Roll	7,509	6,027
Average attendance	3,158	2,712
Government Grant-in-Aid	£ 1,957	£ 1,612

In regard to these statistics it must be borne in mind that all of the country schools were destroyed by the storm, and that the work of those in town was much hindered by the use of the buildings as refuges. In 1899, out of the Imperial Grant for damage done by the hurricane, reconstruction of the school buildings was commenced and pushed forward successfully. Many localities in which more than one school had existed before the storm were assigned one school in lieu thereof, and towards the end of the year school affairs began to resume a normal appearance. The destruction of school furniture will have to be remedied in the current year. The Education Code requires simplification, being far too complex and expensive for a small and embarrassed Colony.

28. The Kingstown Grammar School continued to make satisfactory progress, the numbers on roll increasing from 36 to 47 during the year. The curriculum of the school embraces the subjects required for the Cambridge Local Examinations, and the annual examination is conducted by the Syndicate. The Government Grant to the school amounted to £128.

GOVERNMENT INSTITUTIONS.

Colonial Hospital.

29. The number of the patients treated during the year was 665, of whom 350 were discharged cured, 194 relieved, 47 died, and 74 remained in hospital; the daily average was 80, as against 58 in 1896, 60 in 1897, and 96 after the hurricane in 1898. The abnormal conditions resulting from that disaster continued almost throughout the year. Special assistance in the shape of Medical Officers and Nurses had to be obtained from Grenada and Trinidad, both of which Colonies willingly responded to the call.

Georgetown District Hospital.

30. Under existing conditions this hospital is supposed to be only used for casualties, and the accommodation is limited; it does not, therefore, fulfil the requirements of a hospital for the Windward District, which is much needed, owing to the great difficulty attending the removal of cases, 24 miles by road, to Kingstown. Twenty-nine cases are reported as having been treated during the year, of which 14 were cured, 9 relieved, 4 did not improve, and 2 died: the daily average was 2.

Pauper Asylum.

31. Conditions at this institution in 1899 were unsatisfactory. As a result of the hurricane, the daily average, which had been 100 in 1897, was swollen to 142, which, having regard to the limited section of the buildings then assigned to inmates, over-crowded the Asylum. The figures for the year disclose that 131 inmates remained on at the end of 1898, and 144 were admitted during 1899, of whom 53 were discharged, and 48 died. Many of the defects of this Asylum have been remedied in the current year, and all details of its administration thoroughly re-organised.

Leper Asylum.

32. Fifteen inmates were in Asylum at the opening of the year, 6 fresh cases were admitted, and the daily average was 15; 3 patients died. This institution leaves much to be desired, but the Colony is, unfortunately, not able to provide a really suitable Asylum for all of its lepers. Some improvements have been effected in 1900, but the Asylum remains unisolated and insufficient for the needs of the Colony in this respect.

Low Point Asylum.

33. Following upon the hurricane it was deemed advisable to open a special Pauper Asylum at the old military hospital buildings at Low Point, and in this a daily average of 60 refugees was maintained during 1899. In the current year this has been closed, it having been found possible to discharge the majority of the inmates, and the remainder have been transferred to the re-organised Pauper Asylum, which now contains only 120 inmates altogether.

Savings Bank.

34. From the following statement of the work of the bank for the last five years, the results of 1899 appear to be larger than in the preceding years. The figures, however, are somewhat misleading, as the deposits and balance of 1899 contain a sum of £511 paid in under the provisions of the Land Settlement Ordinance, being the value of certain property acquired by the Government, and not yet claimed by its owner; this cannot be regarded as a true Savings Bank deposit. The number of depositors also includes no less than 248 accounts, in respect of which no transactions have taken place for 12 years, and the balances of which, amounting to £119, should have been forfeited to Colonial Revenue, as required by law, instead of appearing among the balances to credit of depositors at end of 1899.

Steps are being taken in this direction in the current year, and the figures of 1899 should really read as shown at foot of the statement:—

Year.	Number of Depositors at 31st December.	Amount of Deposits, including capitalised interest.	Amount of Withdrawals.	Balance at credit of Depositors 31st December.
		£	£	£
1895	1,012	4,316	4,460	8,974
1896	1,062	4,451	5,350	8,455
1897	1,047	4,515	4,383	8,771
1898	1,091	4,263	3,739	9,283
1899	1,036	5,375	5,123	9,716
Revised figures for 1899.	787	4,864	5,123	9,086

35. An analysis of the revised figures at the end of the year discloses that out of 787 accounts 512 are in sums of £5 or less, and that of the remainder 176 accounts do not exceed £25, evidencing that the bank is being chiefly used for small deposits. £8,500 of the funds of the bank are invested.

36. In the present year the much-needed branches of the bank have been opened at Georgetown and Chateaubelair, thus bringing its facilities home to the people of the country districts, and largely extending its operations and usefulness in the future.

JUDICIAL STATISTICS.

Police.

37. The Colonial Police Force consists of a Chief, a Sergeant-Major of European birth and military training, and 52 West Indian non-commissioned officers and privates. They are, in addition to their civil duties, drilled and trained to the use of arms, and are armed with Snider rifles. Besides ordinary police work, they render invaluable assistance to the Government in many details of the administration, being charged with the supervision of the excise duty on rum, and with co-operating in collection of customs duties, district post-office work, registration of births, &c., poor relief, and the management of the small district telephone exchanges. In the principal town they are

also responsible for extinguishing fires, receiving from the Town Board additional pay for this service; and the Kingstown Prison has just been incorporated with the Police Department. In fact, the aid given to the embarrassed finances of the Colony by the police force, under its efficient and hard-working Chief, cannot be too highly commended.

Prisons.

38. Three hundred and twenty-three persons were committed to prison in the year—177 men, 137 women, and 9 juveniles. The daily average was 31 against 25 in the previous year, and the total cost per prisoner is returned as being £13 15*s.* 2*d.* as against an average of £18 14*s.* 6*d.* in the seven years ending with 1899. The sanitary condition of the prison appears to have been good throughout the year, but much cannot be said in favour of the discipline enforced. At the date of this report the Police and Prison Departments have been amalgamated, and better results in this direction may be looked for in the future.

Crime.

38. Three hundred and twenty-three persons were committed victions obtained for the several classes of offences in the four years 1896-9:—

Convictions.	1896.	1897.	1898.	1899.
Offences against the Person	188	179	163	164
Prædial Larceny	55	52	119	144
Other offences against Property ...	99	83	130	169
Other offences	377	387	431	427
Totals	719	701	843	904

It will be seen that the results of 1899 are higher than in any year of the series, a natural sequence of the disorganisation ensuing from the hurricane. At the same time it is evident that far less crime than might have been expected followed that

disaster. The Chief of Police writes as follows:—"Considering the demoralised condition of the community in the early part of the year, there was much less crime than might have been expected. Even at the most acute period of their sufferings, after the hurricane, there was no disposition shown by the people to break from the moral restraints of law and order. This is due, no doubt, to the measures of relief adopted by the Government in all parts of the Colony to ameliorate their wants. Prædial larceny of a petty character, to satisfy immediate cravings of hunger, occurred to a great extent, and depredations were openly committed on the sugar-cane cultivation remaining uninjured by the hurricane."

VITAL STATISTICS.

Population.

40. The population at end of 1899 is estimated by the Registrar-General at 44,633. This estimate takes no account of emigration or immigration; of the latter there is little of a permanent nature, but there has necessarily been of late years an outgoing of the people in search of employment under better conditions than obtain locally. The population by last census was 41,054, so that if the estimate at end of last year be correct, there has been since 1891 an increase of 3,579 from natural causes. The natural increase in 1899 is returned as 633, the birth rate 36, and the death rate 21·6 per thousand. There was a marked increase in the number of marriages, 293 being registered as against 205 in 1898, and 189 in 1896, the last previous year in which a return was made.

Public Health.

41. The Colonial Surgeon reports that the health of the Colony in the early part of the year suffered from the special conditions created by the hurricane. Dysentery, diarrhœa, and fever of a typhoid type were prevalent, and were followed by epidemics of whooping cough and influenza, while in the rainy season gastro-enteritis and malarial fever appeared in some parts of the Colony. Severe thunderstorms in September cleared the air, and the remainder of the year proved healthy. He also notes that the disease of yaws (Framboesia), which used to be a scourge of the Island, is not nearly so prevalent since the storm; a result, possibly, he thinks, of the destruction of foul tenements, and the washing away by torrential rains of germ *foci*.

Sanitation.

42. There is a general Board of Health for the Colony in existence, but it never transacts any business, and the local

health law is cumbersome and difficult to work in the altered conditions of the Colony; important changes have been proposed in the current year, which should secure satisfactory sanitary arrangements. The Town Board of Kingstown keeps that town in a fairly good state of sanitation. At date of this report, as the result of special measures, it is particularly clean and well kept. Some of the smaller towns and the villages, however, require attention in this respect; and but for the very healthy climate, and the good natural conditions favouring drainage, there would be much trouble in connection with them.

Climate.

43. The rainfall for the year was below the average, 92 inches being recorded at the Botanic Station in the south of the Island, as compared with an average of 112 inches for the last ten years; 97 inches were received at Tourama, in the north east of the Island. The thermometer record for the year is incomplete, the instruments having been destroyed in the storm, but in the last nine months of the year, during which a record was kept, the minimum reading was 68·5 in December, and the maximum 88·5 in August. The highest corrected reading of the barometer was 30·152 in September, and the lowest 29·823 in December. The direction and force of the wind were normal, the prevailing wind being, as usual, the north-east trade.

POSTAL AND TELEPHONE SERVICES.

44. 1899 was the first year of the working of the Imperial penny postage rate and the improved triple scale of parcel post, and the results are distinctly satisfactory, as the subjoined figures show:—

—	1898.	1899.	Increase.
Letters to the United Kingdom ...	9,683	10,879	1,196
" " other places	46,626	66,760	20,134
Parcels from United Kingdom ...	705	744	39
" " other places	503	595	92

Post Office Revenue showed a large increase, being £2,281 against £1,691 in 1898; this was caused by the issue of a new set of combined revenue and postage stamps in the course of the year, which led to large orders from stamp dealers and collectors.

45. The revenue of the Telephone Department was £429, and its expenditure £359, excluding charges on loan for construction of system. £62 was also spent from the Imperial Grant on re-construction of lines after the storm. As nearly all of the trees along the Leeward route were destroyed, improved communication has resulted, leakage being thereby obviated. The number of paid messages sent was 606, as compared with 89 in 1898.

GENERAL OBSERVATIONS.

46. A general review of the year 1899, taken from the point of view of an observer not connected with the Colony during the year, shows that, after a period of panic and uncertainty caused by the staggering blow received in the great hurricane of 1898, the Colonists began to make an effort to rehabilitate their fallen fortunes. The immense moral and actual support given by the Mother Country at this severe crisis cannot be either over-estimated or too gratefully acknowledged. The Colony was prostrate, and could never, of its own efforts, have regained its lost ground, when Her Majesty's Government, by a free grant of £25,000 to restore the damage done, and by a loan of £50,000 to enable planters to re-build their estate works, inspired some hope and confidence in the future. And not only did the Imperial Government thus show its practical sympathy with a suffering community, but the people of the United Kingdom and the Colonies also gave tangible proof of their kinship and goodwill by donations, of which the share apportioned to St. Vincent reached the sum of £20,586. This open-handed generosity not only did good by the expenditure within the Colony which it made possible, but brought home to the hearts of the sufferers that they were not being left to face the ordeal unaided, and that friendly eyes in all parts of the Empire were watching their efforts to emerge from the ruin inflicted by the cyclone.

47. That these efforts have not been in vain is evidenced by the condition of affairs in the Colony today, for, although fraught with difficulties, as the future of St. Vincent must necessarily be for some time to come, there can be no doubt that the energies of the Colonists are at work on a higher level than before the storm, when all was doubt and misgiving. Apart from the

Government scheme of land settlement, there is far more land made available to the peasants for cultivation, and as a consequence food is plentiful. The outlook for the arrowroot crop is cloudy, but it still exists, and still pays, even if not so much as it would if properly treated by the proprietors. If its presence as a paying staple can be preserved, a few more years should see it supplemented by other products, to the permanent advantage of the Colony.

EDWARD DRAYTON,

Administrator.

St. Vincent,

24th October, 1900.

GRENADA. 1899.

GRENADA.

(For Report for 1898, *see* No. 280.)

GOVERNOR SIR ALFRED MOLONEY to MR. CHAMBERLAIN.

Grenada,
25th September, 1900.

SIR,

I HAVE the honour to transmit the report on the Blue Book of Grenada for the year 1899, by the Acting Colonial Secretary, the Honourable Leslie Probyn.

I have, &c.,

ALFRED MOLONEY,
Governor.

7303—800—11/1900 Wt 24600 D & S—5

GRENADA.
1899.

REPORT ON THE BLUE BOOK FOR 1899

FINANCIAL.

Revenue and Expenditure.

The Revenue for 1899 was the largest ever collected in the Colony and amounted to £68,757 1*s.* 7*d.*, showing an excess of £5,882 3*s.* 7*d.* over the Revenue of 1898, and an excess of £9,239 over the average annual Revenue during the five previous years.

The estimated Revenue for the year was only £61,175.

The Expenditure amounted to £59,358 13*s.* 10*d.*, which, although £1,747 in excess of the Expenditure during 1898, was £632 less (solely attributable to reductions in personal emoluments) than the average annual Expenditure during the five previous years.

The estimated Expenditure for 1899 was £59,560.

REVENUE.—The following table enables the increases and decreases in the several Heads of Revenue which occurred in 1899 as compared with 1898 to be contrasted with the increases and decreases in 1899 as compared with annual average revenue of the same Heads during the five preceding years:—

TABLE I.

——	Increase.	Decrease.	Average of five years 1894-1898.	1899.	1898.	Increase.	Decrease.
	£	£	£	£	£	£	£
Customs	10,440	—	27,708	38,148	32,713	5,435	—
Licences and Excise	—	1,339	26,305	24,966	24,756	210	—
Fees of Office	307	—	1,033	1,340	1,249	90	—
Post Office	—	761	1,547	786	1,140	—	353
Sale of 4th Centenary Stamps	—	29	105	76	528	—	451
Telephone	57	—	1,091	1,148	1,094	54	—
Rent of Government Property	17	—	408	425	366	59	—
Interest and Sinking Funds	67	—	898	965	769	195	—
Miscellaneous Receipts	—	20	120	100	185	—	85
Land Sales	—	211	298	87	70	17	—
Grant in aid of Botanical Station ...	711	—	711	711	Nil.	711	—
Total	11,599	2,360	60,224	68,752	62,870	6,771	889

GRENADA. 1899.

The Grant in Aid of the Botanical Station from Imperial Funds was made in 1899 for the first time. During 1898 an issue of $2\frac{1}{2}d.$ stamps was sanctioned to commemorate the Fourth Centenary of the discovery of the Colony, the sales of which naturally declined in 1899 as a result of the postage on nearly all extra colonial letters having been reduced from $2\frac{1}{2}d.$ to $1d.$

Eliminating these two heads of revenue, which are shown in the Table in order that the balances may be checked, it becomes clear that the increase in Customs is the only direction in which substantial improvement is shown. Although in 1899 there was an increase of £210 in Licences and Excise, the amount received therefrom was £1,339 less than the average annual receipts for the five preceding years.

The Head of Revenue "Licences and Excise" is made up of revenue from (*a*) excise, (*b*) revenue stamps, (*c*) other sources of internal revenue, *e.g.*, Land and House Tax; from the following table it will be noticed that the principal decline was in Excise. The large increase in the amount received from Other Sources of Revenue is due partly to improved collection of the House and Land Tax, and partly to the increased number of licences taken out during 1899:—

TABLE II.

—	Increase.	Decrease.	Average.	1899.	1898.	Increase.	Decrease.
	£	£	£	£	£	£	£
Excise	—	1,225	11,811	10,586	12,462	—	1,876
Revenue Stamp Duties.	—	26	3,081	3,055	2,456	599	—
Other sources of Revenue.	—	88	11,413	11,325	9,838	1,487	—
Total ...	—	1,339	26,305	24,966	24,756	2,086	1,876

In 1897 the Excise work was transferred to the Police, and the amount of duty collected during that year, although below the average of the three preceding years, was satisfactory, while in 1898 the amount rose to £12,462, the largest amount collected for many years. The decline shown in 1899 cannot therefore be traced to the system introduced in 1896, but is probably due to three causes—(*a*) the importation of rum, which caused nearly

£1,000 of duty to be transferred from Excise to the Head of Revenue "Customs"; (*b*) in a small degree to the fact that the high price of rum brought it into competition with cheap whiskey; (*c*) the increased temptation to illicit trade consequent upon the increased price. [See observations on Imports *infra*.]

The increase shown in Revenue Stamp Duties is chiefly due to the amount collected in 1898 having been abnormally low in consequence of the stamp frauds which were perpetrated during that year and 1897.

The £38,148 collected from Customs was made up as follows:—(*a*) Import Duties £32,852, (*b*) 10 per cent. Additional Import Duty £3,285, (*c*) Export Duty £2,011.

It may be pointed out that the latter amount was £230 less than the duty paid on imported muscovado sugar.

Of the £32,852 Import Duties £25,650 was collected from specific duties on 25 classes of goods. £3,713 was collected from ad valorem duty on unenumerated articles.

Reverting to the decreases shown in Table I., it will be noticed that the most important decrease was in the Post Office, the revenue from which shows a decline of £353 when compared with 1898, and of £761 when contrasted with the average of the five preceding years. The explanation of the decrease is that the penny postage system was introduced during the year, and the relatively large decline from the five years' average is due to the large purchases of stamps in 1895 and 1896, a period during which the old system of having separate classes of stamps for revenue and postage purposes was abolished.

EXPENDITURE.—The expenditure in 1899 was £59,358, which, although an increase of £1,747 over the expenditure of 1898, is, as already stated, £632 less than the annual average for the five years 1894-1898.

The increases and decreases in the several Heads of Expenditure in 1899 as compared with 1898 (showing, as stated, a net increase of £1,747) are not of much interest; for example, decreases of £363 and £286 are respectively explained by the Postal Transit Charges which were paid in 1898, and by the Hurricane Grant to St. Vincent which was also made during that year.

Of the increases £1,134 took place in Public Works Recurrent, and is explained by the enforced economy in 1898 which made the expenditure under this Head during that year lower than in any year for a long time past.

Under Education an increase of £662 is due to the increased result grants which were earned.

Having called attention to the chief decreases and increases in 1899, it might appear natural to make a detailed comparison between the expenditure in 1899 and the annual average expenditure for the five preceding years. Such a course would, however, be misleading in dealing with the Treasury Department and with Education on account of the changes which took place at the end of 1896, the new Education Code having been then introduced, and the Post Office merged with the Treasury, the Excise work (till then done by the Treasury) being transferred to the Police.

TABLE III.

Expenditure on Police, Post Office, and Treasury since the change in 1896, and for the three years preceding the change.

Year.	Personal Emoluments.	Other Charges.	Total.
	£	£	£
1897	7,911	1,824	9,735
1898	7,811	2,582	10,393
1899	7,817	2,380	10,198
Annual Average	7,846	2,263	10,108
	£	£	£
1894	8,835	2,928	11,765
1895	8,836	2,538	11,374
1896	8,744	2,387	11,132
Annual Average	8,803	2,610	11,423

TABLE IV.

Expenditure on Education for the three years following the introduction of the new Education Code and for the three years before its introduction.

Year.	Personal Emoluments.	Other Charges.	Total.
	£	£	£
1897	415	5,688	6,103
1898	415	4,848	5,263
1899	400	5,526	5,926
Annual Average	410	5,354	5,764
	£	£	£
1894	408	5,667	6,075
1895	416	6,306	6,723
1896	415	6,675	7,090
Annual Average	413	6,216	6,629

These two tables show that if the expenditure during 1899 on the Departments concerned was compared with the annual average expenditure during the five preceding years, a considerable reduction would be shown in favour of 1899 both in money spent on personal emoluments and on other charges.

As already stated, if the total expenditure in 1899 is compared with the annual average expenditure of the five preceding years, a reduction (£668) is shown in the personal emoluments, while the variation in the total expenditure on "Other Charges" is nominal, the sum spent in 1899 being only £37 more than the five years' annual average. The explanation of there not being a larger reduction is that the savings in "Other Charges" in the heads of expenditure dealt with in Tables III. and IV. were

GRENADA. 1899.

counterbalanced by increases in the Heads—Charge on Account of Public Debt (£630); Pensions (£79); Agriculture (£142). The last increase is due to the contribution to the Botanical Station from Imperial Revenue which enabled more work to be done, and the increase in the Public Debt charges is because the principal Colonial Loan was not entirely spent until 1896.

In Appendix *A* is given the total Revenue and Expenditure of the Colony for the five years 1894 to 1898 inclusive.

Taxation.—The 10 per cent. Additional Import Duty was imposed throughout the year, but was not re-enacted, and therefore will not operate in 1900.

Assets and Liabilities.

The Assets of the Colony at the close of 1899 were £30,971, showing an increase of £13,888 over the Assets at the end of 1898, and showing a surplus £12,239 over Liabilities as compared with £984, the corresponding surplus in the preceding year.

Of the increase in the Assets, £11,433 was unquestionable, being made up chiefly by an increase of £8,257 on deposit or on current account at the Colonial Bank and by £2,000 invested in Victoria 3 per cent. Stock.

An increase of £597 took place in the amount of advances representing amounts due to the Colony or expenditure not then brought to account. The remaining balance of the increase of £13,888 being made up by a further augmentation of £1,857 in the amount (£3,836) owing, for interest and arrears of sinking fund contributions to the Government from the Parochial Boards.

The Liabilities amounted to £18,270 as compared with £16,098, the corresponding amount in 1898. The increase is due to the larger amount of the Savings Bank Account, which rose by £2,474 to £10,925.

The Supreme Court Account (Suitors' money) showed an increase of £684 and the Post Office Account (Money Orders &c.) a decrease of £576 as compared with the respective amounts in 1898.

Public Debt.

The Public Debt is £127,670, on all of which 4 per cent. interest is paid except upon a £4,000 loan which was raised in 1886-1889 and carries 4½ per cent.

The interest both on the £4,000 and on the balance of the Public Debt is paid half-yearly, and in both cases there is a

sinking fund of 1 per cent. per annum. The accumulated sinking fund amounted at the end of 1899 to £8,033. The £4,000 loan is a debenture loan which is redeemed by periodical drawings, but the remainder of the loan is Stock redeemable at par at dates which were fixed when the Stock was issued and which in no case are more than 50 years from the date of issue.

With the exception of £37,890 issued in 1892-'94 for the conversion of previously existing 4½ per cent. debentures, all the Public Debt has been incurred for Public or Parochial work.

The last loan was completed in 1896, since when the Public Debt has not been increased.

Currency.

The Colonial Bank has a branch at St. George's and a district branch at Grenville.

The notes ($5) of the Bank and British silver are considered as legal tender, there being no right to insist upon payment in gold. This customary tender does not, of course, apply to payments made abroad in fulfilment of contracts entered into in the Colony.

In connection with changes due to an alteration in their charter, the Colonial Bank found it necessary to refrain during the early part of the year from issuing any notes. The notes in circulation were naturally lessened in number by this process, and for some weeks the community experienced all the inconveniences of a silver currency except those resulting from the depreciated value of silver. Ultimately notes were again issued and the temporary inconvenience ceased, but the incident has a value as an object lesson showing that the mere fact that a currency is limited to silver will not result in its depreciation.

Of the total note issue sanctioned by the Bank's Charter, $65,000 is at present apportioned to Grenada, an amount shown by experience to be quite sufficient.

Municipal Bodies.

There are six municipal corporations in the Colony, of which five, purely elective, are somewhat inaccurately styled "Parochial Boards," although their jurisdiction is confined to the towns over which they have control. The sixth corporation is the St. George's Town Board, and consists of ten members, of whom half are elected and half nominated by the Governor.

The following table shows the financial position of the Boards:—

TABLE V.

Financial position of the Town Boards at 31st December, 1899.

Town.	Revenue.	Expenditure.	Surplus Assets.	Deficit.	Loan Debt.	Accumulated Sinking Fund.
	£	£	£	£	£	£
St. George	2,576	2,879	74	—	7,481	658
Grenville	910	896	—	3,836	13,270	57
Sauteurs	427	411	—	105	1,100	440
Victoria	273	272	—	—	1,404*	97
Gouyave	592	631	—	259	3,304†	152
Hillsborough	133	123	35	—	600	35
Total	4,911	5,212	109	4,200	27,159	1,439

* Does not include £417 advanced for jetty repairs.

† Does not include £250 due to the Government for old Court House premises.

The Boards derive their legal existence from Ordinances which may be regarded as the charter of each corporation. The Parochial Boards Ordinance, 1891, contains provisions enabling a Parochial Board to raise loans (with the consent of the Governor) for the construction of Public Works. The limit on this power is that no loan may issue which would make the charges for interest and sinking fund exceed one-fourth of the income of the Board. The loans shown in the table are all due to the Government.

In the event of the payments for interest or sinking fund being in default the Governor-in-Council is empowered to levy within the town in default such additional rates as may be necessary. By what has been termed their Charter the Parochial Boards are compelled to keep their cash at the Colonial Bank, and if they make default in their payment to the Government, and *if* their account is in credit at the Bank, power is given to the Colonial Treasurer to obtain payment of the amount due to the Government by drawing a cheque on the Board's account.

The St. George's Town Board and the Parochial Boards of Hillsborough and Grenville have, in connection with systems of water supply, jurisdiction beyond the town boundaries.

In appendix *B* will be found a comparative table of the Revenue and Expenditure for a series of years of the Grenville Board, which in its capacity as the Grenville Water Authority is the chief cause of the unfortunate financial position of the ratepayers within the town proper.

The Report of the Parochial Boards Commission was published during the current year, and consequently the conclusions arrived at are not now referred to.

TRADE, &c.

Imports and Exports.

The total Imports amounted to £226,828, being £25,045 more than the Imports in 1898, and £48,278 over the annual average for the five years—1894 to 1898 inclusive.

The total Exports amounted to £267,738, being £10,464 more than the Exports in 1898, and £75,798 over the average for the five years mentioned.

It will be noticed that the excess of Exports over Imports reached £40,910 as compared with £13,290, the average annual excess during the five years preceding 1899.

*Imports.**

The excess of £25,045 was mainly due to the increase in the imports from the British Colonies caused by the larger importation of "Food and Drink Supplies" (Z.—2). The chief increases were an increase in imports from Barbados of £4,700, Trinidad £3,400, St. Kitts £1,000. The imports from St. Vincent diminished by £1,000, in consequence of the results of the hurricane which visited that colony during the last quarter of 1898.

IMPORTS.—The excess of £25,045 in the importations was thus made up:—

(*a*) An excess of £15,413 in Class I. (Live Animals, Food and Drink Supplies, Narcotics), the importation of which amounted to £104,440, an increase of 17 per cent. over the amount in 1898.

(*b*) An excess of £2,248 in Class II. (Raw Materials), which amounted to £18,715.

(*c*) An excess of £7,520 in Class III. (Manufactured Articles), the importation of which amounted to £100,548, an increase of 8 per cent. over the amount in 1898.

(*d*) Coin and Bullion was imported to the value of £3,125, being £135 less than in 1898.

Of the £15,413 excess in Class I., *one half* was caused by increased importations of molasses and muscovado sugar; of the former only £289 was imported in 1898, as compared with £3,142 in 1899. Of muscovado £6,860 was imported, showing an excess of £4,892. The cause of these considerable increases was the collapse of sugar cultivation during the year, and the fact that the stock of rum left at the end of 1898 was low. The price of rum rose from 1*s.* 6*d.* per gallon to 4*s.*, and consequently the small cane crop was used by the distillers, with the result that nearly all the muscovado required had to be imported from neighbouring colonies.

The duty paid on this sugar amounted to £2,241.

The importation of Flour (which comes almost exclusively from the United States) declined in value by £1,707 to £25,167, a result of the high prices in 1898; the quantities imported in 1899 showing an excess of 4,653 barrels, and consequently an increase in the duty of £930.

* In the Blue Book for 1898, the importation of manufactured articles (metal) is overstated by £9,000. In this report the comparisons are made on the corrected figures.

An increase of £1,077 is shown in Fish (Dried and Preserved) which is due to high prices. Most of this article is imported from the British West Indies, but some comes from the United States, and this latter quantity rose in 1899 to 239,066 lbs., as compared with 58,045 lbs. in 1898.

An increase of £1,917 took place in the amount of Meat (Salted and Preserved), nearly all of which comes from the United States.

A decrease of £900 is shown in Rice, the price of which rose during the year.

An increase of £311 took place in the value of "Gin and Rum" imported. On this the duty is 5*s.* per proof gallon, and as the duty received from this source increased by £907 to £2,181, it is clear that importation of high proof rum was the cause of the increase.

The importations of Class II. (Raw Material) rose by £2,248, of which nearly one half was caused by the increased use of manure, £1,817 of which was bought. Of this amount £376 came from the United States, from which none was imported in 1898. The Foreign West Indies also supplied £321, as against nil in 1898; while the manure from the United Kingdom increased by £833, and that from the British West Indies showed a large decrease.

During 1898 and 1899 larger quantities of building materials were imported than usual. In 1899, however, less prosperity is shown than in 1898, there having been a decrease in the total value and in the quantity of the "Shingles" imported and a decrease in the quantity of Timber, which latter, however, rose in value. The trade in these materials seems to have been in 1899 rather more favourable to the West Indies and less so to the United States than in 1898.

With regard to the increase of £7,520 shown in Class III. (Manufactured Articles) a large decrease is shown in textile manufactures, which would be adverse to the United Kingdom whence such articles chiefly come. On the other hand, in "Glassware," "Hardware," "New Furniture," and in the "unenumerated metal manufactures," all of which are chiefly imported from England, increases are shown which more than counterbalance the £3,000 diminution in textiles, and which together with well distributed but small increases in other articles of the class result in the net increase of £7,520.

The Imports were thus divided:—

From the United Kingdom	£101,921	showing an excess of	£6,938
" British Colonies	£64,603	" " "	£10,737
" Foreign Countries	£60,303	" " "	£7,370

GRENADA. 1899.

Of the excess of £7,370 from Foreign Countries, £5,534 is due to importations from the United States and nearly £1,300 to importations from France.

Foreign import trade is at present almost entirely confined to the United States, and the following figures may therefore be of interest as having a bearing on the prospects of the new Canadian line.

Year.	Imports from the United States.	Imports from Canada.
	£	£
1896	44,872	1,658
1897	44,529	2,816
1898	52,104	6,372
1899	57,638	6,748

The Blue Book, as has been customary, does not tabulate the principal imports of the Colony for a series of years.

In 1895 the values of imports were for the first time calculated according to their statistical value, consequently the following tables begin with that year. Table VI. contains articles important as indicating the position of the well-to-do classes. Table VII. is limited to what may be regarded as necessaries, while Table VIII. is of intermediate character.

The significance of Table VII. will be understood when it is remembered that in 1894, 1898, and 1899 the price of cocoa was very much higher than during the three intervening years, and also that during the first three years the corn crop probably failed. (Vide Climate).

Abstract of the Values of the Principal Articles imported (exclusive of transhipments) during the years 1895, 1896, 1897, 1898, and 1899.

Two points will at once be noticed from these returns. The rise in 1899 shown in Table VI. indicates in which direction prosperity was most felt.

The cocoa crop ending in September, 1897, was the second best known in the Colony, and more cocoa was actually shipped during 1896 than in any year, yet owing to the low *price* of cocoa the importations fell to the extent shown in the tables.

Exports.

Cocoa was exported during the period 1894 to 1898 as follows, the amount shown as exported in 1898 being the correct amount although not that given in last year's Blue book:—During the year 1894, 72,622 cwt.; 1895, 69,191 cwt.; 1896, 90,193 cwt.; 1897, 65,849 cwt.; 1898, 78,350 cwt.; 1899, 79,472 cwt.

These figures represent the amount of cocoa which according to the departmental returns was exported during the financial year; and they are, of course, quite different from the crop returns, details of which are given later in this report. The departmental returns represent the Colony's spending power for the year and consequently have their value; the crop returns show the progress of the cocoa industry, and should alone be regarded as the test in all matters connected with that progress.

Owing to Nutmegs being exported in packages of irregular shape and weight it is not possible from the departmental returns to show the position of the nutmeg industry for a series of years.

The following table contrasts the exportation of the principal exports in 1899 with the equivalent amounts during the five preceding years:—

TABLE IX.

Value of the Principal Products of Grenada exported in the six years 1894–99.

Year.	Cocoa.	Coffee.	Cotton.	Cotton Seed.	Fruit.	Firewood.	Ground Nuts.	Hides.	Kola Nuts.	Live Stock.	Logwood.	Manure.	Pease.	Poultry.	Spices.	Sugar.	Turtle Shell.
	£	£	£	£	£	£	£	£	£	£	£	£	£	£	£	£	£
1894 ...	168,498	120	4,267	1,060	422	481	42	221	41	1,302	1,330	15	134	387	9,583	50	170
1895 ...	138,520	66	3,543	1,020	584	466	74	179	133	1,385	1,733	—	476	204	20,984	15	118
1896 ...	159,519	217	3,840	634	880	538	86	167	180	1,304	372	84	128	235	12,424	192	167
1897 ...	132,642	283	2,132	588	540	605	25	105	88	1,230	302	197	6	226	13,503	—	165
1898 ...	227,655	59	2,495	639	427	476	7	168	43	1,211	54	—	43	166	22,107	—	297
1899 ...	234,610	13	2,077	564	672	513	7	198	96	1,086	25	—	126	496	21,761	24	219

As already stated, the Exports amounted to £267,738 0*s.* 10*d.*, being £10,464 more than last year. There being a decline in value both of the spices exported and of the cotton and cotton seed, the excess was chiefly due to the increase in the cocoa and to an export of miscellaneous merchandise, amounting to £2,000, to Venezuela.

The bulk of the cocoa shipped to Europe was sent with an option to unload at Havre or London. In most cases Havre was stated to be the port chosen, with the result that the returns show a diminution of £22,990 in the exports to the United Kingdom and an increase of £24,091 in those to France.

An increase of £5,116 took place in the exports to the United States, which country bought an unusually large proportion of the nutmeg crop.

The Summary of Imports and Exports (Z—1) shows small exports to Holland, Germany, and Denmark, and the details show, I believe for the first time, a not inconsiderable exportation of nutmegs to Canada.

In Appendix *C* is shown the Total Imports and Exports for the five years ending December 31st, 1898.

Agriculture.

In April a successful Agricultural and Horticultural Exhibition was held at St. George's.*

The Administration Report upon the Botanical Gardens for 1899 has not yet been received, so that no mention is made in this report of the work done by that institution.

The Cotton crop was poor, there having been, when compared with the annual average of the four preceding years, a decline of 533 cwt. and 370 cwt. in Raw Cotton and Cotton Seed respectively.

The apparent influence of the combined effect of wind and rain upon cocoa crops is alluded to in the observations upon Climate made later in this report. Whether the conclusions there suggested are correct or the reverse, the increased expenditure upon manure, already alluded to in connection with "Imports," is strong evidence to show that great attention was given to the cocoa cultivation during the year.

* A grant of £50 for prizes was contributed by the Imperial Department of Agriculture.

GRENADA. 1899.

Unsatisfactory prices alone prevent an extension in coffee cultivation and in Kola planting. The following show that there is a steady decline in the export both of Coffee and Kola nuts:—

—	1896.	1897.	1898.	1899.
	£	£	£	£
Coffee	216	283	59	13
Kola Nuts	180	131	43	96

The Grenada Agricultural Society increased its membership during the year, and in addition to its ordinary work, organised the Exhibition referred to. There being no Commercial Association in the Colony it is very difficult to fill in accurately the returns as to wages, price of foodstuffs, cultivated acreage, &c., given in form BB. in the Blue Book.

SHIPPING.

Steam Vessels.—162 steamers entered and 161 cleared during the year; with the exception of one steamer which cleared at Hillsborough, all both entered and cleared at St. George's.

A marked increase is shown in foreign shipping, 22 vessels (eight Norwegian and 14 United States of America) having entered and 22 (nine Norwegian and 13 American) having cleared, as compared with three and three respectively during the previous year and *nil* during 1896 and 1897. Fifty per cent. of these vessels both cleared and entered in ballast, whereas of the British steamers 47 per cent. cleared and only 34 per cent. entered in ballast. The proportion of British vessels which entered in ballast seems unusually low, the percentage having been 41 per cent. in 1898 and 47 per cent. in 1897.

A calculation of the averages shows that though the British steamers were smaller than the foreign vessels, they carried a larger crew:—

—	Average Number of crew per vessel.	Average Tonnage of vessels.	Proportion of Tonnage per head of the crew.
British	41	1,325	32
Foreign	35·5	1,616	45·5

Foreign Steamers.—Of the 22 Foreign Steamers 11 came with cargoes from the United States of America and one from the British West Indies, whence also came the 10 vessels in ballast.

Of the 22 Foreign Steamers which cleared nine went in ballast to the British West Indies and one to the United States of America. Of the remaining 12 which left with cargoes 11 went to the United States and one to the British West Indies.

British Steamers.—60 vessels arrived from and 50 departed for the United Kingdom the numbers being in both cases almost exactly the same as in each of the three preceding years. With the exception of one vessel which arrived in ballast all both arrived and departed with cargoes.

Sixty-two vessels arrived from and 69 departed to the British West Indies as compared with 76 and 77, the average numbers for the three preceding years. In 1896 50 per cent. of the vessels trading to and from the British West Indies were with cargoes, whereas in 1899 only 19 arrived and only 10 departed with cargoes; as the last two numbers were above the respective averages for the two preceding years, it would seem that the trade in 1896 was unusual in character.

Fourteen British Vessels arrived from and 12 departed to the United States of America, both numbers showing a reduction of about one-third on the average of the three preceding years. All the vessels trading between the Colony and the United States, as usual, both entered and cleared with cargoes, in which respect they differed from the vessels going to Venezuela and to the Dutch West Indies, every one of which departed in ballast.

One steamer was taken of the register and registered in the United States, a fact which explains part of the above-mentioned difference between the number of arrivals and clearances.

SAILING VESSELS.—The total number of vessels entered was 391, being an increase of 53 over the number entered in 1898, but almost exactly equal to the totals for 1896 and 1897.

The total of foreign vessels entered was 41, showing an increase on 13, the average for the three preceding years. Of the foreign vessels 50 per cent. entered and 34 per cent. cleared in ballast, whereas in the case of British vessels only 4 per cent. entered and 20 per cent. cleared in ballast.

The following table shows that the foreign vessels were larger than the British and carried proportionately smaller crews:—

—	Average Number of crew per vessel.	Average Tonnage of vessel.	Proportion of Tonnage per head of crew.
British	4·7	27	5·8
Foreign	5·7	44	7·5

The average tonnage of foreign vessels, it may be noted, was much less than the average of the three preceding years.

With unimportant exceptions all the British vessels entered and cleared from and to the British West Indies.

Sixty per cent. of the foreign vessels entered from Venezuela and 25 per cent. from the Dutch West Indies, while 51 per cent. cleared for Venezuela, 30 per cent. for the Dutch West Indies, and 14·5 for the British West Indies.

Nearly all the Venezuelan vessels entered in ballast and cleared with cargoes.

In Appendix *D* a summary is given of the shipping during the last five years.

LEGISLATION.

There was no legislation of importance during the year, a fact due to the recent revision of the Laws of the Colony.

EDUCATION.

EDUCATION.—The expenditure on Education was £5,926, being thus apportioned, £4,654 on Primary Schools, £595 on Secondary Schools, and the balance on the salaries of the Inspector of Schools and of the Librarian, and on other miscellaneous matters.

Secondary Schools.—(1.) The Grammar School (undenominational) receives a fixed annual grant of £250, and also a grant of £5 a head on every boy who receives half marks in the annual examination. The average attendance of boys was 44 (the number on the roll being 48), and at the examination (conducted by examiners wholly disconnected with the School), 29 passed. thus making the Government contribution for the year £395, to which sum has to be added £30 paid by the Government in respect of the six scholarships at the Grammar School (tenable for five years) which are awarded to boys from the Primary Schools. The school fees amounted to £226 and voluntary contributions to £25, making a total revenue of £676, which practically balanced the expenditure, the latter averaging £14 1*s.* 0*d.* per scholar on the roll.

(2.) The Girls' High School (undenominational). The Government contribution consists of a grant (not to exceed £100 in all) of £2 per head on the average daily attendance. The latter was only 35 (there being 40 on the roll), so that the school was unable

to earn the full Government Contribution. From school fees the school obtained £180, from voluntary contributions £9, making total revenue of £259, which was £8 more than the expenditure. The school fees, it will be noticed, equal £4 10*s.* 0*d.* per scholar on the roll, as compared with £4 14*s.* 0*d.* in the case of the Grammar School. The School is not endowed in any way and has to pay rent, it is thus possible that one cause of the inability to obtain the maximum Government contribution is that the high school fees which are necessary to keep the school solvent, prevent many from being able to send their girls to the school.

(3.) St. Joseph's Convent School (denominational). The Government grant is given on the same principle as to the Girls' High School. The daily average is 64, thus enabling the school to obtain £100, the maximum of the grant. The school fees amounted to £140 and voluntary contributions to £20, making a total revenue of £260, which is £123 *in excess** of the expenditure. The school fees average £1 15*s.* 0*d.* per scholar.

PRIMARY SCHOOLS.—The amount spent on the Education during the three years before and after the Introduction of the Code is shown in Table IV.

The Expenditure on Secondary Education, on the Library, and on miscellaneous educational matters has not varied greatly; the cause of the reduction shown in the Table is the Education Code, which came into operation at the end of 1896. Thus the total Government Contributions to Primary Schools in 1895 was £5,354, in 1896 £5,792; whereas in 1898 the amount was £4,046, and £4,654 in 1899.

The Code of 1896 which now regulates the Government grant to Primary Schools reduced the amount spent on salaries, reduced the Capitation grant, and diverted it from the teachers to the purchase of school supplies; on the other hand, it increased the scale of the result grant, although this last increase is considerable, the result grant to all the schools in 1896 being only £1,141, whereas in 1899 it amounted to £1,630, nevertheless it does not counterbalance the saving in other directions.

In 1899 there were 41 schools open as compared with 37 in 1896. The schools, with the exception of those under Government control, are denominational.

The following table shows the large increase in the number of scholars on the roll since 1896. The large increase in the Catholic Schools is partially accounted for by there being three infant schools now, which was not the case in 1896. This explains also the different figures shown in the table as being the amount after deducting that paid in respect of infants:—

* The expenditure is not debited with Teachers' salaries the tuition being given by the Sisters.

TABLE X.

Denomination.	Number of Schools.		Scholars on the roll in 1896.	Scholars on the roll in 1899.	Rate of increase since 1896.	Present proportion to total scholars on the roll.	Total Government Contribution in 1896 apportioned per head on the roll.	The same in 1899.	Result Grant earned in 1899 apportioned per head of scholars on the roll.
	1896.	1899							
Wesleyan	4	4	756	852	12·5	10·6	247*d.*	141*d.*	49¾*d.*
Anglican	7	7	1,161	1,569	35·2	17·0	230*d.*	138*d.*	47½*d.*
Government ...	10	9	1,721	2,113	22·7	22·8	204*d.*	134*d.*	42½*d.*
Roman Catholic ...	14	19	3,274	4,493	37·2	48·5	153*d.*	101*d.* [or deducting infants 106*d.*]	38½*d.* [or deducting infants 40*d.*]
Presbyterian ...	2	2	216	213	—	—	—	—	—

From this table it will be noticed that since 1896 the expenditure per head in Government Schools has shown a tendency* to approximate to that in the Wesleyan and Anglican Schools. In the Catholic schools, however, the cost per head remains very far lower than in all other schools, a fact the more remarkable when the relatively large earnings (40*d.* per head) from the result grant are borne in mind. The school fees (which go to the teachers) collected per head of average attendance are:—

Denomination.	Per Annum.
Wesleyan	2*s.* 5*d.*
Anglican	2*s.* 7*d.*
Government	3*s.* 4*d.*
Roman Catholic... ...	1*s.* 1*d.*

As these fees may be regarded as voluntary payments, inasmuch as that the non-payment does not effect the Government contribution, it would appear that the Catholic Schools do not require more monetary aid in spite of that now obtained by them being relatively far below the amounts paid to other Schools.

The result grant is only granted in respect of a scholar who has made 200 attendances during the year, and consequently may be regarded as indicating to some extent the discipline of a school as well as its educational position. For this reason the table does not show the average of attendance at the various schools.

If the Code be viewed as having for its main object instruction in the three R's only, the amount earned in result grant is a fairly accurate test of the extent to which a school achieves the object of the Code. Owing, however, to the bulk of that grant being earned in respect of pupils in the preliminary and first three standards the total result grant earned is not an index of a school's efficiency in giving tuition in the higher standards.

Denomination.	Result Grant earned in the Preliminary Standard.	Total Result Grant Earned.
	£	£
Wesleyan	39 or 22 °/₀ of	176
Anglican	87 or 28 °/₀ of	311
Roman Catholic...	249 or 34 °/₀ of	719
Government	142 or 38 °/₀ of	372

* A partial explanation is that certain salary allowances (*e.g.*, house rent) have had to be continued pending a change in the teaching staff.

GRENADA. 1899.

Agriculture is not a compulsory subject under the Code, and probably the first opportunity which children had of learning that it was useful to know something of plant life was in 1897 when they may have overheard the advice given to their parents or neighbours by the Curator during one of his periodical visits.

These visits were made under an arrangement then started by His Excellency Sir Alfred Moloney as a step towards spreading a knowledge of agriculture. During 1899 further progress was made in the same direction, arrangements being then completed whereby the Teachers in all the aided schools would be able to attend during the current year Lectures on Agriculture, given by Lecturers appointed by the Imperial Department of Agriculture, thus enabling them to qualify themselves to teach Agriculture in their respective schools.

The interest taken by parents in the education of their children is a great guide in forming an opinion of the social well being of a country. Judged by such a test the status of the Colony is satisfactory, as the results of the yearly examinations are followed with great interest by the parents, large numbers of whom gather at the schools on examination days.

GOVERNMENT INSTITUTIONS.

Colony Hospital.

This well situated building was opened in 1897, so that it is only possible to consider the results of two years work. The staff of attendants, four day and two night nurses, as well as five assistant servants, was the same during both years. In 1899 the number of patients admitted was 781, being 80 more than in the preceding year, an increase solely due to the larger number of female patients admitted.

Judging by results the ailments although more numerous in 1899 were less serious than in 1898, as there were 153 more patients cured and 27 fewer deaths in the former than during the latter year.

The daily average number of patients in the hospital was 103, being seven in excess of the normal number of beds assigned to all the wards, whereas in 1898 the full accommodation of the hospital was not taken advantage of.

Complaints as to irregularity of the water supply resulted in it being decided to give an alternative source of supply, but the work could not be done during the year. In spite of the defect in the water service, however, the general cleanliness and well being of the institution seem to have been maintained, as no cases occurred of a fresh disease breaking out amongst the patients.

The Hospital is not used by sick persons coming for medical treatment from other countries, the large number of Barbadians and Vincelonians, &c. shown by the Returns to have been inmates during the year being in reality permanent inhabitants of Grenada.

The most prevalent disease requiring treatment was ulcer in various forms, there being 203 cases (more than one quarter of the total) during the year. The next most prevalent diseases were, malarial fever (66 cases), rheumatism (44 cases), cardiac disease (44 cases), the first mentioned showing a considerable decrease and the two last a like increase in comparison with the cases in 1898.

There was no increase in cases of Anæmia, and Anchylostomiasis, which was so very frequent in 1898, ceased to be in any way prominent.

Of the 47 deaths, eight resulted from Cardiac Disease, 11 from Tuberculosis (Pulmonary) and only four from Dysentery, the comparative prevalence of which in 1898 had been attributed to the defective water supply already alluded to.

The total receipts from fees, &c. in respect of the Colony Hospital amount to £147, being £1,838 less than the cost of salaries, maintenance, &c.

It will be noticed that the number of fever patients was very low. In the following table the rainfall is based on observations taken at Richmond Hill and Dougaldston, stations which fairly represent that part of the Colony in which there are no district hospitals, and from which consequently come most of the patients at the Colony Hospital:—

Year.	Total Patients Admitted.	Fever Cases.	Rainfall inches.
1896	584	109	112·1
1897	654	85	97·76
1898	701	80	90·21
1899	781	66	79·18

Mosquito nets are not used at the Hospital.

ST. ANDREW'S HOSPITAL.—This hospital has 12 beds, and, unlike the Colony Hospital, was not overcrowded, as the daily average in the Hospital was only 10. Of the 112 patients treated 64 were cured, 33 were discharged, their ailments being relieved, five died, and the balance still remained in the Hospital at the end of the year.

GRENADA. 1899.

As in the case of the Colony Hospital the most prevalent diseases were ulcers, malarial fever, and anæmia, but not rheumatism.

A noteworthy fact in connection with this hospital is that during the dry years 1898 and 1899 (the rainfall at Dunfermline being 73 and 79 inches) the proportion of patients who suffered from malarial fever was less than in 1896 (100 inches) and 1897 (92 inches). If this fact be anything more than a coincidence, a probable explanation is that in dry years certain swamps which fringe portions of the coast in the St. Andrew's District become partially dry. As in the Colony Hospital there was a marked increase in the number of the female patients.

CARRIACOU HOSPITAL.—This hospital has 16 beds, being exactly the number of the daily average of patients. The number of patients who entered was 92 being 52 less than in 1898. There were only eight cases of Malarial Fever, the most prevalent disease being ulcers, as in the other hospitals.

THE YAWS HOSPITAL.—Ninety cases were admitted during the year, as compared with 84 in 1898. If the number of cases remaining uncured at the end of 1898 is added to the admissions a total of 136 patients is arrived at, and of these 89 were discharged cured.

The average length of stay in the hospital was 103 days in the case of women and 114 days for men, both periods being considerably less than those in 1899.

Lunatic Asylum.

The average number resident in the Asylum was 127, an increase of 17 over the number in 1898, thus continuing the constant annual increases which have taken place since 1893, and which have resulted in the accommodation at the Asylum being now insufficient for the combined requirements of St. Lucia and St. Vincent, and Grenada.

The percentage of recoveries on the number admitted was 36·66, being 4·9 under the average percentage for the last 20 years. The percentage of deaths on the average number of residents was 12·59, being 2·59 over the 20 years average. In these two respects the year is the reverse of 1898, during which the number of deaths were abnormally low and that of the recoveries unusually high.

Of the female patients more recovered and fewer died than in the case of male patients.

In spite of the increased number of patients fewer cases (12 as compared with 24 in 1898) took place in which it was necessary to use the Restraining Belt, which is the only form of mechanical

restraint in use. On the other hand, probably largely in consequence of the overcrowding, it was found impossible, in 15 cases, to prevent patients from inflicting small injuries upon one another.

Of 127, the average number of residents, it was possible to occupy on an average 45 daily by employment, and the value of the work so done during the year is estimated at £116.

POOR ASYLUM.—This is a home for aged paupers and for incurable cases. The accommodation for males is 26 and is taken advantage of to the utmost, whereas the accommodation for females (24) is never fully required.

There were six deaths only, as compared with 15 in 1898.

The Savings Bank.

This Bank has seven offices, the chief being at the Treasury in St. George's. The Treasurer is the Manager of the Savings Bank, the Assistant Treasurers and Revenue Officers being sub-managers of the district offices.

By the Savings Bank Ordinance, 1896, one hundred pounds is fixed as the maximum amount which may be deposited in any one year, with this exception there is no limit to the amount which may be deposited, but *all* interest ceases when a deposit amounts to £200.

The interest payable to depositors is fixed by the law at 3 per cent., and the investments are left entirely to the discretion of the Governor-in-Council.

The number of depositors in 1899 was 1,215, being 162 more than in 1898 and more than in any other year.

The amount deposited during the year was £9,203, and is largely in excess of the deposits during any previous year.

The withdrawals amounted to exactly £7,000, being also more than in any other year except 1894 when they rose to £7,893. During the six years 1894 to 1899 the withdrawals have been less than the deposits, except during 1895 and 1896, which, as will be remembered, were both years during which the price of cocoa was low.

The amount standing to the credit of depositors at the end of 1899 was £10,925. At the same date £10,500 stood invested, of which £4,000 brings in 4 per cent. interest and the balance 3 per cent.

As the Savings Bank does not necessitate the employment of any additional staff, it may be regarded as really making a small profit. There was, however, in 1899 a loss of £13 9*s.* 0*d.*

GRENADA. 1899.

on the working of the Bank, which was due to the accident that the interest on one of the investments, although duly paid in England, could not be remitted to the Colony in time to be passed to the credit of the Bank during the year.

JUDICIAL STATISTICS.

The Police Force of the Colony consists of 58 constables, exclusive of sergeants and other superior officers. The Force is entrusted with the Excise work in addition to ordinary police duties. The estimated expenditure for the year was £4,732.

There are two Prisons, both at St. George, the one the Male Prison (76 cells) situated at Richmond Hill 500 feet above the sea level, the other the Female Prison (12 cells) being an old spacious building in the town.

The following table shows the extent to which these institutions have been needed during the three years mentioned, it being remembered that 1894 was a year of general prosperity and that in 1896 the Colony was passing through hard times:—

TABLE XI.

—		Number of Persons committed.	Number committed for Debt.	No. of Persons Sentenced.			
				For 5 years or more.	For 1 year but less than 5.	For 3 months or more but less than a year.	For 3 months or under.
Male prison	1894	211	8	1	15	13	137
	1896	238	12	4	11	19	141
	1899	152	2	2	7	9	98
Female prison	1894	81	—	Nil.	Nil.	2	77
	1896	94	—	Nil.	Nil.	3	82
	1899	61	—	Nil.	Nil.	Nil.	53

This table shows (*a*) that only five females were sentenced to more than three months imprisonment during the three years

referred to and that during that period none were sentenced for one year or upwards; (*b*) that although 1894 was a prosperous year and that the population was then (naturally) smaller than in 1899, nevertheless the crime was less in the last mentioned year; (*c*) that the poverty in 1896 was accompanied by an increase in crime.

It is also clear that both prisons (especially the Female Prison) have accommodation in excess of the requirements of the Colony.

In both prisons those sentenced by the Supreme Court for a period exceeding one month are awarded marks according to their behaviour, and under this system a person sentenced to two years imprisonment can earn a remission of one-fourth of his sentence.

Penal Labour (shot drill) is compulsory until a prisoner has earned 240 marks (which can be done in 30 days), subsequently the labour consists in the male prison in baking bread for the public institutions, in making bedding, clothing, &c., also for the institutions. Outside labour consists in collecting stone for road repairs and cleaning Government Lands. In the Female Prison employment is found in breaking stones, washing, and preparing cocoa for the public institutions, but no labour outside the prison is allowed. The work thus done was estimated as having saved the Government £1,286 during the year; as no money is actually received under the system the prisoners are not regarded as entitled to "earnings." The expenditure on both prisons was £1,171.

The proportion of those who were committed and who had previous convictions is shown in Appendix *E*.

Criminal Statistics.—The Criminal Statistics of the year are satisfactory. Out of 2,148, which was the total number of persons against whom criminal proceedings were commenced during the year, 1,107 were convicted summarily, and of this number 942 (85 per cent.) escaped by paying a fine or by giving recognisances for good behaviour.

The number of cases determined by the Magistrates during 1899 is slightly below the average number for the three preceding years, and the proportion of convictions to cases dismissed or abandoned is higher, the percentage of convictions being 51·5 in 1899 as compared with 49 per cent., the proportion during the three preceding years. The proportion in 1896 was 47 per cent., so that it seems probable that there is a steady and progressive tendency to refrain from commencing criminal proceedings without sufficient justification.

GRENADA. 1899.

It should, however, be noticed that proceedings against persons for prædial larceny show that hasty action is still by no means uncommon, there having been only 44 per cent. of convictions for such larceny as compared with 56 per cent. of abortive cases.

The following extract from the Report on the Grenada Blue Book for 1888 is of interest as showing the improvement that has been made since that date:—

"78. The Total number of offences coming before the magistrates' courts was 1,873, being at the rate of 37·97 per thousand of the estimated population, as compared with 34·66, calculated on the average of the four years. As the Attorney-General shows, however, in his annual report, there were '956 cases out of 1,873 wherein the parties charged were either not prosecuted or were acquitted'; and he further remarks, 'The number of cases not prosecuted or acquitted bears far to large a proportion to the number of convictions; it betokens a carelessness in the proceedings in cases which come before the magistrate, but whether on the part of private prosecutors or of the police there is nothing to show.'"

In the Supreme Court there were only 17 convictions, of which four were for serious crime (murder and rape). The principal offences during the year which resulted in the offenders being imprisoned (the total being 169) were 31 cases of common assault, 27 cases of abusive language, 18 of disorderly conduct, and 39 cases of theft of cocoa or nutmegs.

It may be mentioned that the annual average number of convictions in the Supreme Court during the four years 1896-1899 was 27, which is the same as for the four years 1879-1882, when the population was only 43,000 as compared with 63,000, the estimated present number.

Vital Statistics.

The estimated population at the close of 1899 was 64,098 as compared with 53,209, the population according to the Census in 1891.

From the following table it will be seen that the deaths in 1899 were fewer in number than in any year since the Census year:—

Year.	Births.	Deaths.
1891	2,457	1,172
1892	2,465	1,194
1893	2,475	1,395
1894	2,471	1,192
1895	2,624	1,215
1896	2,450	1,184
1897	2,318	1,386
1898	2,617	1,294
Average ...	2,449	1,256
1899	2,630	1,154

In connection with these statistics it should be borne in mind that the law relating to the registration of deaths, births, and marriages was in 1899 an old and not very workable law.

Both from the Hospital returns, from the figures given in the above table, and from the medical reports, it may be safely stated that during 1899 the health of the Colony was satisfactory.

Under the Public Health Ordinance of 1895 the Central Board of Health has large powers enabling prompt action to be taken in cases of epidemic. The Central Board has also formulated a scheme of inland quarantine by which the spread of certain specified contagious and infectious diseases could be checked in the event of an outbreak. Under ordinary circumstances the sanitation of the towns is entrusted to the municipal bodies, and in the country districts to the Road Boards.

Vaccination is compulsory, but considerable difficulty is found in carrying the law into effect. The difficulty is not due to any great reluctance on the part of the parents, but arises from certain difficulties connected with the registration of births, which it is hoped will be removed during the current year.

Owing to the fact that the bulk of the population live in the country* there are no great sanitary difficulties. In St. George,

* The country is so hilly that it is difficult to find level ground on which to build. To save the expense of levelling, most houses are built on pillars of wood or stone and are consequently not affected by moisture arising from the soil.

where the basements of the houses in one street are above the level of the roofs in the next, sanitary difficulties only begin after a prolonged spell of dry weather, as one heavy shower is sufficient to cleanse the open cement drains which run from the hilly parts of the town to the sea.

In matters of Hygiene public education is *not* advanced.

The new Sanitorium (about 1,800 feet above sea level) at the Grand Etang was completed during the year.

CLIMATE.

The year was relatively dry, the greatest rainfall being 151 inches at the Grand Etang.

The rainfall during the months March to July inclusive naturally affects the corn crop and the quantity of "provisions," *e.g.*, yams, &c. In order to compare the several years together it is necessary to select stations which fairly represent those parts of the Colony in which corn, &c., is grown.

Dunfermline, Les Avocats, and Carriacou are the stations chosen for the purpose in the following table:—

TABLE XII.

Year.	Dunfermline.	Les Avocats.	Carriacou.
1894	17·15	22·96	9·44
1895	23·04	42·08	23·15
1896	37·60	53·91	22·90
1897	31·20	51·36	20·25
1898	19·04	32·85	15·38
1899	23·58	28·01	15·85

From the column giving the totals in Carriacou it will be noticed that in the three years 1894, 1898, and 1899 the five months in question were very much dryer than they were in the three intervening years.

The year 1894 was the dryest at all three stations, but there are slight variations in the other years, for example, 1896, although showing the greatest rainfall at Dunfermline and Les Avocats, ranked after 1895 at Carriacou. If in three columns, representing the stations, the years are ranked in their

order of dryness, and their average position thus ascertained, it will be found that the following is the order, the dryest years coming first:—1894, 1898, 1899—1895, 1897, 1896. By dealing on the same principle with the quantities imported of following foodstuffs:—meal, flour, rice, dried fish, and meat, it will be found that the following is the order of the greatest importation:—1898, 1894, 1899—1895, 1896, 1897.

The inference that drought during the five months results in larger importations of foodstuffs, although natural cannot be regarded as conclusively shown by these figures, because the three dry years happen to be, owing to the *high price* of cocoa, the most prosperous years.

During the same five months of the present year, however, a great deal of rain has fallen, and should the price of cocoa continue high and the crop be good the value of the inference will be determined.

The statistics in "KK." show that the relative humidity was low, a fact not without interest on account of the sympathy between the cocoa crop and the average air moisture* during the months when the cocoa is in flower or in its early growth. The records of the cocoa crops kept by Messrs. Hubbard and Co. make each crop end in September of each year, and consequently the months by which the fate of each crop is determined are the twelve months beginning with the preceding April.

Crops as Described in order of Magnitude.	No. of Bags.	Quality.	Relative Humidity for the 12 months described.
1894	55,665	Good	76·53
1897	54,597	Good	76·05
1898	53,384	Medium	74·85
1899	52,141	Medium	74·72
1896	46,504	Bad	73·9
1895	42,827	Bad	73·1

The months April, May, and June are the most important months, and determine whether a crop is going to be very good or the reverse; they do not, however, determine the exact position of a crop, for example, the crop ending in September, 1897, was raised from the third place assigned to it by the air moisture in April to June to its rank as the second highest crop, by the

* These returns differ from those of rainfall because they are affected by the wind.

GRENADA. 1899.

high degrees of moisture in December, 1896, and in the early months of 1897, which resulted in the large shipments which took place during the last three months of the crop year.

The record crop of 1894 probably encouraged planting fresh cocoa, which would mature in time to influence the crop now about to end; very much more manure was used in 1899 than in any previous year; in spite of these advantages it will be a matter of surprise if the crop ending in September, 1900, is more than an average crop.

The air moisture in April, May, and June of the present year was relatively high, a fact which augurs well for the 1901 crop.

POSTAL AND TELEPHONE SERVICES.

Post Office.

The total Revenue from the Post Office during 1899 was £863, from which sum £77, the proceeds of the sale of the Commemoration Stamps, should be deducted, in order to compare the revenue with £1,086, the amount of the previous year.

The commission earned on Money Orders amounted to £168, showing an excess of £23 over the amount in 1898, and all other small items in the Revenue account also show increases.

The gross receipts from Letters, Parcels, &c., however, amounted to £565 as compared with £939, the amount in 1898, a diminution of £374 or 39 per cent., attributable to the postage rate being reduced to one penny. As one set of stamps serves for both Revenue and Postal services, and as the stamp revenue of the Post Office is calculated on the assumption that it is one quarter of the total sale of stamps during the year, the effect of the penny postage system is best shown by the following table:—

TABLE XIII.

External postage of Letters and Postcards.

Year.	Received.			Despatched.		
	From United Kingdom.	From other places.	Total.	To United Kingdom.	To other places.	Total.
1899	22,256	65,273	87,529	22,385	56,537	78,922
1898	17,875	41,847	59,722	18,928	37,734	56,662
1897	17,732	34,541	52,273	16,696	31,876	48,572
1896	18,252	40,261	58,513	17,795	36,074	53,869
1895	17,550	37,960	55,510	16,463	37,035	53,498
1894	18,278	39,208	57,586	18,561	39,226	57,787

From this table it will be noticed that the total number of letters and postcards despatched to the United Kingdom and to other places during 1899 rose to 78,922, being 24,845 more than 54,077, the annual average during the five preceding years.

Assuming for the purpose of comparison that the letters and postcards sent in 1898 were paid for at an average of 2½*d.* and that the average in 1899 was 1*d.*, the revenue in 1898 would have been £562 and £329 in 1899, making a loss of £223 in the latter year, which, it will be noticed, is 39 per cent. diminution, the same percentage as the actual loss, £374, already referred to.

As postal statistics are usually progressive, the curious fact disclosed in the above table that the letters despatched in 1894 exceeded in number those in 1895, 1896, and 1897, will attract immediate attention. During 1894, 1898, and 1899 the price of cocoa was very much higher than during the three intervening years, and a not unnatural inference would be that prosperity was the cause of the relative pre-eminence of 1894. Before accepting this inference, however, regard should also be had to the fact that during 1894, 1898, and 1899 the five months which determine the prosperity of the corn and "provisions" (yams, &c.) crops, were months which were abnormally dry, and that consequently the crops failed. Without an exhaustive enquiry, which would be out of place in this report, it is not possible to ascertain the exact truth. The following figures are, however, of special interest when it is borne in mind that a larger number of the male inhabitants of the important Dependency of the Colony—Carriacou—emigrate chiefly to Trinidad, when the corn crop in that Island is unusually bad. In the table given under "Climate" it will be noticed that 1894, 1898, and 1899 were years in which the rainfall in Carriacou during the months March to July was less by five inches than that during the same five months of the intervening years.

Year.	Letters and Postcards received from Trinidad.
1894	13,949
1895	11,648
1896	No report.
1897	12,753
1898	16,744
1899	29,952

During the year the local post amounted to 88,956 letters and postcards, as compared with 86,100 in 1898. There was also an increase in the number of parcels, especially those from and going to the United Kingdom.

As the Post Office is amalgamated with the Treasury it is not practicable to separate the expenditure of the two departments, it is, however, a fact that no extra expenditure was incurred in consequence of the increase in the amount of work done.

The money order transactions increased by £2,745 and amounted to £12,839.

Telephone System.

The system, which is wholly unconnected with the Post Office, was established at a cost of £4,733, of which £207 was contributed from general revenue and the balance from Loan Funds. Repayment of the Loan is effected by an annual contribution of 1 per cent. as a Sinking Fund, the interest being fixed at 4 per cent., the rate of the Colonial Loans.

There were in 1899 and have been since 1894, six stations and 106 miles of Trunk lines. The number of connections with the stations, however, naturally varies, the numbers being in 1894, 179; in 1899, 164; and during the intervening years, 179, 175, 153, and 156 respectively. The total receipts in 1899 were £1,148 as compared with £1,157, the total expenditure including interest charges. Of the expenditure £674 is debited against personal emoluments and £482 against other charges, which include, of course, £225, the cost of interest and sinking fund. By deducting the latter figure £257 is arrived at as the amount out of which the rent of the stations is paid and with which the system has to be worked and maintained in efficient condition, the corresponding figures in 1898 being £161 only.

The small loss shown in working the system cannot therefore be attributed to undue expenditure on maintenance, and it is possible that the amount now spent thereon might be profitably increased, because even if a larger loss was involved than that which occurred during 1899 there can be no question of the enormous indirect advantages of the service. Owing to the mountainous nature of the Colony communication by land is difficult and slow, hence, but for the telephone useless journeys could not be stopped, meetings could not be postponed, delay would take place in making good the damage caused by storms —in short, there would be losses in time, money, and sometimes in life which are now avoided by the system.

PUBLIC WORKS RECURRENT.

The amount spent on these works in 1899 was £8,042, being £1,134 more than in 1898, but almost exactly equal to the annual average expenditure of the four preceding years. The increase is principally due to the amount spent on the maintenance of Public Buildings. The bulk of the expenditure under this head

is for roads, the amount for £6,500 was provided in the estimates for the year. The expenditure on the upkeep does not include the repairs of bridges, on which service £188 was spent during the year. According to the return, there are approximately 402 miles of road in the Colony, divided as follows:—

Main Roads	...	...	132 miles
1st Class bye-ways	...	...	82 „
2nd Class	...	...	188 „

PUBLIC WORKS EXTRAORDINARY.

The amount spent on these works in 1899 was £2,474, being £308 less than in 1898, but almost exactly the amount of the annual average expenditure of the four preceding years. The principal expenditure was on the following works, all of which were completed:—

The Sanatorium at the Grand Etang ...	£490
The Gouyave Embankment Wall ...	396
Wharf construction along the Carenage at St. George	275
Bridge at Duncan's Town	774

ESTABLISHMENT.

Changes in the Establishment.—The office of Police Magistrate of the Southern District became vacant in consequence of the death of the Hon. J. F. Lavington Payne on the 8th October.

Dr. R. D. O'Neale was appointed a Medical Officer, thereby filling a vacancy which resulted from the changes in the service consequent upon Dr. Boyd's promotion to Jamaica in 1898.

Dr. G. L. Latour resigned, thereby causing a vacancy in No. 3 Medical District.

SUMMARY.

A year during which the revenue exceeds that of any previous year and which ends with a proportionately large surplus must be regarded as prosperous, at the same time it should be remembered that the flourishing revenue of 1899 was the result of three causes, which are not certain to be found in combination frequently, and that consequently it would be unwise when

GRENADA, 1899.

considering future expenditure to regard that revenue as certain to be maintained. The three causes were, (*a*) that a large *amount* of cocoa was exported, (*b*) that the *price* of cocoa was high, and (*c*) that there was a large importation of food-stuffs, probably in consequence of the drought.

Tables VI., VII., and VIII. and the explanatory sentences before and after the tables make it clear that the dominant factor in the general prosperity of the Colony is the price of cocoa. If this fact be accepted as an axiom, the wisdom of forming a reserve fund* during years when the revenue is abnormally high will be obvious, as will also be the prudence of not allowing any increase in "Personal Emoluments," which either form or represent that part of a colony's expenditure which it is most difficult to suddenly reduce.

In fact a fall in the price of cocoa may be regarded as a possible accident against which the Colony should insure, as regards revenue, by a reserve and by a strictly controlled expenditure, and with regard to the general prosperity, by fostering other forms of cultivation besides cocoa, and by improving (even if some expenditure is necessary) the quality of the stock, &c., now kept by the smaller proprietors.

The most noteworthy event in the Colony during the year was the failure of sugar cultivation.

The effect of rain and wind on cultivation is only a surmise, but if established would enable future revenue to be estimated at an early date, and would also show the importance of "wind-breaks" and of irrigation.

LESLIE PROBYN,

Acting Colonial Secretary and Attorney General.

September 14th, 1900.

---

* During the current year £5,000 has been so treated.

APPENDIX A.

Total Revenue and Expenditure of the Colony for five years ended 31st December, 1898.

Year.	Revenue.	Expenditure.
	£ s. d.	£ s. d.
1894	63,021 11 11	59,594 8 6
1895	58,467 13 2	63,674 14 7

ADMINISTRATOR SIR HARRY THOMPSON to GOVERNOR SIR R. B. LLEWELYN.

Government House,
Saint Lucia,
July 30, 1901.

SIR,

I HAVE the honour to transmit my Report on the Blue Book for 1900.

I have, &c.,

HARRY THOMPSON,
Administrator.

Governor Sir R. B. Llewelyn, K.C.M.G., &c.,
Grenada.

9865—875—8/1901 Wt 25152 D & S—5

ST. LUCIA, 1900.

REPORT ON THE BLUE BOOK FOR 1900.

FINANCIAL.

REVENUE AND EXPENDITURE.

The revenue for the year amounted to £72,197 15*s.* 1*d.*, which was £6,150 13*s.* 9*d.* in excess of the estimated revenue, and exceeded the revenue of last year (up to then the largest revenue collected in the history of the Colony) by £628 11*s.* 5*d.*

The following table shows the revenue of the Colony for the last five years :—

Year.	Amount.
	£
1896	55,331
1897	60,639
1898	67,628
1899	71,479
1900	72,107

Every head of revenue showed an increase over that of the previous year with the exception of that for Miscellaneous services, which was abnormally large in 1899 owing to special receipts in connection with the frauds in the spirit warehouse discovered in that year. The sum actually paid over for the Imperial Grant in Aid of Agriculture was also £175 less than in 1899.

The largest increase of revenue was under port, harbour, &c., dues. It amounted to £2,221 and was due to the large number of steamers which visited the port during the year.

The Customs Revenue remained at a high figure in consequence of the continuation of the collection of the additional 15 per cent. duty during the whole of the year.

The original estimate of expenditure was £65,957 1*s.* 4*d.*, which was increased by supplementary votes in the course of the year to £67,733 16*s.* 8*d.* The actual expenditure was £64,749 18*s.* 1*d.* or £7,357 17*s.* 0*d.* less than the revenue.

Most of the heads of expenditure showed a small increase over that of last year, but there was a considerable saving in the Immigration Department owing to abolition of most of the offices on the termination of the indentured service of the immigrants.

The Public Works undertaken during the year were of a limited description and the expenditure on them was £1,440 less than in 1899.

The largest increase in expenditure was under the head "Miscellaneous" and was due to the refund to the Land Sales Fund of £1,000 temporarily transferred to general revenue in 1896, to the wiping off of the debt of the Choiseul Village Fund, amounting to £259 11*s.* 4*d.*, and to a grant of £100 to the sufferers in the fire at Ottawa.

The expenditure on agriculture was much in excess of that of 1899 and was chiefly incurred in permanent improvements to the Botanic Station.

Assets and Liabilities and Public Debt.

The balance sheet of the Colony at the close of 1900 showed a surplus of assets over liabilities of £18,554 2*s.* 4*d.*, having been increased during the year by the excess of revenue over expenditure.

The Public Debt of the Colony at the close of 1900 amounted to £176,679 11*s.* 0*d.*, made up as follows :—

—	Amount.		
	£	*s.*	*d.*
Inscribed Stock	85,479	11	0
Debentures	91,500	0	0
Total	176,679	11	0

Of this sum £17,000 of inscribed stock has been borrowed for the Castries Town Board and £5,900 of inscribed stock and £6,000 debentures for the Immigration Fund. During the year £10,500 debentures were redeemed, which included the wiping off of the loan of £8,000 raised in 1891 for immigration purposes.

The Sinking Funds of the Colony are reduced by the amount of the Sinking Fund of the last mentioned loan, and the total of the Sinking Funds now stands as follows :—

—	Amount.
	£ s. d.
For Inscribed Stock	4,167 14 11
For Debentures	897 9 8

TRADE.

IMPORTS AND EXPORTS.

The total value of the imports into the Colony was £403,592 as compared with £282,963 in 1899, or an increase of 42 per cent. A very large proportion of this increase is to be attributed to increased importation of stores of all sorts for the use of the Military Authorities.

There are not many items in the list which call for much comment, and, excluding the special importations for military works, the consumption of the various articles of Import remained at about the same figure as in 1899.

With regard to the source of our imports we received £220,825 from the United Kingdom, or nearly 55 per cent. of the total imports. This was an increase of 41 per cent. over the figures of 1899, and a large portion is due to military stores.

From the United States our imports were £124,263 or nearly 31 per cent. of our total imports. There was an increase of 45 per cent. in our imports from this source over those of 1899, but the proportion of the total imports remained about the same.

Coal was responsible for nearly the whole of the increase, and the figures for the coal trade for the last ten years are interesting.

In 1891 there were 34,079 tons of bunker coal exported, valued at £51,118, and this represented about 28 per cent. of the total exports of the Colony.

In 1900 there were 100,055 tons of bunker coal exported, valued at £124,554, and it represented about 54 per cent. of the total exports.

The growth of the coaling trade during the last ten years has, therefore, been very large, and it might be supposed that our

market was worth competing for, but from the following figures it will be seen that the trade has been surrendered to the United States almost without a struggle.

In 1891, of the coal imported for the trade, 88 per cent. came from the United Kingdom, and 12 per cent. only from the United States. In 1900 the figures stood at 16 per cent. from the United Kingdom and 84 per cent. from the United States. The difference in price must no doubt have always been an important factor in the competition, but in spite of this advantage in favour of the American product English coal appears to have held its own fairly well for several years in the proportion of about 65 per cent. of English to 35 per cent. of American. It was only in 1898, after the coal strike in the United Kingdom, when English coal was practically unprocurable, that the American product took the lead, and it is now so firmly established that but few ships besides men-of-war take any other.

The imports from France stood at almost exactly the same figure as they did in 1899.

The slight increase which appears in the imports from British Colonies is due to the specie imported from them.

On the whole the main feature of the increase in the import trade, excluding military stores, is rather in the value of the articles imported than in the volume of trade.

Exports.

The value of the export trade for the year was £229,436 against £170,663 in 1899, or an increase of 34 per cent.

The increase is chiefly attributable to the bunker coal which, I have already mentioned, formed 54 per cent. of the total exports, and showed an increase of 72 per cent. over the exports in 1899.

The value of sugar and its products exported was £55,561 against £58,034 in 1899. It represented 24 per cent. of the total exports in 1900 and 34 per cent. in 1899.

The direction of our sugar trade is illustrated by the following table :—

—	1899.	1900.
	Per cent.	Per cent.
United Kingdom	6	26
United States	91	71
Other places	3	3

The increase in the trade with the United Kingdom was due to the fact that almost the whole of the sugar from the Dennery Factory was sent there instead of to the United States.

The export of cocoa, the produce of the Colony, showed a most satisfactory increase both in quantity and value. So far as I can find, it is the largest export of cocoa which there has been in any year in the history of the Colony.

The quantity exported was 1,298,100 lbs., valued at £38,247. It represented nearly 17 per cent. of the total exports. 16 per cent. of the crop went to the United Kingdom, and 84 per cent. to France.

The other minor items of export call for no comment. The direction of our trade during the year was chiefly noticeable for a falling off in the value of exports to the United States, which was chiefly due to the diversion of the Dennery sugar to the English market. The exports to the United States in 1900 were £39,630 against £53,006 in 1899, or a decrease of 25 per cent. In 1899 the United States took 30 per cent. of our total exports, while in 1900 they took 17 per cent. only.

The exports to the United Kingdom were valued at £23,519 as compared with £20,423 in 1899, or an increase in actual value of 15 per cent., but they represented only 10 per cent. of the total exports as compared with 12 per cent. in 1899.

In consequence of the large proportion of the cocoa crop which went to France the exports to that country show a very large increase, from £16,824 in 1899 to £32,352 in 1900.

SHIPPING.

1,857 vessels, with a tonnage of 1,841,593, entered and cleared at Castries. Of these 1,240 with a tonnage of 1,812,316 were steamers, and the British vessels were 1,481 with a tonnage of 1,518,174.

BOTANIC STATION.

The improvements in the Botanic Station were continued, and a neat iron fence with an entrance gate was erected. Pipes were laid on for supplying the nurseries from the new town water supply, and the work of raising economic plants for distribution continued.

A further course of instruction in elementary agricultural principles was given to the teachers of elementary schools.

The most important work, however, in connection with the Department of Agriculture was the selection of sites for experimental plots in various parts of the Island. The year was somewhat advanced before the final selection was made and but little work was, therefore, done on them. I look forward to most excellent results from these practical examples of model cultivation all over the Colony, not only to the small cultivators but also to the large land holders and their employees.

Although no final decision was come to during the year the site for the Agricultural School and the Experimental Station in connection with it was practically determined.

The Agricultural Society, with the assistance of the Imperial Department of Agriculture, continued to do good work. An agricultural show was held at Dennery and the preliminaries for an important experiment in the cultivation of cotton were discussed, and the project was well advanced by the end of the year.

CROWN LANDS AND SURVEYS.

The Department continued to do much useful work during the year. 173 applications for land, amounting to 1,591 acres, were received, and there were 39 alienations of land of 623¾ acres, valued at £658 11*s.* 6*d.*

17 cases of escheat for a total area of 3,252 acres were settled during the year.

The revenue of the department was £2,323 16*s.* 6*d.*, including the refund of £1,000 from general revenue already referred to, and the expenditure was £1,685 14*s.* 11*d.*, of which £613 1*s.* 4*d.* was voted on the estimates and paid from general revenue.

The important question of forest conservation is properly forming an important feature in the work of the department, and I am glad to learn that great care is now exercised in allotting land so that the main sources of the water supply may be preserved.

On the whole I think that the department has continued to do useful work and to have the confidence of the purchasers of land.

CASTRIES TOWN BOARD.

The revenue of the Castries Town Board for the year was £5,993 8*s.* 7*d.*, and the expenditure £5,516 8*s.* 4*d.* Of the revenue £2,451 14*s.* 2*d.* was derived from the sale of water to

ships, an amount far in excess both of that derived from the same source in 1899, and of the anticipated receipt, in consequence of the number of ships which called.

The Market Dues brought in £1,213 8*s.* 8*d.*, showing a small increase over last year.

The new water works gave an ample supply of water to the town, but owing to the continued uncertainty of the direction which legislation for their management would take, no steps were taken during the year for its distribution.

LEGISLATION.

Eleven Ordinances were passed during the year, of which perhaps the most important was "The Agricultural Schools Ordinance" which lays down the principles on which the Agricultural School in the Colony is to be conducted. A useful Ordinance was passed by which a fund is established which enables the Colony to insure its own public buildings.

The importation of, and dealing with, petroleum were also regulated, and provision was made for taking a census during this year.

EDUCATION.

There were 42 assisted schools in operation during the year, of which one was closed in October. The number of children on the rolls of the assisted schools was 6,365, and the average attendance was 3,433. Both these figures compare favourable with those of last year. The grants in aid to these schools amounted to £3,138 4*s.* 10*d.*, or slightly more than in the previous year.

It is estimated that there must be about 8,000 children of school age, *i.e.*, between six and 14, and from particulars obtained from the masters of both assisted and unassisted elementary schools, and from the secondary schools in Castries, there appear to be 5,070 of these children on the rolls of the schools.

These figures show that there is still a good deal to be done to make education as general as it should be. The St. Mary's college for boys and the school of the convent of St. Joseph for girls continued to perform useful work, and the success of the pupils at the Cambridge local examinations was a proof of the careful education they are receiving.

A scholarship at Harrison's college in Barbados, offered by the Imperial Department of Agriculture for competition in the

Windward Islands, was gained by a boy from the St. Mary's college.

A new code for primary schools, embracing among other things an improved system of industrial education, was prepared during the year, but was still under consideration at the end of the year.

HOSPITALS.

From the reports of the medical officers, it appears that 5,025 persons availed themselves of the accommodation provided by the hospitals and other institutions during the year, and there were 30,965 attendances at the various dispensaries.

There were 1,842 persons admitted to the Victoria hospital, of whom 906 were East Indian immigrants, 469 natives of other places, and 40 seamen; so that if it were not for our foreign population this, as well as other institutions in the Colony, might be maintained on a very much smaller scale.

In the Poor asylum there was a daily average of 58 and the death rate was 28·4. Attention is again called in the reports to the miserable condition of this building, and I am glad to say that steps are being taken to improve matters.

Owing to absences, transfers, and sickness, the medical department was often very short handed and difficulty was experienced in providing for the work in the various districts.

On the whole the health of the Colony was good, and there were no epidemics which call for special remark. Malarial fevers still occupy the most prominent position in the list of diseases.

The colonial surgeon calls attention to some serious surgical operations successfully performed by Dr. Gray at the Victoria hospital, and interesting special reports by that officer on malaria and mosquitos, and by Dr. Galgey on filaria sanguinis hominis, in continuation of former reports, attest the interest taken by them in the work of their profession.

SAVINGS BANK.

The savings bank figures continue to show an increase, and the balance to the credit of depositors at the 31st December amounted to £14,418 16*s.* 5*d.*, as compared with £13,884 9*s.* 11*d.* at the 31st December 1899.

The amount was distributed among the savings banks as follows :—

—	Amount.
	£ s. d.
First District	13,883 7 11
Second District	321 15 10
Third District	213 12 8

and was divided among 1,403 depositors.

The invested funds of the bank amounted to £13,416 14*s.* 11*d.*

The interest credited to depositors was £375 4*s.* 0*d.*

To make up the difference between the income derived from invested funds and the expenses of the institution a contribution from general revenue of £77 11*s.* 7*d.* was required.

It is a question how far the general revenue should be called upon to make this contribution, and the matter is now under consideration.

FRIENDLY SOCIETIES.

One society was registered during the year, bringing the number of them up to five. The total membership at the end of 1900 was 638, and the total funds of the societies £635 3*s.* 7*d.*

On the whole the societies seem to have been carefully managed, and though they are still working on a very small scale show signs of progress.

POLICE.

Of the police force not much can be said. The work of the force continued to increase, and its strength remained at the same number that it has for many years past. Such a state of affairs could only result in complaints both from the public and the police authorities. Soon after the close of the year, it was thought advisable to have an enquiry into the police, and I trust that the recommendations of the commission which was appointed may have the effect of making the force a more useful body.

Prisons.

The limited accommodation of the prison continued to be severely taxed during the year.

Though the actual number of prisoners admitted during the year was only 28 in excess of last year, the average daily number in prison rose from 58·94 to 75·26.

Of the prisoners admitted 468 males and 180 females were convicted prisoners, and nearly 50 per cent. of each were natives of places other than St. Lucia, including soldiers and merchant seamen.

The most regrettable incident in connection with the prison was the occurrence of no less than three suicides during the year. The circumstances formed the subject of an enquiry in each case and a special enquiry was held early this year. I am glad to say that nothing was found in the prison management to which these regrettable cases could be attributed.

The circumstances of the Colony are such that an increase in the prison population must naturally be expected and an increase in accommodation will no doubt be necessary before long. For the moment we are sending our long-sentence prisoners to Grenada and thus relieving the congestion.

The health of the prisoners was fairly good and one death only occurred in addition to the three cases of suicide already mentioned.

CRIMINAL STATISTICS.

The number of offences reported and of persons prosecuted were both slightly higher than in 1899, while the number of persons convicted in the inferior Courts was slightly less.

The number of cases in the Royal Court was higher than it has been for the last five years. 48 cases were sent up for trial by the magistrates, of which 38 were actually tried.

32 were convicted and six acquitted, and of those convicted 16 only were natives of St. Lucia.

Though the statistics show a considerable increase in crime during the last few years I do not think that they are altogether unsatisfactory when it is considered what large numbers of people have come into the Island. I think that an even larger increase might not unnaturally have been expected, and the fact that there has been plenty of work for all who wish to find it, has no doubt had its effect in keeping employed those who might otherwise have been inclined to mischief.

POST OFFICE.

The business of the department continued to increase in almost every direction, as appears from the tables in the Blue Book, but there is nothing in the transactions for the year that calls for much comment.

TELEPHONES.

The Telephone System which was completed in 1896 from loan funds began to show evident signs of wear during the year, with the result that communication with the outstations was interrupted very frequently. As far as funds would allow, the wooden posts which collapsed were replaced by iron rails, which, though not sightly objects, will be far more permanent.

I am afraid that the time has come when our expenditure on the maintenance of the lines must increase if they are to be kept in a serviceable condition.

PUBLIC WORKS.

No very important public work was undertaken during the year, but the work of maintenance of roads and buildings continued and many improvements were effected.

The Public Works Yard and Offices, which covered a considerable area, were concentrated on one lot, and the remaining three lots were disposed of by tender for £4,357. Work was begun on the piling of the Prince Alfred Basin, and a sum of £691 13*s.* 10*d.* was expended as a first instalment.

Iron railings were erected at the Botanic Station at the cost of the Imperial Department of Agriculture.

Dredging was carried on in the Castries Harbour for eight months with the Priestman Dredger, when the pontoon broke down and work had to be suspended. Dredging was chiefly done on the shoal at the N.E. corner of the harbour.

On roads and bridges the chief separate work was a fine wooden bridge over the Anse Canot River, which was erected at a cost of £326.

Out of the vote for maintenance of roads £3,987 was spent, and besides the ordinary work of maintenance the following work was done which tended to the permanent improvement of the roads :—

6 retaining walls.
3 bridges.
92 stone culverts.
394 concrete cylinders laid.
14,550 feet of new macadam.

From the Crown Lands Fund the following roads for the development of Crown Lands were continued and maintained at the cost stated :—

	£	s.	d.
Trois Pitons to Pilet	100	0	0
Ravine Souffre	60	0	0
Micoud to Soufrière	198	18	4

The total mileage maintained was 253.

Though much no doubt remains to be done to improve the internal communications of the Colony, I think that there is a general agreement that the improvement during the last ten years has been very great. When it is considered that the estimates for the maintenance of the road prepared by the Road Boards amounted to over £13,000 and we were able to allot them £4,000 only, I think that those bodies may be congratulated on the manner in which they have accepted a difficult situation and made the best of it.

£1,042 was spent on current repairs, and extensive repairs were done to Government House (including painting), Victoria Hospital, Vigie Lighthouse, Vieux-Fort Hospital, and the Police Barracks.

£263 was spent on the maintenance of the wharves, but I foresee that in future years we shall have to provide for a much larger expenditure on them.

Owing to restricted means it has not been possible to devote as much to this work as was necessary, and I fear that a larger expenditure may now be required than would have been necessary if the wharves had been regularly maintained.

The work yard continued to perform useful work, and out of the profits it was possible to purchase new steam machinery at a cost of £226.

VITAL STATISTICS.

The registered births during the year were 1,995, an increase of 130 over last year. The average birth-rate was 3·80, as compared with 3·54 in 1899.

The percentage of legitimate and illegitimate births was slightly in favour of 1900 as compared with 1899. The figures were :—Legitimate, 42·91 ; illegitimate, 57·09.

The deaths were 942, or a rate of 1·93 as compared with 2·14 in 1899.

Allowing for the natural increase, the population at the end of the year was estimated at 49,558, and that this was not very wide of the mark is proved by the results of the census taken in April of this year, which showed a total population of 49,895.

It is to be noted that it was the first year in the history of the Colony in which there was no recorded death from snake bite.

METEOROLOGY.

The only noticeable point in the meteorology of the year was the very small rainfall. It amounted at the botanical station to 73·25 inches only, and is, I believe, the smallest rainfall of which we have any record except that of 1891, when 70·15 inches only were recorded.

There has been a steady decrease in the rainfall for the last six years, and this has been attributed by some to the persistent felling of the forests during these years. Looking to the records of the past years, I do not think that those for recent years are sufficient to justify a definite opinion on the point, but the matter requires careful watching.

GENERAL.

The year under review may be regarded as one of continued prosperity for St. Lucia, and I think I may fairly say that it was on the whole the most prosperous year in the history of the Colony since the time when sugar was supreme.

There were no convulsions of nature, such as hurricanes or earthquakes, and no misfortunes, such as large fires in populous places. The cocoa crop was the largest ever exported, and the prices obtained for it were good; the sugar crop was a fair one with remunerative prices; the coal trade was by far the largest done in any year since the establishment of Castries as a coaling station, and there was a large expenditure on military works which provided remunerative employment to a large number of people, and caused the circulation of considerable sums of money.

After so short a residence in the Colony it is perhaps presumptuous on my part to attempt to say what is necessary for the continued welfare of the Colony, but I should hope that at no distant date we may see our means of communication extended and improved, our public buildings made more suitable to the growing needs of the Colony and to the convenience of the public who have to resort to them, the cultivation of the land extended and taken up by those who now earn a precarious livelihood, often at the cost of their own health, by visiting the Cayenne Gold Fields, and last, but by no means least, such necessary maintenance and improvement of the harbour as will ensure that the successful trade which has been built up with so much spirit and energy may not be tempted to move to some other place which may for a time appear to offer greater attractions.

St. Lucia seems now to be established in a career of prosperity, and I can foresee nothing in the near future which is likely to interfere with it.

COLONIAL REPORTS—ANNUAL.

GRENADA.

(For Report for 1899, *see* No. 316.)

GOVERNOR SIR R. B. LLEWELYN to MR. CHAMBERLAIN.

Grenada,
7th November, 1901.

SIR,

I HAVE the honour to forward the Report on the Blue Book of this Colony for the year 1900, prepared by Mr. E. Drayton.

I have, &c.,
R. B. LLEWELYN,
Governor.

c10347—875—11/1901 Wt 25152 D & S—5

GRENADA, 1900.

BLUE BOOK REPORT FOR THE YEAR 1900.

FINANCIAL.

REVENUE.

The General Revenue of the year 1900 amounted to £70,363, of which £700 was a grant in aid of the Botanic Station from Imperial funds, so that the revenue from local sources was £69,663, being the largest on record.

The General Revenue for the last five years was as follows:—

Year.	Amount.
	£
1896	56,275
1897	56,973
1898	62,875
1899	68,757
1900	70,363

2. The subjoined comparative statement of the revenue in 1899 and 1900 shows that the improved results of the latter year are due to better collection of internal revenue, chiefly the land and house taxes, and to sales of escheated properties, and of a portion of a mountain estate, purchased for conservation in forest, that part of it not required for such purposes being re-sold.

On the other hand, Customs Revenue declined by £1,565, as a consequence of the abolition at the commencement of the year of the 10 per cent. additional import duty which had been imposed to meet the financial difficulties of the four preceding years.

Head of Revenue.	1900.	1899.	Increase.	Decrease.
	£	£	£	£
1. Customs	36,584	38,148	—	1,564
2. Licences, Excise, and Internal Revenue.	26,497	24,966	1,531	—
3. Fees of Office, &c.	1,369	1,340	29	—
Carried forward ...	64,450	64,454	1,560	1,564

Customs Revenue—cont.

Head of Revenue.	1900.	1899.	Increase.	Decrease.
	£	£	£	£
Brought forward ...	64,450	64,454	1,560	1,564
4. Post Office	1,089	787	302	—
5. Sale of Commemoration Stamps.	18	76	—	58
6. Telephones	1,150	1,149	1	—
7. Rent of Government Property.	435	426	9	—
8. Refund of Interest and Sinking Funds.	950	965	—	15
9. Miscellaneous Receipts ...	242	100	142	—
10. Land Sales	1,329	88	1,241	—
11. Grant in aid of Botanical Station.	700	712	—	12
Total	70,363	68,757	3,255	1,649

EXPENDITURE.

3. The General Expenditure of 1900 amounted to £62,718, of which £932 was in respect of the Botanic Station; and the Expenditure for the last five years was as follows:—

Year.	Amount.
	£
1896	60,523
1897	58,549
1898	57,612
1899	59,359
1900	62,718

GRENADA, 1900.

4. The comparison of the details of the expenditure of 1900 with that of 1899, given below, shows an increase under nearly every head, the total increase being £3,359.

Head of Expenditure.	1900.	1899.	Increase.	Decrease.
	£	£	£	£
1. Charge on Account of Public Debt.	6,429	6,430	—	1
2. Pensions	1,500	1,057	443	—
3. The Governor and Legislature.	2,135	2,135	—	—
4. Colonial Secretary	1,897	1,817	80	—
5. Treasury, Customs, Post Office, &c.	5,763	5,488	275	—
6. Audit Department	493	520	—	27
7. Legal Departments	5,367	5,012	355	—
8. Police and Excise Department.	5,017	4,711	306	—
9. Prisons	1,083	1,120	—	37
10. Medical Department ...	7,444	7,415	29	—
11. Education	6,268	5,926	342	—
12. Ecclesiastical...	486	496	—	10
13. Charitable	511	445	66	—
14. Telephone Department ...	1,245	1,157	88	—
15. Miscellaneous Services ...	3,864	3,713	151	—
16. Public Works Department...	792	740	52	—
17. Public Works Recurrent ...	8,323	8,042	281	—
18. Public Works Extraordinary	3,169	2,474	695	—
	61,786	58,698	3,163	74
19. Agricultural Department ...	932	661	271	—
Total	62,718	59,359	3,434	74

5. Under Pensions, the increase is attributable to £300 granted in compassionate allowances to widows and children of

deceased public officers and to two new pensioners; under Treasury and Post Office, to heavy payments on account of postal transit charges; under Legal Departments, to the appointment of a Registrar with increased salary, to heavy expenses for Criminal Sessions of the Supreme Court, and for Escheats, and to the holding of a Session of the Circuit Court of Appeal; under Education, to increased grant in aid of Primary Education, £5,004 being spent as against £4,652 in 1899; under Miscellaneous, to a grant of £150 to the School of Tropical Medicine; and under Public Works, to larger amount of works executed.

CHANGES IN TAXATION.

6. The additional import duty, at the rate of 10 per cent. on all import duties paid, which had been imposed since 1896 to assist in meeting the financial difficulties of the Colony, was, in accordance with the promise to that effect given by the Government at the time of its imposition, abandoned at the end of 1899, as the accounts of that year closed with a large surplus of assets.

GRENADA, 1900.

ASSETS AND

7. After writing off the sum of £4,344, being irrecoverable the surplus of colonial assets at the end of the year was £16,423,

GRENADA, 1900.

Of this surplus, £7,030 was set aside as the commencement of a Reserve Fund, to be held for emergencies, and as a safeguard against times of financial depression, which have been in the past of periodic occurrence.

PUBLIC DEBT.

8. The Public Debt at the close of 1900 was £127,570, of which £123,670 was 4 per cent. Inscribed Stock, and £3,900 in 4½ per cent. Debentures, £100 more of the latter having been redeemed during the year. Provision is made for redemption of the debt by contributions to sinking funds at the rate of 1 per cent. per annum on the nominal value of the stock issued, and of 1 per cent. per annum on the total amount of debentures originally issued, the general revenue and assets of the Colony being finally liable for due repayment. The Inscribed Stock Sinking Fund at 31st December amounted to £9,443, and that for Debentures to £30; of the latter, £300 have been already retired by annual drawings.

The Colony is also liable for the repayment by the St. George's Town Board, in March, 1903, of the sum of £1,000, being a loan raised in 1879 for construction of waterworks. A sinking fund has been created by the Board, and is held by the Colonial Treasurer, amounting at end of 1900 to £625.

Revenue and Expenditure of Town Boards.

9. A comparative statement of the revenue and expenditure for the last five years of the Boards in whom the administration of the towns of the Colony is vested is appended :—

—	Revenue.					Expenditure.				
	1896.	1897.	1898.	1899.	1900.	1896.	1897.	1898.	1899.	1900.
	£	£	£	£	£	£	£	£	£	£
St. George's	2,477	3,049	2,158	2,576	2,459	1,978	3,021	2,033	2,879	2,707

* Correct returns not yet received.

GRENADA, 1900.

Town Boards' Debt.

10. The Town Boards' Debt at 31st December, 1900, stood as follows:—

St. George's	£7,481
Grenville	1,300
Sauteurs	1,100
Victoria	1,394
Gouyave	3,304
Hillsborough	600
	£15,179

11. At the end of 1899 these debts amounted to £27,159, but, as an indirect result of the report of the Parochial Boards Commission of 1896, which was presented on 12th January, 1900, the Grenville Waterworks Loan, £11,933, has been assumed by the Government, and another small balance outstanding against that town for a fire engine written off. Similarly, the sum of £3,687, due from the Grenville Waterworks as arrears of loan charges, together with £240 owed by the town of Gouyave in connection with their market place, and £417, advanced to Victoria for repair of jetty, were abandoned by the Government at the end of 1900 as irrecoverable.

12. The repayment of the present towns' debt is provided for either by sinking fund contributions or refund by instalments, with the exception of £200 owed by Grenville to the Colonial Treasury for a breakwater, and £150 advanced to the same Board from the same source to assist them in paying current liabilities in 1895. Measures are being taken by Government in the current year to improve the administration and finances of the towns.

TRADE, AGRICULTURE, AND INDUSTRIES.

IMPORTS AND EXPORTS.

13. The Imports for the year 1900 are valued, for statistical purposes, at £232,790, and the Exports at £311,681. The corresponding figures for the four preceding years are:—

Year.	Imports.	Exports.
	£	£
1896	154,405	183,883
1897	164,356	154,439
1898	210,783	257,274
1899	226,828	267,738

In respect of Imports, therefore, the year under review was but slightly in excess of 1899, but in Exports a marked increase is shown, due to the satisfactory output in 1900 of the Colony's staples—cocoa and spices.

14. To illustrate the trade of the Colony five tables are subjoined. In the first the imports and exports for the five years ended in 1900 are divided into the usual statistical classes.

Classes.	Imports.					Exports.				
	1896.	1897.	1898.	1899.	1900.	1896.	1897.	1898.	1899.	1900.
	£	£	£	£	£	£	£	£	£	£
Live animals, food, drink, and narcotics ...	71,043	76,598	89,028	104,440	108,353	175,647	148,907	252,263	261,144	303,148
Raw materials	11,410	10,656	16,467	18,715	21,402	6,458	4,314	4,754	4,066	6,484
Manufactured articles	71,952	77,102	102,028	100,548	102,342	599	274	185	1,603	1,649
Coin and bullion	—*	—*	3,260	3,125	693	1,179	944	72	925	400
Totals	154,405	164,356	210,783	226,828	232,790	183,883	154,439	257,274	267,738	311,681

* No returns.

15. In the second, the volume and direction of the trade are shown for the quinquennial period, and here it will be observed that 45 per cent. of the imports last year came from the mother country; the corresponding percentage in 1896 was 43; 25 per cent. came from British Colonies, and 30 per cent. from foreign countries, according to the returns; in 1896 these figures were 28 per cent. and 29 per cent respectively. It must be pointed out, however, that the bulk of the imports from British Colonies consists of American foodstuffs brought in from Barbados and Trinidad. While the import trade with Great Britain may thus be said to have been in 1900 at about the same rate as in 1896, the figures of exports disclose that foreign countries are now competing for a larger share of the Colony's staples, as 15 per cent. of the exports of 1900 went to them, as compared with about 5 per cent. in 1896, the percentages to the United Kingdom being 83 per cent. in 1900 and 92 per cent. in 1896.

—	Imports.					Exports.				
	1896.	1897.	1898.	1899.	1900.	1896.	1897.	1898.	1899.	1900.
	£	£	£	£	£	£	£	£	£	£
United Kingdom	66,485	78,893	98,626	101,922	105,592	169,499	138,656	243,574	220,479	259,079
British Colonies	42,504	40,126	55,254	64,603	57,628	5,790	4,283	3,307	5,636	5,399
Foreign Countries	45,416	45,337	56,903	60,304	69,570	8,594	11,500	10,393	41,623	47,203
Totals	154,405	164,356	210,783	226,829	232,790	183,833	154,439	257,274	267,738	311,681

GRENADA, 1900.

16. The next table traces the foreign trade to the countries with which it is carried on, and here the strides made by the United States of America are worthy of notice, that country claiming 96 per cent. of the imports and 67 per cent. of the exports from and to foreign countries in 1900. When, in connection with the imports, the remarks in the preceding paragraph as to the true nature of the bulk of the Colony's trade with British Colonies are borne in mind, the actual position of the import trade with the United States will be realised. In the past this trade consisted principally of foodstuffs and petroleum, but there is ample evidence that an increasing quantity of manufactured articles is now finding its way in, displacing the corresponding class of British manufactures. This tendency is due not to want of appreciation locally of British manufactures, but to the great advantages enjoyed by the American imports in point of rapid transit, cheaper freight, and lower charges for packing, behind which also lies the well directed advertisement continually employed by the American exporter. The first two are, for the present at all events, beyond the power of the British merchant to compete with, especially as the Colony enjoys the advantage of direct steam service three times a month with New York, but greater attention on his part to packing and advertisement might attract a large share of West Indian trade.

17. The rapidly increasing consumption by the United States of the Colony's staples is one of the most promising guarantees of the future prosperity of Grenada. In 1896 the cocoa exported thither was valued at £4,752, and the spices at £1,276; in 1900 these values had advanced to £22,376 for cocoa, and £9,297 for spices. It is known that the consumption of cocoa in the United States has in the last five years about doubled, and when the enormous population of the States realise the merits of chocolate as a sustaining beverage, as there is good reason to hope they are beginning to do, an immense market for the cocoa-producing Colonies of the West Indies will be opened up. Similar remarks apply to British North America, as yet unexploited in this respect.

18. As has been remarked in previous reports, the statistics of the cocoa export to France are not quite reliable. A certain quantity of the Colony's cocoa is shipped to Havre, "optional" for London, and the Customs authorities have no means of ascertaining how much, if any, actually finds its way into France.

Foreign Countries.	Imports.					Exports.

Other	1,594	1,249

20. In the fifth table are shown the values of the principal articles of local produce exported in the five years 1896-1900, and here the satisfactory results of the last year again appear, an increase being shown under most items. Coffee and logwood seem to be disappearing from the exports, while kola nuts show an unexplained rise, which it is hoped, may continue, as the Colony is capable of doing much in this direction. The statistics of Fruit are not reliable, as under existing arrangements a

GRENADA, 1900.

considerable proportion of this export does not find its way into the returns.

Produce Exported.	1896.	1897.	1898.	1899.	1900.
	£	£	£	£	£
Cocoa	159,519	132,642	227,655	234,611	269,931
Spices	12,424	13,503	22,107	21,761	30,153
Cotton and cotton seed ...	4,474	2,720	3,134	2,641	4,622

Coffee	217	283	59	13	5
Logwood	372	302	54	25	39

MINES, MANUFACTURES, AND FISHERIES.

21. There are no mines, and the only manufactures are those of muscovado sugar (mostly of low grade) and of rum, for local consumption. No record of the sugar made is available, but the quantity of rum made in each of the last five years is given below, and, for convenience of reference, the amount of excise duty collected thereon is also shown:—

Year.	Quantity.	Excise Duty.
	Gallons.	£
1896	52,895	11,188
1897	57,406	11,448
1898	32,662	12,478
1899	48,477	10,605
1900	47,942	11,327

It hence appears that the output last year was 535 gallons less than in 1899, and that the manufacture generally has not yet recovered the position it had reached in 1897, the record year. It is also seen that the duty collected in any year appears to depend upon the quantity distilled in the preceding year. None of this rum is exported. There were 16 distilleries at work during the year.

22. There are no fisheries, properly so called. Fish abounds on the coasts, and considerable quantities are caught daily for local consumption. During the whaling season — January-March—some attempt is made by fishermen on the south-western coast to capture whales, but the efforts made are half-hearted and frequently fail. In 1900 two whales were killed, and 1,381 gallons of whale oil are shown as having been exported.

AGRICULTURAL INDUSTRIES.

23. The crop of the staple produce of the Colony for the year ended 30th September, 1900, was as follows:—

Crop.	Produce.
Cocoa	53,388 bags.
Spices	3,428 barrels. 1,224 half barrels. 931 cases. 49 bags.
Coffee	134 bags.
Cotton...	995 bales.
Cotton seed	5,816 bags.

The cocoa crop was a good one, being 1,247 bags in excess of that for the preceding year, but it fell short by 2,277 bags of the record crop, that of 1894. It is a matter for surprise that with the great extension of cocoa cultivation in Grenada the output should only have doubled itself in the last twenty years. Much is perhaps attributable to the old trees not yielding so vigorously, but the chief cause is undoubtedly that a very large area of the cultivation is in the hands of

peasant proprietors who continue to follow crude methods both of cultivation and curing. An Agricultural Instructor is about to be appointed by the Government in the hope of improving this defect, and the efforts being made in the direction of agricultural education in the primary schools will doubtless also be of assistance to this end.

Prices were favourable during the year, the London market opening with cocoa at 64*s.* to 70*s.*, and closing at 70*s.* to 73*s.* 6*d.*

24. On account of the variety of packages used for export it is difficult to compare the *crops* of spices, so that it is necessary to refer to the recorded exports, and these disclose the following results:—

Average for five years ended 1897	2,533 cwt.
1898	4,373 „
1899	5,005 „
1900	6,687 „

There is, therefore, a steady increase in the output of spices, which are chiefly nutmegs, 5,887 cwt. of the total export in 1900 being of that description.

The cultivation of this tree is principally in the hands of large proprietors, and much care and attention are bestowed upon it.

25. The coffee reaped is now consumed locally, as prices are so low that it no longer pays to export it, and during 1900 only 1 cwt. found its way to the United States of America.

26. The crop of cotton and cotton seed, which is the product of Carriacou, a dependency of Grenada, was good, 2,628 cwt. of cotton and 5,334 cwt. of seed, valued at £4,622, being exported, as compared with 1,768 cwt. of cotton and 4,114 cwt. of seed, valued at £2,641, in the preceding year.

PEASANT PROPRIETARY.

27. As connected with the agricultural development of the Colony, and lying at the root of its material prosperity, some account may here be included of the position of the peasant proprietary of Grenada. It has been erroneously stated in certain quarters that this valuable body is on the decrease, their property being gradually absorbed by the large estates. That this is not the case is conclusively shown by the following comparative statement for the last seven years, from which it will be seen that the total number of land proprietors whose holdings do not exceed ten acres has steadily increased from 6,120 in 1894 to 8,176 in 1900. Further, it will be observed that of this latter total no less than 79 per cent. were holdings of not more

than 2½ acres, and that the chief growth in the seven years has been of this class:—

Year.	2½ acres and under.	Over 2½ acres to 5 acres.	Over 5 acres to 7 acres.	Over 7 acres to 10 acres.	Total.
1894	4,476	1,171	275	198	6,120
1895	4,912	1,074	275	201	6,462
1896	5,077	1,111	260	209	6,657
1897	5,078	1,102	262	202	6,644
1898	6,046	1,192	279	198	7,715
1899	6,198	1,193	308	213	7,912
1900	6,453	1,206	295	222	8,176

28. There can, therefore, be no doubt of the existence in a healthy condition of this important body. The problem of the future is how best to educate them, agriculturally, to the level of their possibilities, so as to make them of the most effective use to themselves and to their country. With a view to the future, too much stress cannot be laid upon the importance of agricultural instruction in the primary schools; but in the present much can be done, if the right man can be found for the work, by advice and practical demonstrations from a competent instructor, visiting the peasants' holdings, and communicating with them sympathetically. The Grenada labourer will not as a rule go out of his way to look at object lessons in agriculture, but gives a willing ear to advice brought home to him in regard to his own property.

BOTANIC STATION.

29. The Botanic Station has, since the 1st of October, 1898, been under the charge of the Imperial Department of Agriculture, and is supported by Imperial funds, although expenditure on improvements still takes place from Colonial funds. The following extracts are made from a brief review by Dr. Morris of the Curator's annual report for 1900:—

* * * * * * * *

"It is observed that the cost of upkeep of the garden during "1900 was £811 0*s.* 5*d.*, an increase over the expenditure for

GRENADA, 1900.

"1899 of £150 11*s.* 9*d.*, while the receipts for the sale of plants "were £50 9*s.* 1*d.*, or £33 6*s.* 11*d.* less than those of the "previous year."

* * * * * * * *

"An interesting feature in connection with the work of the "Botanic Station during 1900 was the establishment of seven "experimental cacao plots in various parts of the island under "the control of the Curator and other officers of the Imperial "Department of Agriculture."

* * * * * * * *

"The report is on the whole of a favourable character, and "indicates an evident desire on the part of the Curator to "conscientiously carry out the duties entrusted to him."

SHIPPING.

30. The following is a comparative statement of the total shipping, inwards and outwards, for the last five years, according to the Blue Book returns. From these figures it would seem that, as regards shipping entered, the year 1900 was up to the average, while, as regards shipping cleared, it was much below the average:—

Year	Entered.	Cleared.
	Tonnage.	Tonnage.
1896	221,395	224,233
1897	220,179	223,629
1898	216,192	218,006
1899	222,437	231,611
1900	222,399	216,110
Average	222,620	222,738

31. Details of the shipping for the last two years, according to the returns, are contained in the subjoined statement, which also shows the nationality of the vessels. The chief point of interest in this table is the disappearance of the steam tonnage under the American and Norwegian flags, due to the sale of

a regular trader with the Colony, of American registration, and the temporary substitution for her of a steamer belonging to Norway.

Nationality.	Tonnage Entered.						Tonnage Cleared.					
	1899.			1900.			1899.			1900.

LEGISLATION.

32. Seventeen Ordinances were enacted during the year, of which the most important measures were:—

The Tenants Compensation Ordinance, to enable occupiers of land to obtain compensation for improvements made by them on the land occupied.

The Volunteer Ordinance, making it lawful for the Governor, on behalf of the Sovereign, to accept the services of any persons desiring to be formed into a Volunteer Corps and offering their services for a term of three years, and providing for the due regulation and discipline of the body so formed.

The Marriage Ordinance, to consolidate and amend the local laws relating to marriage, and to provide for the appointment of marriage officers and proper registration.

The Agricultural Interests Protection Ordinance, to prevent the introduction and to provide for the eradication of diseases affecting vegetation.

The Marriage Ordinance has not yet been brought into operation, as it was found necessary to amend certain of its provisions before it could be enforced.

EDUCATION.

PRIMARY.

33. There are two classes of primary schools—Government, entirely supported from colonial revenue, and Grant-in-Aid, receiving contributions from public funds. The system in force is one of payment by results, grants being paid to teachers from the Colonial Treasury monthly upon the certificates of the school managers (who are usually the clergy of the several religious denominations), based upon the educational results of the schools as shown by an annual examination by the Inspector, who is a Government officer. Managers are also paid a grant at the rate of 1*s*. per annum for each pupil who attends school on not less than 100 days in the year, this grant being intended to assist them in supplying school furniture and apparatus. They are further allowed to receive the whole of the school fees paid by the pupils, which are, however, but indifferently collected. The administration of the system is under the control of a Board, composed of equal numbers of Roman Catholic and non-Roman Catholic members, the Governor presiding, but allowed only a casting vote.

34. The chief statistics relating to primary education in the Colony are summarised for the last two years in the following table. It will be observed that the Government contributions are on the increase, that there are no voluntary contributions, so that the title of "Grant-in-Aid" Schools appears to be a misnomer, and that school fees have decreased from £505 in 1899 to £397 in 1900.

SECONDARY.

35. There are three schools of secondary education, one for boys and two for girls, one of the latter being attached to the Roman Catholic Convent in St. George's. The boys' school receives a fixed grant of £250 per annum from public funds, as well as a result grant of £5 per head on each pupil who obtains not less than half marks at the annual examination. The girls' schools receive each a grant of £2 per pupil, based on the average daily attendance, but not to exceed £100 per annum each; they are examined annually by an officer appointed and paid by Government. A comparative statement of the leading statistics relating to the secondary schools for the last two years is subjoined :—

Secondary Schools.

Decrease in 1900... ...	11	1	12	12	66	11	—	—

36. There are no industrial, technical, or agricultural schools at present, but the question of agricultural education is not being lost sight of, and it is hoped that before long the curriculum of the primary schools will include at all events elementary instruction in this subject. In the meanwhile, as the first step to that end, two courses of lectures were given to primary school teachers in 1900 by the Imperial Department of Agriculture, with the cordial co-operation of the Government and all concerned. The lectures were well attended, and the subsequent examinations held showed that they had been successful in their object. The lectures were accompanied by practical demonstrations given to the teachers at the Botanic Station. A law has been passed in the current year making it one of the conditions of future grants to primary schools that provision is made to the satisfaction of the Board of Education for Instruction in Agriculture, and a Committee has been appointed to prepare regulations.

GOVERNMENT INSTITUTIONS.

Colony Hospital.

37. The number of patients treated during the year was 850, of whom 512 were discharged cured, 193 relieved or not improved, 65 died, and 80 remained in hospital at the end of the year; the daily average was 83, and the daily cost per head a little more than a shilling. The general health of the institution was good, with the exception of an outbreak of influenza while it was epidemic in the island. The amount received from patients paying fees for their treatment was £168, the number of such cases being 100. The erection of a new operating room and of an administration building, to contain office, dispensary, &c., was commenced.

Yaws Hospital.

38. One hundred and eighty-three patients were treated in the year, being an increase of 47 on the previous year. 105 persons were discharged cured, six relieved, and two died from nephritis, 60 being carried over to 1901 for treatment; the daily average was 63, and the daily cost per head about sixpence. The treatment of the disease by thyroid has been abandoned, having been found to give no good results, and the usual treatment by a preparation of arsenic and iodide of mercury has been resumed.

CARRIACOU DISTRICT HOSPITAL.

39. This hospital appears to have done but little service during the year, and very little care seems to have been bestowed upon it by those concerned. Only 67 cases were dealt with, of which 27 were discharged as cured, 21 relieved, 2 died, and 17 remained on; the daily average was 7.

ST. ANDREW'S DISTRICT HOSPITAL.

40. At this institution 147 patients were treated during the year, of whom 108 were discharged as cured, 24 as relieved, 5 died, and 10 remained on to the next year; the daily average was 10, and the gross cost £551, against which should be set the dispensary receipts, amounting to £278.

LUNATIC ASYLUM.

41. One hundred and twenty-four patients were in the institution on 1st January, 1900, and 26 were admitted during the year; 18 being from Grenada, 7 from St. Vincent, and 1 from St. Lucia, four of whom were patients who had already been under treatment. Ten patients were discharged, 8 as cured, and 2 transferred to the new Asylum in Trinidad, being the cases from Tobago remaining in the Grenada Asylum since the time that Tobago was attached to the Government of the Windward Islands. 17 deaths occurred, 7 being due to diarrhœa. The daily average was 126, being six in excess of the proper accommodation of the buildings, and the daily cost per head about 8½*d*. The sanitary condition was satisfactory, and a structural improvement was effected by placing the latrines in annexes to the buildings, instead of, as formerly, in the wards. Influenza was prevalent in April.

POOR ASYLUM.

42. There were 43 inmates on 1st January, 1900, 19 were admitted during the year, 18 deaths occurred, and 7 left of their own free will; one male was committed to prison for a violent assault on a fellow inmate, and one female transferred to the Lunatic Asylum. The daily average was 38, and the daily cost per head about 6*d*. The male ward of this asylum for incurables is always full, while there are invariably many vacancies in the female ward.

SAVINGS BANK.

43. The work of the bank in the last five years is set forth in the following statement, which is a record of steady progress. Of the balance at credit of depositors on the 31st December,

1900, £11,000 was either invested in sundry Colonial Government securities or on deposit at 3 per cent. interest with the Colonial Bank:—

Year.	Number of Depositors at 31st December.	Amount of Deposits (including interest capitalised).	Amount of Withdrawals.	Balance at credit of Depositors at 31st December.
		£	£	£
1896	895	5,026	5,062	6,390
1897	968	6,498	5,518	7,370
1898	1,053	7,803	6,722	8,451
1899	1,215	9,474	7,000	10,925
1900	1,387	9,379	9,136	11,168

JUDICIAL STATISTICS.

POLICE.

44. The Police Force comprises a chief and sergeant-major of European birth and military training and 63 West Indian non-commissioned officers and privates; it is maintained on a semi-military footing, and is armed with Martini-Henry rifles, a regular annual course of musketry being enforced. It is also (with the assistance of a Superintendent of Excise) charged with the supervision and control of the distillation of rum and the collection of the excise duty thereon, and in the principal town the detachment on duty is responsible for fire brigade duty. The conduct and discipline of the Force in 1900 were good.

PRISONS.

45. Only 189 persons were committed to prison in 1900, 157 being convicted prisoners, 2 debtors, and 30 for safe custody, &c.; of these 6 were convicts from the St. Vincent prison, transferred here for imprisonment in accordance with an arrangement arrived at between the Colonies. The daily average in prison was 41, that is to say, less than half of the highest daily average yet reached, which was in 1894. The cost of the prisons was £1,089, and the value of the work done by prisoners (which includes such work as baking all the bread and preparing the

cocoa consumed at the public institutions, and making the clothing, bedding, and mattresses therefor) was estimated to be £1,179. Good discipline was maintained during the year, and the mark system continued to work satisfactorily.

CRIMINAL STATISTICS.

46. The following table compares the statistics of crime in 1900 with those of the four previous years, and shows that the general improvement which has been remarked of late years continued. Out of 1,804 persons brought before the Magistrates, convictions were obtained, either summarily or before the Supreme Court, against 986; but, as showing the usually mild character of the offences committed it should be noted that only 157 of these 986 persons were sent to prison. The only offence which shows signs of increase, and it is at a moderate rate, is prædial larceny, for which 71 convictions were obtained against 61 in the previous year, and 51, the average for the three years 1896-8; and it is worthy of remark that this increase has taken place in the face of a law permitting flogging for the offence, a remedy which was applied by one Magistrate in no less than 17 cases in 1900. Another fact of importance connected with this offence is that in the majority of cases brought before the Magistrates a conviction seems to follow, the 116 cases so brought in 1900 resulting as under:—

71 convictions.

24 dismissed on merits.

21 discharged "for want of prosecution."

Total	1,198	1,124	986

VITAL STATISTICS.

POPULATION.

47. According to the registration records, the estimated population at 31st December, 1900, based upon the natural increase only, was 65,523; and carrying the estimate forward to the 7th April, 1901, when the census was taken, it was at that date 66,013. According to the census, however, the population was, on 7th April, 1901, only 63,458, or 2,575 less than this estimate. It is difficult to reconcile these divergent results, but they are attributed by the compiler of the census to emigration from the Colony.

48. The registration returns show a natural increase in 1900 of 1,425, the average for the preceding ten years being 1,237. The birth-rate per thousand of the mean estimated population was 40·98, the death-rate 19, and the marriage rate 5·31.

GRENADA, 1900.

PUBLIC HEALTH.

49. With the exception of a severe epidemic of influenza in March-May the public health was good in 1900. The chief causes of deaths in that and the preceding year were as follows:—

Cause of Death.	1899.	1900.
Diarrhœa and dysentery ...	182	140
Fevers	71	80
Phthisis	49	77
Enteritis	33	63
Bronchitis	25	27
Pneumonia	18	34
Influenza	1	48

Diarrhœa and dysentery thus take precedence of all other causes of death. While impure water must be in many villages a prominent factor in developing these diseases, it is noteworthy that in St. David's parish, where the water supply is adversely commented upon by the District Medical Officer, only 15 deaths took place in 1899 out of 182, and in 1900 only five out of 140. In Carriacou, where the water supply is both bad and scanty, there were but six deaths in 1899 and three in 1900 from diarrhœa, none from dysentery being recorded.

SANITATION.

50. The administration of details of sanitation is entrusted to a General Board of Health, with the several Town and Road Boards as local health authorities subordinate to it. In the towns some little attention is paid to sanitation, although nothing like what the conditions demand, but in the rural districts, natural conditions appear to be relied upon as the sole remedial agents. In other words, neither in town nor in country do the local health authorities do their duty properly, and as the Central Board of Health has only had five meetings since its formation in 1895, its controlling influence is practically absent. The islands are fortunately healthy, their configuration favouring good drainage, and the prevalent sea breeze is of itself a powerful sanitary agent.

CLIMATE.

51. The rainfall differs at the several stations in consequence of the shape of the island tending to a mountainous centre, so that three points are selected in illustration of the records in 1900:—

South of island	...	...	...	63·45	inches.
Centre	,,	...	...	...	157·33 ,,
North	,,	...	...	...	74·70 ,,

At Carriacou, an island in the extreme north of the Colony, the record is imperfect for 1900, but 54½ inches were registered in 11 months, so that about 60 inches may be estimated as the probable rainfall there for the year.

52. In connection with the epidemic of influenza above referred to, attention may be directed to the facts that between 15th March and 15th May, the approximate period of its duration, only 4·36 inches of rain fell in the south of Grenada; and that on May 17th the first rains for the season fell, 1·80 inches being recorded in the south that day, the rainfall at that station between 15th and 31st May being 6·11 inches, as compared with 35 parts only in the corresponding fortnight of 1899.

53. The mean temperature was 79·6°, the maximum, 91·5°, being on 4th October, and the minimum, 66°, on 27th June. The north-easterly trade is the prevailing wind, but in 1900 there was an unusual amount of south-easterly wind, which set in about May and attained its maximum in September.

POSTAL AND TELEPHONE SERVICES.

54. The work of the Post Office has noticeably increased in the five years 1896-1900. In the latter year there were 88,999 more letters and postcards and 625 more parcels dealt with than in 1896, and £4,725 more money orders were issued. The revenue of the office in 1900 was, however, £1,107, as compared with £1,842 in 1896, the decrease being apparently due to the introduction of penny postage.

55. The revenue of the Telephone Department was £1,150, and its expenditure (including loan charges) £1,245. It had been contemplated to make during the year many changes in the working of the department, which had outgrown its original outfit, and as the trunk lines and exchanges had been working for ten years, reconstruction was in many places requisite. The temporary removal of the manager to St. Vincent on special duty prevented anything being done, and towards the end of the year complaints were so numerous and insistent that the services of a special inspector were obtained by the Government for a report on the system. No tangible results, however, followed this report, and in the current year the necessary improvements are being effected.

P.N.-11 28 589643 F. of C Block 860 X-11

GRENADA, 1900.

MILITARY FORCES AND EXPENDITURE.

56. There is no military force in the Colony. The police are drilled and trained to the use of arms, and there is a law on the statute book enabling the formation of a volunteer corps, but no such body has yet been formed.

GENERAL OBSERVATIONS.

57. The progress of the war in South Africa deeply stirred the loyal sentiments of the colonists, and the several successes of the British arms were celebrated locally with enthusiasm. In January a public meeting was held under the presidency of Governor Sir Alfred Moloney, and subscription lists, both in cocoa and money, were opened for the War Fund, with the result that cocoa to the value of £179 and £416 in money, or £595 altogether, was remitted to England.

58. On 28th July the first steamer of the line to connect the West Indies with Canada, under a subsidy from the Imperial Government, arrived, but unfortunately one of these steamers, the "Orinoco," was, on the morning of the 2nd November, wrecked on the south-east coast of the island in returning from Tobago. This misadventure for a time retarded the work of the line, which should not fail eventually to be of much use in developing a trade with British North America.

59. On 3rd December, Sir Alfred Moloney left the Colony on his appointment to be Governor of Trinidad and Tobago, and on the 12th his successor, Sir Robert Llewelyn, previously Governor of the Gambia, was sworn in, having arrived on the previous evening.

60. The Colonial Secretary, Mr. E. Drayton, was absent from the Colony from the 16th February to the end of the year administering the Government of St. Vincent. Mr. Leslie Probyn discharged the duties of Colonial Secretary in that period, in addition to those of his substantive office of Attorney-General.

61. The year may be described as one of much prosperity for the Colony, and there is every indication that this prosperity is likely to continue. The lessons learned in the "hard times" of 1896 and 1897 have apparently been taken to heart by all concerned, with results which cannot fail to be beneficial to themselves and the whole community.

EDWARD DRAYTON,
Colonial Secretary.

ST. VINCENT.

(For Report for 1899, *see* No. 312.)

ADMINISTRATOR CAMERON to GOVERNOR SIR R. B. LLEWELYN.

Government House, St. Vincent,

December 14, 1901.

SIR,

I HAVE the honour to forward to Your Excellency herewith my report on the Blue Book for the year 1900.

I have, &c.,

EDWARD J. CAMERON,

Administrator.

REPORT ON THE BLUE BOOK OF ST. VINCENT FOR THE YEAR 1900.

I. FINANCIAL.

(A.) GENERAL REVENUE AND EXPENDITURE.

The following comparative statements and table give the heads of Revenue and Expenditure, and the amounts received under those heads for the years 1899 and 1900, as well as the total Revenue and Expenditure for the last five years, 1896-1900:—

10815—875—1/1902 Wt 2866 D & S - 5

ST. VINCENT 1900.

Total Revenue and Expenditure for five years **1896–1900.**

Year.	Revenue.			Expenditure.		
			Total.			Total.
1896.	Local	26,487		Local	27,591	
	Imperial Grant	—	26,487	Imperial Grant	—	27,591
1897.	Local	24,845		Local	27,866	
	Imperial Grant	—	24,845	Imperial Grant	—	27,866
1898.	Local	26,901		Local	27,674	
	Imperial Grant	—	26,901	Imperial Grant	—	27,674
1899.	Local	29,218		Local	30,322	
	Imperial Grant	34,075	63,293	Imperial Grant	17,533	47,855
1900.	Local	28,376		Local	29,081	
	Imperial Grant	2,050	30,426	Imperial Grant	7,040	36,121

The total local Revenue of the Colony for the year under review was £28,376, being £3,457 in excess of the Estimate, though £842 less than the similar Revenue of 1899.

The gross Revenue, including the Imperial Parliamentary Grant for Botanic Station and Agricultural School, was £30,426.

Importations of foodstuffs, &c., were still above the average of past years, as a sequel of the hurricane of 1898, though not so large as in the year immediately succeeding that disastrous event. Post Office Revenue was abnormal in 1899, owing to the introduction of a new issue of Postage and Revenue Stamps, the demand for which has now considerably slackened.

The Expenditure in 1900, exclusive of the Parliamentary Grant, amounted to £29,081, being £987 less than estimated, and £1,241 less than the sum expended in 1899, a result attributable mainly to reduction in the outlay required on Poor Relief and Hospitals. The gross Expenditure was £36,121.

(B.) Taxation.

No changes took place during the year under review.

(C.) Assets and Liabilities.

The excess of Assets over Liabilities, as shown in the annexed statement, is nominally £4,414, but this includes £4,094, the unexpended balance of the Imperial Grant-in-Aid of the damage done by the hurricane, which is being disbursed during the current year.

ST. VINCENT, 1900.

School, Agricultural Instruction, and erection of Agricultural School
December 1900.
Grant of £25,000 in aid of damage done by the hurricane of 1898.

(D.) Public Debt.

The Public Debt of the Colony at the end of 1900 stood at £14,470. Of this sum, £5,000 is provided for by an Imperial Grant in the hands of the Crown Agents on deposit; £6,350 is repayable from the funds of the towns of Kingstown and Georgetown, and the actual amount to be paid from Colonial Revenue is thus—£3,120, which is being repaid at the rate of £560 per annum.

The Colony is further responsible to the Imperial Government for repayment of a sum of £16,026, loaned to planters to enable them to restore works and buildings destroyed by the hurricane of 1898. Repayment of this sum is provided for by Ordinance, and is made to extend over 23 years.

(E.) Currency.

Gold, American and British, Colonial Bank Notes, with British Silver and Copper, constitute the currency of the island.

The Government's Accounts are kept in Sterling, and Commercial Accounts in Dollars and Cents.

(F.) and (G.) Finances of Municipalities or Public Boards.

The management and control of the affairs of the town of Kingstown are vested in a Board, half of whom are elected by the ratepayers and the other half nominated by the Government. The small towns of the Colony are controlled by Wardens, annually appointed by the Government.

The following comparative statement gives the total Revenue and Expenditure of these towns for the last five years:—

Revenue.

Town.	1896.	1897.	1898.	1899.	1900.
	£	£	£	£	£
Kingstown	2,017	1,985	1,848	2,082*	1,961

* Account books destroyed by hurricane.

Debts of Towns.

The debts of the towns are as follows:—

Kingstown Water Supply	£5,100	
„ Town Improvement ...	600	
		£5,700
Georgetown Water Supply		650
Total		£6,350

Provision for repayment of these Loans is made by rates levied annually on the townspeople, and the debts are secured on the General Revenue of the Colony. The Kingstown Water Supply Loan is being repaid at the rate of £400 per annum, the Town Improvement Loan at the rate of £150 per annum, and the Georgetown Loan by annual instalments of £50.

The time for repayment of the Kingstown Improvement Loan has had to be extended during the current year in consequence of the insufficiency of the town's Revenue to meet the calls upon it.

II. TRADE, AGRICULTURE, AND INDUSTRY.

(A.) Imports and Exports.

The following comparative statements give the value of the chief articles of Import and Export in 1899 and 1900 and the totals for the last five years:—

Imports.

Chief Articles.	Value.	
	1899.	1900.
	£	£

Totals	67,392	68,935	44,666	33,575	97,769

* No returns.

The volume and direction of the Colony's trade in the five years, 1896-1900, are shown below:—

Imports.

—	1896.	1897.	1898.	1899	1900.
	£	£	£	£	£
United Kingdom	29,847	28,358	27,291	29,241	35,538
British Colonies	31,667	34,908	44,812	52,046	35,882
Foreign Countries	9,975	7,558	16,205	22,340	24,771
Totals	71,489	70,824	88,308	103,627	96,191

Exports.

—	1896.	1897.	1898.	1899.	1900.
	£	£	£	£	£
United Kingdom	21,131	20,432	14,176	19,383	71,584
British Colonies	15,851	21,945	14,260	10,812	14,584
Foreign Countries	30,410	26,557	16,230	3,380	11,601
Totals	67,392	68,934	44,666	33,575	97,769

The decrease in the value of Imports as compared with the previous year was the natural result of the Colony's return to a more normal condition, the Imports in 1899 having been largely in excess of the average owing to the necessity for repairs and other replenishings as a consequence of the hurricane of 1898.

The increase in value of Exports is similarly a result of the Colony's gradual recovery from the effects of that hurricane. The values, however, of the arrowroot export in the returns in both years are misleading. The 14,000 barrels of 1899 probably realised £40,000 to £45,000, or double the figures given, while the 25,000 barrels of 1900 cannot have brought much more than £50,000 The high prices of 1899 led to a large over-production in 1900, and a continuance of such conditions cannot but have a baneful effect on the industry. Efforts are, however, at the present time being made by proprietors to form a combination to restrict the output. The increase of minor products such as cassava starch, live stock, and ground provisions is a hopeful sign.

(B.) Mines, Manufactures and Fisheries.

Nil.

(C.) Agricultural Industries and Botanical Station.

Agriculture.

The main and most serious feature to be noted under this head appears to be the unwise over-production and shipment of arrowroot, glutting the London market and resulting in a reduction of the price realised to a figure at which the cultivation of the plant is practically unremunerative.

Sugar and rum are no longer produced to any considerable extent.

Cocoa cultivation is being extended, and will, it is hoped, prove an important factor in raising the fallen fortunes of the Island.

Loans to the extent of £26,026 were granted to Planters from the Imperial Treasury under the provisions of "The Hurricane Loan Ordinance," and re-erection of or repairs to estate works and buildings destroyed or damaged by the 1898 hurricane were carried on pretty generally throughout the Island.

The Land Settlement or Peasant Proprietor Scheme made substantial progress during the year, and from the Leeward Acquired Estates large quantities of provisions and some quantity of small stock are now shipped in small vessels to St. Lucia and Trinidad.

Botanical Station.

The expenditure on this is defrayed from an Imperial Grant, and good work was done throughout the year in distribution of

plants to the Peasant Proprietors, and other encouragements afforded to minor industries.

(D.) Land Grants and General Value of Land.

Nine applications for Crown Land were received during the year, and twenty-eight grants were issued for land in respect of which payments had been completed, the Land Tax Roll being thereby increased to the extent of 566 acres.

The present price of Crown Land, which is for the most part mountain land, is £1 an acre cash, and £2 if paid in instalments. There was no attempt during the year to recover from the peasantry the large outstanding arrears of Crown Land purchase money, but a beginning has since been made.

(E.) Shipping.

A table is annexed of the Steamers and Sailing Vessels, Inwards and Outwards, during 1899 and 1900, as also a comparative statement of total shipping for the last five years.

These figures do not include men-of-war, of which twelve (British) visited the Island during the year.

Totals	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

III. LEGISLATION.

There were sixteen Ordinances during the year, the principal being the Customs Ordinance, a valuable measure of consolidation, and the Small Towns Ordinance, by which the Finances of these villages have been brought under an apparently much needed Treasury control.

IV. EDUCATION.

(A.) Primary Education.

The results of primary education in 1899 and 1900 compare as follows:—

—	1899.	1900.
Number of Schools	33	31
Number on Roll	6,027	6,000
Average Attendance ...	2,712	2,706
Government Grant-in-Aid...	£ 1,612	£ 1,667

The present condition of the Schools is far from satisfactory, but the whole system has been under consideration during the current year, and it is hoped that under the new Education Code now in preparation a better state of things will be gradually arrived at. The small sum of money available in view of the population to be served and the absence of any qualified Education Officer are factors which militate gravely against advancement.

(B.) Secondary Education.

The Kingstown Grammar School for Boys and Girls is the only Secondary Educational establishment in the Colony. The curriculum of the school embraces the subjects required for the Cambridge Local Examinations and the annual examination is conducted by the Syndicate. The Government Grant to the school amounted to £141.

(C.) Industrial, Technical and Agricultural Schools.

An Agricultural School was established under the auspices of the Imperial Department of Agriculture and with Imperial money during the year. The ground was selected and opened up in May. The School itself was opened in a temporary building with fifteen boys in September, and removed in October to the new buildings which had in the meantime been erected by the Public Works Department.

There are now some 24 boys at the School receiving a good serviceable training, including practical field work, and it is hoped that a useful class of young agriculturists will be turned

out in due course who will utilise the training they have received in the development of their native land.

The total cost of the School upkeep during the year was £317.

V. GOVERNMENT INSTITUTIONS.

(A.) Hospitals.

The number of patients treated during the year was 552, of whom 287 were discharged cured, 155 relieved, 54 died, and 56 remained in Hospital. The daily average was 67 as against 60 in 1897, 96 in 1898, and 80 in 1899. A Commission of Enquiry into the administration of the Colonial Hospital, with Sir Francis Lovell, C.M.G., Surgeon-General of Trinidad, as Chairman, was appointed in the middle of the year, on whose finding and recommendations various abuses were stopped, a Resident Medical Officer and a Steward appointed, and a much more satisfactory and economical system of management introduced.

The small District Hospital at Georgetown received 21 patients during the year, of whom 12 were discharged cured, 7 improved, and 2 died.

(B.) Asylums.

Lunatics.

A portion of the old Military Barrack at Fort Charlotte is set aside for temporary detention of Lunatics prior to their removal to the Asylum at Grenada.

Six lunatics were sent to Grenada during the year, making a total number under care there of 31, at a cost to the Colony of £651 per annum.

Lepers.

The number of inmates of the Leper Asylum at the opening of the year was 17; two fresh cases were admitted, and the daily average was 18.

The Asylum is not all that could be desired and its accommodation is limited, but it is all that the Colony can at present provide, and is fairly kept and economically managed.

(C.) Poor Houses.

The conditions at the Pauper Institution at Fort Charlotte, which had been found to be unsatisfactory, were carefully investigated, and a thorough re-organisation of all details of the

ST. VINCENT, 1900.

management effected during the year by the Acting-Administrator, Mr. Drayton. There were 157 inmates at the end of 1899, and 93 were admitted in 1900, of whom 98 were discharged and 33 died, leaving 119 at the close of the year.

Some much needed repairs to the building are being carried out at the present time, and the Institution is being carefully worked and supervised and is, on the whole, in a fairly creditable state, although falling short, as must necessarily be the case with the small funds at command, of the model conditions obtaining in larger and more flourishing Colonies.

The Low Point old Military Hospital, which had continued open as an overflow Institution for paupers since the hurricane, was closed during the year.

(D.) REFORMATORIES.

Nil.

(E.) SAVINGS BANKS.

The following is a statement of the work of the Bank for the last five years:—

Year.	Number of Depositors at 31st December.	Amount of Deposits.	Amount of Withdrawals.	Balance at credit of Depositors 31st December.
		£	£	£
1896	1,062	4,451	5,350	8,455
1897	1,047	4,515	4,383	8,771
1898	1,091	4,263	3,739	9,283
1899	1,036	5,375	5,123	9,716
1900	900	7,790	7,122	10,594

Some 248 accounts, in respect of which no transactions had taken place for twelve years, and the balances of which amounted to £119, were written off during the year and the amounts forfeited to Colonial Revenue as required by law.

The figures of Deposits and Withdrawals are swelled by a sum of £2,926, which passed through the Bank under the provisions of the Land Settlement Ordinance, being the value of certain property compulsorily acquired by the Government, which sum is not a true Savings Bank Deposit.

Branches were opened at Georgetown and Chateaubelair, and considerable advantage has been taken by the people of the facilities thus afforded.

VI. JUDICIAL STATISTICS.

(A.) Police.

The Colonial Police Force consists of a Chief, a Sergeant-Major of European birth and military training, and 52 West Indian non-commissioned officers and privates. They are, in addition to their civil duties, drilled and trained to the use of arms, and are armed with Snider rifles. Besides ordinary police work, they render invaluable assistance to the Government in many details of the administration, being charged with the supervision of the excise duty on rum, and with co-operating in collection of customs duties, district post office work, registration of births, &c., poor relief, and the management of the small district telephone exchanges. In Kingstown they are also responsible for extinguishing fires, receiving from the Town Board additional pay for this service; and, during 1900, an amalgamation was effected by which the Police Department were given the control and management of the Kingstown Prison.

(B.) Prisons.

Two hundred and sixty-seven persons were committed to prison in the year—170 men, 88 women, and 9 juveniles. The daily average was 31 against 31 in the previous year, and the total cost per prisoner is returned as being £14 1*s.* 11*d.* against an average of £18 14*s.* 6*d.* in the seven years ending with 1899.

(C.) Criminal Statistics.

The total number of offences reported to the Police or to the Magistrates in 1900 was 1,268 against 1,475 in 1899.

Of the offences reported in 1900, 291 were for offences against the person; 55 were for prædial larceny; 181 were for offences against property other than prædial larceny; 741 were for other offences.

The total number of convictions in the Inferior Court in 1900 was 795, against 878 in 1899.

These convictions are classed as follows:—135 for offences against the person; 14 for malicious injuries to property; 50 for prædial larceny; 69 for offences against property other than prædial larceny; 230 for offences against Revenue Acts, &c.; 297 for other offences.

The convictions in the Supreme Court were as follows:—5 for offences against the person; 10 for offences against property.

The acquittals were as follows:—in the inferior Court, 169; in the Supreme Court, 3.

VII. VITAL STATISTICS.

(A.) Population.

The population at the 1891 Census was 41,054. The population at the end of 1900 is estimated at 45,540, but no account is taken of emigration or immigration, and it is probably correct to make a very liberal discount on the figure of the estimate to cover the considerable immigration, chiefly of the younger and more able-bodied of the population, to more prosperous lands in search of work.

(B.) Public Health.

The public health of the Colony was, generally speaking, good throughout the year. There was no serious disease, but the widespread distribution of ulcers and ulcerous sores among the peasantry, arising in a great measure from their own shiftlessness, is a very regrettable feature, as it saps the vitality of the population and is accountable for a great deal of the drain on Government resources for Pauper Relief.

(C.) Sanitation.

The Medical Report on the Town of Kingstown is not as satisfactory as could be desired, but the powers of the Town Board to effect improvements are limited by their income. From the point of view of a newcomer, I may say that the Town appears to me to be very fairly clean and well kept, though I can conceive that with larger expenditure a better outward effect might be produced. Certain recognised defects have been recently receiving attention.

The smaller towns and country villages may leave somewhat to be desired in the way of sanitation, but no glaring evils are to be noticed.

A new Public Health Act has been passed during the current year.

(D.) Climate.

The rainfall for the year was 103·06 inches, recorded at the Botanic Station, just above the Town of Kingstown. The average for the last eleven years is 111·93 inches. The minimum

reading of the thermometer was 67·05 (in February) and the maximum 88 (in August and September).

The direction and force of the wind were normal, the prevailing wind being as usual the North-East Trade.

VIII. POSTAL, TELEGRAPH, AND TELEPHONE SERVICES.

The Postal Service is performed by a fortnightly service of the steamers of the Royal Mail Steam Packet Company from and to Barbados, under contract with His Majesty's Government. There are also lines of steamers from Halifax, Nova Scotia, and from the United States, which call at the Port of Kingstown, though at somewhat irregular intervals.

There is an Inland Postal system by which the Windward and Leeward districts of the Colony are daily, and the Islets of the Grenadines, are weekly, served.

The volume of correspondence appears from the Postmaster's returns to have been somewhat less than in the previous year, and the same applies to parcels. Newspapers, however, show a slight increase.

The Revenue was only £1,263 as against £2,281 in 1899, in which latter year the receipts from the sale of Postage Stamps outside the Colony were largely above the average, consequent on the appearance of a new issue.

The Revenue of the Telephone Department was £445 and the Expenditure £334. The lines re-constructed after the hurricane worked well and the service is a most valuable one.

IX. MILITARY FORCES AND EXPENDITURE.

Nil.

X. GENERAL OBSERVATIONS.

Having arrived in the Colony only in May of the present year, I am not in a position to review at any length the general events of 1900. It may be said, however, that the year was one of slow emergence from the disastrous conditions induced by the hurricane of 1898, while there are evidences of able administration under circumstances of difficulty for which the Colony has reason to be grateful.

ST. VINCENT, 1900.

The present outlook is certainly not bright, and in regard to the arrowroot industry especially there is grave cause for anxiety on account of the effect of over-production on price, as already explained, particularly as this industry is practically the only remaining general source of wage-earning employment for the agricultural labourer.

On the other hand, however, the Land Settlement Scheme promises fairly well, and the wider distribution of land among the peasantry should gradually bring about an amelioration of the conditions of poverty and distress that are now only too noticeable.

In time it may be hoped that the cloud of gloom that now overhangs this fair island will be dispelled; but, without a widely distributed, paying industry to give steady employment to the population, it would be too optimistic to say that that time is within measurable distance.

EDWARD J. CAMERON,

Administrator.

GOVERNOR R. B. LLEWELYN to MR. CHAMBERLAIN.

Grenada,
22nd October, 1902.

SIR,

I HAVE the honour to forward the Annual Report on the Blue Book of this Colony for the year 1901.

I have, &c.,
R. B. LLEWELYN,
Governor.

---

875 Wt 28616 1/03 D & S 5 13002 A 2

BLUE BOOK REPORT FOR THE YEAR 1901.

FINANCIAL.

Revenue and Expenditure of First Quarter.

In 1901 the Colony's financial year was changed from the calendar year to that ending on 31st March, and in consequence of that change it became necessary to make the first quarter of 1901 a complete financial period, commencing the new arrangement from 1st April, 1901. Of the finances of the quarter it is only necessary to record here that the Revenue was £16,061 and the Expenditure £15,331, the accounts closing with a surplus of £10,955, *i.e.*, about £500 more than at the 1st of January.

Statements of the Colonial accounts and local revenues are given both for the first quarter and for the year 1901-1902, but all other returns are, as heretofore, compiled in respect of the calendar year 1901.

Revenue.

2. The general revenue of 1901-1902 was £70,075, of which £800 was a grant from the Imperial Treasury for the upkeep of the Botanic Station, so that the revenue from local sources was £69,275. The figures for the last five years are as follows:—

Year.	Amount.
	£
1897	56,973
1898	62,875
1899	68,757
1900	70,363
1901–02	70,075

3. For purposes of comparison the revenue for the twelve months ending 31st March, 1901, is shown below instead of that for the year 1900, and it is seen that an improvement in Customs and Internal Revenue took place in 1901-1902, while the total result would have been an increase of about £1,500 had not the figures for the preceding year been inflated by an unusual sale of land, and by transfers to revenue account under Post Office and Miscellaneous Receipts of items overlooked in previous years.

Head of Revenue.	1900–01.	1901–02.	Increase.	Decrease.
	£	£	£	£
Customs	36,076	36,739	663	—
Licences, Excise, and Internal Revenue.	26,315	27,022	707	—
Fees of Office, &c.	1,438	1,425	—	13
Post Office	1,257	1,035	—	222
Sale of Commemoration Stamps	14	—	—	14
Telephones	1,155	1,229	74	—
Rent of Government Property	419	429	10	—
Refund of Interest and Sinking Funds.	1,104	1,080	—	24
Miscellaneous Receipts	252	67	—	185
Land Sales	790	248	—	542
Grant in aid of Botanical Station.	800	800	—	—
Total	69,619	70,075	1,454	1,000

Expenditure.

4. The total expenditure of 1901-1902 was £65,490, which includes £792 from the Imperial grant to the Botanic Station, and the expenditure for the last five years was as follows:—

Year.	Amount.
	£
1897	58,549
1898	57,612
1899	59,359
1900	62,718
1901–02	65,490

5. The expenditure for the year 1901-1902 is compared below with that for 1900-1901, this table corresponding to the Revenue Table in paragraph 3. It will be seen that the expenditure for 1901-1902 was less by £893 than that for 1900-1901.

Head of Expenditure.	1900–1901.	1901–1902.	Increase.	Decrease.
	£	£	£	£
Charge on Account of Public Debt.	6,432	6,730	299	—

Telephone Department	1,429	1,314	—	115
Ditto Special Expenditure	—	371	371	—
Miscellaneous Services	3,826	5,382	1,556	—
Public Works Department ...	868	891	23	—
Public Works Recurrent ...	8,742	8,818	76	—
Public Works Extraordinary ...	4,734	4,367	—	367
Total	65,434	64,698	2,369	3,104
Agricultural Department ...	950	792	—	158
Total	66,384	65,490	2,369	3,262

The increase under Debt Charges is due to the purchase at a premium of the remainder of the 4½ debentures of the loan of 1886; under Miscellaneous, to the cost of the Census of 7th April, 1901, to the purchase in 1900 of certain premises for use as a Girls' High School which were not paid for until 1901, and to an amount paid as compensation for resumption of the leasehold of certain Crown Lands which had been granted in 1892 to trustees in aid of the maintenance of Queen's Park as a public recreation ground; special expenditure to the amount of £371 also took place on the telephone system of the Colony, which needed reconstruction.

Assets and Liabilities.

6. At 31st March, 1902, the Colonial assets amounted to £36,334, and the liabilities to £18,369, leaving a surplus in favour of the Colony of £17,965. This surplus would have been much larger but for the purchase of the debentures mentioned in paragraphs 5 and 7. As it is, the surplus represents an addition since 1st January, 1901, of £1,542. £7,851 of the surplus is invested as a reserve fund, to be held for emer-

gencies and against periods of financial depression, and it is intended to increase this fund steadily until a safe margin is reached.

Public Debt.

7. The Public Debt at 31st March, 1902, was £123,670 in 4 per cent. Inscribed Stock, and the Sinking Fund in the hands of the Crown Agents for the Colonies for its redemption amounted to £12,008. The unredeemed balance of the former debenture loan of £44,475, viz., £3,900 in 4½ debentures, was retired by purchase during the financial year, and the debentures cancelled. The purchase price was £4,203.

8. A debt of the St. George's Town Board of £1,000, borrowed in 1879 for waterworks and repayable in March, 1903, is also secured on the General Revenue of the Colony. The Sinking Fund in the hands of the Colonial Treasurer for its redemption amounted to £967, and before the close of the current financial year it will be repaid.

Town Boards' Revenue and Expenditure.

9. The revenue and expenditure of the several Town Boards in the last five years are shown in the following statement:—

—	Revenue.					Expenditure.				
	1897.	1898.	1899.	1900.	1901-02.	1897.	1898.	1899.	1900.	1901-02.
	£	£	£	£	£	£	£	£	£	£
St. George's	3,049	2,158	2,576	2,459	2,848	3,021	2,033	2,879	2,707	3,114
Grenville	919	946	910	940	909	829	953	896	992	860
Sauteurs	463	480	427	540	601	412	556	411	465	507
Victoria	270	281	273	300	331	260	291	272	288	244
Gouyave	557	529	592	601	579*	604	477	631	551	655*
Hillsborough... ...	132	128	133	133	109	125	147	123	126	173

* For the year 1901.

With the exception of those for the town of Gouyave the figures for the last year of the series are those of the financial year 1901-1902. The accounts of that town were in arrear and had to be specially written up.

Town Boards' Debt.

10. The debts of the towns are as follows:—

Town.	Amount.
	£
St. George's	7,481
Grenville	1,150
Sauteurs	1,100
Victoria	1,384
Gouyave	3,304
Total...	14,429

Repayment of these debts is provided for either by Sinking Fund contributions or annual instalments.

11. The current liabilities of the Boards (with the exception of Sauteurs and Victoria, with surplus assets of £135 and £161, respectively) exceeded their assets at 31st March, 1902, as follows:—

Town.	Amount.
	£
St. George's	247
Grenville	94
Gouyave	291
Hillsborough...	5

TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and Exports.

12. The statistical value of the imports in the year 1901 was £246,567, and of the exports £303,934. In the four preceding years these values were:—

Year.	Imports.	Exports.
	£	£
1897	164,536	154,439
1898	210,783	257,274
1899	226,828	267,738
1900	232,790	311,681

The imports of 1901, therefore, were more valuable than in any preceding year, and the exports, while at a satisfactory figure, were slightly less valuable than in 1900.

13. The trade of the Colony in the quinquennial period 1897-1901 under the four usual divisions is given in the next table, and the most marked feature is the steady increase in the imports of manufactured articles.

Classes.	Imports.					Exports.				
	1897.	1898.	1899.	1900.	1901.	1897.	1898.	1899.	1900.	1901.
	£	£	£	£	£	£	£	£	£	£
Live animals, food, drink, and narcotics ...	76,598	89,028	104,440	108,353	106,696	148,907	252,263	261,144	303,148	295,990
Raw materials	10,656	16,467	18,715	21,402	22,842	4,314	4,754	4,066	6,484	5,989
Manufactured articles	77,102	102,028	100,548	102,342	110,882	274	185	1,603	1,649	1,955
Coin and bullion	—*	3,260	3,125	693	6,147	944	72	925	400	—
Totals	164,356	210,783	226,828	232,790	246,567	154,439	257,274	267,738	311,681	303,934

* No returns.

14. The volume and direction of the trade are set forth in the following table, covering the same period, and it will be seen that in 1901 the United Kingdom supplied 46 per cent. of the imports (45 per cent in 1900); British Colonies, 24 per cent. (25 per cent. in 1900); and foreign countries, 30 per cent. (the same as in 1900). Of the

exports 74 per cent. went to the United Kingdom and 24 per cent. to foreign countries, indicating that the tendency of late years for an increasing quantity of the Colony's staples to be sent to the latter continues, the corresponding figures in 1900 being 83 per cent. and 15 per cent., while in 1896 they were 92 per cent. and 5 per cent.

—	Imports.					Exports.				
	1897.	1898.	1899.	1900.	1901.	1897.	1898.	1899.	1900.	1901.
	£	£	£	£	£	£	£	£	£	£
United Kingdom	78,893	98,626	101,922	105,592	113,953	138.656	243,574	220,479	259,079	226,715
British Colonies	40,126	55,254	64,603	57,628	58,949	4,283	3,307	5,636	5,399	4,535
Foreign Countries	45,337	56,903	60,304	69,570	73,665	11,500	10,393	41,623	47,203	72,685
Totals	164,356	210,783	226,829	232,790	246,567	154,439	257,274	267,738	311,681	303,935

15. A feature of the trade with British Colonies which deserves notice this year is the steady growth of the imports from the Dominion of Canada; the figures for the last three years are subjoined:—

Year.	Imports.	Exports
	£	£
1899...	6,749	—
1900...	7,946	282
1901...	11,264	91

The stimulus given to this trade by the subsidised line of steamers which commenced to run in 1900 is beginning to have its effect now that the vessels are more regular and punctual, and in 1901 for the first time wheaten flour appears among the imports from Canada. It is hoped that the Dominion will in time reciprocate by receiving a share of the Colony's staples, cocoa and nutmegs, and with that in view an exhibit of these products has been sent to the Toronto Exhibition in the current year. The exports given above represent nutmegs.

16. Of the other trade with British Colonies that with Barbados and Trinidad is predominant, £46,063 of the imports and £3,880 of the exports in 1901 being in this direction. With the increasing facilities for direct trade with the United States and with Canada this trade may reasonably be expected to diminish in time.

17. Following up the foreign trade to the countries with which it is transacted, as shown in the subjoined table, it is found that the United States of America continues to be the principal customer of the Colony, and that the business steadily increases. In 1901 74 per cent. of the total recorded foreign trade was with that country, and that is exclusive of the quantity of American foodstuffs imported by way of Barbados and Trinidad. As noted in last Blue Book Report, more manufactured articles are coming in from the United States than formerly, the great advantages conferred by direct steam communication with New York three times a month producing their inevitable result. The United States is a most valuable customer of the Colony for its staple products, and there is every indication that this promising market is expanding yearly. Five years ago the cocoa sent thither was valued at £4,752 and the spices at £1,276; in 1901 the corresponding values were £25,992 and £11,054.

18. The figures given for the exports to France are not reliable. A quantity of cocoa is shipped to Havre, "optional" for London, and there is no means at present of ascertaining how much of this actually is imported into France.

Foreign Countries.	Imports.					Exports.				
	1897.	1898.	1899.	1900.	1901.	1897.	1898.	1899.	1900.	1901.

Earthen and glass ware	3,576	3,628
Furniture	1,235	1,558
Leather (manufactured)—		
Boots and shoes	5,266	4,665
Other	1,249	1,375

20. The leading exports of local produce in the last five years are shown in the next table. Both cocoa and nutmegs

show a decrease in 1901 as compared with the preceding year, which may be attributable to a severe drought experienced in the early months of the year. Kola nuts continue to exhibit an improvement. The fruit statistics are not reliable, the returns being unsatisfactory. Much more is exported than appears to be the case.

Produce Exported.	1897.	1898.	1899.	1900.	1901.
	£	£	£	£	£
Cocoa	132,642	227,655	234,611	269,931	265,979

Logwood	302	54	25	39	48

MINES, MANUFACTURES, AND FISHERIES.

21. There are no mines, and the only manufactures are of rum, ice, and muscovado sugar, for local consumption. A record is available of the rum alone, and the following are the figures for the years 1897-1901, together with the excise duty collected thereon:—

Year.	Quantity.	Excise Duty.
	Gallons.	£
1897	57,406	11,448
1898	32,662	12,478
1899	48,477	10,605
1900	47,942	11,327
1901	53,204	11,669

22. There are no fisheries other than the regular daily catch of fish along the shores for local consumption. A lucrative industry might be created by a whale fishery, as in the first quarter of the year numbers visit the coasts, but they are rarely captured, and no systematic attempt is made to do so. An excellent oyster is found in a lagoon at Carriacou, and is protected by enforcing a regular season for its consumption, and by the issue of a limited number of licenses to gather it during the season.

AGRICULTURAL INDUSTRIES.

23. The crops of cocoa in the five years ended 30th September, 1897-1901, were as follows:—

Year.	Bags.
1897	54,597
1898	53,384
1899	52,141
1900	53,388
1901	53,387
Average	53,379

The crop of 1900-1901 was, therefore, up to the average of recent years, and fell only a bag short of that for the preceding year; a bag of cocoa averages about 180 lbs. in weight. The crop was delayed by prolonged drought in the early months, and it was at one time feared that it would be short, but better conditions later on in the year restored the equilibrium. Prices were satisfactory.

24. Much improvement in the methods of cultivating and curing pursued by the majority of the peasant proprietors has to be secured before the cocoa output of the Colony attains to its proper dimensions. An Agricultural Instructor was appointed in 1901, whose most important duty it is to visit the peasant proprietors in all parts of the Colony and advise and assist them sympathetically; the officer selected appears to be doing this work well, and the effort promises to be successful.

25. Probably on account of the drought already referred to, the crop of spices was deficient. Comparing the exports of this staple for recent years the following results are disclosed:—

—	Year.	Cwt.
Average export for five years ended ...	1897	2,433
Export for the year	1898	4,373
Export for the year	1899	5,005
Export for the year	1900	6,687
Export for the year	1901	4,548

Of the total export of 1901, 3,664 cwt. were nutmegs, and 1,945 cwt. of this were sent to the United States of America.

26. The cotton crop, which is exclusively the staple of the Island of Carriacou, the chief dependency of Grenada, was satisfactory. The exports for the last three years were as follows:—

Year.	Cotton.	Seed.	Value.
	Cwt.	Cwt.	£
1899...	1,768	4,114	2,641
1900...	2,628	5,334	4,622
1901...	2,250	4,859	4,905

27. An important movement in regard to this dependency was commenced in 1901, the results of which should be far-reaching. The Government gave notice to certain owners of large properties there of their intention to acquire them under the provisions of a law passed with that object with the intention of re-selling in small lots for the settlement of peasant proprietors thereon. Since the collapse of the sugar industry in the Colony, say thirty years ago, the large sugar estates of those days in Carriacou have remained practically intact, of little use to their owners or to the community, and it has been most difficult for a peasant desiring to own land to invest his savings therein as has been so successfully done in Grenada. The policy of the Government will set free these lands, and in the course of the next few years it may reasonably be hoped that many hundreds of thriving lots will be under cultivation, placing the prosperity of this interesting Island on a sound basis. At the date of this Report surveys are proceeding on the first estate to be acquired, Beau-séjour, the area of which is about 700 acres.

Botanic Station.

28. From the remarks made on the curator's Annual Report by the Commissioner of Agriculture, under whose department the Botanic Station was placed on the 1st of October, 1898, the following extracts are made:—

* * * * * * * *

"It is observed in this Report that the expenditure for the year was £826, and the receipts derived from the sale of plants, &c., amounted to £52 2*s.* 7*d.*, or £1 13*s.* 6*d.* more than those for the previous year."

* * * * * *

"The curator reports that various new works were undertaken during the year. Amongst the more important were the erection of a retaining wall along the bank of a ravine near the office, and laying out a new road along the upper boundary of the Station."

* * * * * *

"The experiment plots of economic plants at the Botanic Station continue to make satisfactory progress. Small plots of limes and alfalfa were added during the year under review. On the experimental cacao plots in the country districts the most satisfactory results would seem to have been obtained at Nianganfoix and Gouyave plots. On the former 322 trees are stated to have given a yield, during a period of 18 months, of 3,335 lbs. of wet cacao, while at Gouyave a yield of 4,985 lbs. from 373 trees was obtained."

* * * * * *

"The general tenour of the Report is favourable and indicates that considerable effort has been made by the curator to carry out the duties entrusted to him."

* * * * * *

29. Under the auspices of the Imperial Department of Agriculture visits were paid to the Colony by Mr. A. Howard, the mycologist, and Mr. H. Maxwell-Lefroy, the entomologist, of the Department, in February and March of 1901; the latter in conection with the investigation of "Thrips," an insect pest attacking the cocoa pods, and the former to enquire into sundry fungoid diseases of cocoa. After full and careful enquiry both officers recommended remedial measures, but expressed the opinion that there was at present no cause for alarm, the chances of the cacao crop suffering materially from the attacks of Thrips being, in the opinion of Mr. Maxwell-Lefroy, remote.

30. The Department was also instrumental in procuring a visit to the Colony from Mr. W. K. Morrison, a bee expert, who, after a round of inspection and lectures in March, reported favourably on the practicability of establishing bee-keeping as a minor industry.

31. The local agricultural staff was strengthened in November by the much-needed appointment of an Agricultural Instructor, which has been referred to above. The officer selected was Mr. Murdo McNeill, who had already had Colonial experience in the neighbouring Island of St. Vincent. This officer's emoluments are provided from Colonial funds.

SHIPPING.

32. The total shipping inwards and outwards for the last five years is given below, and a marked increase is exhibited in 1901:—

Year	Entered.	Cleared.
	Tonnage.	Tonnage.
1897	220,179	223,629
1898	216,192	218,006
1899	232,437	231,611
1900	222,899	216,110
1901	267,972	275,770
Average	231,936	233,025

33. In the next table the shipping is classified into sailing and steam vessels and the nationality is given, a comparison being instituted with the figures for the preceding year:—

Nationality.	Tonnage Entered.						Tonnage Cleared.					
	1900.			1901.			1900.			1901.

LEGISLATION.

34. Twenty Ordinances became law during the year, the most important being:—

The Public Lands Acquisition (Small Holdings) Ordinance, which has been referred to above in connection with Carriacou.

The Education Amending Ordinance, requiring provision to be made for agricultural instruction in primary schools as a condition precedent to a grant from public funds.

The Town Boards Ordinance, abolishing the elective Parochial Boards as the authorities responsible for government of the small towns of the Colony, and creating semi-elective Town Boards in their stead.

The Pensions Ordinance, regulating the grant of pensions to public officers.

The Public Officers Security Ordinance, consolidating and amending the law relating to the security to be given by public officers.

The Town Boards Ordinance was not brought into full operation until 1st April, 1902.

EDUCATION.

Primary.

35. There are two classes of primary schools—Government, entirely supported from Colonial revenue, and Grant-in-Aid, receiving contributions from public funds. The system in force is one of payment by results, grants being paid to teachers from the Colonial Treasury monthly upon the certificates of the school managers (who are usually the clergy of the several religious denominations), based upon the educational results of the schools as shown by an annual examination by the Inspector, who is a Government officer. Managers are also paid a grant at the rate of one shilling per annum for each pupil who attends school on not less than 100 days in the year, this grant being intended to assist them in supplying school furniture and apparatus. They are further allowed to receive the whole of the school fees paid by the pupils, which are, however, but indifferently collected. The administration of the system is under the control of a Board, composed of equal numbers of Roman Catholic and non-Roman Catholic members, the Governor presiding, but having only a casting vote.

36. The following table compares the results of the last two years. It will be noticed that there were no voluntary contributions to the Grant-in-Aid Schools, which are consequently supported by the Government grants and by an amount of school fees, which, owing to laxity in collection, is steadily dwindling. Slight increases appear in the numbers on the roll and in average attendance.

Primary Schools.

Description of School.	Number of Schools.	Number of Scholars on the Roll.				Income.			Expenditure.

SECONDARY.

37. The returns of the three schools for secondary education are set forth below and compared with the total results of the preceding year. The Grammar School is a boys' school, and receives a grant from public funds of £250 per annum in addition to a result grant of £5 for each pupil obtaining not less than half marks at the annual examination. The other two are girls' schools (although the Convent School admits also a few small

boys), and are paid grants not exceeding £100 per annum each, at the rate of £2 per pupil in average attendance; they are examined annually by an officer appointed by Government, but the Governing Body of the Grammar School appoints its own examiner.

38. In 1901 certain premises in St. George's, known as Bachelor's Hall, which were purchased by the Government with that object in 1900, were handed over to the Governing Body of the Girls' High School, which is now styled the Victoria High School for Girls, for repair and occupation as school buildings.

GOVERNMENT INSTITUTIONS.

Colony Hospital.

39. The number of patients treated during the year was 848, of whom 548 were discharged as cured, 173 relieved or not improved, 60 died, and 67 remained in hospital at the end of the year; the daily average was 86, and the daily cost per head, 1*s.* 1*d.* The general health of the institution would have been good had not dysentery made its appearance, being epidemic in the Colony, 110 cases of it occurring, with 20 deaths. The amount received from paying patients was £129, and their number 97. A portion of the new Administration Building was occupied, but further work and expenditure are necessary before the quarters on the first floor, intended for a matron, are fit for habitation.

Yaws Hospital.

40. The number of cases under treatment was 150, or 27 less than in 1900; of these 105 were discharged as cured, 3 were relieved, 3 died, and 45 remained on at the end of the year. The daily average was 52, and the daily cost per head, 6*d.* The majority of the cases treated appear to come from the adjoining parishes of St. George and St. David, and, unless rigid compulsion be resorted to, there is little hope of the cases from outlying districts being treated. Carriacou is almost immune.

St. Andrew's District Hospital.

41. 109 patients were treated, 68 being discharged as cured, 23 as relieved, 7 died, and 11 remained in hospital at 31st December. The daily average was 11, and the gross cost of the institution (excluding the Medical Officer's salary) was £496, against which should be set the dispensary receipts, £186.

Carriacou District Hospital.

42. There 145 cases were treated, 101 being discharged as cured, 24 as relieved, 4 not relieved, 2 died, and 14 remained on to 1902. The gross cost of the institution was £593, but the dispensary receipts cannot be correctly ascertained as on the 11th July the dispensary and dispenser's quarters were destroyed by fire, the origin of which it has so far been impossible to prove. This hospital is infested with the *Anopheles* mosquito, and consequently malarial fever attacks the cases therein. The buildings are too old for successful removal to a site free from this pest, and other premises will have to be provided at no distant date.

Lunatic Asylum.

43. The number of inmates on 1st January, 1901, was 123, and 33 were admitted during the year, being 19 from Grenada, 8 from St. Lucia, and 6 from St. Vincent. 13 patients were discharged as cured, and there were 15 deaths. The daily average was 122, and the daily cost of a patient, 8½*d*. The Asylum is too small for the requirements of the three Colonies, and it is understood that St. Lucia contemplates shortly erecting an Asylum there for its own lunatics. When this is done, the Grenada and St. Vincent patients can be comfortably accommodated in the Richmond Hill Asylum, and the present unsatisfactory conditions prevailing there removed.

Poor Asylum.

44. This is practically an Asylum for incurables, and there were at the commencement of 1901 37 inmates. 21 were admitted in the year, 10 died, and 5 left voluntarily. The daily average was 41, and the daily cost per inmate, 5¾*d*. Expenditure is necessary to make these premises a proper Asylum, and until some steps are taken in this direction it cannot be regarded as a satisfactory public institution.

Savings Bank.

45. A table is subjoined with the figures showing the work of the bank in the five years 1897-1901, and satisfactory progress is shown. £6,500 of the depositors' balances at the close of the year was invested in sundry Colonial Government securities, and £4,500 was held on deposit by the Colonial Bank at 3 per cent. interest. The depositors in the principal bank at St. George's were 738 in number, with balances of £6,222, and in the district branches, 617, with £4,989 balance at end of year. In 1891 these figures were: St. George's, 462 depositors, £6,524 balance; districts, 175 depositors, £1,086 balance. The marked success which has attended the establishment of the branch banks is most encouraging.

Year.	Number of Depositors at 31st December.	Amount of Deposits (including interest capitalised).	Amount of Withdrawals.	Balance at credit of Depositors at 31st December.
		£	£	£
1897	968	6,498	5,518	7,370
1898	1,053	7,803	6,722	8,451
1899	1,215	9,474	7,000	10,925
1900	1,387	9,379	9,136	11,168
1901	1,355	8,603	8,561	11,211

JUDICIAL STATISTICS.

Police.

46. The Police Force, consisting of a Chief and sergeant-major and 63 non-commissioned officers and privates, is armed with Martini-Henri rifles and kept on a semi-military footing. In addition to its ordinary police duties, it is charged with the supervision of the collection of the excise duty on rum distilled in the Colony, and, in St. George's, the headquarters' detachment is also responsible for fire brigade duty. The Chief reports that in 1901 the discipline of the force was well maintained, and at the annual course of musketry the average per man was 45 out of a possible 80 points.

Prisons.

47. The leading feature of the Grenada Prison returns of late years is the steady decrease in the number of prisoners. The committals from local courts in the last five years were as follows:—

Year.	Number.
1897...	249
1898...	222
1899...	213
1900...	153
1901...	180

In 1900 six convicts were introduced from St. Vincent, and in 1901 one more from St. Vincent and 12 from St. Lucia, and yet the daily average in prison in the latter year was only 49, the highest on record being 84 in 1894. The decrease in committals may be taken as an index of the improved condition of the lower classes, while the daily average is affected both by this decrease and by the fact that since 1895 there has been a radical change in the length of the sentences passed by the Supreme Court, which previously to that year were characterised by a severity foreign to modern ideas on the subject.

48. The cost of the prisons in 1901 was £1,278, and the value of the work done, which is chiefly of a remunerative nature, was £1,260; so that they are practically, and have been for some years, self-supporting. The usual good health of the prisoners was interrupted during the year by the dysentery epidemic, there being 25 cases of the disease, with two deaths. The discipline was maintained at its usual satisfactory standard at the prison for males. So long as the female prison remains in St. George's little can be effected in this direction, and it is

gratifying to record here that the current year is witnessing the prosecution of active work on the erection of the new prison at Richmond Hill, too long deferred.

Criminal Statistics.

49. The statistics relating to crime in 1901 compare most favourably with those for 1900 and with the average for the preceding three years, as shown below, with one exception, the offence of prædial larceny, which maintains the high figures reached last year. This question has been engaging the attention of a committee of the Legislative Council, which has presented a report in the current year. The committee do not recommend any increase in the severity of the punishment permitted by ths local law, and suggest certain changes in the law relating to sale and purchase by dealers of cocoa and nutmegs. This report is under consideration.

Total	1,164	986	938

VITAL STATISTICS.

Population.

50. According to the Census of 7th April, 1901, the population of the Colony was 63,438, and at 31st December it was estimated, from natural increase, to be 64,288. This increase would have been greater but for an abnormal death roll, 1,445 deaths being registered, the highest on record, the cause being a very severe epidemic of dysentery which raged in the Island of Grenada from June to December, claiming no less than 285 victims. The Acting Colonial Surgeon remarks that "The distribution of the disease and its attacking persons living in houses and localities where the purity of the water supply could not be questioned appears conclusive that other climatic conditions aided in its development." This view is confirmed by the immunity of Carriacou, where the water supply is both scanty and defective, from the epidemic.

The birth rate per thousand of the mean estimated population was 43·22, the death rate 22·47, and the marriage rate 7·31.

Public Health.

51. With the exception of the epidemic just referred to, the health of the Colony was good. The chief causes of death in the last three years were as follows:—

Cause of Death.	1899.	1900.	1901.
Diarrhœa	135	95	109
Dysentery	47	45	297
Fevers	71	80	75
Enteritis...	33	63	71
Phthisis	49	77	66
Bronchitis	25	27	28
Pneumonia	18	34	17
Influenza	1	48	3

Diarrhœa and dysentery, it will be observed, take precedence of all other causes of death; the percentage on the total deaths being about 16 in 1899, 11 in 1900, and 28 in 1901.

Climate.

52. The principal meteorological statistics for the year are as follows:—

Rainfall, North of Island	97·12
„ Centre of Island...	189·67
„ South of Island...	92·15
Relative humidity (mean)	76·2
Mean temperature (maximum)	83·4
„ (minimum)	74·1
Mean pressure	29·975
Days of rain	233

There was a prolonged and severe drought in the early months of the year. In April, in the south of Grenada, only 0.71 inches of rain were recorded, and in Carriacou only half an inch. The rainy season opened on the 25th of May, and from thence to the end of that month, and in June and July, there was a very heavy rainfall.

53. A severe gale visited the neighbouring Islands of St. Vincent and Barbados and the Northern Grenadines on 20th August. At Grenada heavy sea and violent south-west wind were experienced that day, chiefly on the south of the Island, but little damage was done. The Government revenue cruiser was wrecked at Mayreau in the Grenadines.

SANITATION.

54. The sanitary administration was in 1901, as in previous years since 1895, in the hands of a Board of Health, with the several Road and Town Boards as local authorities subordinate to it, but this arrangement continuing to work unsatisfactorily, a complete change has been effected in the current year.

POSTAL AND TELEPHONE SERVICES.

POST OFFICE.

55. The work of the Post Office has greatly increased of late years, as will be seen from the following comparison of last year's statistics with those of 1896:—

—	1896.	1901.	Increase.
Letters and post cards	199,022	334,361	135,339
Book packets, &c....	80,066	99,496	19,430
Parcels	2,676	3,952	1,276
	£	£	£
Money orders issued, other than local ...	8,841	14,032	5,191

The department had been amalgamated in 1896 with the Treasury for purposes of economy, but it became necessary to separate them in November, 1901, as the efficiency of both departments, and chiefly the Post Office, was being affected. Much improvement has resulted in the current year in the Post Office administration.

Telephone Department.

56. The revenue from telephones in 1901 was £1,177, and the expenditure on ordinary maintenance was £1,052. In addition, there was spent £130 on reconstruction, £115 on stores ordered by the administration in 1900 but not paid for, and £27, the loan charges for first quarter of the year, making a total disbursement of £1,324, or £147 in excess of revenue. With the resumption by the manager of the department of his duties on 1st of July a complete change was effected in administration, a supervisor and a foreman being appointed with their whole time at the disposal of the Service, and the work of reconstructing the system, rendered necessary by ten years' work and expansion, commenced. Such work can be done but slowly with the funds and staff available, but it will be steadily pursued until completion.

MILITARY FORCES AND EXPENDITURE.

57. There is no military force in the Colony. As stated above, the police are maintained on a semi-military footing. There is legal provision for the establishment of a Volunteer force, but no steps have yet been found practicable in this direction. Notice has been given in the Legislative Council in the current year of a bill providing for the creation of a Volunteer Reserve, a proposal undoubtedly suited to the present requirements of the Colony.

GENERAL OBSERVATIONS.

58. The most profound grief was felt in the Colony at the death of our late beloved Queen in January, and as a lasting memorial of her long and glorious reign, not only over the destinies but in the hearts of her subjects, Her late Majesty's birthday, the 24th of May, was created an annual public holiday under the title of "Victoria Day."

59. Mr. E. Drayton, Colonial Secretary, returned to the Colony on 6th April, after 14 months' absence in St. Vincent administering the Government of that Colony. Mr. Leslie

Probyn, Attorney-General, left, on promotion, on 1st of March, and his successor, Mr. Charles Major, arrived on 25th June.

60. The erection of three important iron bridges was completed during the year, the crossings bridged being those at Hermitage, St. Patrick's, Grand Roy, St. John's, and De Har, in St. David's parish. Work on a third bridge at La Force in St. Andrew's was commenced and vigorously pushed forward. A rain storm on 5th July in St. Andrew's parish, where eight inches were recorded during the night, and heavy rainfall later on in the year, caused the expenditure of nearly £700 on storm damages to roads, and of £214 on the reconstruction of the Dunfermline bridge, which collapsed.

61. 1901 was a very prosperous year for the Colony, and the future is full of promise.

EDWARD DRAYTON,

Colonial Secretary.

ADMINISTRATOR SIR GEO. MELVILLE to GOVERNOR SIR R. B. LLEWELYN.

Government House,

25th February, 1903.

SIR,

WITH reference to my despatch of the 5th November last, forwarding the Blue Book of this Colony for the year 1901, I have now the honour to forward my Report on the above annual return.

2. I have to express my great regret that, owing to the pressure of work which I have had to attend to and to the late period of the year when I was enabled to take up the preparation of this Report, the transmission of it to Your Excellency at an earlier date has not been possible.

I have, &c.,

GEO. MELVILLE,

Administrator.

---

875 Wt 21109 5/1903 D & S 5 14333 A

REPORT ON THE BLUE BOOK FOR 1901.

FINANCIAL.

Revenue.

The General Revenue for the financial year 1901-1902 is returned at £67,365 6*s.* 3*d.*, inclusive of the grant-in-aid from the Imperial Government towards the Botanic Station, which shows a net decrease of £4,742 when compared with the Revenue of the previous year, which amounted to £72,107.

The following table shows the total amount of General Revenue collected during the last five years:—

Year.	Amount.
	£
1897	60,639
1898	67,628
1899	71,479
1900	72,107
1901–2	67,365

The accompanying comparative statement of the revenue received for the last two years, 1901-1902 and 1900, shows that the decrease in the last year's revenue appears principally under three heads, "Customs," "Port, Harbour, &c." and "Repayment of Loans."

The decrease under "Customs Receipts" is due to the abandonment at the end of 1900 of the 15 per cent. additional import duty on all import duties paid, except on coal, which was imposed in 1896 to assist in meeting the financial difficulties which existed at that time. The falling off under "Port, Harbour, &c.," can be attributed to the decrease in the quantity of coal imported resulting from the quarantine imposed against the Colony during the latter part of the year. The decrease under "Repayment of Loans" is due to the redemption in 1900 of the loan of £8,000 which was raised for immigration purposes.

The increase of receipts which appears under head "Miscellaneous" is attributable to the balance of the premium on Stock, Water Works Loan, which was transferred during the year, and also to the value of water works stores taken over by the Castries Town Board.

The sum contributed by the Imperial funds towards the grant-in-aid of agriculture was £1,676 in excess of 1900. This was principally for the improvement to the Botanic Station and to the grounds of the Union Estate recently acquired for the Agricultural School, and the erection of the necessary buildings in connection therewith and for furniture, &c., for the school.

Head of Revenue.	1901-2.	1900.	Increase.	Decrease.
	£	£	£	£
1. Customs	32,123	35,980	—	3,857
2. Port, Harbour, &c. dues ...	5,070	6,938	—	1,868
3. Licences, Excise, &c. ...	17,916	17,657	259	—
4. Fees of Court or Office ...	4,336	4,547	—	211
5. Post Office	1,294	1,047	247	—
6. Telephone	561	554	7	—
7. Miscellaneous	804	456	348	—
8. Interest	2,041	2,079	—	38
9. Repayment of Loans ...	406	1,899	—	1,493
9A. Part proceeds of sale of Reclaimed Lands.	188	—	188	—
10. Imperial Department of Agriculture.	2,626	950	1,676	—
Total	67,365	72,107	2,725	7,467

The rate of taxation remained unchanged during the year.

EXPENDITURE.

The actual General Expenditure for 1901-1902 amounted to £67,486, inclusive of what was spent on the Botanic Station, or £121 more than the total Revenue received. The expenditure for the last five years was as follows:—

Year.	Amount.
	£
1897	57,123
1898	60,975
1899	63,821
1900	64,750
1901-2	67,486

The following table gives the details of the expenditure of 1901-1902 as compared with that of 1900, and shows a total increase of £2,736 over the expenditure of the previous year:—

Heads of Expenditure.	1901-2.	1900.	Increase.	Decrease.
	£	£	£	£
1. Charges on account Public Debt.	11,472	13,219	—	1,747
2. Pensions	1,069	835	234	—
3. Governor and Legislature ...	2,854	2,611	243	—
4. Treasury, Customs, &c. ...	2,032	3,055	—	23
5. Audit	488	494	—	6
6. Port and Marine	837	826	11	—
7. Legal	4,234	4,456	—	222
8. Police	3,974	3,400	574	—
9. Prisons	1,303	1,207	96	—
10. Medical	5,854	5,834	20	—
11. Sanitary	193	283	—	90
12. Charitable	1,084	994	90	—
13. Immigration	125	125	—	—
14 Education	3,967	3,950	17	—
15. Ecclesiastical	1,500	1,500	—	—
16. Miscellaneous	7,200	8,400	—	1,200
17. Post Office	2,439	2,259	180	—
18. Telephone	831	522	309	—
19. Agriculture	2,894	1,277	1,617	—
20. Public Works Department ...	1,037	1,039	—	2
21. Survey and Crown Lands ...	600	613	—	13
22. Public Works Recurrent ...	7,150	6,462	688	—
23 Public Works Extraordinary	3,349	1,389	1,960	—
Total	67,486	64,750	6,039	3,303

Under head "Pensions" the increase is attributable mainly to the retirement of three bailiffs of the I. and III. District Courts, and the Chief of Police; under "Governor and Legislature" to the increase to the Administrator's salary; under "Police" to the increase of the Force; under "Post Office" to the new steam service to Dennery; under "Telephone" to the annual contribution for interest and sinking fund for redemption of the loan, this service not having been previously provided for under this head, the cost of construction thereof having been met out of loan money; under "Public Works Recurrent" to increased expenditure on buildings, roads, dredging and Soufriere river bed; and under "Public Works Extraordinary" to erection of the Paupers and Yaws Asylums at Soufriere, the agricultural school buildings, and repairs to jetties. It will be observed that a decrease is shown under "Charge on Account of Public Debt"; this is due to the redemption of the Immigration Loan of £8,000 during 1900. Under head "Miscellaneous" a decrease of expenditure is also

shown; this is mainly due to a smaller contribution during the year towards repatriation of the time-expired coolies.

Assets and Liabilities.

On the close of business on the 31st March, 1902—the end of the financial year—the balance sheet of the Colony showed a surplus of assets over liabilities of £19,416 9*s.* 4*d.*, being an increase of £862 7*s.* over that of the preceding year.

The investment on account of the reserve fund which has been established for the purpose of meeting in the future any emergencies which may arise through financial depression, stood, at the 31st March, 1902, at £15,654 1*s.* 11*d.*; during the year £3,000 were added to the fund.

The total amount has been invested by the Crown Agents in the following securities:—

	£	*s.*	*d.*
Zanzibar Guaranteed Debentures at 3 per cent.	3,000	0	0
Gold Coast Guaranteed Debentures at 3 per cent.	1,792	4	8
Lagos (Scrip Bank Rate)	6,000	0	0
Sierra Leone (Scrip Bank Rate) ...	4,861	17	3
	£15,654	1	11

Public Debt.

The Public Debt of the Colony at the close of the year 1901 amounted to £173,779 11*s.*, of which £85,479 11*s.* at 4 per cent. were due to holders of inscribed stock, distributed as follows:—£50,579 11*s.* for public works, £5,900 for immigration purposes, £10,000 for Castries Town Board—expended on erection of iron-covered market and other works of public utility, £12,000 contribution from General Revenue towards construction of new water works, and £7,000 Castries Town Board contribution towards the cost of the construction of the water works, and £88,300 due to holders of debentures for the following purposes:—£11,000 at 6 per cent. interest for shares in the St. Lucia central sugar factory, £3,400 at 6 per cent. and £2,400 at 5 per cent. for immigration purposes, £9,100 at 4½ per cent. for preference shares in the St. Lucia central sugar factory, and £62,400 at 4½ per cent. for the improvement of the harbour of Castries.

Debentures were redeemed during the year to the amount of £2,900.

The general revenue of the Colony is liable for the due repayment of these loans.

The inscribed stock sinking fund on 31st December, 1901, amounted to £5,650 9*s.* 5*d.*, and that of debentures to £1,625 14*s.* 0*d.* The latter amount was deposited at interest in the London and Westminster Bank, and the former invested in the following securities:—

	£	s.	d.
Queensland, 3½ per cent.	678	0	7
South Australia, 3 per cent. ...	720	7	4
Tasmania, 3½ per cent.	717	11	4
Trinidad, 3 per cent.	727	13	11
Western Australia, 3 per cent. ...	817	14	0
Gold Coast, 3 per cent.	986	2	4
Lagos Scrip (Bank Rate) ...	603	17	8
Sierra Leone (Bank Rate) ...	477	13	4
Cash in Bank of England... ...	11	8	11
	£5,650	9	5

These securities are held in trust on behalf of the Government by the Crown Agents for the Colonies.

TRADE.

Imports and Exports.

A comparison of the total imports into the Colony for the year 1901 and 1900 under a general classification shows the following results:—

Articles.	1901.	1900
	£	£
Class I.—Live Animals, Food and Drink and Narcotics	84,849	78,469
„ II.—Raw Materials:		
(*a*) Textiles	—	—
(*b*) Metal	10	65
(*c*) Other	122,321	114,113
„ III.—Manufactured articles:		
(*a*) Textiles	27,197	30,297
(*b*) Metal	13,749	21,026
(*c*) Other	126,206	147,163
„ IV.—Coin and Bullion	8,320	12,464
Total	382,652	403,597

The figures in the foregoing return show that the total value of the imports for last year fell short by £20,945 of the results of the preceding year. This decrease appears principally under Classes III. and IV., manufactured articles and coin and bullion. It will also be observed that under Classes I. and II. increases are shown; under the latter head the value of coal

appears, which exceeds that of the previous year by £10,870, notwithstanding the fact that the quantity imported of that article was less by 14,045 tons in 1900.

The increased importation during 1901 of live animals, food and drink and narcotics exceeded the value of the previous year by £6,380.

The chief articles of import as compared with those of the previous year are set forth in the following comparative statement:—

Articles.	Value.	
	1901.	1900.
	£	£
Cattle	7,853	7,147
Horses and Mules	534	265

The figures in these returns show that the total exports of the Colony fell short of the previous year's value by £41,370. This decrease is principally due to the falling off in the exportation of cocoa, and to a decrease in the quantity of bunker coal taken by steamers.

The decrease as shown under the head of the former article can be accounted for in two ways— short crop, and to a large quantity of this product being shut out from the European markets during the month of December at the time the Colony was quarantined for yellow fever.

The extent to which the trade of the Colony was affected at the time of the yellow fever scare is again illustrated in the falling off in the quantity of coal taken by steamers during this unfortunate period. Steamers and warships requiring coal avoided coming to this port and obtained their supplies from elsewhere.

The following are the places to which the colonial produce and produce of other countries were exported during the past year:—

Countries.	Colonial Produce.	Produce of other Places.	Total.
	£	£	£
United Kingdom	27,461	4,435	31,896
British Colonies	2,487	1,311	3,798
Foreign Countries	40,736	1,440	42,176
Bunker Coal	—	—	110,196
Total	70,685	7,186	188,066

The total imports and exports for the last five years amount to as follows:—

Year.	Imports.	Exports.
	£	£
1897	245,253	230,444
1898	271,995	166,508
1899	282,963	170,668
1900	403,598	229,436
1901	382,652	188,067

Savings Bank.

The total balance to the credit of the Savings Bank to the 31st December, 1901, amounted to £13,287 14*s.* 3*d.*, as compared with £14,418 16*s.* 5*d.* of the preceding year. This balance is divided as follows:—

	£	s.	d.
I. District	12,606	11	7
II. "	518	2	8
III. "	163	0	0
	£13,287	14	3

This decrease when compared with the previous year is attributable to the time expired coolies *ex* "Roumania" who were repatriated to India during the year, among whom there were many with large sums deposited in the Savings Bank which were withdrawn by them for transmission to their country.

The investments amounted to £13,416 14*s.* 11*d.*, being £129 0*s.* 8*d.* more than the balance of the account. This was only temporary, and by subsequent increased deposits the position of the bank was soon adjusted.

The total amount of revenue derived from the investments and refund of income tax, &c., amounted to £446 14*s.* 7*d.*, and the amount of interest paid to depositors and working expenses of the bank for the year amounted to £410 10*s.* 8*d.*, thereby showing a balance of £36 3*s.* 11*d.* to the credit of working account.

The investments were held in the following securities:—

	£	s.	d.
Government of Canada Inscribed Stock, at 3½ per cent.	2,000	0	0
Government of New South Wales Stock, at 3½ per cent.	2,000	0	0
Government of Western Australia Stock, at 3 per cent.	3,000	0	0
Government of Trinidad Stock, at 3 per cent.	1,500	0	0
Government of South Australia Stock, at 3 per cent.	1,500	0	0
Government of Barbados, Debentures at 4 per cent.	1,000	0	0
Government of Victoria Inscribed Stock, at 3½ per cent.	416	14	11
At deposit in Colonial Bank, bearing interest at 3 per cent. ...	2,000	0	0
	£13,416	14	11

SHIPPING.

The following schedule gives the number, tonnage and nationality of steam and sailing vessels entered at the Port of Castries during the past year:—

Nationality.	Steam Vessels.		Sailing Vessels.		Total.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
British	461	770,443	273	9,634	734	780,077
American... ...	11	36,857	2	2,345	13	39,202
Dutch	1	1,152	7	412	8	1,564
Russian	—	—	1	411	1	411
Danish	—	—	1	285	1	285
Spanish	4	7,836	2	190	6	8,026
French	51	19,068	1	132	52	19,200
Norwegian ...	18	30,969	1	485	19	31,454
German	14	15,376	—	—	14	15,376
Italian	18	23,738	—	—	18	23,738
Belgian	6	12,016	—	—	6	12,016
Austrian	1	1,476	—	—	1	1,476
Total ...	585	918,931	288	13,894	873	932,825

The following statement shows the total shipping inwards and outwards for the last five years:—

Years.	Entered.	Cleared.
	Tonnage.	Tonnage.
1897	890,759	889,801
1898	779,806	776,971
1899	637,538	641,815
1900	921,426	920,170
1901	932,825	931,895

From these returns it is worthy of note that during the year 585 steamers of a total tonnage of 918,931 and 288 sailing vessels of a tonnage of 13,894 visited Port Castries, the total tonnage exceeding that of the previous year.

The total tonnage of vessels entered and cleared at Castries during the year was 1,864,720, or 23,128 tons more than the year 1900.

AGRICULTURAL DEPARTMENT.

Botanic Station.

Further improvements were carried out during the year at the Botanic Station. An additional iron entrance gate was erected, new walks constructed, grass laid and the permanent collection of plants increased and partly relabelled.

Over 15,000 plants were distributed.

A third course of instruction in elementary agricultural science and practice was given to the teachers of the elementary schools.

Agricultural instruction with practical demonstrations was also given on many estates.

An Agricultural Show was held at Dennery, and lectures with demonstrations in bee-keeping have been given throughout the Island with good results.

On the experimental plots about the Colony very instructive results are being obtained in the demonstration of proper methods of cultivating various tropical plants, particularly cocoa and cotton, and planters are beginning to appreciate the value of these plots and improvements in cultivation on several plantations are noted.

Agricultural School and Experiment Station.

"Union" Estate, near Castries, was acquired by the Government for the purposes of an agricultural school.

The school buildings and officers' quarters were erected, some of the old works being adapted to the requirements of the institution, which was opened in October with ten pupils.

About 12 acres of land were cleared, drained, and roads constructed, and nearly three acres were brought into cultivation.

Crown Lands and Surveys.

The following is a *resumé* of the work done by this important Department during the year:—

Applications for Crown lands received ...	160
Alienations " " " ...	134

Revenue:—

	£	s.	d.
Survey fees	531	9	1
Deposits on account	207	11	0
Instalments	726	3	8
Sundries	36	15	9
	£1,501	19	6

Expenditure:—

	£	s.	d.
Survey fees	477	2	1
Roads	306	9	3
Acquisition of "Union"	1,244	11	2
Refunds	82	3	0
Miscellaneous	104	11	1
	£2,214	16	7

which shows a debit balance of £712 17*s.* 1*d.*, against which "Union" stands as an available asset.

Amount voted from General Revenue for upkeep of office—

	£	s.	d.
Pay of Staff	584	18	0
Incidentals	2	9	2
	£587	7	2

Amount to credit of Land Sales Fund at 31st December was £1,916 9*s.* 2*d.*

Forest Reservation.

Wood on high hill and main ridges was preserved from spoliation by preventing the unauthorised cutting of trees and clearing of land in such localities.

No estates escheated to the Crown during the year 1901.

Establishment and Upkeep of Boundaries.

The boundaries of lands, the property of the Crown, were cleared and, where necessary, marked, and the boundaries of four new estates defined.

Issue of Plants from Botanic Station.

Orders for 7,929 plants of various economic kinds, such as cocoa, coffee, and nutmeg were issued to persons who had purchased Crown Lands as provided for under Crown Lands Regulations.

Expenditure on Roads from Land Sales Fund.

The sums, as under, were expended on the following roads:—

	£	s.	d.
Goldsworthy Road	165	16	4
Soufrière-Micoud	116	14	3
Ravine Soufre	19	15	4
Dufore (Trace)	4	3	4
	£306	9	3

The work which engaged the greatest attention this year was the effort to at once settle persons on plots applied for. To do so, other items of work, such as the escheat of vacant estates was set aside. This was done to meet the increasing demand for garden lands owing to the lack of labour on sugar estates and to the advantage to be derived from owning one's own land. All that could be done by the present staff was done to prevent illicit wood-cutting especially along those high lands or ridges which form the water sheds for the main

valleys. A section of country has been marked out as a forest reserve for the Castries water supply. The boundaries of this were kept up and wood-cutting thereon prevented.

A portion of the lands of the "Union" Estate (an abandoned sugar estate purchased by the Crown from the proceeds of the sale of Crown Lands) together with the buildings thereon were handed over to the Imperial Department of Agriculture for the establishment of an agricultural school, from which it is hoped much benefit will accrue to the rising generation of planters and peasants by means of the tuition to be given at that institution. The remainder of the land is to be cut up into small holdings and sold to peasants.

CASTRIES TOWN BOARD.

The revenue of the Castries Town Board for the year was £6,055 5*s.* 6*d.* and the expenditure £6,776 9*s.*; but on the 1st January, 1901, the Board had a balance in hand of £1,356 0*s.* 8*d.*, and there has been carried forward to the year 1902 a balance of £634 17*s.* 2*d.* The principal items of revenue are

	£	*s.*	*d.*
Water Dues from Shipping ...	1,994	4	0
Market Dues	1,367	5	1
House Taxes	1,691	0	5

and the chief charges against it are—

Maintenance of Water Works, exclusive of pay of Staff	1,369	5	4
Expenses of Fire Brigade ...	542	1	11
Interest and Sinking Fund, on Loans	979	14	4
Repayment of Water Works Debt	673	4	5

LEGISLATION.

During the year twelve Ordinances passed the Legislative Council, but Ordinance No. 9 "To amend the Police Ordinance, 1887," did not receive the Governor's assent. None of them is of sufficient importance to call for special notice, except, perhaps, the Ordinance to provide for the maintenance of a supply of water for the town of Castries. This measure was finally passed by the Council, and accepted by the Town Board after much correspondence caused by differences of opinion as to the expediency of certain of its provisions; and it is, I believe, working satisfactorily.

EDUCATION.

There were 44 assisted primary schools in operation during the year 1901, of which one was closed in September. The number of children on the rolls of these schools was 6,833, and the average attendance 3,577, an advance of 468 and 124 respectively on the numbers for 1900. The grants-in-aid amounted to £3,167 8*s.* 5*d.*, or £29 3*s.* 7*d.* more than in the previous year.

It is estimated that 14·1 per cent. of the population were on the rolls of all the schools, primary and secondary, and 7·45 per cent. in average attendance, as against 13·6 per cent. and 7·4 per cent. respectively for the year 1900.

Owing to the operation of the new Code, there was a large increase in the number of children examined in the primary schools, the number being 4,065 as against 3,134 for the year 1900.

The new Code came into operation, as far as the general regulations were concerned, on the 1st October. The financial regulations take effect from the 1st April, 1902.

The Code provides, *inter alia*, for the strict supervision of the schools by the managers, the right of visiting schools by members of the executive and legislative councils, and other officers of the Government, and the licensing and registration of teachers. The subjects of instruction in addition to the elementary subjects, now include the systematic teaching of English as a spoken language, needlework, drawing object lessons, elementary science, &c. Special encouragement has been given to the teaching of practical agriculture. Grants to schools will depend to a greater extent than formerly on the average attendance, modified, however, by the degree of efficiency as shown by the examinations. A grant of 1*s.* 6*d.* per unit of average attendance in lieu of school fees has the effect of making education in St. Lucia practically free.

The St. Mary's College for Boys and the School of the Convent of St. Joseph for Girls continued to perform useful work. All the pupils of the college who were presented for the Cambridge local examinations, and all the convent girls who were presented for the examinations of the College of Preceptors were successful.

HOSPITALS.

From the Annual Medical Reports it will be seen that 3,050 persons were admitted for hospital indoor treatment, 1,975 less than previous year.

Dispensaries.

There were 34,344 attendants, 3,388 in excess of 1900.

Victoria Hospital.

There were admitted to this institution during the year—

Coolies 1,112, an excess of 206 on 1900.

Natives of other places 619, excess 150 on 1900.

Police officers, gaol warders and seamen, 97.

Natives of the Island, 358, or 4 less than 1900.

Poor Asylum.

In this institution there was a daily average of 56, less by 2 than for 1900; and the average death-rate was 20 per cent. as compared with 28·4 per cent. in 1900. Owing to financial reasons anticipated improvements were delayed until early in current year.

With the exception of a few cases of yellow fever among the troops on the Morne, the general health of the Island was good. Dr. Galgey continued his observations on Filaria and Dr. Gray on malarial parasites.

Great inconvenience is still experienced from want of suitable local accommodation for lunatics.

FRIENDLY SOCIETIES.

The law which regulates friendly societies in this Colony is entitled "The Friendly Societies Ordinance of 1896." The societies which have registered under it came into existence from 1898. In that year four were in working order. In 1901 their number had risen to eight. No count has been taken of two which registered in 1901 for the sole purpose, apparently, of enabling their members to parade the streets in naval uniform. They were stamped out of existence in consequence of police prosecution under "The Uniforms Ordinance of 1896," leaving no records and no funds.

The following table shows in detail the position of the societies at the start, their present condition, and the progress which they have made:—

Year.	Membership at end of Year.			Income for the Year			Expenditure. for the Year.			Balance at end of Year.		
	Males.	Females.	Total.	£	s.	d.	£	s.	d.	£	s.	d.
1898	160	136	296	390	6	4	160	12	8	229	13	8
1899	290	201	491	517	9	7	341	16	9	405	6	7
1900	352	286	638	771	8	0	541	11	0	635	3	7
1901	426	341	767	982	9	7	807	15	2	809	18	0

These figures speak for themselves, and leave no doubt that the people should be encouraged in every way to form themselves into associations which will develop in them ideas of thrift and mutual assistance, thus raising them morally and at the same time relieving the Government which would otherwise, in many cases, be called upon to sustain them in the hospitals and to incur the expense of burying them after death.

POLICE.

Owing to complaints that existed in connexion with the police and prisons a commission was appointed to enquire into the administration of these Departments. As a result of the enquiry, the Police Force was increased to meet the growth of Castries in area and population, and was further strengthened by a sergeant-major and sergeant obtained from the Royal Irish Constabulary. These and other changes produced a decided improvement in the Police.

The absence of proper accommodation is a great drawback, and the condition of the Force will not be satisfactory until suitable quarters can be provided.

PRISONS.

The Commissioners' Report on prison matters dwelt on the unsuitability and inadequacy of the present buildings.

The discipline maintained in the institution was not found unsatisfactory, but attention was drawn to undesirable outdoor labour, since discontinued, that interfered with proper prison management.

The number of admissions reached the highest on record, namely, 1,021: 718 males and 303 females, being 201 in excess of the previous year. Of these, 155 were remands and 866 convictions.

The proportion of these in relation to the inhabitants is noteworthy. Of a population of 49,803, composed of 41,777 St. Lucians and 7,026 natives of other places, the former furnished 284 and the latter 582 of the convicted admissions.

Corporal punishment was inflicted in one instance.

There were more cases than usual treated in the infirmary owing to an acute form of influenza that prevailed in the early part of the year.

Four deaths occurred, three from natural causes and one of suicide in the case of a coolie undergoing a sentence of 12 years.

Criminal Statistics.

There was a large decrease in the number of cases sent up to be tried before the Superior Court for indictable offences, nor were the cases of a very serious character. The number of convictions showed a decrease of 18 as compared with the year 1900, and of 12 as compared with the year 1899. The record for 1900 was, however, the highest known since 1895. Of those convicted, seven only were natives of St. Lucia.

Police offences continued to increase during the year. The number of summary convictions was 1,616 or 371 above the figures for 1900—an increase which is undoubtedly due to the influx of labouring people of a very mixed character from the neighbouring islands, attracted by the prospect of higher wages in connection with military works and coaling. They are, unfortunately, as I understand, not of the agricultural class, so much desired, and attach themselves almost exclusively to the town of Castries.

The Attorney-General in his report observes that "the criminal statistics for 1901 may be said, on the whole, to reflect in a fairly creditable manner on the Colony, having regard to the increase of population and the character of that increase. The figures indicate, at least, that the conditions of life which elsewhere favour the growth of crime do not exist to any serious extent in St. Lucia, and that the people are fairly contented, if not prosperous."

POST OFFICE.

The work done in this Department continues to increase under every head, there being increases in the number of letters under "Foreign Mail Service" of 8,022 and under "Inland Service" of 7,593, as compared with the figures of 1900.

The revenue for the year 1901 was £1,689 4*s.* 1½*d.* and the expenditure £2,361 9*s.* 6*d.*

These figures would make it appear as if the Postal Department did not pay its way, but under expenditure for salaries,

wages, and all expenses of the Postal Service, there appears an item of £1,230 9*s.* 4*d.* paid to the Royal Mail Company for a daily steamer service coastwise to Soufrière, &c. This service, however, is not by any means only for conveyance of mails, and if this item be deducted, as it should be, from the expenses of the Postal Service, the balance shows a net Postal revenue of £558 3*s.* 11½*d.*

Telephones.

The only improvement to the telephone system during the year was effected by the substitution of 145 iron rails for rotten wooden poles. These old poles will be replaced gradually, as funds will allow, by the erection of a few miles each year of iron poles with larger (copper) wire. Telephonic communication in this Island compares very unfavourably with this system in other parts of the West Indies, and constant complaints are made respecting it. To make it a satisfactorily working and paying Department a considerable additional expenditure will be necessary.

PUBLIC WORKS DEPARTMENT.

Works and Buildings.

The construction of agricultural school premises at "Union" cost £2,044 16*s.* 5*d.*, an imported officer being specially detailed to carry out the work.

The jetties were repaired at a cost of £254 2*s.* 1*d.* At Choiseul the pier was extended seawards 50 feet at a cost of £178 2*s.* 11*d.*

Castries wharves were maintained at a cost of £207 16*s.* 8*d.* The work of refacing the wharf at Prince Alfred Basin was held in abeyance, £221 4*s.* 8*d.* being spent in closing up the work for the year. Wharf extension and harbour improvement was the subject of investigation and borings were commenced.

Dredging operations were carried on. The harbour bed fronting the Northern Wharf was deepened to 28 feet. The expenditure on dredging and disposal (including purchase of plant, refitting, repairs, engineer's salary and working expenses) was £1,575 13*s.* 10*d.*

At Rat Island a stone storage tank was built with a view to equipping the Island as a future quarantine station.

A building of four single rooms for the temporary housing of lunatics was commenced.

At Soufrière a site was selected and plans prepared and operations commenced with a view to transferring the Poor House and Yaws Hospital patients from Castries.

Under "Public Works Recurrent" £942 9*s.* 4*d.* was spent in repair to buildings, the larger items were in respect of Laborie, Dennery, Vieux Fort, Gros Islet, and Micoud Police Stations; Government offices; Prince Alfred Building; Government House; Prison; Yaws Asylum and the hospitals at Vieux Fort and Dennery.

Works were carried out in the work yard for Government institutions, and for 56 private parties. There were also 21 shipping jobs executed. The credit balance was £277 18*s.* 4*d.* at the close of the year.

Roads.

As shown by the Report for the previous year, the greater proportion of the total expenditure was in respect of road maintenance and improvement.

The gross expenditure at 31st December, 1901, in respect of road service was £4,906 9*s.* 3*d.*, as under:—

Recapitulation.

	£	s.	d.	£	s.	d.
Upkeep of roads and bridges ...				4,130	1	0
Road improvements				307	14	6
Land Sales Fund—						
Goldsworthy Road...	165	17	9			
Ravine Soufre Road	19	15	4			
Micoud Soufrière Road	116	14	3			
Dufore Road ...	4	3	4			
				306	10	8
Public Works Extraordinary—						
Repairs Choc Bridge				31	19	3
Advances—						
Paving Morne Fortuné drains...				25	3	10
Acquisition of section of new road at Sulphur Springs				105	0	0
				£4,906	9	3

With reference to the item of "upkeep," it is recorded in the report on Public Works that the cost of removing landslides and débris occasioned by severe weather, notably on 6th July, 20th August, and 19th September was, in the first district,

£331, in the second district, £186, and £65 in the third district. Permanent damage had to be faced by the boards of the above districts. There were 15 Road Board meetings.

Items of "Improvement" were in the nature of constructive works. 886 lineal feet of culverts were laid; 21,625 lineal feet of macadamized road were constructed; a bridge of stone and iron at Balata was erected; and three smaller stone bridges on Roseau Highway were completed.

Choc Bridge was re-floored in concrete and steel.

Several new roads and ancient tracks were investigated, the majority being recommended as suitable for opening up inland properties. Bridging the principal rivers, especially on cartable roads, appears much in request.

VITAL STATISTICS.

The births registered during the year were 1,958, as compared with 1,995 in 1900—the legitimate births were 43·21 of the total, and the illegitimate showed a percentage of 56·79.

The deaths were 1,279, as compared with 942 in the previous year. Adding the excess of births over deaths between the 7th April, the date when the Census was taken, and the 31st December, the population of St. Lucia at the close of 1901 represented a total of 50,354.

There was no illness of an epidemic form during the year, and during the same period there was an immunity from deaths by snake bites.

METEOROLOGY.

The following meteorological notes are taken from the Botanic Station records for 1901:—

Mean annual barometric pressure, 29·973 inches.

Mean annual temperature, 78° 9.

The highest temperature of 96° in the shade was recorded on May 5th and the lowest of 61° on February 5th.

The mean solar radiation was 146°·7.

The relative humidity, ·75.

The total rainfall was 99·71 inches, being 26·46 more than the previous year, which was exceptionally dry, and slightly over the average for the past 12 years. The greatest fall in any one day was 7·60, on September 19th.

Rain fell on 218 days during the year.

GENERAL REMARKS.

After a residence of only a few months in the Colony, I am unable to make any useful remarks in this paragraph which should be by way of a general review of its condition during the past year; but I may safely say that the statistics of the Blue Book justify the opinion that the Colony was in a generally prosperous condition.

I can, however, repeat the hopes expressed by the late Administrator that our means of communication with Europe especially may be extended and improved; that more suitable buildings may be provided for the conduct of the business of all public Departments; that the country may be opened up by better roads and many very much needed bridges so as to encourage people to take up the cultivation of land as a livelihood; and that, to make this valuable coaling station more useful and more widely known than it is at present, the harbour may be entirely dredged and more facilities given to vessels coaling, not only from piers or wharves but also at anchor in the harbour.

GEO. MELVILLE,

Administrator.

Saint Lucia,

25th February, 1903.

COLONIAL REPORTS—ANNUAL.

No. 385.

ST. VINCENT.

(For Report for 1900, *see* No. 350.)

ADMINISTRATOR CAMERON to GOVERNOR SIR R. B. LLEWELYN.

Government House,
St. Vincent,
28th February, 1903.

SIR,

I HAVE the honour to forward to Your Excellency herewith my report on the Blue Book for the year 1901, which includes financial returns for the period 1901-1902.

I have, &c.,
EDWARD J. CAMERON,
Administrator.

REPORT ON THE BLUE BOOK OF ST. VINCENT FOR THE YEAR 1901.

I. FINANCIAL.

(A.) GENERAL REVENUE AND EXPENDITURE.

The following comparative statements and table give the heads of Revenue and Expenditure and the amounts received under those heads for the first quarters of the years 1900 and 1901, and for the complete years 1900 and 1901-1902, as well as the total Revenue and Expenditure for each of the last five years, 1897—1901-1902:—

875 Wt 21109 5/1903 D & S 5 14332

(TABLE 1.)

	Imperial Grant	2,907		Imperial Grant	3,423	
			26,612			29,572

The total local Revenue of the Colony for the first quarter of 1901 was £5,602, being £674 below the estimate and £1,614 less than the similar revenue of the first quarter of 1900, the main falling off being in Customs duties and licences and excise.

No Imperial contribution in aid was brought to account in either period.

The local Revenue for the financial year 1901-1902 was £23,705, being £1,852 below the estimate and £4,670 less than the receipts of the calendar year 1900, the deficiency being again under Customs and Excise.

The gross Revenue, including Imperial Parliamentary Grants for Botanic Station and Agricultural School and in aid of Deficit was £26,612.

A collection of £575, long outstanding arrears of purchase money of Crown lands, is to be noticed.

The local Expenditure in January to March, 1901, amounted to £6,037, being £917 less than estimated and £1,034 less than in the first quarter of 1900. The gross expenditure was £7,391, including £989 of the balance of the Imperial Grant for restoration of damage by the 1898 hurricane.

In 1901-1902 the local Expenditure was £26,149 and the gross expenditure £29,572, as against £26,961 and £31,593 estimated and £29,081 and £36,121 expended during the calendar year 1900.

(B.) Taxation.

No changes took place during the period under review.

(C.) Assets and Liabilities.

The nominal excess of assets over liabilities at 31st March, 1901, was £2,625, which figure is, however, subject to an addition of £365 and a subtraction of £3,105 as appears from the footnotes to the attached return, making the true condition an excess of liabilities, £115.

At 31st March, 1902, the excess of liabilities similarly arrived at was £1,144.

The unexpended portion of the Hurricane Grant has during the present year been returned to the Imperial Treasury.

the Imperial Treasury, which is £16,077.
Agricultural School in excess of receipts from Imperial Funds.
of £25,000 in aid of damage done by the hurricane of 1898.

(D.) Public Debt.

The Public Debt of the Colony at 31st March, 1902, stood at £13,010. Of this sum £5,000 was provided by an Imperial Grant in the hands of the Crown Agents on deposit, which, during the current year has been duly used for the purpose intended. £5,850 of the debt is repayable from the funds of the towns of Kingstown and Georgetown, and the actual amount, therefore, for which the Colonial Revenue is liable is only £2,160, which is being paid off at the rate of £560 per annum.

The Colony is further responsible to the Imperial Government for repayment of a sum of £16,026 loaned to planters to enable them to restore works and buildings destroyed by the hurricane. Repayment of this sum is provided for by Ordinance and is made to extend over 23 years.

(E.) Currency.

Gold, American and British, Colonial bank notes, with British silver and copper constitute the currency of the Island.

The Government's accounts are kept in sterling, and commercial accounts in dollars and cents.

(F.) and (G.) Finances of Municipalities or Public Boards.

The management and control of the affairs of the town of Kingstown are vested in a Board, half of whom are elected by the ratepayers and the other half nominated by the Government. The small towns of the Colony are controlled by wardens, annually appointed by the Government.

The following comparative statements give the total Revenue and Expenditure of these towns for the last five years:—

Revenue.

Town.	1897.	1898.	1899.	1900.	1901.
	£	£	£	£	£
Kingstown	1,985	1,848	2,082*	1,961	1,805

Bequia	11	3	—	3	12

* Account books destroyed by hurricane.

Debts of Towns.

The debts of the towns are as follows:—

	£	£
Kingstown water supply	4,700	
„ town improvement ...	550	
		5,250
Georgetown water supply		600
		£5,850

Provision for repayment of these loans is made by rates levied annually on the townspeople, and the debts are secured on the general Revenue of the Colony. The Kingstown Water Supply Loan is being repaid at the rate of £400 per annum, the Town Improvement Loan at the rate of £150 per annum, and the Georgetown Loan by annual instalments of £50.

The time for repayment of the Kingstown Improvement Loan had to be extended during 1901 in consequence of the insufficiency of the town's revenue to meet the calls upon it.

In addition to the above, the town of Georgetown was indebted to general revenue for advances made in previous years for certain specific purposes in the sum of £419, which money, in view of the damage to property and the blow to its prospects as a trading centre wrought by the disastrous eruption of 1902, it is somewhat doubtful if the town will ever be able to repay.

The town of Chateaubelair was similarly indebted in the sum of £50, which with care and insistence will in due course be made good.

II. TRADE, AGRICULTURE, AND INDUSTRY.

(A.) Imports and Exports.

The following comparative statements give the value of the chief articles of import and export in 1900 and 1901 and the totals for the last five years:—

Imports.

IV. Coin and bullion* ...	—	—	—	—	—
Totals	68,935	44,666	33,575	97,769	51,987

* No returns.

The volume and direction of the Colony's trade in the five years, 1897-1901, are shown below:—

Imports.

—	1897.	1898.	1899	1900.	1901.
	£	£	£	£	£
United Kingdom	28,358	27,291	29,241	35,538	31,733
British Colonies	34,908	44,812	52,046	35,882	26,756
Foreign Countries	7,558	16,205	22,340	24,771	16,430
Totals	70,824	88,308	103,627	96,191	74,919

Exports.

—	1897.	1898.	1899.	1900.	1901.
	£	£	£	£	£
United Kingdom	20,432	14,176	19,383	71,584	28,306
British Colonies	21,945	14,260	10,812	14,584	12,983
Foreign Countries	26,557	16,230	3,380	11,601	10,698
Totals	68,934	44,666	33,575	97,769	51,987

The decrease in the value of imports as compared with the previous year is chiefly on foodstuffs and lumber, and the total assimilates to the totals of the years immediately preceding the hurricane year, 1898.

The value of exports is largely below the official figure for 1900, which figure, however, is, as explained in the last annual report, misleading, and is for purposes of comparison reducible by about 33 per cent. The quantity of arrowroot exported in 1901 was very slightly less than in 1900, but the price was so low throughout the year as to make the industry practically unremunerative.

A combination was formed among the growers dating from 1st December to counteract this state of things by limiting the export and fixing a minimum price, which is considered to have tended to improve things slightly. The eruption of the Soufrière in May last, however, entirely altered the conditions for the time being, and sent prices up from 70 to 100 per cent.

(B.) Mines, Manufactures and Fisheries.

A whale fishery is carried on in the St. Vincent Grenadines, notably Bequia and Canouan, and is a very material benefit to the inhabitants of those islands whose condition compares favourably with that of the labourers of St. Vincent itself. The value of whale oil exported was £1,231, double that of the previous year.

(C.) Agricultural Industries and Botanical Station.

Agriculture.

The condition of the arrowroot industry is referred to above.

The production of sugar and rum is inappreciable.

Cocoa cultivation was making way slowly but has received a severe set back from the disaster of 1902.

The Land Settlement or Peasant Proprietary Scheme continued to make progress along the lines laid down, and the survey and allotment of an important estate near Kingstown was completed, the different plots being eagerly sought after.

There has not so far been much attention paid by the peasantry to systematic cultivation of economic plants, "ground provisions" absorbing their efforts in the majority of cases.

An Agricultural Instructor has, however, been recently appointed and will, as the scheme contemplates, be a constant visitor to the acquired estates, giving advice and instruction as to the plants most suitable and the proper methods of planting and caring for them.

Botanical Station.

The expenditure on this is defrayed from an Imperial Grant, disbursed under the supervision of the Imperial Commissioner of Agriculture at Barbados. From this station

there were sold during 1901 some 18,000 plants, mainly of cocoa and lime, while nearly 9,000 economic plants were distributed free to land settlement allotment holders.

The garden and nurseries are well laid out and tended, and are the admiration of all visitors to the Island.

Bee culture was also embarked upon at the Station, and several good strains imported which have thriven and multiplied, giving an excellent quality of honey. Small landholders might do well with bees if they would take up the business systematically, and every effort has been made and facility given by the Curator to induce them to do so.

(D.) Land Grants and General Value of Land.

The year was chiefly remarkable for a determined effort to recover some portion of the very long outstanding arrears of purchase money of Crown lands, which resulted in a collection of over £500, which shows that these lands, although far up in the mountains and accessible for the most part with difficulty, have a distinct value to their owners.

The price of Crown land is £1 an acre cash, and £2 if paid in instalments.

Ten new applications for purchase of land were received during the year, and some portion of land was rented out at a moderate figure, payment of rent in advance being insisted on.

(E.) Shipping.

A table is annexed of the steamers and sailing vessels, inwards and outwards, during 1900 and 1901, as also a comparative statement of total shipping for the last five years.

These figures do not include men-of-war, of which one (British) visited the Island during the year.

Outwards	124,940	127,326	122,735	144,895	180,282
Totals	248,877	254,825	245,588	289,741	361,467

III. LEGISLATION.

Fourteen Ordinances were passed during the year, of which the Public Health Ordinance, an enactment on modern lines, and the Birds and Fish Protection Ordinance, may be noticed.

There is a crying need for the consolidation and simplification of the laws of the Colony and their presentment in a volume of handy form and size, with index.

IV. EDUCATION.

(A.) Primary Education.

The results of primary education in 1900 and 1901 compare as follows:—

—	1900.	1901.
Number of Schools	31	31
Number on Roll	6,000	5,804
Average Attendance ...	2,706	2,516
	£	£
Government Grant-in-Aid...	1,667	1,519*

* Expenditure during financial year 1901–02.

An examination of the schools by the Inspector of Schools of Grenada was held in the last quarter of the year, and his report indicates much room for improvement. A new and simpler code of regulations than the existing one is needed, and was in preparation, but owing to the general "bouleversement" occasioned by the eruption it has been impossible to proceed with it. Until, however, the Department can be brought directly under the management of a qualified education officer, which the financial condition of the Colony does not at present permit, any appreciable improvement and progress can scarcely be looked for.

(B.) Secondary Education.

The Kingstown Grammar School for Boys and Girls is the only secondary educational establishment in the Colony. The curriculum of the school embraces the subjects required for the Cambridge Local Examinations, and the annual examination is conducted by the Syndicate. The Government Grant to the school amounted to £140.

(C.) Industrial, Technical and Agricultural Schools.

An Agricultural School was established under the auspices of the Imperial Department of Agriculture with Imperial money in 1900.

There was an average of 24 pupils during 1901.

Various improvements were carried out to the school buildings and premises, and, under the efficient supervision of the officers of the Department, the institution is carrying out satisfactorily the duties entrusted to it.

The total cost of the school upkeep during the year was £623.

V. GOVERNMENT INSTITUTIONS.

(A.) Hospitals.

The number of patients treated at the Colonial Hospital in Kingstown during the year was 473, of whom 403 were discharged cured or relieved; 38 died and 32 remained in hospital.

Great economy was exercised in the management, and a saving of nearly £600 on the estimated expenditure effected; but, in forwarding his report on the institutions, the present medical officer, Dr. C. W. Branch, has pointed out that such a reduced scale of expenditure is, in his opinion, inadequate for the wants of a population of the size of that of St. Vincent, among whom, moreover, certain diseases are, he has found, extraordinarily prevalent.

The small District Hospital at Georgetown was kept up, but very few patients were treated there, and this institution is practically of little use to the community.

(B.) Asylums.

Lunatics.

A portion of the old military barrack at Fort Charlotte is set aside for temporary detention of lunatics prior to their removal to the asylum at Grenada.

Six lunatics were sent to Grenada during the year, making a total number under care there of 30, at a cost to the Colony of £547.

Lepers.

The number of inmates of the Leper asylum at the opening of the year was 18; two fresh cases were admitted and the daily average was 19.

The asylum is not all that could be desired, and its accommodation is limited, but it is all that the Colony can at present provide and is fairly kept and economically managed.

(C.) Poor Houses.

The Colony's paupers are housed in the old military buildings at Fort Charlotte on a considerable elevation commanding the town of Kingstown. There were 119 inmates at the end of 1900, and 46 were admitted in 1901, of whom 30 were discharged and 26 died, leaving 109 at the close of the year, viz., 68 males and 41 females.

Considering the origin of the human wreckage here congregated, the nature and variety of the diseases with which these unfortunates are afflicted, and the comparatively small expenditure for upkeep, it is wonderful that this institution

presents the clean and decent appearance it invariably does on inspection, and credit is due to the medical officer and to the overseer in charge for this condition of things.

The expenditure in 1901-1902 was £1,041 on the institution, and, in addition to this, £1,086 was spent in outdoor relief, interments, &c.

(D.) Reformatories.

Nil.

(E.) Savings Bank.

The following is a statement of the work of the bank for the last five years:—

Year.	Number of Depositors at 31st December.	Amount of Deposits.	Amount of Withdrawals.	Balance at credit of Depositors at 31st December.
		£	£	£
1897	1,047	4,515	4,383	8,771
1898	1,091	4,263	3,739	9,283
1899	1,036	5,375	5,123	9,716
1900	900	7,790*	7,122*	10,594
1901	907	6,108†‡	6,015	10,687

* Includes £2,926 under Land Settlement Ordinance.
† Includes £1,200 under Land Settlement Ordinance.
‡ Includes Interest.

VI. JUDICIAL STATISTICS.

(A.) Police.

The Colonial Police Force consists of a chief, a sergeant-major, of European birth and military training, and 53 West Indian non-commissioned officers and privates. They are, in addition to their civil duties, drilled and trained to the use of arms, and are armed with Snider rifles. Besides ordinary police work, they render assistance to the Government in many details of the administration, being charged with the supervision of the excise duty on rum, and with co-operating in collection of customs duties, district post office work, registration of births, &c., poor relief, and the management of the small district telephone exchanges. In Kingstown they are also responsible for extinguishing fires, receiving from the Town Board additional pay for this service.

(B.) Prisons.

Two hundred and nine persons were committed to prison in the year—122 men, 86 women and one juvenile. The daily average was 21·11 against 31 in the previous year.

One prisoner sentenced to a term of imprisonment of over 12 months was sent, in accordance with the arrangements now in force, to serve his term in Grenada.

(C.) Criminal Statistics.

The total number of offences reported to the police or to the magistrates in 1901 was 1,256 against 1,268 in 1900.

Of the offences reported in 1901, 357 were for offences against the person, 123 were for prædial larceny, 104 were for offences against property other than prædial larceny, 672 were for other offences.

The total number of convictions in the Inferior Court in 1901 was 719, against 795 in 1900.

These convictions are classed as follows: 196 for offences against the person, 6 for malicious injuries to property, 74 for prædial larceny, 45 for offences against property other than prædial larceny, 185 for offences against Revenue Acts, &c., 213 for other offences.

The convictions in the Supreme Court were as follows: 3 for offences against the person, 4 for offences against property.

The acquittals were as follows: in the Inferior Court, 182, in the Supreme Court, 1.

VII. VITAL STATISTICS.

(A.) Population.

The population at the 1891 Census was 41,054. No census was taken in 1901 on account of the expense involved, which the Colony was not in a position to afford. An estimate of the Registrar-General puts the population on 7th April, 1901, at 47,548, reckoning the excess of births over deaths during the decade and deducting the excess of departures over arrivals on the figures given in the Official Gazette.

It is generally considered, however, that the figure of the estimate does not tally with the facts, and the population is really not very much, if at all, in excess of the 1891 total.

(B.) Public Health.

The public health of the Colony was fair, save for a slight epidemic of dysentery. The general health conditions among the labouring population, however, owing to the poverty of the country and the great prevalence of ulcers and other syphilitic affections, leave much to be desired.

(C.) Sanitation.

There is nothing special under this head to call attention to.

(D.) Climate.

The rainfall for the year was 125·69 inches, recorded at the Botanic Station just above the town of Kingstown. The average for the last twelve years is 113·26 inches. The minimum reading of the thermometer was 65° (in December) and the maximum 88° (in August and October).

The direction and force of the wind were normal, the prevailing wind being as usual the north-east trade.

On 20th August a very violent storm struck the town and harbour of Kingstown and occasioned considerable damage, driving ashore all the vessels in the port, save one, and doing injury to property on the sea-front.

The Government jetty was almost destroyed by a schooner that drove, and was smashed, against it.

VIII.—POSTAL TELEGRAPH AND TELEPHONE SERVICES.

The Postal Service is performed by a fortnightly service of steamers of the Royal Mail Steam Packet Company from and to Barbados under contract with His Majesty's Government. There are also lines of steamers from Halifax, Nova Scotia, under similar contract, fortnightly, and other steamers also from and to the United States and direct from and to London call at the Port of Kingstown though at somewhat irregular intervals.

There is an Inland Postal system by which the Windward and Leeward districts of the Colony are daily, and the Islets of the Grenadines weekly, served.

There is a slight decrease in the number of letters by inland post handled during 1901 as compared with the previous year, but the numbers of foreign letters and newspapers, books and parcels have increased appreciably.

The revenue was £1,221, which is about the average annual collection under normal conditions.

The revenue of the telephone department was £426, and the expenditure £335. The lines run from Kingstown to Chateaubelair on the Leeward side and to Georgetown on the Windward side of the Island about 24 miles either way, and the service is a most useful one.

IX.—MILITARY FORCES AND EXPENDITURE.

Nil.

X.—GENERAL OBSERVATIONS.

The death of Her late Majesty Queen Victoria in January was sincerely mourned throughout the Colony. Solemn memorial services were held amid manifestations of genuine sorrow by the coloured population, by whom her name ever was, and her memory ever will be, blessed and honoured. By an Ordinance of the Legislature the 24th of May was created an annual public holiday under the title of "Victoria Day."

Mr. Edward Drayton, Colonial Secretary of Grenada, returned to that Colony in April after administering the Government of St. Vincent for over a year, and Mr. E. J. Cameron arrived from the Turks and Caicos Islands on 14th May and assumed the duties of Administrator.

Chief Justice Walker left on leave in August, and was subsequently given an appointment in Trinidad, his office being filled here by the Attorney-General, Mr. O. Hazell.

Changes in the judicial and magisterial systems were under consideration during the year, with a view to economy.

The two principal events of the year were the short but disastrous local gale of 20th August and the actual effectuation of an agreement among the arrowroot producers for self-protection, a matter which has been so often spoken of and previously attempted without success.

The condition of the Colony generally was still a decadent one, and among the business community 1901 was one of the worst years ever known.

I regret that, in consequence of the press of work and the disarrangement occasioned by the disastrous eruption of last year, it has been impossible to complete the Blue Book and this Report at an earlier date.

EDWARD J. CAMERON,

Administrator.

COLONIAL REPORTS—ANNUAL.

No. 403.

ST. VINCENT.

REPORT FOR 1902-3.

(For Report for 1901 *see* No. 385.)

Presented to both Houses of Parliament by Command of His Majesty.
October, 1903.

LONDON:
PRINTED FOR HIS MAJESTY'S STATIONERY OFFICE,
BY DARLING & SON, LTD., 34-40, BACON STREET, E.

ST. VINCENT.

(For Report for 1901, *see* No. 385.)

ADMINISTRATOR CAMERON to ACTING-GOVERNOR SIR G. MELVILLE.

Government House,
St. Vincent,
21st August, 1903.

SIR,

I HAVE the honour to forward to Your Excellency herewith my report on the Blue Book of St. Vincent for the year 1902-3.

I have, &c.,

EDWARD J. CAMERON,
Administrator.

REPORT ON THE BLUE BOOK OF ST. VINCENT FOR THE YEAR 1902-3.

I. FINANCIAL.

(A.) GENERAL REVENUE AND EXPENDITURE.

The following comparative statements and table give the heads of Revenue and Expenditure, and the amounts received under those heads, for the years 1901-1902 and 1902-1903, as well as the total Revenue and Expenditure for each of the last five years 1898-1902-3:—

875 Wt 21109 10/1903 D & S 5 15871

(TABLE 1.)

Comparative Statement of Revenue for the Years 1902–1903 *and* 1901–1902.

	Imperial Grant	2,050		Imperial Grant	7,040	
			30,426			36,121
1901-2.	Local	23,705		Local	26,149	
	Imperial Grant	2,907		Imperial Grant	3,423	
			26,612			29,572
1902–3.	Local	25,931		Local	25,758	
	Imperial Grant	3,361		Imperial Grant	2,632	
			29,292			28,390

The total local Revenue of the Colony for the year 1902-3 was £25,931, being £1,833 above the Estimate, and £2,226 more than the receipts of the previous year.

The gross excess of receipts over Estimate was £3,275, attributable mainly to increases of £2,239 and £803 respectively under the heads of Customs and Post Office, the former owing to the heavy importations of supplies, lumber, &c., that followed on the disastrous eruption of the Soufrière, and the latter to the large sales of postage stamps consequent on the withdrawal of the Victorian issue.

The gross deficiency on estimated receipts was £1,442, £722 under Internal Revenue, being chiefly land tax remitted in consequence of the eruption, £255 under Crown lands, owing to the stoppage of enforcement of payment of arrears through the same cause, and £411 interest, &c., which corresponds approximately with a sum appearing as an estimated receipt in the Estimates for Refunds of Hurricane Loan, but which should not properly have found a place there.

There results therefore the net increase of £1,833 as first quoted.

The gross Revenue, including Imperial Parliamentary Grants for Botanic Station and Agricultural School, and a sum of £1,800 in aid of estimated deficit, was £29,292.

The local expenditure of the Colony for the same period was £25,758, and the gross expenditure £28,390, as against £26,977 and £28,402 estimated. There is included in the gross expenditure a sum of £1,180 paid back to the Imperial Treasury, being the unexpended balance of a sum of £25,000 granted by the Imperial Government to repair damages caused by the 1898 hurricane.

The corresponding figures of local and gross expenditure in 1901-2 were £26,149 and £29,572.

It should be noted for comparative purposes that the Crown Agents' transactions for the Colony during February and March last, namely, receipts, local, £4, and Imperial Grant, £357, and expenditure, local, £338, are not incorporated in the Account, owing to the provisions of the new financial instructions as locally interpreted.

(B.) Taxation.

No changes took place during the period under review.

(C.) Assets and Liabilities.

An examination of the statement annexed shows an excess of Assets of £568, to which, however, has to be added £117, balance of money expended locally, to 31st March, on the Agricultural Department in excess of the receipts from the grant made for that service by the Imperial Government, making in all £685. The footnote to the statement dealing with a sum of £110 16*s*. requires explanation, that figure referring only to the balance of transactions between 1st April, 1902, and 31st March, 1903, which is not the actual balance of transactions *ab initio*.

At 31st March, 1902, the account showed an excess of Liabilities of £335.

The £26,957, "Drafts and Remittances," in the present statement is made up of £25,000 of the Soufrière Eruption Fund remitted for investment, and remittances on account of the Hurricane Loan Special Fund.

Hurricane Loan to planters from the Imperial Treasury, which is £16,077.
year 1902–3 on account of Botanic Station and Agricultural School, in

EDWARD J. CAMERON,
Treasurer.

(D.) Public Debt.

The Public Debt of the Colony at 31st March, 1902, stood at £6,770, as against £13,010 at the end of the previous year.

A loan of £5,000 raised in 1897 to provide for deficiency of Colonial revenue was paid off during the year with monies in the hands of the Crown Agents, granted some time back by the Imperial Government for this purpose.

£5,250 of the present debt, though guaranteed by the Colony, is repayable from the funds of the towns of Kingstown and Georgetown, and the actual amount, therefore, for which the Colonial revenue is liable is only £1,520, of which £320 will be paid off in 1903-4.

It is some small comfort amidst the current depression to reflect on this freedom from any appreciable incubus of debt.

The Colony is further responsible for a sum of £16,026 loaned to planters to enable them to restore works and buildings destroyed by the hurricane. Repayment of this sum is provided for by Ordinance, and is made to extend over 23 years. The first repayments of principal became due during the year, and were punctually met by the borrowers.

(E.) Currency.

Gold, American and British, Colonial bank notes, with British silver and copper constitute the currency of the Island.

The Government's accounts are kept in sterling, and commercial accounts in dollars and cents.

(F.) and (G.) Finances of Municipalities or Public Boards.

The management and control of the affairs of the town of Kingstown are vested in a Board, half of whom are elected by the ratepayers and the other half nominated by the Government. The small towns of the Colony are controlled by wardens, annually appointed by the Government.

The following comparative statements give the total Revenue and Expenditure of these towns for the last five years:—

Revenue.

Town.	1898.	1899.	1900.	1901.	1902.
	£	£	£	£	£
Kingstown	1,848	2,082°	1,961	1,805	1,495†

Layou	10	2	16	15	17
Bequia	3	—	3	12	5

° Account books destroyed by hurricane.

Debts of Towns.

The debts of the towns are as follows:—

	£	£
Kingstown water supply	4,200	
,, town improvement ...	500	
	——	4,700
Georgetown water supply		550
		£5,250

Provision for repayment of these loans is made by rates levied annually on the townspeople, and the debts are secured on the general revenue of the Colony. The Kingstown Water Supply Loan is being repaid at the rate of £400 per annum, the Town Improvement Loan at the rate of £50 per annum, and the Georgetown Loan by annual instalments of £50.

In addition to the above, the town of Georgetown was indebted to general revenue for advances made in previous years for certain specific purposes in the sum of £419, which money, in view of the damage to property and the blow to its prospects as a trading centre wrought by the eruption of which it bore the full brunt, it is impossible for the town to repay.

The town of Chateaubelair was similarly indebted in the sum of £36, as against £50 at the end of 1901-2.

II. TRADE, AGRICULTURE, AND INDUSTRY.

(A.) Imports and Exports.

The following comparative statements give the value of the chief articles of Import and Export in 1901 and 1902, and the totals for the last five years:—

Imports.

Chief Articles.	Value.	
	1901.	1902.
Class I.—	£	£
Beef, salted or cured	370	405

Totals	44,666	33,575	97,769	51,987	44,094

* No returns.

The volume and direction of the Colony's trade in the five years 1898-1902 are shown below:—

Imports.

—	1898.	1899.	1900.	1901.	1902.
	£	£	£	£	£
United Kingdom	27,291	29,241	35,538	31,733	24,579
British Colonies	44,812	52,046	35,882	26,756	25,107
Foreign Countries	16,205	22,340	24,771	16,430	29,437
Totals	88,308	103,627	96,191	74,919	79,123

Exports.

—	1898.	1899.	1900.	1901.	1902.
	£	£	£	£	£
United Kingdom	14,176	19,383	71,584	28,306	22,333
British Colonies	14,260	10,812	14,584	12,983	15,146
Foreign Countries	16,230	3,380	11,601	10,698	6,615
Totals	44,666	33,575	97,769	51,987	44,094

The slight net increase in the value of Imports in the calendar year 1902, as compared with 1901, is attributable to the large importations of foodstuffs, lumber, &c., from the United States after the eruption, the increase from that country being £13,000, against which there is a decrease of £8,000 from Great Britain and British Colonies.

The value of Exports of local origin was only £41,000, against £50,000 in 1901, the difference being in sugar and arrowroot.

Cotton shows an increase of over 100 per cent. in quantity exported, owing to greater system and care in planting and gathering the crop in the Grenadines.

(B.) Mines, Manufactures, and Fisheries.

A whale fishery is carried on in the St. Vincent Grenadines, notably Bequia and Canouan, and is a very material benefit to the inhabitants of those islands whose condition compares favourably with that of the labourers of St. Vincent itself. The value of whale oil exported was £1,108, as against £1,231 in 1901.

(C.) Agricultural Industries and Botanic Station.

Agriculture.

By the volcanic eruption of May, 1902, a large area of land, practically one-third of the island, comprising within its area some of the most fertile estates, was entirely devastated. The immediate result was to send up the price of ordinary quality arrowroot, the present St. Vincent staple, from less than 2*d*. to over 4*d*. per pound in the London market, and it has not since then gone below the 2*d*. figure which was the irreducible minimum at which it was the aim of the combination of growers, referred to in the last year's report, to keep it.

The production of sugar and rum in St. Vincent at the present day is inappreciable, and the conditions, as regards what remains of this industry, were not much altered by the catastrophe.

Cocoa cultivation received a severe set back, great destruction and damage being done to all trees within the devastated area.

Fortunately none of the Land Settlement or Peasant Proprietary Scheme Estates were within the fatal zone, but in the Linley Valley Estates, on the Leeward side, some hurt was done to cultivation by the volcanic dust, which also affected provisions and other products at Park Hill and New Adelphi on the Windward coast. Generally speaking, however, the acquired estates escaped any serious injury.

An Agricultural Instructor, the necessity for whose appointment had been previously urged, was at length appointed in June, but unfortunately it was necessary to utilise the services of the officer at once in Eruption Relief work, and to the end of the year this work absorbed the larger part of the Instructor's time and energies, as also again in March, 1903.

In my last report I wrote: "There has not so far been much attention paid by the peasantry to systematic cultivation of economic plants, 'ground provisions' absorbing their efforts in the majority of cases."

The situation in regard to this important feature of the scheme, as has recently been forcibly pointed out by the Commissioner of the Imperial Department of Agriculture for the West Indies, Sir D. Morris, K.C.M.G., requires careful looking into. This it would have received earlier but for the unhappy disturbance in last year of all normal conditions, and the immense press of work that followed, but this is now at length over, and it must be hoped that there will be no recurrence.

Two further properties for land settlement purposes were acquired during the period under review, and have since been laid out and allotted, a considerable part of the land having, however, been utilised for the settlement of eruption refugees.

For a like purpose, two other estates, Campden Park and Rutland Vale, were purchased with monies from the Eruption Fund, and the greater part of the time of the Land Commissioner and his staff has had to be devoted to dealing with these estates and the housing of refugees upon them and elsewhere.

(D.) Land Grants and General Value of Land.

The price of Crown land is £1 an acre cash, and £2 if paid in instalments. The land is disposed of to applicants under regulations; the existing set of regulations is, however, quite obsolete, and new ones to suit modern conditions are needed.

A large number of Crown land holdings of five acres and upwards were within the devastated area, and compensation has been paid in all such cases from the Eruption Fund.

Fifteen new grants were issued for lands fully paid up for.

The eruption necessarily prevented the continuance of systematised action to deal with the arrears, but a certain amount of the outstanding money was nevertheless got in.

(E.) Shipping.

A table is annexed of the steamers and sailing vessels, inwards and outwards, during 1901 and 1902, as also a comparative statement of total shipping for the last five years.

These figures do not include men-of-war, of which fourteen British, one Italian, and two American visited the Island during the year:—

Totals	254,825	245,588	289,741	361,467	380,559

III. LEGISLATION.

Twenty Ordinances were passed during the year, of which the more important were the Pensions Ordinance, which follows the lines of the Model Ordinance suggested by the Colonial Office, and the Medical Officers' Ordinance, which defines with clearness the position and duties of these officers.

Attention has more than once been drawn by me to the great necessity that exists for the consolidation and simplification of the laws of the Colony.

IV. EDUCATION.

The results of primary education in 1901 and 1902-3 compare as follows:—

—	1901.	1902-3.
Number of Schools	31	32
Number on Roll	5,804	6,693
Average Attendance ...	2,516	3,242
	£	£
Government Grant-in-aid ...	1,519*	1,344

* This figure is for financial year 1901–2.

No examination of the schools was held during 1902-3, it having been impossible to provide for it, and, owing to the work entailed by the eruptions, the completion and bringing into effect of the new Code of Regulations, which had been in preparation, had to be postponed.

Six schools were broken up by the eruption, of which three were totally destroyed, in two of the cases the entire teaching staff perishing.

Despite drawbacks, however, there has been better work done in the schools during the year than for some time back, as the report on the recent examination, just received by me, demonstrates.

£100 was expended in the provision of school materials, the need for which was dire.

(B.) Secondary Education.

The Kingstown Grammar School for boys and girls is the only secondary educational establishment in the Colony. The curriculum of the school embraces the subjects required for the Cambridge Local Examinations, and the annual examination is conducted by the Syndicate. The Government Grant to the school amounted to £110.

(C.) Industrial, Technical, and Agricultural Schools.

An Agricultural School was established under the auspices of the Imperial Department of Agriculture with Imperial money in 1900.

There was an average of 25 pupils during 1902-3.

Various improvements were carried out to the school buildings and premises, and, under the efficient supervision of the officers of the Department, the institution is carrying out satisfactorily the duties entrusted to it.

The total cost of the school upkeep during the year was £603.

V. GOVERNMENT INSTITUTIONS.

(A.) Hospitals.

The number of patients treated at the Colonial Hospital during the 15 months January, 1902, to March, 1903, was 992, of whom 849 were discharged cured or relieved; 88 died, and 55 remained in hospital. The figures for the 12 months of 1902-3 are:—

Remaining at 31st March, 1902	37
Admissions	864
	901
Discharged cured or relieved...	740
Discharged not improved	33
Died	73
Remaining	55
	901

The admission figure for 1901 was 473.

The above does not include the cases of eruption burns and injuries, which were admitted and treated in a separate field hospital by the Army Medical Corps in the Hospital Compound.

The figure of cases treated in 1902-3 is far higher than has ever been known before.

The enormous increase is due in great part to the precipitation of several thousand refugees upon the town and to an epidemic of dysentery, but it is also the consequence of the earnest and most praiseworthy manner in which the present Medical Officer in Charge, Dr. C. W. Branch, who assumed duty on 1st April, 1902, has tackled the deplorable conditions of disease and suffering among the labouring classes with which he found himself confronted.

For his crusade against syphilis and anchylostomiasis, his recognition of anthrax, which has caused effective precautions against the dissemination of the disease to be taken by stock-keepers, and his general skill and care in the alleviation of suffering, the Colony and its people owe this officer a considerable debt of gratitude.

In spite of the immense amount of work done the expenditure was kept well within the limit of the estimate, the net saving on the different sub-heads being £72.

(B.) Asylums.

Lunatics.

A portion of the old military barrack at Fort Charlotte is set aside for temporary detention of lunatics prior to their removal to the asylum at Grenada.

Four lunatics were sent to Grenada during the year 1902-3, making a total number under care there of 33, at a cost to the Colony of £585.

Lepers.

The number of inmates of the Leper Asylum at the commencement of 1902 was 16; two fresh cases were admitted during the financial year 1902-3.

The asylum is not all that could be desired, and its accommodation is limited, but it is all that the Colony can at present provide, and is fairly kept and economically managed.

(C.) Poor Houses.

The Colony's paupers are housed in the old military buildings at Fort Charlotte, on a considerable elevation, commanding the town of Kingstown. There were 109 inmates at the end of 1901. The admissions and releases by death and discharge in the first quarter of 1902 were respectively 14 and 13.

In the 12 months of 1902-3 the figures were:—

—	Male.	Female.	Total.
Admissions ...	36	42	78
Discharged ...	14	24	38
Died	19	15	34
	33	39	72

leaving 116 on 1st April, 1903.

The clean and decent condition of the institution, referred to in the last report as remarkable in view of the diseased wreckage which it harbours, was maintained.

The total expenditure in 1902-3 was £1,287 on the institution, including leper asylum and lunatics kept locally, as against £1,041 in 1901-2. The excess is accounted for by an expenditure of £224 in much-needed repairs to floors and walls, and for a complete new set of iron beds and bedding, replacing the ancient and undesirable wooden-steads, as also a better grade of clothing.

(D.) Reformatories.

Nil.

(E.) Savings Bank.

The following is a statement of the work of the bank for the last five years:—

Year.	Number of Depositors at 31st December.	Amount of Deposits.	Amount of Withdrawals.	Balance at credit of Depositors at 31st December
		£	£	£
1898	1,091	4,263	3,739	9,283
1899	1,036	5,375	5,123	9,716
1900	900	7,790*	7,122°	10,594
1901	907	6,108†‡	6,015	10,687
1902	992	8,781	6,501	11,975

* Includes £2,926 under Land Settlement Ordinance.
† Includes £1,200 under Land Settlement Ordinance.
‡ Includes Interest.

VI. JUDICIAL STATISTICS.

(A.) Police.

The Colonial Police Force consists of a chief, a sergeant-major, of European birth and military training, and 53 West Indian non-commissioned officers and privates. They are, in addition to their civil duties, drilled and trained to the use of arms, and are armed with Martini-Enfield rifles. Besides ordinary police work, they render assistance to the Government in many details of the administration, being charged with the supervision of the Excise duty on rum, and with co-operating in collection of Customs duties, district Post Office work, registration of births, &c., poor relief, and the management of the small district telephone exchanges. In Kingstown they are also responsible for extinguishing fires, receiving from the Town Board additional pay for this service.

(B.) Prisons.

222 persons were committed to prison in the year—142 men, 79 women, and 1 juvenile. The daily average was 14·3, against 21·11 in the previous year.

(C.) Criminal Statistics.

The total number of offences reported to the police or to the magistrates in 1902 was 954, against 1,256 in 1901.

Of the offences reported in 1902, 247 were for offences against the person, 87 were for prædial larceny, 133 were for offences against property other than prædial larceny, 487 were for other offences.

The total number of convictions in the Inferior Court in 1902 was 529, against 719 in 1901.

These convictions are classed as follows:—118 for offences against the person, 10 for malicious injuries to property, 52 for prædial larceny, 55 for offences against property other than prædial larceny, 68 for offences against Revenue Acts, &c., 2 for offences against Masters and Servants Acts, &c., 224 for other offences.

The convictions in the Supreme Court were as follows:—5 for offences against the person, 11 for offences against property.

The acquittals were as follows:—In the Inferior Court, 172; in the Supreme Court, 5.

VII. VITAL STATISTICS.

(A.) Population.

The population at the 1891 Census was 41,054. No Census was taken in 1901 on account of the expense involved, which the Colony was not in a position to afford. By the estimate of the Registrar-General, the population at 31st December, 1902, was 47,488. This figure, however, as explained in last year's report, is generally considered to be inaccurate and reducible by about 15 per cent.

The births registered in 1902 were 1,551, 788 male and 763 female, as against 1,751 in 1901. Of these 882, or 57 per cent., were illegitimate.

Still-births were 119, 42 legitimate and 77 illegitimate.

Marriages (226, as against 150 in 1901) were in excess of the average, owing to religious influence brought to bear on the refugees while sheltering in the towns.

The total registered deaths were 2,311, of which 1,327 were registered as due to the eruption. The infant mortality was 23 per cent of the 984 normal death-rate.

(B.) Public Health.

From the returns of the medical officers, it would appear either that there was more sickness than usual during the year, or that the people availed themselves of the medical aid provided to a greater extent than previously. While the latter

is to some degree the case, yet under the conditions following the eruption there was undoubtedly a good deal of illness among the refugees. A serious epidemic of dysentery prevailed among all classes for some months throughout the island.

Notwithstanding, if the deaths which occurred in the eruption of May 7th be subtracted from the total (2,260—1,327=933), the mortality for the Island of St. Vincent (excluding the Grenadine Dependencies) is only just above the average for the nine preceding years, *i.e.*, 933 as against 927.

It may, I think, be fairly deduced from this, that the steps taken for the relief and care of the eruption refugees were attended with a fair measure of success.

The live-births during the year were much below the average in St. Vincent proper—1,404, as against 1,837. But the still-births were the same as the average.

In the St. Vincent Grenadines the deaths were below the average.

With the exception of the dysentery there was no grave epidemic in the Colony during the year.

(C.) Sanitation.

There is nothing special under this head to call attention to.

(D.) Climate.

The rainfall for the year 1902 was 108·37 inches, as against 125·69 in 1901, and 4 inches below the average for the last 12 years.

Rain fell on 276 days throughout the year.

The maximum fall in one day was 5·16, in May.

November was the wettest month with 15·78 inches, and March the driest with only 2·02 inches.

The mean monthly temperature was 79·7° F. Maximum for the year 88° F. in May, minimum 65° F. in February.

There was happily no storm as in 1901, and the hurricane season was singularly free from alarms.

VIII.—POSTAL, TELEGRAPH, AND TELEPHONE SERVICES.

The Postal Service is performed by a fortnightly service of steamers of the Royal Mail Steam Packet Company, from and to Barbados, under contract with His Majesty's Government. There are also lines of steamers from Halifax, Nova Scotia, under contract with the Canadian Government, fortnightly, and other steamers also from and to the United States, and direct from and to London, call at the Port of Kingstown, though at somewhat irregular intervals.

There is an Inland Postal system by which the Windward and Leeward districts of the Colony are daily, and the Islets of the Grenadines weekly, served.

There was an appreciable decrease in the Inland Post business; the volcanic eruption and its disastrous effects on the towns of Chateaubelair and Georgetown are no doubt largely accountable for this.

On the other hand the increase in foreign correspondence is large, especially for the quarter ended 30th June, such increase being directly attributable to the eruption and the enormous interest aroused by it in all parts of the world.

The Postal Revenue in 1902 was £2,145, being considerably larger than usual owing to the large sale of stamps consequent on the cessation of the Victorian issue.

The revenue of the Telephone Department was £419, and the expenditure £330. The lines run from Kingstown to Chateaubelair on the Leeward side and to Georgetown on the Windward side of the Island, about 24 miles either way, and the service is a most useful one.

IX.—MILITARY FORCES AND EXPENDITURE.

Nil.

X.—GENERAL OBSERVATIONS.

His Excellency The Governor of the Windward Islands was in residence in the Colony from 28th February, 1902, to 22nd July, 1902, and, with the exception of a few days' absence in St. Lucia and Grenada, during that time administered the Government, paying visits also subsequently on three occasions, and remaining 19 days in November.

The Chief Justiceship continued to be filled by Mr. O. Hazell, the Attorney-General, who was appointed to act in August, 1901, until 1st December, 1902, when Mr. P. M. Sheriff, Magistrate of the Southern District, Grenada, relieved him, Mr. Hazell proceeding some time afterwards to the latter Colony to take up there the post of Attorney-General.

The Attorney-Generalship remained unfilled.

Dr. O'Neale, Acting Colonial Surgeon, returned to Grenada in March, 1902, and was succeeded in April by Dr. C. W. Branch from St. Kitts, who is in charge of the hospital and other medical institutions.

The Colonial Surgeoncy, however, remains in abeyance.

Mr. E. D. Laborde, Chief of Police and Supervisor of Customs, left, on promotion to St. Lucia, in April, his place being taken by Mr. W. J. Calder, an Inspector of the Jamaica Constabulary.

All minor events are eclipsed by the appalling eruption of the Soufrière Volcano, which on 7th May awoke from its 90 years' slumber to again hurl death and devastation over nearly one-third of the hapless Island of St. Vincent.

The horror of that time and of the sights and sounds in the temporary hospitals to which the injured survivors were first taken is not to be forgotten by those whose lot it was to pass through it.

The universal sympathy aroused by the event and by the annihilation of the town of St. Pierre, in the closely adjacent Island of Martinique, by a similar volcanic outburst, and the frightful holocaust of human life, found practical expression in the subscription of a large fund for the relief of the distress and suffering that had been occasioned.

The generous and most prompt action of the United States Government in despatching a special vessel laden with supplies of food, clothing, and medical stores is one that will ever be remembered with feelings of gratitude.

In the initial stage the sufferers were attended by the local medical staff, who had the assistance of Miss Rachael Paterson (with local nurses under her), Nurse from the Colonial Hospital, selected and sent out to St. Vincent by the English Nursing

Association some time previously. To the patient attention given them by this lady, whose devotion and example at that early time under most trying circumstances merit the highest respect and praise, many are indebted for the fact of their ultimate recovery.

Further help from Barbados was soon on the spot, and the best skilled treatment was afforded to the injured. Drs. Hutson, Bowen, and Orford, and Major Will, of the Royal Army Medical Corps, and his Staff were unremitting in their attentions, and their services are warmly appreciated and remembered. The very large percentage of recoveries shows how valuable they were.

The money subscribed has enabled the refugees whose dwellings and living were destroyed to be sustained as long as was necessary by direct aid and provision of work, and to be ultimately re-settled in houses very far better, in the vast majority of cases, than those which they had ever been previously accustomed to, or, under normal circumstances, had any chance of obtaining, and under improved conditions of life, in that they have no rent to pay for the spot on which their house is placed, and are given " provision grounds " free.

The concentration, however, of so many people within the narrowed limits of the island considered safe is a feature that must necessarily occasion anxiety where there is no paying industry established to furnish them with anything like steady employment.

In July, two months subsequent to the eruption, two earthquakes were experienced of greater force than any inhabitant had recollection of, and naturally occasioned considerable alarm.

On September 3rd, October 15th, and March 22nd, occurred further eruptions of the Soufrière, each of first magnitude, covering the devastated area with a still heavier layer of dust and scoriæ, and their disturbing and unsettling effect can well be imagined.

That of 3rd September was especially alarming, occurring on a clear night and enveloping the whole heavens in an inky canopy, continuously starred, and riven from end to end with great splashes and rivers of electricity, the display being one that baffles description.

Captain Young, C.M.G., Chief Secretary of Cyprus, was specially deputed by the Secretary of State to visit the Colony at the end of 1902 to undertake the distribution of money to be paid as compensation for actual losses sustained in cattle, goods, furniture, and to advise generally as to relief measures.

He spent six weeks here, visiting different parts of the Island, and left on 31st December.

Various treatises have been written on the scientific side of the eruptions. The book of Messrs. Flett and Anderson, who

were specially deputed by the Royal Society to visit the scene and draw up a report, is the standard English work of reference, while the writings of Professor Jaggar, of Harvard University, of Professor Curtis, and Dr. E. O. Hovey, of the American Museum of New York, who also paid visits to St. Vincent, are full of interest.

The condition of an island which in a period of four years is subjected to two such cataclysms as the hurricane of 1898 and the volcanic eruption of 1902, coming on the top of a succession of years of gradual but marked decadence, cannot very well afford much scope for encouraging report, and I fear St. Vincent must of necessity for some appreciable time continue to be a cause of considerable anxiety to those who are responsible for its government, both on the spot and at home.

At the present time there is an effort being made under the auspices of the Imperial Agricultural Department to establish a cotton industry, which if successful may for some time, at least, somewhat improve things, but otherwise there is little silver lining in the clouds that honest vision can detect.

ACTING-GOVERNOR SIR G. MELVILLE to MR. CHAMBERLAIN.

St. Lucia,
15th October, 1903.

SIR,

I HAVE the honour to transmit Administrator Drayton's Report on the Blue Book of Grenada for 1902, the usual copies of which, he informs me, have been sent direct to the Colonial Office.

I have, &c.,
GEO. MELVILLE,
Acting-Governor.

---

875 Wt 21109 11/1903 D & S 5 1605

BLUE BOOK REPORT FOR THE YEAR 1902.

FINANCIAL.

Revenue and Expenditure.

The General Revenue and Expenditure of the Colony of Grenada for the financial year ended 31st March, 1903, reached £72,803 and £68,669, respectively, being in each case the highest figure yet recorded. Of the revenue, £1,015 was from the Imperial Grant-in-Aid of agriculture in the West Indies, so that from purely local sources the revenue amounted to £71,788, the largest yet received.

2. The figures for the last five years are as follows:—

Year.	Revenue	Expenditure.
	£	£
1898	62,875	57,612
1899	68,757	59,359
1900	70,363	62,718
1901-2	70,075	65,490
1902-3	72,803	68,669

Details of the revenue in the last two financial years are shown and compared in table A, annexed hereto, and it will be seen that satisfactory increases appear under nearly every head, except Customs, which shows a falling off of £1,275, due, according to the trade returns, chiefly to a smaller quantity of textiles and manufactured articles of metal being imported in 1902. The increase under Post Office is attributable to large sales of a new issue of stamps, the first under the new reign, as well as to more business having been done.

3. The details of the Expenditure for the same years are contained in table B. The decrease under "Public Debt Charges" is caused by the purchase by Government in 1902 of the outstanding balance of 4½ per cent. debentures issued in 1886; the decreases under "Colonial Secretary" and "Treasury" are nominal, being caused by transfers of certain items to other heads. Of the increases, that under "Legal Departments" is chiefly caused by heavier expenses in connection with the Criminal Sessions of the Supreme Court and for Inquests, and also by the purchase in 1902 of an embossing

die for cancellation of revenue stamps at the Registrar's office; under "Medical Department," the increase is due to the prolonged quarantine measures adopted against Barbados on account of the prevalence of small-pox there, and to coincident outlay on vaccination; that under "Miscellaneous Services" is attributable to special expenditure in connection with the local celebration of the King's Coronation, and in relief of the sufferers from the volcanic eruptions in St. Vincent and Martinique; and that under "Agricultural Department," to the appointment of an Agricultural Instructor. The increases shown under the new heads of "Post Office," "Land and House Tax Collection," and "Water Supplies" are the result of changes in the classification of the expenditure.

ASSETS AND

4. The financial year 1902-3 opened with a surplus of Colonial similar balance of £22,199.

The Assets at the latter date were as follows:—

ASSETS.	£ s. d.	£ s. d.
Cash in Treasury Chest...		655 4 5
Cash in Colonial Bank—

Other Small Deposits	473	0	5			
				15,850	8	9
Drafts and Remittances				20	16	8
Total				15,871	5	5

5. It will be observed that a Reserve Fund is being formed, and that it amounted at the above date to £13,099; to that amount may properly be added the item under "Assets" of £259 for Carriacou Land Settlement Fund, which is really a portion of the Colony's balance invested in land, as will be explained under the head of "Agricultural Industries." It is intended gradually to increase the Reserve fund until it reaches £25,000, and thus to provide a safe margin for about five years' expenditure in excess of revenue in the event of a period of financial depression occurring in the future as it did in 1895-98.

Public Debt.

6. The Public Debt is £123,670, in 4 per cent. Inscribed Stock, and a Sinking Fund is provided for its extinction in the year 1942, by setting aside annually one per cent. of the nominal value of the Stock; at 31st March, 1903, this fund amounted to £14,520, which is invested by the Crown Agents for the Colonies as trustees therefor.

In addition to setting aside this sinking fund, it should be noted that in the last ten years debentures amounting to £8,675 have been redeemed from current revenues.

During the financial year under review, that portion of the St. George's Waterworks' debt, £1,000 in debentures, in respect of which the Colonial revenue was pledged as collateral security, was repaid by the Town Board in full.

Finances of Town Boards.

7. The government of the towns of the Colony is entrusted to Town Boards, half elected by the ratepayers and half nominated by the Governor; table C exhibits their revenue and expenditure in the last five years.

8. With the exception of the town of Gouyave, which had a small excess of liabilities, the accounts of all the towns closed for the year with a surplus of assets.

9. The debts of the towns are as follows, the Government being their creditor in each case:—

	£
St. George's...	6,277
Grenville	1,130
Sauteurs	1,100
Victoria	1,384
Gouyave	3,301
	£13,192

Repayment is provided for either by contributions yearly to sinking funds, or by annual instalments, and, on the whole, payments are now fairly well made.

TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and Exports.

10. The trade returns give the value of the imports of 1902 as £239,108, and of the exports as £310,602. The figures and averages for the five previous years were:—

Year.	Imports.	Exports.
	£	£
1897...	164,536	154,439
1898...	210,783	257,274
1899...	226,828	267,738
1900...	232,790	311,681
1901...	246,567	303,934
Average ...	216,301	259,013
1902...	239,108	310,602

The trade of 1902, was, therefore, as regards imports, somewhat less than in 1901, but in excess of the average; and, as regards exports, in excess both of 1901 and of the average for the five years preceding 1901.

11. For a review of the trade of the Colony and of its general features in 1902, the statistics of the five years ended 31st December, 1902, have, for convenient comparison, been arranged in five tables, which are annexed and marked D to H.

12. Table D exhibits the imports and exports for the quinquennial period under the usual four classes, and a steady increase in Class I., live animals, food, and drinks, and in Class II., raw materials, imported, is noticeable; while the imports of manufactured articles do not show this tendency, and in 1902, although up to average, they were about £6,600 less than in 1901. Coin and bullion, both imports and exports, fluctuate, and are not of abnormal amounts. Under exports, as usual, Class I. covers 90 per cent. of the total, cocoa and spices being the Colony's staple products; and 62 per cent. of Class II. is cotton and cotton seed from the Colony's dependency, Carriacou.

13. In table E the direction of the trade is traced, and its amount shown (1) with the United Kingdom; (2) with British Colonies; and (3) with Foreign Countries. Here it will be seen that the imports from Foreign Countries are on the

increase, the actual percentages of the totals being as follows in the last three years:—

—	1900.	1901.	1902.
United Kingdom	45 per cent.	46 per cent.	44 per cent.
British Colonies	25 "	24 "	21 "
Foreign Countries	30 "	30 "	35 "

The Mother Country continues, however, to receive the bulk of the exports, and nearly 86 per cent. of the total was sent there in 1902.

14. Of the trade with British Colonies, that with Barbados, Trinidad and Tobago, and the Dominion of Canada is alone worthy of special notice; the value of the imports from these Colonies in the last three years is shown below:—

—	1900.	1901.	1902.
	£	£	£
Barbados	28,598	25,773	20,205
Trinidad and Tobago	18,862	20,290	19,706
Canada	7,946	11,263	9,140

The imports from the first two Colonies consist chiefly of American foodstuffs, purchased there by the smaller shopkeepers; those from Canada, of foodstuffs and lumber. The satisfactory increase shown in 1901 in regard to Canada was slightly interrupted in 1902, the f lling off being in lumber for building purposes, only £2,895 in value of this material being imported, as against £4,897 in 1901, preference being apparently given in 1902 to lumber from the United States. Foodstuffs continue, however, to show a steady increase, and 722 barrels of wheaten flour were imported from Canada, as compared with 380 in 1901.

15. The trade with Barbados shows a tendency to diminish, and, as facilities for direct intercourse with Canada and the United States increase, may be expected to do so; in the year under review it was, however, seriously affected by quarantine difficulties.

16. The exports to British Colonies are seen to be small as a general rule, but in the year under review they rose to £10,528, in consequence of the exports to the sister colonies of St. Lucia and St. Vincent reaching the abnormal figures of £3,266 and £2,473, respectively. This is apparently due to shipments of lumber and foodstuffs made to these islands, perhaps in consequence of the difficulty of getting things from Barbados during the prevalence of small-pox there.

17. In Table F. the foreign trade of the Colony is analysed and the leading position occupied by the United States of

America is at once seen, that country claiming about 97 per cent. of the import and 77 per cent. of the export trade of Grenada with foreign countries. Good steam communication, rapid transit, and cheap freights are producing their inevitable result, and, as American manufactures are well suited to West Indian requirements, may be expected to continue to do so, unless conditions change.

18. As is noted annually, the figures for the exports to France are not reliable, a quantity of cocoa being shipped to Havre, "optional" for London, and the local trade returns do not take into account the actual final destination.

19. Table G compares the chief imports in 1901 and 1902, and the only important difference shown is the falling off under Class III. in textiles and manufactured articles of metal; 1901 was, however, an exceptional year in this respect, as the following figures demonstrate:—

—	1899.	1900.	1901.	1902.
	£	£	£	£
Textiles imported	46,484	47,733	52,057	48,980
Metal Manufactures imported	15,290	16,337	19,365	14,923

20. The important items of local produce exported are shown in table H for the last five years, which indicates that the year under review was a satisfactory one for the colonial staples. Fruit and poultry seem to have had a healthy increase, but it is believed that this is due to better rendition of the returns, which are defective. Coffee, which showed up better in 1901, has again shrunk to insignificance; most of that produced is consumed locally. Sugar, of local manufacture, is, as usual, absent from the table, but rum shows a sudden spurt, due to an unusual demand from the neighbouring Dutch islands and Venezuela. Wool also advanced into significance. The whole export of this article goes to the Mother country, and this is the case with all but a few hundredweight of the raw cotton and cotton seed. The subjoined table, showing the direction taken by the Colony's principal staples in 1902 may be interesting:—

—	Cocoa.	Spices.	Cotton and Seed.
	£	£	£
United Kingdom	238,924	22,043	4,056
United States of America ...	22,959	3,252	—
France	6,277	—	—
British West Indies	51	214	1
French " "	—	1	12
Danish " "	—	12	—

Mines, Manufactures, and Fisheries.

21. Rum, ice, and muscovado sugar for local consumption are the only manufactures, but, except in the case of rum, on which an excise duty is levied, no returns are available from which quantities can be arrived at. The rum made and duty paid thereon in the last six years are as follows:—

Year.	Quantity made.	Excise Duty paid.
	Gallons.	£
1897	57,406	11,448
1898	32,662	12,478
1899	48,477	10,605
1900	47,942	11,327
1901	53,204	11,669
1902	45,054	11,853

The table shows a curious fluctuation of quantities, and also demonstrates that the duty received in any year depends upon the quantity manufactured not in that year, but in the preceding; this is due to the rum being warehoused and duty paid as required. 512 gallons were exported in 1902, which is unusual.

22. Mr. John Steele, C.B., sent out by the Imperial Government to enquire into the excise systems in the West Indies, paid a visit to the Colony in May-June, and inspected some of the principal distilleries.

23. There are no mines; and fish, which abound on the coast, are only caught for daily consumption in the island. Once in a way a whale is captured by the fishermen of Grand Ance Bay, and much might, with energy and application, be made of the fishery, as whales are plentiful on the coasts from February to April annually. A fine oyster grows on the mangroves at Grand Carenage, a land-locked harbour in Carriacou, and the season for cutting them is regulated by law. The season for turtles, which abound, is also regulated; there is a small export annually of turtle and shell, in addition to what is consumed locally.

Agricultural Industries.

24. The crop of cocoa is counted locally in bags and is recorded for the year ending 30th September; a bag weighs about 180 lbs. The average crop for the five years ended 30th September, 1901, was 53,379, while that for 1902 was 61,285

bags, a marked and satisfactory increase which may be taken as indicating the effect of improved methods as well as of extended cultivation. A great advance has been made in this direction of late years by the larger proprietors, and it is hoped that the efforts made to induce similar action among the peasant proprietors are beginning to bear fruit. The Agricultural Instructor, appointed in 1901, largely with that object in view, did excellent work in this direction in 1902, and the Imperial Department of Agriculture has also established experimental plots, as object lessons, in important districts.

25. Nutmegs and spices are exported from the colony in packages of varying description, so that it is difficult to compare them annually as is done in the case of cocoa, and a comparison must, therefore, be sought in the figures recorded in the trade returns of exports. These show that in the five years ended 31st December, 1901, the average quantity of spices exported was 4,624 cwt., while in 1902 it amounted to 6,839 cwt., of which 5,999 cwt. were nutmegs. In 1897 the total export was 2,505 cwt., so that there is marked increase apparent. Prices were not, however, as favourable as in the preceding year.

26. Cotton and cotton seed are at present exclusively the product of Carriacou, the principal dependency of Grenada. The average export for the five years ended 31st December, 1901, was 2,095 cwt. of raw cotton, and 4,537 cwt. of cotton seed, and the average annual value was £3,605: in 1902 the actual export was 2,212 cwt. of raw cotton, and 4,536 cwt. of cotton seed, valued at £4,069. From reliable returns recently published in a local newspaper, the "Chronicle," it appears that in 1803 the output of raw cotton from Carriacou amounted to 4,709 cwt., and there is good reason to hope that with the stimulus imparted by the present demand for cotton in the home market, and by the change of agricultural conditions now taking place in the island this quantity will soon be reached again, and probably exceeded.

27. The climate and weather conditions of Carriacou being pre-eminently suitable for this product it is of happy augury that the revived demand in England for cotton from her colonies should coincide in point of time with the opening up to the peasant proprietor by Government action of the lands of Carriacou, too long dormant in the hands of absentee proprietors. In October, 1902, the work of surveying the first estate selected by the Government to be purchased and broken up into small lots for sale was commenced, and at the date of this report 160 peasants have been settled on it, as proprietors, and the survey of a second estate is proceeding. In connexion with the scheme attention is being paid to other important details, such as a system of forest conservation and of re-afforestation, improved water supply, and better

methods of cultivation and of reaping the crops, and the future of the dependency may now be contemplated in a hopeful spirit.

Botanic Station.

28. The following extracts are taken from the remarks of the Commissioner of the Imperial Department of Agriculture on the annual report of the Curator of the Station:—

* * * * * * *

"It is observed in this Report that the expenditure during the period referred to, including Special Services, was £1,292 8*s*. 3*d*., and the receipts, derived from the sale of plants, fruit and other products, amounted to £54 3*s*. 3*d*. or £2 0*s*. 8*d*. more than those for the twelve months ending December 31, 1901."

* * * * * * *

"Among the new works undertaken during the period under review, are mentioned the partial construction of a rubble main drain and an embankment wall along a portion of the cocoa section. Some of the smaller buildings and garden seats were repaired and painted."

* * * * * * *

"It is stated that economic and ornamental plants to the total number of 9,432, exclusive of 96 packages of seed, were distributed from the Station nurseries. These figures as compared with 8,794 economic plants distributed in 1901, show an increase of 638 (inclusive of ornamental plants) during the fifteen months under review."

* * * * * * *

"With the exception of the fruit trees, the economic plants already established at the Station appear to make satisfactory progress. The Curator alludes to the continued attacks of 'black blight' on fruit trees in the orchard section, and states that it is difficult to keep the pest out of the Station owing to the presence of so many badly affected mango trees in close proximity on private lands."

* * * * * * *

"The general tenor of the report is favourable and indicates that the Curator is steadily endeavouring to improve the Station and to carry out the duties entrusted to him."

* * * * * * *

29. With respect to the experimental plots in the rural districts, the Commissioner remarks:—

"On the cocoa experiment plots in the country districts, the most satisfactory results would seem to have been obtained at Nianganfoix and Bellevue. On the former, from October 1, 1901, to September 30, 1902, 3,989 ibs. of wet cocoa were obtained, while at Bellevue 2,087 lbs. are recorded. Both these plots are exactly one acre in size."

SHIPPING.

30. The following is a return of the total shipping inwards and outwards for the last five years, and it shows in respect of 1902 a considerable increase:—

Year.	Entered.	Cleared.
	Tonnage.	Tonnage.
1898	216,192	218,006
1899	232,437	231,611
1900	222,899	216,110
1901	267,972	275,770
1902	287,000	290,035
Average	245,300	246,306

31. In table I in the Appendix a classification of the shipping in the last two years into sailing and steam vessels, with their nationalities, is made: it shows that of the total tonnage entered and cleared in 1902 British vessels formed 97 per cent.

LEGISLATION.

32. Thirteen Ordinances passed into law during the year, but two of these relate to the same subject, the second repealing the first: of the eleven remaining the most important are:—

The Public Health Ordinance, repealing previous legislation on the subject, and providing that the General Board of Health for the Colony shall be the Governor and other members of the Executive Council, with Local Health Authorities, appointed by the Governor, to see after details in the districts.

An Ordinance amending the law relating to partition of real property, simplifying and cheapening the procedure in regard to estates of small value.

An Ordinance legalising and placing upon a proper basis the payment of public officers' travelling expenses.

An Ordinance incorporating the Governing Bodies of two of the schools of secondary education.

EDUCATION.

Primary.

33. There are two classes of primary schools—Government, entirely supported from Colonial revenue, and Grant-in-Aid, receiving contributions from public funds. The system in force is one of payment by results, grants being paid to teachers from the Colonial Treasury monthly upon the certificates of the school managers (who are usually the clergy of the several religious denominations), based upon the educational results of the schools as shown by an annual examination by the Inspector, who is a Government Officer. Managers are also paid a grant at the rate of one shilling per annum for each pupil who attends school on not less than 100 days in the year, this grant being intended to assist them in supplying school furniture and apparatus. They are further allowed to receive the whole of the school fees paid by the pupils, which are, however, but indifferently collected. The administration of the system is under the control of a Board, composed of equal numbers of Roman Catholic and non-Roman Catholic members, the Governor presiding, but having only a casting vote.

34. Table J in the Appendix is a comparison of the figures obtained from the returns of the last two years, and it will be seen that the schools were increased in number by two, one being an infant school in connection with a Roman Catholic School, and the other an Anglican School. A slight increase in the numbers on the roll and a marked increase in average attendance will also be noted, while school fees showed a desirable improvement. Under this last item may be observed a curious difference in results between the schools of the colony. In 1902, the fees collected at the Government Schools amounted to 2*s.* 9*d.* per head of the average attendance, and the Anglican Schools realised the same amount, the Wesleyans coming next, with 2*s.* 6*d.* per head; while the Roman Catholic and Church of Scotland Schools only collected 1*s.* 1*d.* per head.

35. The following figures, excerpted from the annual report of the Inspector of Schools, are interesting as showing the

progress made by primary education in the colony since 1882, when an organised system was first introduced:—

Year.	Population (Approximate).	On Roll.	Percentages of population attending school.
1883...	43,483	3,087	7·9
1886...	46,723	3,141	6·7
1889...	49,963	4,783	9·6
1892...	54,881	6,247	11·3
1895...	58,124	7,025	12·0
1898...	62,622	8,386	13·3
1901...	63,438 (Actual).	9,837	15·5

Secondary.

36. A comparative statement of the returns relating to the schools of secondary education in the colony in 1901 and 1902 is appended in Table K, and it cannot be said that it exhibits satisfactory results. On the 7th of July, 1902, a Committee was appointed by the Governor to enquire into the feasibility of establishing in this colony a College on the lines of the Royal College of Mauritius, and the Committee's report is being considered in the present year: there can be no doubt that a complete change in the existing state of affairs is requisite to meet local wants.

GOVERNMENT INSTITUTIONS.

Colony Hospital.

37. The number of patients treated during the year was 905, of whom 537 were discharged as cured, 236 relieved or not improved, 58 died, and 74 remained in hospital at the end of the year: the daily average was 86, and the daily cost per head about 1*s.* 2*d.* The amount received from paying patients, 74 in number, was £107. The general health of the institution was good, but improvement in the water closet system is necessary, and is receiving attention in the present year.

Yaws Hospital.

38. The number of cases treated was 163, being 13 more than in 1901; the daily average cost per patient was about 6¼*d.*; 106 cases were discharged cured, four relieved, and two died

from Pulmonary Tuberculosis and Nephritis, respectively. 61 cases were under treatment at the end of the year. As usual, the majority of the cases came from the parishes adjacent to the hospital. Provision is being made this year for the admission of twelve more patients to the hospital.

St. Andrew's District Hospital.

39. There were 96 cases treated, and of these 64 were discharged cured, 18 relieved, 7 died, and 7 were in hospital at the end of the year. Four of the seven deaths were due to dysentery, which was prevalent in the district throughout the year. The daily average was 10, and the gross cost of the institution was £507, but as the District Dispensary expenditure is included in these figures, the receipts from paid prescriptions, £126, and the value of 1,857 free prescriptions should be set off against them.

Carriacou District Hospital.

40. 145 patients were treated, 109 discharged cured, 8 relieved, 9 not improved, and 1 died, the daily average being 15. Of the cases treated 30 were from the St. Vincent Grenadines, and 60 per cent. of the total were cases of ulcers. The gross cost was £461, against which should be set the dispensary receipts, £95, and the value of free prescriptions, 1,088 in number. New and larger buildings on a healthier site are much needed.

Lunatic Asylum.

41. 128 patients were in the asylum on 1st January, 1902, and 23 were admitted during the year, of whom 10 were from St. Lucia, and 2 from St. Vincent, making a total of 151 under treatment, and a daily average of 127. 11 patients were discharged cured, and 14 died. The daily cost of a patient was 7¾*d*. The buildings can no longer accommodate the lunatics of the three colonies of the Windward Islands Government, and it is to be hoped that the new asylum for St. Lucia, which is understood to be contemplated, may not be long delayed, as it is impossible to classify cases and deal with them effectually in over-crowded buildings.

Poor Asylum.

42. This might more appropriately be called an asylum for incurables. It contained 43 inmates at the opening of the year, and during the year 25 were admitted, 9 left voluntarily, 1 was discharged, and 18 died. The daily average was 42, and the daily cost per inmate, 5½*d*. The buildings have many

defects, and require a considerable expenditure to convert them into a proper asylum.

Savings Bank.

43. The transactions of the five years 1898-1902 were as follows:—

Year.	Number of Depositors at 31st December.	Amount of Deposits (including interest capitalised).	Amount of Withdrawals.	Balance at credit of Depositors at 31st December.
		£	£	£
1898	1,053	7,803	6,722	8,451
1899	1,215	9,474	7,000	10,925
1900	1,387	9,379	9,136	11,168
1901	1,355	8,603	8,561	11,211
1902	1,847	9,184	9,378	11,017

44. The year under review exhibits a satisfactory increase of depositors, and of the amount handled during its course, but practically the same sum remained in the bank at its close as in 1901.

A feature of the position that is worthy of notice is that the small depositor is apparently becoming the rule instead of being, as years ago, in the back-ground. In 1898 the average balance of a depositor was £8.25; in 1902 it was £6.18.

45. The district banks continue to make gratifying progress, their balances at the end of 1902 amounting to £5,085, with 830 depositors, as compared with 1,017 depositors at St. George's, with a balance of £6,332: in 10 years the numbers and deposits in the districts have increased fivefold. Of the funds of the bank, £6,500 is invested in Colonial securities, and £2,000 is in the hands of the Crown Agents for similar investment, while £2,500 is retained locally, on deposit with the Colonial Bank, for emergencies.

JUDICIAL STATISTICS.

Police.

46. The strength of the police force was increased by nine during the year, so that at 31st December it consisted of a European Chief and Sergeant Major and of 72 West Indian non-commissioned officers and privates. The increase was necessary on account of increased population, two new district stations becoming necessary: arrangements were also made at important centres for separate non-commissioned officers to be specially entrusted with excise and sanitary duties.

47. The force is, in addition to ordinary police duties, charged with the supervision of distilleries, and the headquarters detachment is responsible for the extinction of fires in the principal town. It is maintained on a semi-military footing and armed with Martini rifles. The discipline is reported by the Chief to have been good in 1902, and at the annual course of musketry the average points per man out of a possible 80 were 46.20: the range is 200 yards maximum.

Prisons.

48. The committals for the year were 188 in number, 132 men, 51 women, and 5 juveniles. Of these, 158 were convicted prisoners, 26 for safe custody, and 4 debtors; they were all from local courts, no prisoners being introduced during the year from either St. Lucia or St. Vincent, but 5 from the former and 3 from the latter colony remained in prison here at the end of the year: the daily average was 52. The cost of the prisons was £1,244, and the value of the work done, which is mostly of a remunerative nature, is estimated at £1,336, so that they continue, as for many years past, to be practically self-supporting. The medical officers report the sanitary conditions to have been good, but at the prison for males dysentery gave some trouble, 16 cases coming under treatment; there were two deaths there from diarrhœa.

The erection of the much needed new Female Prison adjoining the Male Prison on Richmond Hill was commenced.

CRIMINAL STATISTICS.

49. The principal feature of the returns relating to crime in 1902 requiring explanation is the marked increase in the number of cases dealt with by the Magistrates. This is not due to any increase of crime, but to activity of the police in bringing up offenders against the Vaccination Act, it being deemed necessary, in view of the prevalence of small-pox in Barbados, to secure that the law in that direction was more rigidly enforced. Prædial larceny remained at about the same figure as in 1901. A table is subjoined, showing the averages under each head for the three years, 1898-1900, and the actual figures for 1901 and 1902.

—	Average 1898–1900.	1901.	1902.
Magistrates' Courts :—			
Convictions	1,047	922	1,312
Acquittals	326	268	326
Discharged...	576	489	562
Committed for trial in Supreme Court...	41	32	48
Total number of persons brought before the Magistrate.	1,990	1,711	2,248
Supreme Court :—			
Convictions	21	16	26
Acquittals	14	7	6
Not prosecuted	6	3	7
Total number of persons brought before the Court.	41	26	39
Nature of offences for which convictions were obtained :—			
Offences against the person	308	301	378
Prædial larceny	60	70	66
Other offences against property... ...	139	76	114
Other offences	561	491	780
Total	1,068	938	1,338

VITAL STATISTICS.

POPULATION.

50. Allowing for the natural increase since the census of 7th April, 1901, when it was returned at 63,438, the population of the colony at 31st December, 1902, was 65,627. The average natural increase in the 10 years 1892-1901 was 1,279, and in 1902 the actual increase was 1,339. The birth rate for

the year per thousand of the mean estimated population was 40·79, the death rate 20·38, and the marriage rate, 5·02.

Public Health.

51. The general health of the colony was, as usual, good during the year. No disease assumed an epidemic form, and, with the exception of dysentery and malarial fever in certain districts, the ordinary endemic diseases were not abnormally aggressive. The chief causes of death in the last four years are shown below:—

Cause of Death.	1899.	1900.	1901.	1902.
Diarrhœa	135	95	109	83
Dysentery	47	45	297	130
Fevers	71	80	75	115
Enteritis	33	63	71	76
Phthisis	49	77	66	67
Bronchitis	25	27	28	15
Pneumonia	18	34	17	28
Influenza	1	48	3	3

It will be seen from these figures that diseases of the digestive system are responsible for the largest share of the Colony's death rate, and it may be added that the percentage of infant mortality (mostly caused by these diseases) is about one-third of the total number of deaths.

CLIMATE.

52. The principal meteorological statistics for 1902 are as follows:—

Rainfall, centre of island	163·70 inches.
" south "	70·19 "
Relative humidity (mean)	73·7°
Mean temperature (maximum)	83·4°
" " (minimum)	74·1°
" pressure	29·973 inches.
Days of rain	226
Average force of wind (24 hours) ...	121 miles.
Maximum temperature (18th May) ...	90·8°
Minimum " (4th February)	69°

The year was unusually dry, but as the rainfall was fairly distributed over the several months there was no actual drought: the rainy season began on 24th May.

53. At the Meteorological Observatory on Richmond Hill, near to the chief town, there has now been a continuous record kept for 12 years, and the following analysis of the rainfall returns in that period may be of interest. It should be borne in mind that, being situated in the south of the island, the rainfall is less there than in the mountainous centre.

Month.	Maximum.	Year.	Minimum.	Year.	Average for 12 years.
January... ...	9·10	1899	2·15	1891	4·53
February ...	7·16	1899	0·81	1892	2·99
March	6·82	1892	0·88	1891	2·92
April	5·93	1893	0·71	1901	2·98
May	10·79	1892	0·49	1899	5·14
June	18·80	1892	4·30	1894	8·67
July	15·10	1892	3·53	1894	9·67
August	19·11	1898	6·08	1895	9·65
September ...	12·16	1894	4·79	1900	8·88
October	10·55	1894	4·00	1893	6·45
November ...	20·90	1896	2·54	1891	9·01
December ...	18·17	1901	3·57	1891	8·13

Maximum for one year 105·89 inches in 1892.
Minimum for one year 56·69 inches in 1891.
Average for twelve years 79·07 inches.

SANITATION.

54. A change was made in the sanitary administration of the Colony during the year. The Governor and other members of the Executive Council became *ex officio* the General Board of Health, with power to make byelaws on all important details relating to health; and Local Health Authorities, consisting of the Chief of the Police, the District Medical Officers, and prominent unofficials in each district, were created, and given the power to carry out such byelaws and the general provisions of the Health Laws. Non-commissioned officers of the police were detailed as District Inspectors, and their reports were required to be laid by the Chief before fixed monthly meetings of the Local Health Authorities. It is perhaps too soon to pronounce upon the success of the change, but it may be mentioned here that during an outbreak in the current year of an eruptive disease which has

become epidemic in some neighbouring colonies, the new system worked easily and effectually, and the Health Authorities did excellent service. For a small Colony, where unofficial co-operation in public duties is necessarily limited, such an arrangement is based upon sound practical principles, and if difficulties in details are carefully attended to, it should work well.

POSTAL AND TELEPHONE SERVICES.

Post Office.

55. The business of the Post Office continues to increase annually, and the following statement of the figures for the years, 1896, 1901, and 1902 show the extent of that increase as compared with the preceding year and with the position six years ago:—

— —	1896.	1901.	1902.
Letters and post cards	199,022	334,661	440,934
Newspapers, books, &c.	80,066	99,496	147,628
Parcels	2,676	3,952	6,147
	£	£	£
Money orders (other than local) issued	8,841	14,032	12,160

The administration of the Post Office was improved during the year under review consequent upon changes in the *personnel* and upon its separation from the Treasury in November, 1901. A mail coach service between St. George's and Grenville viâ St. David's was commenced on 1st October.

Telephone Department.

56. The revenue from the telephone service in 1902 amounted to £1,342, and the expenditure on its maintenance and on loan charges to £1,330, besides which £545 was spent on reconstruction work, which was commenced in July, 1901, and is being steadily prosecuted to the extent permitted by the funds and staff available. The working of the system was improved, and much valuable work done in 1902. Local climatic and other conditions necessitate constant activity and

attention to maintenance if good results are to be secured, but it is believed that on the whole satisfaction is given to the numerous renters, and that the service is as popular as it is indispensable to the Colony.

MILITARY FORCES AND EXPENDITURE.

57. There is no military force in the Colony. Provision exists under the law for the enrolment of a Volunteer Corps, and further legislation has recently been adopted enabling the formation of a Volunteer Reserve, which can be eventually incorporated in a regular corps of Volunteers, if formed: no steps have as yet been taken beyond the introduction of the necessary arms and ammunition, the former, Martini-Enfield rifles, having been considerately supplied by the Imperial Government. The police force is maintained on a semi-military footing.

GENERAL REMARKS.

58. Their Majesties' Coronation on the 9th August was loyally celebrated in the Colony by a people grateful that their Sovereign had been spared to them from a dangerous illness. Arrangements had been made for the celebration, upon a larger scale than usual locally, on the date originally fixed for the ceremony, and, the telegraph line being interrupted, it was not until the morning of the 26th of June that the sad intelligence of the King's danger reached Grenada, in time, however, to stop the proceedings. The genuine sorrow and distress felt by the people was only too evident, and showed up in marked contrast to the decorations surrounding them.

59. The volcanic eruptions at St. Vincent and Martinique also deeply stirred the people of the Colony, and practical proof of sympathy was given by liberal contributions of money, clothing, and food, for the relief of our distressed neighbours. The first eruption of the Soufrière on 7th May was distinctly heard in Grenada, but none of the others of that volcano: on the other hand nearly all of those of Mont Pelée were distinctly heard (200 miles distant), especially that on the night of the 30th August. Dust fell frequently and heavily, and on three occasions, 7th and 20th May and 9th June, the water in the St. George's Carenage was sympathetically affected by the volcanic disturbance.

60. Mr. C. H. Major, the Attorney-General, left the Colony on 5th September on his promotion to be Chief Justice of Fiji, and the vacancy was not permanently filled until the current year.

61. A large bridge at La Force crossing in St. Andrew's was completed during the year, and a bridge at Union, St. Mark's, and a causeway at Black Bay, St. John's, were constructed. The old and dilapidated north wing of the Government House was replaced by a substantial stone structure, giving more accommodation, and much improving the Governor's residence.

62. The record of the year 1902 is one of continued progress, and in this connection a table, which has been prepared and appears in the Appendix, marked L, in which the principal financial statistics of the Colony for the last 10 years are exhibited, may prove interesting.

EDWARD DRAYTON,

Administrator.

Grenada,

7th October, 1903.

APPENDICES TO BLUE BOOK REPORT FOR THE YEAR 1902.

ST. LUCIA.

(For Report for 1901, *see* No. 384.)

ACTING-GOVERNOR SIR G. MELVILLE to MR. LYTTELTON.

St. Lucia,

5th November, 1903.

SIR,

I HAVE the honour to transmit the Blue Book of this Colony for the year 1902, with a Report thereon by the Acting Colonial Secretary.

I have, &c.,

GEO. MELVILLE,

Acting-Governor.

---

875 Wt 21109 12/1903 D & S 5 16179 A 2

REPORT ON THE BLUE BOOK FOR 1902.

FINANCIAL.

Revenue.

The total actual Revenue for the financial year ended 31st March, 1903, was £72,193 0*s.* 4*d.*, made up as follows:—

	£	s.	d.
General Revenue	66,563	3	1
Part proceeds of Sales of Reclamation Lands	1,143	17	3
Imperial Department of Agriculture, Grant-in-Aid	1,486	0	0
Imperial Grant-in-Aid, Sugar Industry	3,000	0	0
Total	£72,193	0	4

This shows a net increase of £4,827 14*s.* 1*d.* as compared with the total actual Revenue for the previous financial year, and a surplus of £1,077 9*s.* 1*d.* over the estimated total Revenue which was £71,115 11*s.* 3*d.*

The increase of £4,827 14*s.* 1*d.* is due to the fact that £3,000 was received as an Imperial Grant-in-Aid for the sugar industry and that £1,143 17*s.* 3*d.* was transferred during the year from the account of "Proceeds of Sales of Reclamation Lands" to the credit of General Revenue to meet the actual expenditure incurred on reclamation work, so that the real increase of General Revenue is reduced to £684 6*s.* 10*d.*, and on reference to the following comparative statement of the Revenue of the Colony for the period ended 31st March, 1903, it will be seen that there was an actual decrease of Revenue from local sources amounting to £3,034 7*s.* 10*d.*

Comparative Statement of the Revenue of the Colony for the Period ended 31st March, 1903.

Heads of Revenue.	Estimate for 1902–3.	Actual Revenue to 31st March, 1903.	Revenue for same period of preceding year.	Increase.	Decrease

13. Imperial Grant-in-Aid of Sugar Industry	—	3,000 0 0	—	3,000 0 0	—
Total	71,115 11 3	72,193 0 4	67,365 6 3	9,001 19 7	4,174 5 6

This decrease is mainly accounted for by a falling off in the Customs receipts, amounting to £1,272 6*s.* 2*d.*, as compared with last year, and by decreases of £1,024 6*s.* 10*d.* and £200 10*s.* 0*d.* under the heads of "Interest" and "Repayment of Loans" respectively.

The decrease in Customs receipts may be attributed to a falling off of trade, particularly in shipping, during the year under review, but this was, I am led to believe, general and not confined to St. Lucia.

The decreases under "Interest" and "Repayment of Loans" were nominal and are explained by the fact that receipts under these two heads which appeared in the Crown Agents' accounts for February, 1902, were not brought to account in the Treasury books until the month of April in the financial year 1902-3.

The rate of taxation was the same as for the previous year, but the receipts for the Road Tax amounted to £1,333 17*s.* 11*d.* as compared with the estimate, which was £1,300.

This tax, however, was under-estimated in the first instance and although there is a slight excess in the receipts over the estimate, the collection was actually deficient.

The amount of Road Tax actually collected was £1,518 16*s.* 0*d.*, of which £1,333 17*s.* 11*d.* represents the net amount carried to the credit of General Revenue after paying fees, &c., in connection with the collection of the tax.

According to the statistics there were 10,560 males in the Colony who were liable to pay this tax which should therefore have yielded £3,168 instead of £1,518 16*s.* 0*d.*, which proves that only about 50 per cent. was collected. This is a matter which is receiving the attention of the Executive, with a view to either changing the tax or devising some means whereby it may be properly collected, as under existing arrangements it seems impossible to do so.

Expenditure.

The total actual expenditure amounted to £69,408 0*s.* 1*d.*, of which sum £59,325 12*s.* 10*d.* was spent on general services during the year; the difference between these sums, amounting to £10,082 7*s.* 3*d.*, was expended as under:—

	£	s.	d.
Public Works, Extraordinary ...	5,531	7	0
Imperial Grant-in-Aid, Sugar Industry	3,000	0	0
Agriculture	1,551	0	3
Total	£10,082	7	3

Details of the expenditure are shown in the comparative statement of the expenditure of the Colony for the period ended 31st March, 1903, given below:—

19. Agriculture	1,684 18 1	1,551 0 3	2,894 2 4	—	1,343 2 1
Total	76,419 16 6	69,408 0 1	67,486 8 7	8,837 13 0	6,916 1 6

The total estimated expenditure, exclusive of supplementary votes, was £71,115 11*s.* 3*d.* or £1,707 11*s.* 2*d.* more than the actual total expenditure as given above, and £1,077 9*s.* 1*d.* less than the actual Revenue which was £72,193 0*s.* 4*d.* The apparent saving of £1,707 11*s.* 2*d.* on the estimated amount is fictitious and is due to the Crown Agents' accounts for February and March, 1903, not being brought to account until after the close of the financial year ended 31st March, 1903, a matter to which reference is made under the head of Revenue.

The excesses under the different heads have been explained in the Treasurer's detailed statement and will be legalised under the Supplementary Appropriation Ordinance.

Assets and Liabilities.

The balance sheet of the Colony on the 31st March, 1903, shows a surplus of £22,262 8*s.* 6*d.*, made up as follows:—

	£	s.	d.
Surplus on 31st March, 1903 ...	18,762	7	5
Net excess of Revenue over Expenditure on 31st March, 1903	2,785	0	3
Interest on Investment of Surplus Funds	715	0	10
Total	£22,262	8	6

Subjoined is a detailed Statement of Assets and Liabilities:—

NOTE.—Amount expended on Agriculture in excess of Grant from Imperial Government... ... ... £252 12 2

MARK KERR, *Treasurer.*

Treasury, Castries, 18th June, 1903.

Reserve Fund.

This fund, which was established in September, 1900, for the purpose of meeting in the future any emergencies which may arise through financial depression and the limit of which is fixed at £25,000, amounted on 31st March, 1903, to £17,215 0*s.* 10*d.*, which is invested by the Crown Agents as follows:—

	£	s.	d.
Advances against Scrip of the unissued Lagos Loan... ...	5,180	3	11
Advances against Scrip of the unissued Sierra Leone Loan...	5,000	0	0
Government of Gold Coast 3 per cent. Stock	4,034	16	11
Government of Zanzibar 3 per cent. Guaranteed Loan ...	3,000	0	0
Total	£17,215	0	10

It is to be hoped that the limit of £25,000 may be reached during the next financial year, as until this is done many works of utility, such as opening up new roads, repairing existing roads and bridges, harbour and other improvements, cannot be undertaken owing to want of funds, all available money, over and above what is required for the bare necessities of the Colony, having to be sent home to the credit of "Reserve Fund" until the £25,000 limit is reached.

Public Debt.

The Public Debt at the close of the financial year was £170,879 11*s.* 0*d.* or £2,900 less than it was at the end of 1901. Of the total debt, the Immigration Fund is responsible for £11,400, and the Castries Town Board for £17,000.

The loans paying the heaviest interest are the Central Factory Loan incurred in 1875, and the Immigration Loan of 1878, on both of which the interest is 6 per cent. per annum. These two loans will be repaid in 1908 and 1912, respectively.

The amount due to Debenture holders amounts to £85,400, and the balance of the debt £85,479 11*s* 0*d.* is due to holders of Inscribed Stock paying interest at 4 per cent. per annum.

The Debentures redeemed during the year amounted to £2,900.

The General Revenue of the Colony is liable for the repayment of all loans.

The Inscribed Stock Sinking Fund stood on the 31st March, 1903, at £6,686 13*s.* 8*d.* and that of Debentures at £1,709 7*s.* 0*d.*

The latter was lying on deposit bearing interest at bank rate in the London and Westminster Bank and the former was invested in Colonial securities.

Savings Bank.

The balance standing to the credit of Savings Bank depositors on 31st March, 1903, amounted to £16,079 0*s.* 5*d.* as compared with £14,231, the amount standing to their credit on 31st March, 1902.

This balance is divided as follows:—

	£	*s.*	*d.*
1st District	14,984	5	10
2nd District...	731	11	2
3rd District	363	3	5
Total	£16,079	0	5

The balance of £16,079 0*s.* 5*d.* is represented by 1,590 individual accounts as compared with 1,467 at the 31st December, 1901, and during 1902 the number of transactions of deposits and withdrawals was 8,186, as against 8,510 for the previous year.

The investments amounted to £15,416 14*s.* 11*d.* or £2,000 more than those for last year which were £13,416 14*s.* 11*d.*

The Savings Bank Accounts are kept by the calendar and not the financial year, and in the report on the transactions of the Institution for the year ended 31st December, 1902, it is shown that during 1902 the total amount deposited was £20,365 12*s.* 6*d.* by 1,590 depositors as compared with £20,891 5*s.* 3*d.* in 1901 by 1,467 depositors. The withdrawals in 1902, amounted to £17,696 8*s.* 6*d.*, as compared with £22,022 7*s.* 5*d.* in 1901, and the amount remaining on deposit on the 31st December, 1902, was £15,956 13*s.* 3*d.*, as compared with £13,287 14*s.* 3*d.* on 31st December, 1901, which tends to show that persons avail themselves of the advantages offered by the bank for investing their money at the rate of interest given, namely, three per cent.

TRADE.

Imports.

The total value of the imports for the year 1902, was £326,324 as compared with £382,652 in the previous year. The following is a comparative statement showing the value of the imports under the various classifications and the increases and decreases under each class:—

Comparative Statement showing Value of Imports under various Classifications, &c.

Articles.	1902.	1901.	Increase.	Decrease.
	£ s. d.	£	£ s. d.	£ s. d.
Class I.—				
Live Animals, Food, Drink and Narcotics	87,812 9 8	84,849	2,963 9 8	—

(*c*) Other	97,053 12 7			
	147,371 4 8	126,206	—	19,780 15 4
Class IV.—				
Coin and Bullion	728 0 0	8,320	—	7,592 0 0
Total	326,324 0 2	382,652	2,963 9 8	59,291 9 6
Total Decrease £56,327 19*s.* 10*d.*				

It will be observed from this statement that there was a net decrease in the value of imports amounting to £56,327 19*s.* 10*d.* The fact that there was a smaller importation of coal is responsible for a decrease of £32,739 19*s.* 3*d.*, to which reference is made below.

There is also a large decrease in the value of coin and bullion imported, which is due to the fact that the Colonial Bank did not import these items to any considerable extent.

The total value of the coal imported during the year was £67,219 10*s.* 10*d.*, as compared with £99,959 10*s.* 1*d.* during the previous year which shows a decrease of £32,739 19*s.* 3*d.* The decrease in amount was 28,650½ tons.

Of the coal imported, £84,640 worth was re-exported and there was a drawback of duty on 16,415 tons of coal supplied to ships of war and steamers of the Royal Mail Steam Packet Company.

The chief articles of import as compared with those of last year are shown in the following comparative statement:—

The value of imports from the United Kingdom was £181,865 17*s.* 11*d.*, from British Colonies £29,737 1*s.* 10*d.*, and from foreign countries £114,721 0*s.* 5*d.*

The value of the imports from foreign countries is, however, misleading, large quantities of whisky and other commodities being imported from Glasgow *viâ* America. The merchants effect a saving in freight by this means, the through freight *viâ* America being considerably less than what is charged by the British steamship lines coming here from British ports. In the Customs returns, however, such imports are classified according to their place of origin, namely, the United Kingdom.

EXPORTS.

The total value of the exports during 1902 was £157,751, as compared with £188,066 during 1901, and from the following comparative statement it will be seen that there was a net decrease in the value of exports amounting to £30,315:—

Exports.

Net Decrease, £30,315.

The bulk of this decrease, £24,159, occurs under Class II (*c*), and is to be attributed to a falling off in the export of bunker coal, for during 1902 the quantity exported amounted to 72,154 tons only, of a total value of £34,295, as compared with 85,517 tons in 1901, valued at £110,196. This is due to the fact that there was less coaling trade done in the place generally and to some of the passenger steamers which used to coal at this port going to Barbados to coal.

The following statements, marked "A" and "B," give the quantities of local and foreign produce exported respectively, and it will be observed on reference to Statement "A" that there was a net decrease in the value of the exports amounting to £8,997, which is mainly due to the falling off in the amount of Usine Sugar exported:—

A.—Local Produce.

Statements marked "C" and "D" are also subjoined, showing the total value of imports and exports for the last five years and the principal places to which the produce of the Colony was exported during the year under review.

C.—The Value of the Total Imports and Exports for the Last Five Years Amounts to :—

Year.	Imports.	Exports.
	£	£
1898	271,995	166,508
1899	282,963	170,668
1900	403,598	229,436
1901	382,652	188,067
1902	326,324	157,753

D.—The following are the Places to which the Colonial Produce and Produce of Other Countries were Exported during the Past Year :—

Countries.	Colonial Produce.	Produce of Other Places.	Total.
	£	£	£
United Kingdom	13,932	3,744	17,676
British Colonies	2,464	3,059	5,523
Foreign Countries	45,767	4,490	50,257
Bunker Coal	—	84,295	84,295

It is, however, worthy of note that although there was a general decrease in the exports from the Colony, yet the export of St. Lucia cocoa maintained its average, taking the last five years into account, as is shown by the following figures:—

Year.	Bags.
1898	4,768
1899	4,412
1900	6,490
1901	3,285
1902	7,467

The large increase in 1902, as compared with 1901, is accounted for by a portion of the 1901 crop not having been exported until 1902.

200 lbs. may be taken as the average weight of a bag of cocoa.

SHIPPING.

The following returns, marked "E" and "F," give the number, tonnage and nationality of vessels which entered at the port of Castries, the only port of entry in the Colony, during the year 1902; and the subjoined statement shows the total tonnage of the vessels entered and cleared for the last five years:—

E.—NUMBER, TONNAGE, and NATIONALITY of STEAM and SAILING VESSELS ENTERED at the PORT of CASTRIES during the PAST YEAR—1902.

Nationality.	Steam Vessels.		Sailing Vessels.		Total.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.

Total ...	538	824,118	409	14,870	947	838,988

F.—Total Shipping, Inwards and Outwards for the Last Five Years.

Years.	Entered.	Cleared.
	Tonnage.	Tonnage.
1898	779,806	776,971
1899	637,538	641,815
1900	921,426	920,170
1901	932,825	931,895
1902	838,988	841,095

During the year 1902, the number of steamers (ships of war and yachts excluded) calling at Castries was 538, taking 57,618 tons of coal and paying £575 5*s.* 0*d.* as pilotage fees and £2,358 2*s.* 4*d.* for wharf accommodation, &c., as compared with 585 steamers entering in 1901, taking 74,663 tons of coal and paying £746 for pilotage fees and £3,111 for wharf accommodation, &c. This shows a falling off in the shipping trade which may be accounted for in part by general depression of that trade and the enforcement of quarantine restrictions due to the prevalence of small-pox in several of the neighbouring colonies.

Agricultural Department

Botanic Station.

No additions were required to the existing buildings during the year and only slight repairs were necessary. In most instances they were effected by the garden labourers.

Altogether, 26,637 plants were distributed during the year as compared with 15,894 during 1901. This is the highest distribution of plants on record. This increase is due to the large number of lime plants supplied to two estates, over 15,000 being supplied to one of them.

Agricultural School and Experiment Plots.

The Agricultural Instructor connected with the department travelled about the Island advising planters with respect to the work being done on their estates, the curing and preparation of produce for market, and on agricultural subjects generally. Practical instruction in agriculture was also carried out at the school and it is reported that the pupils at the school are making satisfactory progress.

Crown Lands and Surveys.

The work done by this important department during the year is given briefly as follows:—

There were 104 applications for grants of Crown Lands for a total area of 746 acres, and 53 lots of land were submitted for alienation of an aggregate area of 479 acres.

The revenue of the department was £1,513 5*s.* 2*d.*, made up as follows:—

	£	s.	d.
Survey Fees	425	16	11
Deposits on account...	219	16	8
Instalments	569	14	10
Sundries	297	16	9
Total	£1,513	5	2

The expenditure for the same period amounted to £1,393 9*s.* 10*d.*, as under:—

	£	s.	d.
Survey Fees	495	5	9
Roads	651	4	5
Survey of Union estate	35	0	8
Refunds	50	4	0
Miscellaneous	161	15	0
Total	£1,393	9	10

which gives a credit balance of £119 15*s.* 4*d.* on the year's working. The sum of £647 16*s.* 4*d.* was voted from General Revenue for upkeep of office, &c.

The amount to credit of Land Sales Fund on the 31st December, 1902, amounted to £2,023 0*s.* 11*d.*

No new work was undertaken during the year under the head of Forest Reservation, but the usual precautions were taken to prevent unauthorised cutting of trees and clearing of lands in the Government reserves.

The customary routine work of keeping open and inspecting boundaries was carried out and the boundary lines of three estates were defined.

A sum of £651 4*s.* 5*d.* was expended from the Land Sales Fund for the opening and upkeep of various roads in the Island.

There was no work calling for special comment done by the department during the year, but the applications for grants of plots of land were not so numerous as in former years, as many persons who are wishful to apply for grants of land cannot do so as they have not the available means for payment of survey fees and deposit on account of purchase money, the minimum cost of which is £3 10*s.* 0*d.*

EDUCATION.

The number of assisted primary schools in 1902 was 42, as compared with 44 in 1901; one of these schools was closed in September, 1901, thus reducing the number during the last quarter of that year to 43; the further reduction to 42 in 1902 is due to the Wesleyan juvenile and infant schools in Castries being amalgamated.

The number of names on the rolls of these schools was 6,665, as compared with 6,833 in 1901, and the average attendance was 3,714, as compared with 3,577, thus showing decreases of 168 and 157 respectively.

The decrease of 168 in the number of names on the rolls is probably due to the more rigid observance of Article 36 of the code, as formerly names of children were kept on the rolls long after they had ceased to attend the school. Article 36 provides that the names of children shall be removed from the rolls after they have ceased to attend for a certain period.

The Grants-in-Aid amounted in 1902 to £3,362 17*s.* 5*d.*, as compared with £3,167 8*s.* 5*d.* in 1901, or an increase of £195 9*s.* 0*d.*

"English" under the new syllabus has been fairly well taken up, and now systematic efforts are made to teach the children from their earliest appearance at school to make use of English words and English expressions instead of the French creole patois they hear in their homes, and by this means English is being more universally spoken in the Island than was the case in past years.

Secondary Education.

Secondary education continues to be provided for by the St. Mary's college for boys and the St. Joseph's convent school for girls. The former receives a yearly grant-in-aid from the Government of £200, and the latter £50. Scholarships to the number of ten, at £6 each, are also provided for boys from the elementary schools.

At the Cambridge Local examinations six boys were presented, two of whom passed the junior examination and four (one with Honours) the preliminary. All the girls (twelve) presented for the College of Preceptors examinations were likewise successful, three passing in the second class with Honours, and nine in the third class, four of these with Honours.

FRIENDLY SOCIETIES.

There are nine Friendly Societies in existence in the Colony, with a total membership of 879 persons. The total receipts of these societies amounted during the year to £2,008, inclusive of a balance of £817 standing to their credit on 31st December, 1901.

The disbursements during 1902 amounted to £1,286, made up as follows:—

	£
Paid in charities	509
Paid for funeral claims	122
Paid working expenses	320
Purchase of property	290
Paid to retiring members	45
Total	£1,286

In 1901, the societies had a membership of 767 persons, with an income of £982 and an expenditure of £808. From the foregoing figures it will be seen that these societies are popular and in a sound financial condition, and therefore a boon to the Colony.

POST OFFICE.

The returns of the work done in this department are very satisfactory and show an all-round increase in postal business.

The revenue collected during the year was £3,087 4*s.* 7*d.*, and the expenditure under all heads amounted to £2,507 4*s.* 6*d.*, showing a net surplus of £580 0*s.* 1*d.* If, however, the cost of the daily steamer service coastwise (£1,000) and steamer service to Dennery (£121 3*s.* 4*d.*) were deducted from the total expenditure of £2,507 4*s.* 6*d.*, the net surplus of the revenue over expenditure would amount to £1,701 4*s.* 7*d.*

The figures given above show a decided improvement in the financial position of the department for the year 1902 as compared with 1901, when the net revenue was £1,689 4*s.* 1½*d.*, and the net expenditure, inclusive of the subsidy of £1,230 9*s.* 4*d.* for coasting steamers, was £2,361 9*s.* 6*d.*

TELEPHONES.

The number of subscribers to the telephone system during the year remained the same as last year, namely, 107.

Necessary repairs were done to the lines throughout the year, and the line was extended from the Castries Exchange to Gros Islet, a distance of 7½ miles. To make this extension, three miles of poles and wire between Castries and the Choc Estate were rented from the military authorities and the additional 4½ miles were newly erected by the Colonial Government.

The working of the department was as satisfactory as could be expected under existing circumstances and until funds are at the disposal of the Government to spend a considerable additional sum annually for improvements.

POPULATION AND VITAL STATISTICS.

The population at the end of 1902 was estimated at 50,934 persons, and the average population to the square mile is 218.

The most thickly populated place is Castries, comprising an area of 35·02 square miles with a population of 19,704 persons, the average being 563 to the square mile.

The registers show that there were 1,815 births during the year and 1,235 deaths, thus showing an increase in the population of 580 souls.

Excluding still-births, which are returned as numbering 139, the birth-rate of the Colony was 3·33 per cent. as compared with 3·59 per cent. in 1901.

The legitimate births numbered 837, and the illegitimate 978.

The total number of deaths is returned at 1,235, or 44 less than in the previous year. There was one death from snake-bite recorded and this occurred in the 1st District.

The net death-rate was 2·18 per cent. of the total population as compared with 2·22 per cent. in 1901. In 1900, it was 1·93 per cent.

There was no illness of an epidemic form during the year.

METEOROLOGY.

The following meteorological notes are taken from the Botanic Station records in 1902. This station is situated in Longitude 60° 59′ 49″ W., and Latitude 14° 0′ 56″ N. and is 10 feet above mean sea-level.

The mean monthly temperature was 78·3° F. The maximum temperature 97° F., was reached on June 2nd. The minimum for the year was 61° F., in January.

The mean barometric pressure was 29·993 inches.

The total rainfall for the year was 91·43 inches. Rain fell on 241 days during the year. The maximum fall was 4·42 inches on May 24th. November was the wettest month with 12·71 inches, and February the driest with 1·46 inches.

CASTRIES TOWN BOARD.

The revenue of the Castries Town Board for the financial year 1902-3, was £6,151 7*s.* 4*d.* and the expenditure £5,316 1*s.* 0*d.*

The principal items of revenue are:—

	£	*s.*	*d.*
Water Dues from Shipping ...	1,815	8	0
Market Dues	1,453	1	8
Water Rate	445	9	4
House Taxes...	1,718	17	6

The principal charges against it are:—

	£	*s.*	*d.*
Maintenance of Water Works ...	944	6	11
Expenses of Fire Brigade	517	6	5
Interest and Sinking Fund on Loans	615	5	0
Pay of Staff	280	0	0
Streets	266	9	0
Market	504	12	3

The Board had a balance in hand of £122 14*s.* 1*d.* on the 1st April, 1902, and there has been carried forward to the financial year 1903-4, a balance of £958 0*s.* 5*d.*

HOSPITALS.

The number of persons treated in the hospitals of the Colony during the year was 2,651, as compared with 3,050 during the previous year. The total number is made up as follows:—

Remaining in hospital at end of 1901 ...	133
Admitted during 1902	2,518
Total	2,651

There were 197 deaths in the hospitals during the year.

Dispensaries.

There were 34,870 attendances at the various dispensaries in the Colony, numbering eight altogether, as compared with 34,344 in 1901, giving an increased number of attendances amounting to 526.

Victoria Hospital.

This hospital is the principal one in the Colony and is situated at the principal town, Castries.

At the beginning of the year 68 patients were in hospital and during the year there were 1,913 admissions, making a total of 1,981 patients treated during the year. These figures show a decrease of 205 as compared with last year.

The number of patients treated may be summarized as under:—

East Indian Coolies	806
Natives of the Island	390
Police Constables	71
Warders, Royal Goal...	3
Seamen	44
Natives of other places	667
Total	1,981

Poor Asylum.

The number of patients remaining in this institution at the beginning of the year was 61 and there were 100 admissions during the year, making a total of 161 persons who received food, lodging and medical attendance during the year. In 1901, the number of persons receiving this relief was 148.

75 per cent. of the inmates were natives of St. Lucia.

The sanitary condition of the Colony, both rural and urban, is considered as satisfactory. There was no case of yellow fever reported during the year or of bilious remittent fever, which much resembles yellow fever; and although small-pox and eruptive fever existed in the neighbouring Islands no case occurred in St. Lucia. The total number of vaccinations during the year was 1,178. This does not include vaccinations done by Royal Army Medical Corps Officers among the troops stationed in the Island.

LEGISLATION.

There were thirteen Ordinances passed by the Legislative Council during the year 1902, all of which have received the Royal Assent.

Under Ordinance No. 4, authority is given to the Governor-in-Council to borrow from the St. Lucia Savings Bank a sum not exceeding £2,000, for the Soufrière Town Fund for the purpose of meeting the cost of introducing a water supply to the town of Soufrière. This loan has been made and the water-works completed.

None of the other Ordinances call for special comment.

One Royal and twelve Local Proclamations were issued during the year, and eight Orders-in-Council.

There were eight Rules and Regulations made under existing local laws.

PUBLIC WORKS.

Works and Buildings.

Public Works Recurrent.

The "Maintenance and Repairs" of public buildings (offices, &c.) and the several institutions were carried out at a cost of £736 6*s.* 5*d.*, the largest items being in respect of Victoria hospital, Vieux Fort hospital, Government House, Choiseul police station and Royal gaol.

Jetties were repaired at a cost of £206 14*s.* 1*d.*, being general repairs to the jetties at Vieux Fort, Laborie, Choiseul and Soufrière.

Castries wharves were maintained at a total cost of £675 11*s.* 10*d.* Borings in the harbour were continued, at a cost of £130 0*s.* 1*d.*

Dredging operations were continued at a cost of £1,211 7*s.* 6*d.*, including the refitting of the steam tug "Midge," engineer's

salary, and general repairs to dredger, hopper barge, and pontoons.

Buildings were erected at Rat Island for quarantine purposes, at a cost of £1,230 4*s.* 3*d.*, but these were not completed until the close of the financial year, when the total cost was £1,260 2*s.* 3*d.*

The Yaws hospital and Poor Asylum at Soufrière were erected, at a cost of £1,986 7*s.* 1*d.*, but the inmates were not transferred until the beginning of 1903.

Wharf railings were erected at a cost of £192 3*s.* 7*d.*

Works were carried out at the Public Works work-yard for private parties, as well as for public services, the credit balance at the 31st December being £258 0*s.* 9*d.*

Roads.

The gross expenditure to 31st December, 1902, on the roads of the Colony is as follows:—

	£	s.	d.	£	s.	d.
Upkeep of roads and bridges				4,339	15	0
Road Improvements				386	16	6
Land Sales Fund:—						
Goldsworthy Road	258	11	8			
Soufrière-Micoud Road ...	56	19	1			
Ravine Soufre Road	14	13	2			
Roseau—Cul de Sac Valley Road	188	8	3			
Desruisseaux Road	71	0	9			
Errard Road extension ...	1	10	0			
				591	2	11
Extraordinary Vote:—						
Construction of new road to sulphur springs				106	16	0
Total				£5,424	10	5

GAOLS AND PRISONERS.

Comment is made in the report on the Royal Gaol, Castries, the only gaol in the Island, as to the inadequacy of the accommodation. This is no new complaint and is referred to in the report on the Blue Book for 1901, but, looking to the present financial condition of the Colony and the many urgent works which have to be undertaken when funds are available, there is small prospect of being able to increase the present gaol accommodation.

The number of admissions during the year was 1,043 (711 males, 323 females and nine juveniles), as against 1,021 (710 males, 295 females and 16 juveniles) in 1901. The admissions in 1901 were the highest on record up to that date, but those for 1902 exceed them by 22.

Of the total number of prisoners admitted, 1,043, 164 were received for safe-custody, want of sureties, or for trial, and 879 for final imprisonment.

Attention is drawn by the Inspector of Prisons to the fact that on comparing the native population, 41,777 souls, with that of the alien population, 8,106, the former furnished 37·22 per cent. of the prisoners and the latter 62·73 per cent. This tends to show that St. Lucia is a dumping ground for undesirable persons from the neighbouring Islands, as there are no legislative measures in force in this Island, such as exist in almost all the neighbouring Islands, to check the introduction of undesirable aliens.

No deaths occurred in the St. Lucia prison, but two St. Lucia long-sentenced prisoners died in the Grenada prison, where they had been transported under existing arrangements.

Corporal punishment was inflicted in two cases only.

The sanitary condition of the prison was satisfactory, the daily average of sick being 1·75.

Criminal Statistics.

There was an increase in the number of persons tried before the Royal Court, the number being nearly double that of the previous year and three in excess of that of 1900.

The most prevailing crimes during the year were house-breaking, cattle stealing and wounding. Of the house-breaking cases, numbering 10, one only was committed by a native of St. Lucia, while five of the seven cases of cattle stealing and three of the six cases of wounding were committed by St. Lucians.

From the returns furnished by the magistrates it appears that 104 persons all told were brought before them in the several districts charged with praedial larceny: 48 convictions were obtained, 30 were discharged for want of prosecution and 26 were dismissed on the merits. In other words, less than 50

per cent. of the persons accused were convicted, while nearly 30 per cent. of the accused were discharged for want of prosecution.

The following table shows the proportion which the number of convictions bears to the number of persons apprehended by the police and charged before the magistrates during the last four years:—

Year.	Number of Cases.	Number of Convictions.	Percentage.
1899	2,270	1,257	55·3
1900	2,280	1,245	54·6
1901	2,843	1,616	56·8
1902	3,202	1,944	60·7

These figures speak for themselves and show that there has been a steady increase both in the number of cases and the number of convictions, which is no doubt attributable as regards the number of cases to the number of undesirable characters who have to leave the neighbouring Islands for the good of those Islands and take refuge in St. Lucia, much to the detriment of the place.

The question of bringing a measure before the Legislative Council to restrict promiscuous immigration to this Island is receiving the attention of the Government.

GENERAL REMARKS.

When one looks at the import and export returns for the year under review and sees that there was a falling off in the former amounting to £56,328 and the latter to £30,315, the year 1902 cannot by any means be called a prosperous one, even though in the body of this report the decreases are explained as far as possible.

The hopes, therefore, expressed in the reports on the Blue Book for the two previous years have been far from realized.

My residence in this Colony, short though it is, has convinced me that there are three things on which it has to rely, anyhow for some years to come, for its prosperity, and I put them below in order of importance:—

(1) Coal and shipping trade.

(2) Works undertaken by the War Department in connection with the transfer of the head-quarters of the troops stationed in the West Indies from Barbados to St. Lucia.

(3) Extension of cultivation of cocoa and introduction of cotton growing.

2. There can be no question as to the harbour at Castries being the most suitable one in the British West India Islands for ships to coal at. Much money has been expended to attain this end, and in 1902, there was excellent accommodation for any class of ship or ships to take coal and water. The wharf accommodation is 1,180 feet in length with a depth of water of 27 feet, and in order to emphasize what I state I will quote one instance only,—when two of the largest United States ships of war, the "Kearsage" and the "Alabama," came alongside the Northern wharf on the 28th December, 1902, and took in 1,691 tons of coal in 16 hours. While this coaling was going on there were also merchant steamers in the harbour being attended to. This points to the fact that St. Lucia is pre-eminently the place for the head-quarters of the steamship company which has the contract for running His Majesty's mails to this part of the Dominion beyond the Seas. Although the accommodation now is good, it can be vastly improved by expenditure of more money, but, unfortunately, that is not forthcoming at present.

3. Turning to the works undertaken by the Military Department and their relation to the prosperity of the Colony, it must be observed that these works attract numerous artizans from the neighbouring Islands, who earn good wages and spend a large proportion of their earnings in the Island, and, as all food-stuffs, &c., have to pay a fairly high rate of duty the larger the consumption is the greater the Customs Revenue will be, which fact being self-evident, no further comment is required.

4. As regards cultivation of cocoa, it is encouraging to be able to report that during the year, estates were taken up by resident proprietors who invested a certain amount of ready money in their property and are looking after their interests themselves, and as there is ample scope for investment of money, with a certainty of a very good return, in plantations here, it is sincerely to be hoped that outside capitalists will turn their attention in this direction.

5. As regards the pressing necessities of the place, they are, briefly, the want of more roads and bridges, the repair of existing ones, and further harbour improvements. Under circumstances which existed in 1902, and which it is sad to relate exist at the present date, all produce is brought to Castries for export (the factories at Cul de Sac, Roseau, and Vieux Fort, excepted), and this is brought to a certain extent by head loads from the Windward parts of the Island, a primitive method of transport which I have seen in the West African Colonies but not elsewhere; the produce from the Leeward side of the Island is brought up by coasting steamer, for which the Government pays a subsidy of £1,000 per annum, and by droghers. There is no doubt whatever that to make the place prosperous, and this could easily be done, good roads

and bridges must be provided and existing roads and bridges repaired, and when repaired kept in good order; their present condition is deplorable.

6. General depression of trade is no doubt answerable for the falling-off of trade in the Island during 1902,—and so is the existence of small-pox in the neighbouring Islands; but what is required here at the present time is money to, in the first place, pay for urgent repairs to existing roads and bridges to open up the country, and by that means induce capitalists to invest their money here; then after roads, &c., have been provided, to further improve the harbour.

None of these works can, however, be undertaken owing to want of funds, as every available farthing has to be put by for the very desirable purpose of providing a Reserve Fund of £25,000 to meet any contingencies which may arise in the future, and until this £25,000 is amassed works of pressing necessity in the Island have to stand aside.

MARK KERR,

Acting Colonial Secretary.

No. 436.

GRENADA.

(For Report for 1902, *see* No. 404.)

GOVERNOR SIR R. B. LLEWELYN to MR. LYTTELTON.

Grenada,
6th October, 1904.

SIR,

I HAVE the honour to forward the report on the Blue Book of the Colony of Grenada for the year 1903, prepared by the Colonial Secretary.

I have, &c.,
R. B. LLEWELYN,
Governor.

---

875 Wt 22378 11/1904 D & S 3 19536

BLUE BOOK REPORT FOR THE YEAR 1903.

FINANCIAL.

Revenue and Expenditure.

The revenue and expenditure of Grenada for the last five years were as follows:—

Year.	Revenue.	Expenditure.
	£	£
1899	68,757	59,359
1900	70,363	62,718
1901-2	70,075	65,490
1902-3	72,802	68,669
1903-4	70,260	70,101

2. In Tables A and B in the Appendix will be found the usual comparative statements of the details of the revenue and expenditure of the last two years. It will be seen from these that the revenue of the last year was less than that of 1902-3 by £2,542, and that the decrease was not due to any marked falling off in the yield of the ordinary sources of revenue, but to decreased receipts (£853) from sale of stamps in the Post Office, (the previous year's receipts having been abnormal in consequence of a new issue of stamps), to a shortage of £951 under Water Supplies, caused by a transfer in the preceding year of balances of former Water funds, and to the Imperial Grant-in-Aid of the Agricultural Department being £462 less than in 1902-3.

3. The expenditure for 1903-4 will be seen to be £1,432 more than in the preceding year, the principal cause of the increase being the heavy outlay incurred in the effort to keep out small-pox, which was epidemic in neighbouring colonies, and in dealing with cases which occurred in the Colony, where, fortunately, it was promptly suppressed. On the services connected with this £802 was spent. Increased expenditure on roads also swelled the total, it being found absolutely necessary to increase the grants for upkeep of the main roads. On the other hand the expenditure on extraordinary public works was £2,222 less than in the year before, and considerable decreases likewise appear under Post Office and Miscellaneous Services, with the result that the expenditure was kept within the revenue of the year.

Assets and Liabilities.

4. The total of the colonial assets at 31st March, 1904, was £39,637, and the liabilities were £16,988, showing a balance in favour of the Colony amounting to £22,649, as compared with the similar balance of £22,199 with which the financial year opened. Details of the assets and liabilities are contained in Table C in the Appendix, and among the assets will be noticed £12,269 for the Colony's Reserve Fund and £4,904 for Carriacou Land Settlement Fund, which is practically an investment of a part of the reserve fund in land.

Public Debt.

5. The public debt is £123,670, in four per cent. inscribed stock, and a sinking fund is provided for its final extinction in 1942 by contributions from general revenue at the rate of one per cent. per annum of the nominal value of the stock. The fund is held by the Crown Agents as trustees and invested by them; at 31st March, 1904, it amounted to £14,391.

Town Boards' Finances.

6. The revenue and expenditure of the Town Boards for the last five years are given in Table D in the Appendix, and their accounts for the last financial year all closed with a surplus of assets. The Boards are indebted to the Government in the following accounts:—

St. George's	£6,187
Grenville	1,110
Sauteurs	1,100
Victoria	1,384
Gouyave	3,250
Total	£13,031

These debts are provided for either by sinking funds paid over to the Government or by annual instalments, and the law gives the Government the power to surcharge to town funds any unpaid loan charges and to levy special rates for their payment.

TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and Exports.

7. The trade of the Colony according to the returns furnished by the Customs Department was in the last five years as follows:—

Year.	Imports.	Exports.
	£	£
1899...	226,828	267,738
1900...	232,790	311,681
1901...	246,567	303,934
1902...	239,108	310,602
1903...	235,440	283,565

The import trade of 1903 was, therefore, only slightly less than in 1902, but the value of the exports fell off by £27,000.

8. Five tables, marked E to I, are included in the Appendix to illustrate the trade of the Colony in the quinquennial period shown above. Table E shows the figures arranged according to the usual statistical classes, F gives the direction of the trade, G the volume of the trade with foreign countries, H compares the values of the principal articles imported in 1902 and 1903, and I is a comparative statement of the values of the chief exports of colonial produce in the last five years.

9. Taking the figures of the four years 1900-3 in Table F, the proportions in which the Colony derived its imports from the three sources shown were as follows:—

—	1900.	1901.	1902.	1903.
	Per cent.	Per cent.	Per cent.	Per cent.
United Kingdom	45	46	44	48
British Colonies	25	24	21	18
Foreign Countries	30	30	35	34

There was, therefore, in the year under review an improvement as regards imports from the mother country, while those from British Colonies continued to decrease, and those from foreign countries were not quite so high as in 1902. The table shows that the United Kingdom receives the largest share of the exports.

10. It is satisfactory to notice the increase in the import trade with Canada, the figures for the last four years being as shown below:—

Year.	Amount.
	£
1900	7,946
1901	11,263
1902	9,140
1903	15,686

The principal items in 1903 were:—

Timber and shingles	£10,593
Wheaten flour	1,246
Butter	882
Salt fish	815
Oats	684
Ropes and cordage	483
Peas	171
Oilmeal	167

The export trade is, unfortunately, insignificant.

11. The bulk of the Colony's foreign trade was with the United States of America, which sent to Grenada 96 per cent. of her imports from, and received 75 per cent. of her exports to, foreign countries in 1903. The value of our exports to the United States of America was the highest yet recorded, £51,971. The rapid increase of the cocoa trade with the great republic is of satisfactory import to Grenada; in 1903 the value was £40,291, as compared with £22,959 in 1902, and £4,752 in 1896. The export thither of nutmegs and other spices shows a corresponding tendency to increase, the value in 1903 being £8,296, as against £3,252 in 1902, and £1,276 in 1896. In the increased consumption of cocoa and spices by the United States lies one of the surest guarantees of a future of prosperity for Grenada.

MINES, MANUFACTURES, AND FISHERIES.

12. Muscovado sugar, rum, and ice are manufactured locally, but there is rarely any export of the first two, the entire output being usually consumed in the Colony. In 1903 the export of a certain quantity of ice began, 245 tons being sent to St. Lucia. An excise duty being levied on rum, there are returns available of the quantity made, and the figures for the

last six years are subjoined, but there are no data from which to compile an estimate in regard to the other two articles.

Year.	Quantity made.	Excise Duty paid.
	Gallons.	£
1898	32,662	12,478
1899	48,477	10,605
1900	47,942	11,327
1901	53,204	11,669
1902	45,054	11,853
1903	43,314	12,723

13. There are no mines, and fish is only caught on the coasts for daily consumption. Whales and turtle abound in their seasons, and Carriacou is noted for a fine oyster which grows on the mangroves in a large land-locked harbour there.

AGRICULTURAL INDUSTRIES.

14. The crop of cocoa continues to show a satisfactory increase, as the figures below demonstrate:—

—	Bags.
Average for 5 years ended 30th September, 1901	53,379
Crop for the year " " 1902	61,285
" " " " 1903	63,019

A bag averages about 180 lbs. Prices in the London market were not so good as usual until the month of August, when they advanced, and remained satisfactory till the end of the year. A feature of the year's transactions was the attention paid by purchasers to the finer grades of cocoa, which indicates that the greater care necessarily bestowed on preparation in such cases meets with appreciation. Grenada cocoa has in the past suffered much in consequence of the absence of such care in the case of cocoa grown by small proprietors, and it is hoped that the lesson is being gradually borne in upon them that in this, as in all other business details, success in these days of competition can only be secured by painstaking labour.

15. That the days are gone when cocoa paid without special effort on the part of the planter is evident to anyone comparing the statistics of production last year with those of the eighties. Fortunately, the world's consumption is not lagging behind, and an estimate which has been published shows that

242,000,000 pounds were consumed in 1903 as compared with 194,000,000 pounds in 1899, an increase of about 25 per cent. In the United States of America the consumption in the same period is shown to have increased from 35,250,000 pounds to 56,500,000, which is encouraging to the cocoa-growing islands in the West Indies.

16. The nutmeg and spice crop shows the same tendency as cocoa to increase in quantity. The average annual export in the five years ended 31st December, 1901, was 4,624 cwts., the export in 1902 was 6,839 cwts., and 1903, 7,959 cwts. Nutmegs, of course, form the bulk of this, the figures being 5,999 cwts. in 1902 and 6,944 cwts. in 1903.

17. Steady increase is also shown in the cultivation of cotton, which is the staple product of the island of Carriacou. The average annual output for the five years 1897-1901 was, raw cotton, 2,095 cwts., cotton seed, 4,537 cwts.

—	Raw Cotton.	Cotton Seed.
	Cwt.	Cwt.
In 1902 it was	2,212	4,536
In 1903 „	2,688	6,757

Under the conditions now existing in Carriacou, this product should continue to increase in quantity; not only is encouragement offered to cultivators by the demand from the mother country for cotton grown within the Empire, but the land of the island is in process of sub-division and sale by Government and the settlement of a body of peasant proprietors upon it is steadily proceeding.

Carriacou Land Settlement Scheme.

18. It may be of interest at this point briefly to recount the action taken and progress made with the scheme for the settlement of peasant proprietors in Carriacou in regard to which definite action began last year. Two estates have so far been purchased and have been surveyed and cut up into allotments. In this manner 244 saleable agricultural lots, covering an area of 714 acres, have been obtained, their assessed sale value being £5,909. 51 building lots for extension of the town were also obtained, valued at £172, making a total sale value of £6,081.

19. At 31st August, 1904, all but 25 of the agricultural lots and 19 of the town lots had been sold, and there had been received from the allottees in cash on account of the purchase money £1,660
The value of those unsold is 892
The balance, payable in 12 annual instalments, bearing interest at five per cent., and secured on the land itself, is 3,529

£6,081

The remaining lots, there is every reason to believe, will be taken up by the end of the current year.

20. The expenditure at the same date amounted to £6,378, of which £5,493 is represented by the purchase money of the properties and the cost of survey and sub-division. The balance, £885, was spent in repair of houses, repair and erection of cotton ginneries, clearing and fencing of pasture lands, construction of roads, and pay of officers. As against the total expenditure, £1,793 has been received, making the net outlay at the above date £4,565.

21. The actual value to the Colony of the investment made is not adequately represented by the figures given above. Apart from the benefit to be derived by the community from the settlement of a valuable class of proprietors on land hitherto unprofitable, important property, which has been reserved for public uses, has accrued to the Government from the acquisition of the estates. This property and its approximate value, as improved by the expenditure referred to above, may be thus described:—

Quarters for public officers	£500
Reservoir at Harvey Vale	250
Cotton ginneries	550
Pastures	484
Recreation ground, adjacent to town ...	60
Experimental plot for agricultural purposes	50
Building sites	82
Other reserves, such as forest, cemeteries, &c. (nominal values)	350
	£2,326

22. It may, therefore, be claimed that, so far at all events, the scheme has been a complete success, and with it a new era has opened for Carriacou. On the 1st of October, 1904, an

Ordinance came into operation which constitutes Carriacou and the adjacent islets (the largest of which, Petit Martinique, has a thriving community of about 900 souls), a district of the Colony and vests its local administration in a Resident Commissioner. The first holder of this office, Mr. Whitfield Smith, besides possessing considerable practical experience in the West Indies, has the advantage of special training in the Imperial Department of Agriculture, of which he was for some years the Travelling Superintendent, and is devoting himself with zeal and energy to the development of his important trust.

SHIPPING.

23. The total tonnage of the shipping entered and cleared at the ports of the Colony in the last five years is as follows:—

Year.	Entered.	Cleared.
	Tonnage.	Tonnage.
1899	232,437	231,611
1900	222,899	216,110
1901	267,972	275,770
1902	287,000	290,035
1903	280,862	288,328
Average	258,234	260,371

24. A detailed comparison is made in Table J in the Appendix between steamers and sailing vessels and their several nationalities in the years 1902 and 1903. British vessels, it will be seen, maintain their predominance, forming, in 1902, 97, and, in 1903, 96 per cent. of the total tonnage inwards and outwards. The appearance of German steam tonnage in the table is explained by the arrival of tourist steamers from the United States of America in the winter months; and in 1903 there were two French steamers at St. George's, a mishap having occurred on the south coast of the island to the mail steamer "St. Germain" on the 10th April, which compelled her to put in to St. George's for repairs, where the s.s. "Salvador" came to her assistance on the 13th of April.

LEGISLATION.

25. The legislation of the year was not of much importance. Nine Ordinances were passed, the principal of which were (1) a consolidation, with amendments, of the law relating to medical officers, (2) an Ordinance providing for the formation of Volunteer Reserve Corps, and (3) an Ordinance creating the office of Sub-Inspector of Police and Excise. Provision was also made for the control of wireless telegraphy, and for giving effect locally to His Majesty's "Foreign Marriages Order in Council, 1903."

EDUCATION.

Primary.

26. There are two classes of primary schools—Government, entirely supported from colonial revenue, and Grant-in-Aid, receiving contributions from public funds. The system in force is one of payment by results, grants being paid to teachers from the Colonial Treasury monthly upon the certificates of the school managers (who are usually the clergy of the several religious denominations), based upon the educational results of the schools as shown by an annual examination by the Inspector, who is a Government Officer. Managers are also paid a grant at the rate of one shilling per annum for each pupil who attends school on not less than 100 days in the year, this grant being intended to assist them in supplying school furniture and apparatus. They are further allowed to receive the whole of the school fees paid by the pupils; these are, however, but indifferently collected. The administration of the system is under the control of a Board, composed of equal numbers of Roman Catholic and non-Roman Catholic members, the Governor presiding, but having only a casting vote.

27. In the comparison between the figures for the last two years, made in Table K in the Appendix, it is noteworthy that an increase is shown for the year under review under every head but those for "school fees" and "voluntary contributions." Under the former head it will be seen that while the Anglicans, with eight schools, collected £138, and the Government schools, nine in number, £123, the Roman Catholics, with 21 schools, collected no more than £105. Such diversity of practice in a small Colony cannot be productive of good results: if school fees are correct in principle the law should be evenly enforced in all classes of schools.

Secondary.

28. The figures returned in respect of the schools of secondary education for the last two years are compared in Table L in the Appendix. About one-half of the total expenditure is pro-

vided by grants from general revenue; in the case of the Grammar school for boys more than one-half. The Convent school appears to be in a flourishing condition, but the same cannot be recorded of the others. The results gained do not compensate the taxpayers for the amounts granted, and a change is necessary in the interests of all concerned.

GOVERNMENT INSTITUTIONS.

29. The principal statistics of interest in connection with the hospitals and asylums in the year 1903 are given below:—

Institution.	Number at 1st January.	Admitted during the year.	Daily Average.	Cured.	Relieved or not improved.	Died.	Remaining at 31st December.	Cost of Institution.
								£
Colony Hospital	74	857	78	468	332	70	61	1,976
Yaws "	51	138	55	132	—	1	56	604
St. Andrew's "	7	97	10	56	31	5	12	484
Carriacou "	18	118	13	104	22	6	8	460
Lunatic Asylum	126	22	122	12	—	15	121	1,753
Pauper "	41	25	38	—	11	22	33	395

30. The condition of the Colony Hospital was satisfactory throughout the year, and improvements in the water supply and sewerage system were effected. The surgical operations performed were 93 in number, or 26 more than in 1902. The amount received from paying cases was £141, an increase of £34 on the preceding year. At the Yaws Hospital the number of cases treated continued to increase, the figures being as follows:—

Year.	Patients.
1901	150
1902	163
1903	189

As in previous years, the majority of the patients came from the parishes adjacent to the hospital. In 1903 arrangements were made for the reception in future of the full number of patients that the buildings can hold.

31. The St. Andrew's Hospital was closed for a month during the year for painting. The cash receipts at the dispensary amounted to £137, and 3,864 free prescriptions were also compounded.

32. Of the admissions to the lunatic asylum, 5 were from St. Lucia and 3 from St. Vincent, and at the end of the year 56 of the 121 patients were Grenadians, 38 were from St. Lucia, and 27 from St. Vincent. It is hoped that it may be possible before long to construct an asylum in St. Lucia so as to relieve the pressure in the Grenada Asylum, which is only capable of properly accommodating the lunatics from Grenada and St. Vincent.

Savings Bank.

33. From the subjoined statement of the work of the bank in the last five years it will be seen that although the balance at the close of 1903 was maintained at the average amount, the transactions of the year were smaller than in any year of the period.

Year.	Number of Depositors at 31st December.	Amount of Deposits (including interest capitalised).	Amount of Withdrawals.	Balance to credit of Depositors at 31st December
		£	£	£
1899	1,215	9,474	7,000	10,925
1900	1,387	9,379	9,136	11,168
1901	1,355	8,603	8,561	11,211
1902	1,847	9,184	9,378	11,417
1903	1,544	7,480	7,674	11,658

Of the balance of £11,658 at credit of depositors on 31st December, 1903, £8,500 was invested in Colonial securities, and £2,500 was on deposit with the Colonial Bank at 3 per cent. interest.

JUDICIAL STATISTICS.

Police.

34. The police force consists of a European Chief and Sub-Inspector and 72 West Indian non-commissioned officers and privates. It is maintained on a semi-military footing and armed with Martini-Henry rifles. In addition to the discharge of ordinary police work, certain of the non-commissioned officers are told off for excise duty, and the headquarters' detachment is also entrusted with fire brigade duties in St. George's.

Prisons.

35. 250 persons—169 male and 79 female adults and 2 juveniles—were committed to prison in 1903, being 62 more in number than in 1902, and the daily average was 57·6 as against 52 in 1902. The cost of the prisons was £1,274, and the value of the remunerative work done was £1,281. In the month of July a virulent outbreak of dysentery occurred in the male prison. 16 prisoners were attacked in a very short period, and the symptoms were so violent and the occurrence so extraordinary that a Medical Board was at once appointed to investigate the matter thoroughly. The Board reported that they found the sanitary arrangements and conditions perfect and were quite unable to account for the outbreak. A separate ward was set apart at the Colony Hospital without delay and nine of the cases transferred to it; two of these patients succumbed to the disease.

36. In May, 1903, a system of gratuities to convicts on their release, based upon the English system, was brought into operation. The superintendent reports that it has proved an "excellent incentive to industry, and . . . . . is noticeably appreciated by the prisoners."

37. The new female prison, adjoining that for males on Richmond Hill, was completed during the year, and opened as a prison on the 1st January, 1904, thus removing the dilapidated structure which has for about two centuries been known as the "Common Gaol" of the Colony.

CRIMINAL STATISTICS.

38. In Table M, in the Appendix, the statistics relating to crime in 1903 are compared with those of 1902, and with the averages for the three years preceding 1902. A general increase in numbers in the year under review is apparent. In regard to the cases brought before magistrates, this is due

simply to increased activity of the police in prosecuting for breaches of the Vaccination and Licence Laws; the increase in the Supreme Court cases is traceable to a ruling of that Court, that certain cases of petty larceny, formerly dealt with by the magistrates, must, as the law stood, come before the higher Court. This ruling has necessitated an amendment of the law, which has been effected in the current year.

39. The table shows a diminution in the number of cases of prædial larceny, but it is not sufficiently well marked to be taken as an indication of a permanent reduction.

VITAL STATISTICS.

Population.

40. The natural increase since the Census of 1901 is shown at 31st December, 1903, as being 3,324; the population at that date is, therefore, estimated to be 66,762, of which 31,675 were males, and 35,087 females. Calculated on the mean estimated population in the year under review, the birth-rate per thousand was 42·7, and the death-rate 25·71.

41. On 1st January, 1903, the Marriage Ordinances of 1900 and 1901 came into operation, effecting a much-needed improvement of the marriage law of the Colony, and securing a system of registration, centralised in the office of the Registrar-General, and providing also for district records. 309 marriages were registered in the year, the average for the preceding decennial period being 398.

Public Health.

42. No disease but whooping-cough can be said to have been epidemic in 1903, but the death-roll was nevertheless the highest on record, 1,716 deaths being registered, as against an average of 1,283 for the previous decennial period. The chief causes of death in the last five years are shown below:—

Disease.	1899.	1900.	1901.	1902.	1903.
Diarrhœa	135	95	109	83	215
Dysentery	47	45	297	130	145
Fevers	71	80	75	115	110
Enteritis	33	63	71	76	128
Phthisis	49	77	66	67	59
Bronchitis	25	27	28	15	47
Pneumonia	18	34	17	28	32
Influenza	1	48	3	3	9
Whooping Cough	36	—	1	—	88
Cardiac Disease	43	46	21	51	46

43. The health of the Colony was disturbed during the year, though without any deaths resulting, by the introduction of a mild form of small-pox, which was epidemic in Trinidad. In Grenada itself, the disease was promptly grappled with and stamped out; the first case occurred on the 13th of April, and the last was discharged from isolation on the 24th of June, 20 cases, altogether, having been treated. In Carriacou and Petit Martinque, however, owing to regrettable laxity of the local authorities in that part of the Colony, the disease obtained a stronger footing, and numerous cases occurred, 73 of which were isolated; it finally disappeared by the end of July.

Climate.

44. The principal meteorological statistics of the year are as follows:—

Rainfall—		
North of Island		96·10 inches
Centre of Island		153·84 „
South of Island		78·93 „
Carriacou		53·22 „
Relative humidity (mean) ...		76·1 per cent.
Mean temperature	maximum	84·5 degrees
	minimum	74·4 „
Mean pressure		29·984 inches
Days of rain		232

The rainfall was of the average quantity, although the rainy season was somewhat late in its commencement. The first thunder-shower occurred on 18th May, but it was not until the 11th of June that the first heavy rains fell. On 30th of April the highest shade temperature for ten years was recorded at the Meteorological Station on Richmond Hill—92°·4.

Sanitation.

45. The sanitary administration of the Colony comprises a General Board of Health, consisting of the Governor and the other Members of the Executive Council, and Local Health Authorities, one for each district, consisting of the District Medical Officers, the Chief of Police, and other official and unofficial members. Non-commissioned officers of police are detailed as district inspectors, and their reports, in a prescribed form, are required to be laid by the chief before fixed monthly meetings of the authorities. During the outbreak of small-pox, which occurred in 1903, the health authorities did good service and demonstrated their necessity and usefulness.

POSTAL AND TELEPHONE SERVICES.

Post Office.

46. A comparison of the Post Office statistics of 1902 and 1903, shows that the business of the Department continued to increase, except in the matter of money orders, where a slight decrease is shown, due no doubt to the quarantine difficulties experienced by the people during the year in their transactions with neighbouring colonies.

— —	1902.	1903.
Letters and post cards	440,934	470,173
Newspapers, books, &c.	147,628	148,915
Parcels	6,147	8,431
	£	£
Money orders issued and paid	20,808	20,227

The bulk of the parcel post business is transacted with the mother country, which claimed 36 per cent. of the total in 1903.

47. The Post Office is in a flourishing condition, and improvements are being steadily effected by the present Colonial Postmaster. In 1903, two more district offices were created, and the interior arrangements of the principal office extended and simplified by structural alterations.

Telephone Department.

48. The revenue in the financial year amounted to £1,373, and the expenditure (including £226 for loan charges) to £1,339. £516 was also spent on re-construction, which was steadily prosecuted during the year with satisfactory results. At 31st December, there were 190 renters' lines connected to the exchanges, using 216 instruments, "switched" telephones being much in vogue in the island owing to special conditions.

MILITARY FORCES AND EXPENDITURE.

49. There is no military force in the Colony. There is legal provision for the enrolment of a volunteer corps, and a further law was passed in 1903, enabling volunteer reserve corps to be formed. It has not been found practicable to form any such corps as yet, but the Imperial Government has kindly supplied the necessary Martini-Enfield rifles and equipment, and a rifle-range is being got ready, with a view to early action.

The police force is drilled and trained in the use of arms, and the Martini-Enfield weapon will be adopted for their use as well as by the volunteers.

GENERAL REMARKS.

50. A fine bridge was completed at Belmont, St. Patrick's, in connection with the diversion of a section of the main road, the object being to replace, by one crossing of the River Antoine, a bridge and two causeways destroyed by the flood of September, 1895. A very satisfactory result has been secured, at a cost of £970, and both crossings of this dangerous river, dividing the parishes of St. Patrick and St. Andrew, are now spanned by fine bridges, making traffic secure and comfortable.

51. The hurricane in Jamaica and the Cayman Islands on the 11th of August, elicited the sympathies of the people of Grenada; a grant of £200 was made from public funds, and by popular subscriptions £314 more was raised and remitted in aid of the sufferers.

52. The office of Attorney-General, vacant since September, 1902, was filled in February, 1903, by the appointment of Mr. Ormond Hazell, Attorney-General of St. Vincent, but he resigned it at the end of the following month, and it was finally conferred on Mr. D. T. Tudor, who arrived from England on the 21st of July.

53. Mr. Norman Lockhart, Assistant Treasurer of St. Kitts-Nevis, succeeded on the 16th of September, as Colonial Treasurer, Mr. C. Falconer Anton, who retired on pension.

54. On the 1st of April a new public seal came into use under Royal Warrant. The device includes the recently adopted badge of the Colony, viz., the vessel of Columbus, in the foreground, approaching the island, shown in the backgound, with the motto, "Clarior e tenebris," on a scroll below.

55. This motto faithfully describes the fortunes of the Colony, which after much suffering entailed by the decadence of the sugar industry, has indeed emerged from her troubles more prosperous than ever before. The high tide of prosperity still continues, but, with a rapidly increasing population, and with the greater portion of the land of the island absorbed by permanent cultivation of products, which are bound to be subject in the future to some vicissitudes, it cannot be said that the sky is free from clouds.

EDWARD DRAYTON,
Colonial Secretary.

Grenada,
1st October, 1904.

875 Wt 22378 12/04 D & S 5 19924

REPORT ON THE BLUE BOOK FOR 1903.

I.—FINANCIAL.

(A.) Revenue.

The general revenue for the financial year ended on the 31st March, 1904, amounted to £66,008 13*s.* 1*d.*, inclusive of £1,683, the Imperial Grant-in-Aid of Agriculture.

The revenue for the previous five years was as follows:—

1898	£67,628
1899	71,479
1900	72,108
1901-2	67,365
1902-3	72,193*

The revenue for the financial year was, therefore, less by £6,185 than that for the previous year, and was £1,368 below the estimate, which was £67,376. The decrease, as compared with the previous year, was to a large extent nominal, as the receipts for 1902-3 were abnormally inflated by the Imperial grant of £3,000 in aid of the sugar industry, and by a transfer of £1,144 from the proceeds of sale of the reclamation lots. These two items account for £4,144 of the decrease referred to.

In revenue from ordinary local sources there were increases under various heads amounting to £2,956, and decreases under other heads amounting to £5,194, the net result being a decrease of £2,238. As will be seen from the following statement, the principal decreases occurred under head 2, "Port, Harbour, &c., Dues," and head 3, "Licenses, &c."

* Includes the special Imperial Grant of £3,000 in aid of the sugar industry.

Comparative Statement of the Revenue of the Colony for the Year ended 31st March, 1904.

9. Repayment of Loans	388 10 0	571 0 0	206 0 0	365 0 0	—
	65,937 4 4	64,325 13 1	66,563 3 1	2,956 4 3	5,193 14 3
10. Part proceeds of Sales of Reclamation Lands	—	—	1,143 17 3	—	1,143 17 3
12. Imperial Department of Agriculture—Grant-in-Aid	1,347 0 0	1,683 0 0	1,486 0 0	197 0 0	—
13. Imperial Grant-in-Aid of Sugar Industry	—	—	3,000 0 0	—	3,000 0 0
14. Interest on Investment of Baron Trust Money	92 0 0	—	—	—	—
Total	67,376 4 4	66,008 13 1	72,193 0 4	3,153 4 3	9,337 11 6

It will be observed that the receipts from Customs duties were £1,010 above those of the previous year. During the earlier part of the year it seemed likely that there would be a serious decrease under this head, and, as a matter of fact, the figures given were only attained during the last two months of the financial year.

The increases shown under the heads "Interest" and "Repayment of Loans" are nominal, being due to the inclusion in the accounts of the year of 14 months' transactions by the Crown Agents, instead of 12, as usual.

The collection of the road tax was again very unsatisfactory, and amounted only to £1,205, or £95 less than the estimate of £1,300, and £129 less than the receipts of the previous year. A Finance Committee of the Legislative Council, appointed during the year, has made recommendations for improving the collection of the tax which are under consideration; but in view of the "floating" nature of the population, especially in and around Castries district, and the ease with which defaulters can evade the officers charged with the collection, a certain proportion of the tax will probably remain uncollected, although a substantial improvement of the present state of affairs should be possible.

The decrease shown under head 3, "Licenses, Excise, &c.," as compared with the previous year, is due to an extraordinary item of £3,120 for sale of 10*s.* revenue stamps included in 1902-3.

(B.) Expenditure.

The total expenditure for the year was £70,692, of which £63,874 was on account of general services, and £6,818 on those of a special nature, *i.e.*:—

Public Works Extraordinary ...	£5,449
Agriculture	1,369

The expenditure for the previous five years was as follows:—

Year.	Amount.
	£
1898...	60,975
1899...	63,821
1900...	64,750
1901-2	67,486
1902-3	69,408

The following statement details the expenditure of 1903-4 under the heads of the estimate:—

Comparative Statement of the Expenditure of the Colony for the Year ended 31st March, 1904.

	62,360 10 1	63,874 2 8	59,462 5 2	9,078 16 5	4,666 18 11
23. Public Works Extraordinary	5,240 11 7	5,448 18 2	5,531 7 0	—	82 8 10
	67,601 1 8	69,323 0 10	64,993 12 2	9,078 16 5	4,749 7 9
24. Imperial Grant-in-aid of Sugar Industry ...	—	—	3,000 0 0	—	3,000 0 0
Imperial Department of Agriculture ...	1,445 7 10	1,368 14 5	1,414 7 11	—	45 13 6
Total	69,046 9 6	70,691 15 3	69,408 0 1	9,078 16 5	7,795 1 3

The total estimated expenditure was £67,239, and the actual expenditure therefore exceeded the estimate by £3,453, and the revenue by £4,683. Against this excess there is, however, to be placed the cost £3,077 of the site for and the erection of the Coal Storage Building in Castries for the use of the Admiralty, an amount which, I may record, has now been repaid to the Colony.

The excesses under heads 1 and 2 are, like the excesses under heads 8 and 9 of Revenue, due to the inclusion in the accounts of the year of 14 months' transactions by the Crown Agents, instead of 12 months', as usual.

(C.) Assets and Liabilities.

The surplus assets of the Colony amounted at the 31st March, 1904, to £18,788, arrived at as follows:—

Surplus at 31st March, 1903	£21,547
Less amount of the excess of expenditure over revenue for 1903-4	4,683
	£16,864
Interest received on investments of surplus funds	1,924
	£18,788

The details of the assets and liabilities are given below:—

(D.) Surplus Funds.

The investments held on this account at 31st March, 1904, amounted to £22,774, against £17,215 on the same date in the previous year.

It is to be noted, however, that the statement of the Colony's assets and liabilities showed a surplus of only £18,788. The difference is due to the fact that a local investment of the sum of £2,358, received from the sale of the former work-yard site, was realised during the year for remittances to England on general account; and on the 31st March, 1904, the expenditure of £3,077 in connection with the Coal Storage Building for the Admiralty, which had prior to that date been treated as an "Advance" account, was charged as general expenditure. The position is being corrected during the current year.

(E.) Public Debt.

At the 31st March, 1904, the public debt stood at £167,880, as compared with £170,880 at the same date in the previous year. Of the former amount, the Immigration Fund is responsible for £11,100, and the Castries Town Board for £17,000.

Of the total debt, £82,400 is due to debenture holders, receiving rates of interest varying from 4½ per cent. to 6 per cent. per annum; and £85,480 to holders of inscribed stock, receiving interest at 4 per cent. per annum.

(F.) Towns and Villages.

The following statement shows the revenue and expenditure for the last five years of the towns and villages of the Colony, and their indebtedness at the 31st March, 1904:—

—	1899.		1900.		1901–2.		1902–3.		1903–4.		Indebtedness at 31st March, 1904.	Balance at 31st March, 1904.

* For a Water Supply. The Loan was made from Savings Bank Funds, and is repayable in 27 years from the 1st July, 1902.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

(A.) Imports and Exports.

The value of the imports in 1903 was £351,086, and of the exports £169,489, including bunker coal supplied to steamers to the value of £63,506.

The imports and exports for the last five years were as follows:—

Year.	Imports.	Exports.		Total.
		General.	Bunker Coal.	
	£	£	£	£
1899	282,963	98,574	72,095	170,669
1900	403,597	104,881	124,555	229,436
1901	382,652	77,871	110,196	188,067
1902	326,324	73,458	84,295	157,753
1903	351,086	105,983	63,506	169,489

The values of the chief articles imported in 1903 are given below, as also those for the previous year:—

Articles.	1903.	1902.	Increase + or Decrease −
Class 1.	£	£	£
Live animals—			
Cattle	5,998	7,029	1,031 —
Horses and Mules	1,460	376	1,084 +
Sheep	1,640	1,688	48 —

Of the imports in 1903, goods to the value of £233,559 came from the United Kingdom; £34,409 from British Colonies, and £83,118 from foreign countries.

The fluctuations disclosed by the foregoing table call for no special comment, and are probably due to the ordinary course of trade.

The principal items of export (the produce of the Colony) and their values for 1903 and 1902 are given below:—

Articles.	1903.		1902.	
	Quantity.	Value.	Quantity.	Value.
	Lbs.	£	Lbs.	£

Pimento Sticks	10,470	554	15,996	446

The rise in the markets of the United Kingdom of the ruling price of sugar, due in part to the effect of the Brussels Sugar Convention, was fully taken advantage of by the local planters, and for the first time for many years almost the whole of the sugar crop was sent to England, instead of to the United States.

(B.) Mines, Manufactures, and Fisheries.

The only mine, if it can be so called, is the Sulphur one at Ventine, in the Soufrière district. Intermittent attempts to work this place have been made for years, but with little success and still smaller profit. An attempt is now being made, I understand, to ship the material in the crude state, and in this direction a greater measure of success may perhaps be looked for than has attended the previous experiments to utilise this natural product.

A fairly large number of boats is engaged in fishing around the coast of the Island, but solely for the purpose of supplying the local market, and no attempt is made at preserving for export purposes.

In addition to the quantity exported, the sugar and rum consumed in the Colony are almost entirely the produce of the home factories and distilleries.

Ice for local consumption is the only other item of manufacture.

(C.) Agricultural Industries, &c.

The production of sugar is, of course, still the principal industry of the Colony, though cocoa now takes the first place among the exports of island produce, and it seems probable that, with the prices now obtainable in the markets of the United Kingdom, the cultivation of the sugar-cane will at least be increased, if not largely extended.

The cocoa crop was the largest on record, and the following figures illustrate the progress which is being made in the cultivation of this product:—

Year.	No. of Bags Exported.
1899	4,412
1900	6,490
1901	3,285
1902	7,467
1903	8,571

It should be explained, with regard to the exports of 1901, that part of the crop of that year was not sent from the Colony until 1902, as on account of the Island being quarantined during the former year, steamers were chary about calling here.

There is almost an unlimited area suitable for the growth of cocoa in this Colony, and it is to be hoped that the impetus which has been given to the cultivation will result in its extension in the future.

During the year under review, the question of the cultivation of cotton has received a good deal of attention, and has been the subject of much discussion at the meetings of the St. Lucia Agricultural Society; but for a number of reasons our planters have not seemed disposed to regard the revival of the industry in the Colony with favour. One of the difficulties which presented itself was the selection of a variety of cotton to suit the varying conditions of soil in different localities. The cultivation is, however, now being more readily taken up, and it is estimated that at least 500 acres will be put under cotton during the current year. The efforts being made by the British Cotton Growing Association and the Imperial Department of Agriculture will no doubt result in this area being appreciably increased.

That cotton will grow in St. Lucia is, I believe, beyond dispute, and this is borne out by the quantity of wild cotton, a survival from former days, which is to be seen practically over the whole of the Colony.

Botanic Station.

Most of the experimental work formerly carried on at the Botanic Station has been transferred to the Agricultural School at "Union," which was opened in 1901. The station, however, still provides a pleasant place of resort for the people of Castries and visitors to the Colony, and its useful features in a practical direction have not been entirely superseded by the institution at "Union," as evidenced by the fact that during 1903 economic plants to a number over 10,000 were either sold at, exchanged, or issued free of charge from the station, as were over 2,000 decorative plants and cuttings.

Agricultural School and Experimental Station.

In the general school work and elementary science lessons, the progress made is stated to have been satisfactory, and as most of the pupils are now in their third year at the school, they are showing more interest in their work and studies.

Examinations are held half-yearly; that held in June, 1903, resulted in the pupils being awarded an average percentage of 65·2 of the marks obtainable, the highest number awarded being 81 per cent. The same average in respect of the following December examination was 58·5. Low as these figures are, they nevertheless represent, in view of the difficulties which have had to be overcome, valuable work on the part of the Curator.

Discipline has been satisfactorily maintained, and the conduct of the boys has on the whole been good.

Two boys were removed from the school by their parents without satisfactory reasons being assigned, and in these cases the provisions of the Agricultural Schools Ordinance had to be invoked and fines were imposed. Two other pupils were dismissed as unfit for the course of training in force.

Vegetables, &c., to the value of £34 were grown at the station, and consumed by the boys.

The average number of pupils maintained during the year was 1[illegible], and the expenditure on the institution from the Imperial Grant-in-Aid was £680.

Work of considerable value was undertaken by the Experimental Station at the institution, the operations forming practical object lessons for the pupils and the proprietors in the vicinity.

The crops under cultivation were cocoa, oranges, maize, onions, cotton, vegetables, &c.

The crops obtained from the maize plots are not unworthy of record, they were as follows:—

Plot.	Variety of Seed.	Yield per acre of air-dried Grains in bushels of 56 lbs.
A. $\frac{1}{30}$ acre.	Antiguan and American Cross A. 1.	56·25
B. $\frac{1}{30}$ acre.	Antiguan and American Cross A. 2.	50·62
C. $\frac{1}{30}$ acre.	Antiguan and American Cross A. 3.	64·50
D. $\frac{1}{30}$ acre.	Saint Lucia, selected from 2-cob Plants.	38·87
E. $\frac{1}{30}$ acre.	Saint Lucia, selected from 1-cob Plants.	41·75
F. $\frac{1}{10}$ acre.	Do.	35·00

As corn and cornmeal to the value of over £1,000 is imported into the Colony every year, there seems to be no reason, with the above results before them, why our planters should not grow at least sufficient to meet the local consumption.

Cocoa, Cotton, and other Experiment Stations.

These stations are situated at Rivière Dorée; La Perle Estate, Soufrière; St. Joseph Estate, Dennery; Bellair Estate, Roseau; and Entrepot Estate, Castries.

The cultivation consists of cotton, limes, pine-apples, &c., on the first-named plot, and of cocoa on the remainder.

The Agricultural Instructor reports that the cultural and manurial methods employed on these plots are being largely followed by both large and small proprietors, with increasingly satisfactory results, and that while three years ago only one or two planters ventured to disturb their cocoa roots with a fork, now thorough and deep tilth has become a recognised operation; while artificial manures are known, used, and thoroughly appreciated, and pruning and draining are constantly practised, not in the former ignorant fashion, but on intelligent lines.

Bee-keeping.

There are now 250 colonies of bees in the Island, in modern hives, all being kept for extracted honey. This is an increase of nearly 100 per cent. within the past year.

The year proved a poor one, but shipments began to be made in the early part of the current year.

The industry seems to be now firmly established, and may be expected to increase in future, and for this result credit is due to the officers of the Imperial Department of Agriculture.

(C.) Crown Lands.

58 new applications were received for the purchase of Crown lands of an area totalling 1,198 acres. In the previous year the number of applications was 104, but while there was thus a decrease in applications the area applied for shows a large increase in 1903, that of 1902 being only 746 acres.

The area actually alienated during 1903 comprised 75 lots, aggregating 1,253 acres, an increase on the figures for the previous year, which were 53 lots of a total area of 480 acres.

The revenue of the Crown Lands and Survey Department for the year was as follows:—

	£	s.	d.
Survey Fees	203	11	1
Deposits on Account	223	7	8
Instalments	527	19	9
Sundries	433	17	10
	£1,088	16	4

The expenditure was as follows:—

	£	s.	d.
Survey Fees	358	4	6
Roads	261	10	7
Sub-division for sale of "Union" Estate Lands	150	11	7
Refunds of Deposits	77	18	8
Miscellaneous	100	11	0
	£948	16	4

In addition, the sum of £233 9*s.* 0*d.* was paid from the Land Sales Fund as compensation for lands sold by the department to which a claim was made and admitted by the Government.

A sum of £1,708 9*s.* 0*d.* was also expended from the same fund on the acquisition of the Malgré Tout Estate at Soufrière, on which new Yaws and Poor Asylums have been erected, and on which it is also proposed to erect a Lunatic Asylum.

The amount standing to the credit of the Land Sales Fund at the 31st December, 1903, was £221 2*s.* 11*d.* The expenditure on the department from general revenue for salaries, office, &c., amounted to £678.

A Commission of Enquiry into the working of the Survey and Crown Lands Department was appointed in the course of the year, but no decision on its report had been arrived at when the year closed.

(D.) Shipping.

As will be seen from the following figures, the year 1903 was a bad one for the Colony as regards the shipping trade. The number of steamers which visited Port Castries was the lowest on record since the year 1895.

Vessels Entered.

Year.	British.				Foreign.			
	Steamers.		Sailing Vessels.		Steamers.		Sailing Vessels.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
1899	364	525,255	222	6,813	113	101,019	49	4,451
1900	473	751,463	271	9,009	147	154,695	41	6,258
1901	461	770,443	273	9,634	124	148,488	15	4,260
1902	430	682,878	338	11,001	108	141,240	71	3,869
1903	354	542,095	269	7,470	66	84,391	152	5,212

Vessels Cleared.

Year.	British.				Foreign.			
	Steamers.		Sailing Vessels.		Steamers.		Sailing Vessels.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
1899	367	528,883	219	6,450	113	101,019	51	5,463
1900	473	749,172	266	8,530	147	156,988	39	5,480
1901	460	768,110	266	9,788	124	142,488	15	5,509
1902	432	685,282	346	10,994	108	141,240	68	3,579
1803	352	540,122	280	7,664	66	84,391	150	4,564

The diminution in the number of steamers calling for coal adversely affected the receipts from harbour and other dues in 1903, and they fell below the estimate by a little over £1,200.

There can be little doubt that the increased number of steamers which coaled at Castries from the commencement of 1900 was due to the South African war, a large number of transports calling here *en route* from American ports to the Cape, and the decline which has ensued is in part merely the result of the trade recurring to its normal level.

III.—LEGISLATION.

Fourteen Ordinances were placed on the Statute Book during the year, of which the more important were—the Medical Officers Ordinance, which regulates the duties, &c., of the Government Medical Officers; the Travelling Allowances Ordinance, regulating the payment of the expenses of public officers travelling on duty; the Port Charges Ordinance, which consolidates the legislation scattered over a number of separate enactments, relating to the payment of wharfage, cargo, and other dues by vessels entering the port; the Wireless Telegraph Ordinance, which requires persons wishing to establish such a system in this Colony to first obtain the Governor's license to do so; the Soufrière Water Supply Ordinance, to provide for the maintenance of a supply of water in that town and district; and the Savings Bank Ordinance, an amending and consolidating measure.

IV.—EDUCATION.

(A.) Primary.

The general statistics for the year and a comparison of the totals for 1902 under the same heads are given in the following table:—

Schools.	No.	Number on Rolls.	Average Attendance.	Number Examined.	Government Grant.
					£
Anglican	4	616	385	436	396
Wesleyan	1	283	138	174	116
East Indian Mission ...	1	56	28	29	39
Roman Catholics	37	6,034	3,526	4,172	2,737
Totals, 1903	43	6,989	4,077	4,811	3,287
1902	42	6,665	3,714	4,583	3,116

It is satisfactory to observe that increases continue, as in the past few years, to be made under each head. The percentage of the whole population attending school was 13·5; the percentage of number on roll in average attendance, 58·3; and the percentage of whole population in average attendance, 7·9. These percentages compare very favourably with the similar ones of other colonies, and they speak well for the work of the managers and teaching staffs.

The Government Grant averaged 16*s.* 1½*d.* per unit of the average attendance, a figure lower than in any other year since 1891. The augmentation of the grant-in-aid is under consideration, but in view of the many calls of an imperative nature on the public revenues, it is not easy to see how further money for the purpose is to be provided.

Teaching of English.

The Inspector reports that "English" lessons continue to be given with good results, and that in the more distant parts of the Island, such as Dennery, Micoud, and Vieux-Fort, it is spoken as well as, if not better than, in those parts of the Colony more open to outside English influences, such as the port of Castries, which is frequented by soldiers and sailors and round which are congregated immigrants from Barbados and other English-speaking colonies.

School Gardens.

The formation of school gardens was taken up with zeal and success by teachers in most parts of the Island during the year, and twenty-three were established at its close. The districts of Anse-la-Raye and Canaries are now the only ones in which there was not such a garden, each of the other districts having at least two.

Special grants for tools for the gardens were made from the grant-in-aid, and complete sets were purchased in England and Barbados and distributed, and a grant of seeds to the various schools was made by the Imperial Department of Agriculture.

Lectures to Teachers.

In July, 1903, 25 teachers went into residence at the Union Agricultural School and passed a fortnight there, receiving lectures and practical demonstrations in agricultural subjects from the Curator and the Agricultural Instructor.

The experiment proved very successful, and cannot fail to be of benefit both to the teachers themselves and to their pupils, as demonstrations and object lessons on agricultural subjects now form a regular part of the ordinary school work. It is

perhaps not too much to say that there has been a real awakening of interest in this direction among both teachers and scholars.

(B.) Secondary.

Secondary education is provided for boys by the Saint Mary's College, and for girls by the Saint Joseph's Convent. The former school received a Government grant of £286, and the latter one of £50.

There were 79 boys on the roll of the College with 52 in average attendance, the similar figures for Saint Joseph's Convent being 135 and 120 respectively.

The boys are prepared for the Cambridge Local Examinations, and the girls for those of the London College of Preceptors.

In response to a representation made to the Legislative Council by the public, the grant-in-aid of St. Mary's College was increased to £400 from the 1st October to enable the College to obtain the services of two English masters, one condition of the increased grant giving the Government the right to appoint a Visiting Committee for the College.

It is hoped that the changes which have been made will enable the College to maintain the good record which it has established.

V.—GOVERNMENT INSTITUTIONS.

(i.) Hospitals and Asylums.

The following statement tabulates the principal statistics for 1903, relating to the hospitals and asylums of the Colony:—

Institutions.	No. of patients at beginning of year.	No. admitted during 1903.	Daily Average.	Patients discharged.		No. of Deaths.
				Cured.	Relieved.	
Victoria Hospital, Castries ...	98	1,637	73	1,422	117	113
Soufrière Hospital	6	112	13	73	—	23
Vieux-Fort Hospital	11	100	10	79	13	8
Dennery "	12	193	12	167	12	19
Yaws Hospital, Soufrière ...	31	39	21	49	—	1
Poor Asylum " ...	60	92	44	—	—	19

There are two small temporary asylums for lunatics, one in Castries for males, and the other at Soufrière for females. Lunatics are only confined in them pending their transfer to the Central Asylum at Grenada. A proper lunatic asylum has been required in St. Lucia for some years, and it is proposed to undertake its construction as soon as the finances of the Colony permit.

Apart from the Yaws Hospital, the principal diseases treated at the above institutions were—of thoracic organs, 236; fevers, 492; and ulcers, 363.

The patients at the Yaws Hospital include five persons suffering from leprosy, who are treated there for the want of a more suitable place. The death which is recorded as occurring in that institution in 1903 was that of a leper.

(ii.) Dispensaries.

Out-door medical relief is given through the medium of a dispensary in each district, at which a medical officer attends every week.

The number of patients treated in 1902 and 1903 was as follows:—

Dispensary.	1902.	1903.
Castries	8,371	7,637
Gros-Islet	1,119	684
Dennery	1,524	989
Anse-la-Raye	780	853
Soufrière	1,185	1,387
Choiseul	285	295
Vieux-Fort	1,880	1,204
Laborie	793	325
Micoud	635	627
Total	16,572	14,001

The chief diseases treated at the dispensaries in 1903 were malarial fever, worms, syphilis, wounds, ulcers, and diseases of the digestive and respiratory organs.

1,310 children were successfully vaccinated during the year.

(iii.) Out-door Relief of Paupers.

The out-door relief of paupers had been provided for by the Medical Aid and Poor Relief Ordinance, 1871, which enacted that a Poor Law Board for each district should be constituted with the Magistrate of the District as Chairman, *ex officio*. As

regards the board, the law appears to have fallen into desuetude many years ago, and as a consequence the whole of the work and responsibility in connection with the administration of out-door relief had fallen to the Magistrate alone. The system was inconvenient and cumbrous in many ways, and especially in Castries, where the proper duties of the Magistrate are more than sufficient to keep the whole time of one man fully occupied.

Advantage was, therefore, taken of the repeal of the Ordinance of 1871 by the Medical Officers Ordinance, 1903, to appoint a Committee to investigate the entire system of relief, and to advise what changes should be made.

The result of this investigation has led to the transfer of the work to the police under a simple but effective system, and to a reduction in the amount annually spent on the service. The new system came into operation at the end of the year.

The number of persons in receipt of out-door relief in 1903 was 321, of whom 127 belonged to the 1st district, and 97 to each of the other two districts.

(iv.) Savings Bank.

The principal bank is in Castries, and there are branches at Soufrière (II. District), and Vieux-Fort (III. District).

The following statement shows the transactions of the bank for the five years ended the 31st December, 1903:—

Year.	Total number of depositors on 31st December of each year.	Total deposits inclusive of Interest.			Total Withdrawals.			Amount on deposit at the end of each year.		
		£	s.	d.	£	s.	d.	£	s.	d.
1899	1,263	14,916	15	9	13,113	17	7	13,884	9	11
1900	1,405	17,487	18	10	16,953	12	4	14,418	16	5
1901	1,467	20,891	5	3	22,022	7	5	13,287	14	3
1902	1,590	20,365	12	6	17,696	8	6	15,956	18	3
1903	1,584	18,338	16	7	17,084	5	11	17,211	8	11

There was a slight reduction in the number of depositors in 1903, as compared with 1902, with a comparatively large decrease in the value of the deposits. The latter decrease is attributed to there being fewer new depositors during the year than in former years, but it is also probably due in part to the decline in the coaling trade, to which I have referred under the head "Shipping," and the consequent smaller earnings of the people employed in it.

On the other hand, it will be observed that the balance at the end of the year rose from £15,957 in 1902 to £17,211 in 1903.

Of the 1,584 depositors at the end of the year, a little over half, viz., 852, had accounts of under £1; 262 accounts of £1 and under £5; 117 accounts of £5 and under £10; and 122 accounts of £10 and under £20. It is, therefore, evident that the class of persons for which the benefits of the institution are primarily intended avails itself of them to a large extent.

The progress made by the district banks is shown by the following statement of their transactions for the last five years.

There were 91 depositors in the Second District, and 54 in the Third District.

Year.	Second District.		Third District.	
	Deposits.	Withdrawals.	Deposits.	Withdrawals.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1899	467 12 5	307 17 4	151 16 4	166 3 9
1900	607 6 7	630 16 3	373 13 11	272 8 10
1901	1,108 17 9	912 10 11	599 17 9	650 10 5
1902	1,142 6 7	1,120 6 8	663 12 11	656 15 8
1903	1,483 10 4	1,167 10 1	690 13 5	434 10 3

Investments to the extent of £13,416 14*s.* 11*d.* have been made in England by the Crown Agents on behalf of the bank, and in addition, a sum of £2,000 is on deposit in the local branch of the Colonial Bank.

The working account of the Bank shows a revenue of £479 3*s.* 11*d.*, and an expenditure of £417 12*s.* 9*d.* The excess of revenue, £61 11*s.* 2*d.*, was transferred to general revenue.

VI.—JUDICIAL STATISTICS.

(A.) Police.

The strength of the force is one officer and 70 non-commissioned officers and men.

Twelve men joined the force during the year, taking the place of seven who resigned, three who were dismissed, and one who died, and there was one vacancy.

The Chief of Police reports that considerable difficulty is experienced in getting suitable men for the force, and that natives of St. Lucia seldom offer themselves for enrolment, there being only two on the strength.

Notwithstanding this difficulty, the state of the force is reported to have improved considerably during the year. The good effect among the men resulting from the superior training of the non-commissioned officers from the Royal Irish Constabulary, of whom there were two, showed itself in the general knowledge displayed in the performance of police work.

Very few complaints were received from private persons against constables for misconduct or neglect of duty.

There were 1,172 prosecutions by the police during the year, 44 being for indictable offences, and 1,128 for those amenable to summary jurisdiction.

The new Police Quarters in Castries were practically finished at the end of the year, but were not occupied until the present year.

(B.) Prisons.

At the commencement of the year there were 58 prisoners in the Royal Gaol—45 males and 13 females.

The number of committals during the year was 767—529 adult males, 18 adult females, and 20 juveniles. This is a considerable decrease on the number committed in 1902, as the following comparison shows:—

—	1902.	1903.
For Statutory Offences ...	679	456
" Non-payment of Road Tax	150	71
" Military Offences	50	54
" Safe custody, trial, &c. ...	164	186
	1,043	767

The highest number of prisoners in custody at one time was 75 and the lowest 41, and the daily average number was 56·60, not taking into account the long-sentence St. Lucia prisoners, who are undergoing their sentences in the Grenada Prison—the daily average of whom was 6·91. The corrected daily average for St. Lucia would be 63·51, as against a similar total of 66·81 in 1902.

Three prisoners escaped during the year, two from gangs employed outside the prison, and one from the prison. All were recaptured within a few days by the police.

The labour of the prisoners during the year is valued at £637 10*s.* 3*d.*; the principal item is for quarrying and breaking stones.

The expenditure on the prison was £1,250, of which £101 was for the maintenance of St. Lucia prisoners at Grenada.

The Medical Officer reports the health and sanitary conditions of the prison and its inmates to have been most satisfactory. The daily average on the sick list was 1·71. No death occurred in the prison, but one prisoner was removed to the Victoria Hospital and died there.

(C.) Criminal Statistics.

There was a considerable diminution in the number of offences reported, compared not only with 1902, but also with 1901.

It is perhaps too much to hope that this decrease in crime will be permanent, having regard to the class from which our population is increased, but the decrease may in part be genuine, and it may be expected that the Infirm Paupers and Immigrants Regulation Ordinance, which was passed in March, 1904, will tend to protect the Colony to a large extent against the influx of the rowdy and pauper element from neighbouring colonies.

The following figures summarise the chief items of the criminal statistics for the last three years:—

—	1901.	1902.	1903.
Offences reported to the police ...	2,258	2,790	1,942
Summary convictions—			
For offences against the person ...	272	333	255
" prædial larceny	21	48	28
" offences against property ...	138	133	77
" other offences	1,185	1,430	877
Conviction by the Superior Court—			
For offences against the person ...	5	6	12
" " " property ...	5	17	11
" other offences	4	1	2

VII.—VITAL STATISTICS.

(A.) Population.

The estimated total population on the 31st December was 51,881, which shows an increase of 1·86 per cent. during the year, and was composed of 24,826 males and 27,055 females.

The birth-rate of the year was 3·82 per cent., as compared with 3·33 per cent. in 1902, and the death-rate 1·96 per cent., as compared with 2·18 per cent. in 1902. The number of births was 2,118, and of deaths 1,171.

The population on the 7th April, 1901, according to the census taken on that date, was 49,883, made up of 23,821 males and 26,062 females. The natural increase of the population by excess of births over deaths from the date of the census to the 31st December, 1903, has been, therefore, approximately 1,998, or 4 per cent., equivalent to an annual increase for the same period of about 1·33 per cent.

The number of marriages registered during the year was 311, as against 288 in the previous year.

(B.) Public Health.

The health of the Colony was good throughout the year, and there is no feature in the statistics relating thereto which calls for special comment.

Malarial fevers, diseases of the digestive organs, and bronchial affections account, as usual, for most of the sickness during the year. The fevers were generally of a mild type, although a few cases are reported of a more malignant character.

(C.) Climate.

The rainfall for the year, as recorded at the Botanic Station in Castries, was 86·84 inches, and it fell on 255 days; but at the Agricultural School at Union, only $1\frac{3}{5}$ miles off in a direct line, the fall recorded was 102·10 inches. At Errard Estate, towards the eastern centre of the Island, 107·56 inches were recorded, and at Soufrière, on the south-western coast, 79·09 inches fell.

The wettest months of the year were July and August, and October and December, whilst the driest were March, April, and May.

The Botanic Station is the only place in the Colony at which continuous meteorological observations of a reliable nature have been made for any length of time, and the following figures are taken from its records:—

Rainfall.

Year.	Inches.
1898	104·49
1899	84·64
1900	73·25
1901	99·71
1902	91·43
Average	90·70
1903	86·84

It will be seen that the rainfall in St. Lucia is subject to considerable fluctuations, but how far they affect agriculture and the health of the Colony is by no means certain, and, as will appear from the remarks above, it is doubtful whether the rainfall at the Botanic Station can be taken as a measure of the average fall over the whole Colony.

The absolute maximum temperature registered during 1903 was 94° in the month of May, and the absolute minimum temperature 62° in December. The mean maximum and minimum for the year were 86·4° and 70·5°, respectively. The mean barometrical pressure for the year was 29·290 inches at 10 feet above mean sea level.

VIII.—POSTAL AND TELEPHONE SERVICES.

(A.) Post Office.

The revenue of the department was £6,751 15*s.* 10*d.*, of which £3,029 was received from letters, post-cards, &c., and £3,488 16*s.* 8*d.* from sales of stamps to collectors. The latter receipts were abnormally increased by the sale of over £3,000 worth of 10*s.* "Queen's Head" Stamps.

The expenditure was £2,782 6*s.* 3*d.*, and the surplus of revenue over expenditure was, therefore, £3,969 9*s.* 7*d.*

The total number of letters and post-cards dealt with was 327,637, as compared with 341,218 in 1902; newspapers, &c., 119,663, as compared with 97,765 in the previous year; and 4,029 parcels, as compared with 3,398 in 1902. The major portion of the correspondence was with the United Kingdom.

The total value of the money order business was £10,734, the share of the United Kingdom in which was £5,760.

(B.) Telephones.

The length of telephone lines open was 127 miles, and there were 108 subscribers.

The receipts amounted to £553 4*s.* 2*d.*, and the expenses to £574 19*s.* 8*d.*, the latter amount including a charge of £225 for interest, &c., on the loan raised for the construction of the system.

There was a slight improvement in the working of the system during the year, but the lines, &c., erected over ten years ago

are now in need of almost entire reconstruction. The working staff, too, was quite inadequate to meet the demands made upon it in an Island with the physical configuration of Saint Lucia. This has been remedied during the current year, and with the larger sum placed at the disposal of the department by the Legislature, it is confidently expected that a marked improvement will result during the next few years.

One of the many difficulties which has to be overcome is the stealing from the lines of considerable lengths of wire, and although the practice was somewhat checked during the year, it still continues, principally in the quarter of Dennery.

IX.—GENERAL OBSERVATIONS.

From a financial aspect, the year under review occasioned the Government some anxiety, and the diminution in the business of the coaling trade was severely felt by the large section of the people of Castries who find a livelihood therein. The stoppage, too, during a part of the year, of the works under construction by the military authorities was another factor which adversely affected labour.

Those persons in the Colony who may be expected to have special knowledge in the matter express themselves as confident of a revival in the coaling trade, and of the number of vessels making Castries a port of call increasing in the near future; and when the extent to which the prosperity of the Colony is bound up with the coaling trade is borne in mind, one can only hope that the confidence so expressed is not misplaced.

Perhaps the most pleasing feature in the record of the year is the extension of the production of cocoa, and the good omen which it conveys for the future. St. Lucia is also, as already stated, well qualified to take a prominent place in the production of cotton, and the efforts which are being made throughout the West Indies to revive this industry should prompt the proprietors of the Colony with large areas of suitable land in their possession, now lying absolutely unproductive, to greater energy in this direction.

The question of improving the harbour of Castries, so as to afford greater facilities for the steamers of deeper draught which now visit the port, was still undecided when the year closed.

A Commission was appointed during the year for the purpose, primarily, of enquiring into the system under which the roads of the Colony are maintained, and to make recommendations for their improvement. The report of the Commission was an exhaustive one, but the changes to be made were not settled during the year.

The opening up of the rich Crown lands of the Island to peasant proprietors by the construction of more roads and bye-ways is of as much importance to the large proportion of the population which is composed of agriculturists, and to the general prosperity of the Colony, as is the improvement of the Castries harbour to the coaling and shipping trade.

No. 446.

ST. VINCENT.

(For Report for 1902–3, *see* No. 403.)

GOVERNOR SIR R. B. LLEWELYN to MR. LYTTELTON.

Grenada,
18th February, 1905.

Forwarded.

R. B. LLEWELYN,
Governor.

Government House,
St. Vincent,
31st January, 1905.

SIR,

I HAVE the honour to forward herewith for transmission to the Secretary of State the Blue Book of the Colony of St. Vincent for the year 1903-4 together with my report thereon.

I have, &c.,

EDWARD J. CAMERON,
Administrator.

REPORT ON THE BLUE BOOK OF ST. VINCENT FOR THE YEAR 1903–4.

I.—FINANCIAL.

(A.) General Revenue and Expenditure.

The following comparative statements and table give the heads of revenue and expenditure, and the amounts received under those heads, for the years 1902-3 and 1903-4, as well as the total revenue and expenditure for each of the last five years 1899-1903-4:—

Comparative Statement of Revenue for the Years 1903–4 *and* 1902–3.

Heads of Revenue.	1903-4.	1902-3.	Increase.	Decrease.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1. Customs	11,759 12 3	13,589 5 10	—	1,829 13 7
2. Port, Harbour, &c. Dues	682 6 11	861 2 4	—	178 15 5
3. Licences, Excise, and Internal Revenue.	5,293 6 0	6,485 16 5	—	1,192 10 5
4. Fees of Office, Payments for Specific Services and Reimbursements in aid.	627 18 9	730 12 10	—	102 14 1
5. Post Office..	823 16 0	2,102 4 11	—	1,278 8 11
6. Telephones	447 7 3	419 2 10	28 4 5	—
7. Rent (Government Property) ..	58 11 8	34 17 4	23 14 4	—

1903-4.	Local	20,944		Local	26,657	
	Imperial Grant	5,572		Imperial Grant	1,458	
			26,516			28,115

* Including the sum of £1,180 7*s.* 7*d.* referred to in note to preceding table.

The total local revenue of the Colony for the year 1903-4 was £20,944, being £203 more than the estimate, but £4,987 less than the receipts of the previous year, in which, however, the conditions were of course abnormal, owing to the eruption of the Soufrière and its consequences, as explained in my last annual report.

The gross excess of receipts over estimate was £1,357, of which £1,165 was under the head of "Customs," and the gross deficiency on estimated receipts was £1,154, of which £640 was under "Licences, Excise, and Internal Revenue," and £275 under "Post Office," the result being a net increase of £203 as above stated.

On a close comparison of the revenue details of 1903-4 with those of the previous year, it is seen that the large decline of nearly £5,000 is made up of £1,855 in import duty, principally on foodstuffs, over one-half being on the single item, rice, of which an enormous quantity came in after the eruption; £2,046 in sale of stamps, of which £768 is allotted under internal revenue (stamp duty) and £1,278 under "Post Office"; £520 "Excise Duty"; and £416 under head of "Interest," which last item does not represent a genuine revenual receipt. There are other minor decreases, and there are also increases under some of the revenue sub-heads, which contribute to the net result of £4,987 decrease—the figure already given.

The gross revenue, including Imperial Grant of £4,000 in aid of deficiency of general revenue, was £24,944, and in addition to this a sum of £1,400* was paid by the Imperial Government, being the annual grant for Botanic Station and Agricultural School.

The expenditure of the Colony for the same period was £26,657, as against £27,321 estimated, and a further amount of £1,458 was expended on upkeep of Botanic Station and Agricultural School.

The corresponding figures of expenditure in 1902-3 were £25,758 and £1,451.

Comparison shows an increased expenditure of £709 in 1903-4 on necessary "Public Works," £210 on "Pensions," £114 on "Police," £208 on "Post Office," and other smaller additions, while £338 of the total belongs, as explained in the next paragraph but one, to 1902-3.

---

* N.B.—The actual amount of the Imperial Grant in respect of the 12 months was £1,400, but £357 paid to the Crown Agents in March, 1903, on account of the Grant for that year was not incorporated in the Colony's account till 1903-4. (*Vide* last Blue Book report, page 7.)

The unexpended portion of the gross receipts of these annual grants from their commencement has now (from 1st April last) in accordance with the Secretary of State's instructions been carried to a ledger account, to which all subsequent instalments of Grant have been and will be now carried as received.

On the other side are decreases of £748 on account of "Public Debt," the liability on which is lessening annually, and £139 on "Hospitals and Asylums."

In my last report I drew attention to the exclusion from the 1902-3 statement of account of the transactions of the Crown Agents for the Colonies during February and March, owing to the provisions of the new financial instructions, which were found to work inconveniently. This matter has now been put straight for the future, but £338 of expenditure and £361 of receipts, being the transactions of the months in question, have gone to swell the figures for the year on which I am reporting.

(B.) Taxation.

No changes took place during the year under review, with the exception of a slight alteration in the table of Customs Duties and Rates payable, and in the table of Exemptions, for the purpose of adjusting certain ambiguities and anomalies, and the following alterations of the duty on sugars:—

Muscovado, raised from 1*s.* 6*d.* per 100 lbs. to 1*s.* 9*d.*

Crystallized, reduced from 3*s.* per 100 lbs. to 1*s.* 9*d.*

Refined, reduced from 4*s.* per 100 lbs. to 1*s.* 9*d.*

The last change was made in August, 1903, in consequence of the obligations imposed under the terms of the Brussels Convention on sugar-producing colonies. It means a loss of revenue to the Colony of from £80 to £100 per annum.

(C.) Assets and Liabilities.

An examination of the statement subjoined shows an excess of liabilities of £1,032.

At 31st March, 1903, the account showed an excess of assets of £568.

deposit with the Crown Agents for the Colonies.
Hurricane Loan to planters from the Imperial Treasury, which is £16,077.

Treasury, St. Vincent,
27th May, 1904.

EDWARD J. CAMERON,
Treasurer.

(D.) Public Debt.

The Public Debt of the Colony at 31st March, 1904, stood at £5,750, as against £6,770 at the end of the previous financial year. By the end of the current year two of the loans, the Telephone Loan and the Kingstown Water Works Loan (1894), will have been finally paid off.

£4,550 of the above, though guaranteed by the Colony, is repayable from the funds of the towns of Kingstown and Georgetown, which are able to meet the call, and the actual amount for which the Colonial revenue is liable is thus only £1,200, which, by March next, will be reduced to £1,000.

The gradual elimination of the Public Debt is a matter for congratulation.

The Colony is further responsible for a sum of £16,026, loaned to planters to enable them to restore works and buildings destroyed by the hurricane. Repayment of this sum is provided for by Ordinance, and is made to extend over 23 years. Repayments of principal continue to be met punctually by the borrowers. In one case, however, of a small loan to a coloured proprietor, the Government will have to bear a loss amounting to £53, the borrower failing to meet his liability, and having since died, and the security for the loan proving, when tested, to be unstable, some suspicion of fraud on the part of the borrower attaching to the transaction.

(E.) Currency.

Gold, American and British, notes of the Colonial Bank, and British silver and copper constitute the currency of the Island.

The Government's accounts are kept in sterling, and commercial accounts in dollars and cents.

(F.) and (G.) Finances of Municipalities or Public Boards.

The management and control of the affairs of the town of Kingstown are vested in a Board, half of whom are elected by the ratepayers, and the other half nominated by the Government. The small towns of the Colony are controlled by wardens, annually appointed by the Government.

The following comparative statements give the total revenue and expenditure of these towns for the last five years:—

Revenue.

Town.	1899.	1900.	1901.	1902.	1903.
	£	£	£	£	£
Kingstown	2,082*	1,961	1,805	1,495	1,621†

Debts of Towns.

The debts of the towns at 31st March, 1904, are as follows:—

	£	£
Kingstown water supply	3,600	
Kingstown town improvement...	450	
		4,050
Georgetown water supply ...		500
		£4,550

Provision for repayment of these loans is made by rates levied annually on the townspeople, and the debts are secured on the general revenue of the Colony. The Kingstown Water Supply Loan is being repaid at the rate of £300 per annum, the Town Improvement Loan at the rate of £50 per annum, and the Georgetown Loan by annual instalments of £50.

In addition to the above, the town of Georgetown was indebted to general revenue for advances made in previous years for

certain specific purposes in the sum of £404, as against £419 at the end of 1901-2.

The town of Chateaubelair was similarly indebted in the sum of £36, its resources having admitted of no repayment during the year.

II.—TRADE, AGRICULTURE, AND INDUSTRY.

(A.) Imports and Exports.

The following comparative statement gives the value of the chief articles of import in 1902 and 1903-4:—

Imports.

Chief Articles.	Value.	
	1902.	1903-4.
Class I.—	£	£
Beef, salted or cured	405	482
Biscuits	1,712	1,412
Butter	1,590	1,568
Coffee	359	287
Fish, salted, &c.	5,005	3,699
Flour, wheaten	9,252	8,840
Flour, other kinds...	698	477
Oilmeal and cake	425	323
Pork, salted	2,170	1,847
Rice	6,681	1,866
Salt	385	445
Sugar, muscovado	45	128
Sugar, refined	427	309
Tobacco, cigars, &c.	902	894
Class II.—		
Manure	44	51
Petroleum oil	1,033	1,116
Timber and shingles	7,242	6,815
Class III.—		
Textile manufactures, other than rope, cordage, and canvas.	14,792	15,717
Metal, manufactured	4,654	5,295
Boots and shoes	846	869
Cement	525	462
Rope, cordage, and canvas	872	935
Soap...	1,411	1,467

The slight net decrease of £1,269 in the value of imports in the year 1903-4, as compared with the calendar year 1902, is the resultant of the following, viz.:—a decrease of £8,892 from foreign countries, £8,508 of which is from the United States of America, which country sent in 1902 very large supplies of foodstuffs and lumber after the Eruption, and increases of £6,567 from the United Kingdom, and £1,056 from British Colonies.

The most noticeable items among the considerable number contributing to the above increases are, from the United Kingdom, textiles £1,150, hardware £950, machinery (for the Government) £313, earthenware £224, food and drink unenumerated £225, and unenumerated manufactured articles other than textile or metal £2,700, and in the case of the British Colonies £700 furniture and £180 cement, both from Trinidad. This furniture, however, should have been more correctly set down as from the United Kingdom, it having been in transit only from Trinidad.

The value of the principal exports is given in the annexed comparative table:—

Exports.

Articles.	1902.	1903–4.
	£	£
Cassava starch	485	921
Whale oil	1,107	1,150
Turtle shell	309	472
Firewood	238	588
Cotton and cotton seed	561	900
Vegetables	1,292	1,329
Manure	298	137
Syrup	369	382
Sugar, muscovado	6,034	2,298
Sugar, Crystallized	Nil.	521
Pease	636	550
Molasses	149	198
Rum	1,150	28
Ground-nuts	259	926
Live stock	4,353	2,682
Fresh fruit	25	52
Farine	24	80
Arrowroot	21,817	21,686
Cocoa	1,558	2,155

The total imports and exports for the five years 1899 to 1903-4 are given below:—

Totals	33,575	97,769	51,987	44,094	38,173

(B.) Mines, Manufactures, and Fisheries.

A whale fishery is carried on in the St. Vincent Grenadines, notably Bequia and Canouan, and is a very material benefit to the inhabitants of those islands, whose condition compares favourably with that of the labourers of St. Vincent itself. The value of whale oil exported was £1,150, as against £1,107 in 1902.

During the year a cotton ginning factory of the most modern approved pattern, planned by the Imperial Commissioner of Agriculture after a personal inspection of many cotton estates in the Southern States of America, which he visited specially in connection with the desired revival of this industry in the West Indies, was erected and equipped with six single action Macarthy gins supplied by three different firms, by which the first experimental crop of Sea Island cotton was effectively handled.

The cost of the factory, erected with the object of assisting to raise the fallen fortunes of the Island and so improve the condition of its people, was defrayed from the Soufrière Eruption Fund.

(C.) Agricultural Industries and Botanic Station.

Agriculture.

Last year, under this head, I had to refer to the devastating effects of the terrible eruption of the Soufrière, by which one-third of the Island was laid waste.

The last of the long series of volcanic outbreaks was on March 22nd, 1903. There has been no recurrence of activity since that date, but the lands affected by the enormous discharge of sand, stones and cinderous matter were scarcely in a condition, during the 12 months under review, to respond to any agricultural effort, and no such effort was made, solitude reigning supreme.

On the Windward side, however, a mantle of green was at the time I left the Colony, in June last, fast spreading itself over the slopes at the foot of the mountain, and gradually enshrouding the jagged spurs and ravines of the volcano itself, while in certain favoured spots, the canes that had not been killed out by the fiery blast, had asserted themselves and were growing vigorously. Very good provision crops also were reaped latterly in the vicinity of Georgetown, bananas and ground nuts giving especially fine results.

The Land Settlement or Peasant Proprietary Scheme Estates continued much in the same condition as last described, though a certain advance was made in the direction of the establishment of economic plants of a permanent nature as against provision crops, which had previously absorbed the efforts of the peasantry for the most part. In this connection the appointment of the Agricultural Instructor, who has been constantly

on and around the estates in touch with the people, has done good.

No further lands were acquired during the year. The great agricultural feature of the year has been the inauguration of the Sea Island cotton industry under the auspices and by the very active effort of the Imperial Department of Agriculture, under Sir D. Morris, K.C.M.G., with whom I have had the pleasure of being associated in this excellent work. The results are certainly encouraging. 136 bales of excellent cotton realizing from 4*d*. (this figure is for the Upland quality) to 1*s*. 3½*d*. per lb. have been shipped from the Colony since April last, and the present area in cultivation, from which the crop is being taken off at the time of writing, is approximately 1,471 acres. With these prices, which moreover leave a fair margin for a fall, the industry should certainly pay and go some way in assisting to restore the Colony's sorely shattered prosperity.

An Agricultural Show, the first for many years, was also held in March, 1904, under the auspices of the Imperial Department, and was very successful.

(D.) Land Grants and General Value of Land.

The settled price of ordinary Crown land is £1 an acre cash, and £2 if paid in instalments. The land is disposed of to applicants under regulations; these together with the laws which authorize them, are in need of consolidation and amendment to bring them into conformity with modern conditions.

This legislative need is, however, only one of many, and in the absence of a regular Law Officer of the Crown, for whom the Colony cannot afford to pay, it remains unmet.

Grants in 1903-4 were confined to lands devastated by the eruption of the Soufrière, which the holders, who in most cases had not completed payment in full, relinquished on receipt of compensation to the extent of what they had paid, and which they were then permitted, if they desired, to repurchase at the cash rate of 5*s*. per acre. The number of persons who decided to retain their lands under these conditions was 66 out of 235, and the acreage granted 350½ out of 1,124, which thus is added to the land tax roll of the Colony.

The renting system initiated in 1901-2 at the rate of 6*s*. 3*d*. per acre was extended. A year's rent money must be paid down before the tenant is allowed to use the land, and the advance payment must be renewed annually to allow continuance upon it. This satisfies the people's land hunger, retains the fee in the Crown in case of the unlikely happening of a large tract of the mountain land being at any time needed for some economic purpose, obviates the necessity for expensive survey and elaborate diagrams to which the present staff is too small to attend expeditiously, and prevents any accumulation of arrears with their inevitably demoralizing effect.

(E.) Shipping.

A table of the entries and clearances of steamers and sailing vessels during 1902 and the fifteen months ended 31st March, 1904, is annexed, as also a comparative statement of the total shipping for the last five years.

These figures do not include men-of-war, of which nine British and two French visited the Colony during the fifteen months.

III.—LEGISLATION.

Eleven Ordinances were passed during the year 1903, of which the more important were those to consolidate and amend the law relating to primary education, and to provide for the constitution of a volunteer reserve force.

Various Orders in Council and Regulations under the authority of Ordinances were also issued, these being more numerous than usual in consequence of the long quarantine against Barbados and Trinidad, and the battle to keep the disease, so-called "varioloid varicella," out of St. Vincent.

IV.—EDUCATION.

The results of primary education in 1902-3 and 1903-4 compare as follows:—

—	1902–3.	1903–4.
Number of Schools	32	27
Number on Roll	6,693	5,466
Average Attendance ...	3,242	2,555
	£	£
Government Grant-in-aid ...	1,344	1,326

An examination of the schools was held from May to July, 1903, by the Inspector of Schools of Grenada, who, it is now settled, will hereafter perform this duty annually, thus ensuring some regularity of system and period.

A new Education Law and new Code of Regulations, simplification and adaptation to modern conditions and financial possibilities being the feature of each, were brought into force. A commodious new school, similar to those previously erected by the Government out of the Eruption Fund at the refugee

settlements of Camden Park and Layou, was established at Troumaca, the cost of which was defrayed, one-half by the Eruption Fund and one-half by the Land Settlement Fund, the building being to accommodate the children both of eruption refugees and land settlement peasants.

The Inspector's report on his examination of the schools is satisfactory reading, and shows that there was evidence of more vitality among teachers and in the system generally than has been the case for some time.

He writes:—"I might add incidentally on the result of the "recent inspection that there is not a single school which may "be said to have done badly."

(B.) Secondary Education.

The Kingstown Grammar School for boys and girls is the only secondary educational establishment in the Colony. The curriculum of the school embraces the subjects required for the Cambridge Local Examinations, and the annual examination is conducted by the Syndicate. The Government grant to the school amounted to £114.

(C.) Industrial, Technical, and Agricultural Schools.

An Agricultural School was established under the auspices of the Imperial Department of Agriculture with Imperial money in 1900.

There was an average of 20 pupils during 1903-4.

The Institution is progressing satisfactorily and several of the lads trained there have recently, after completion of their course, found employment in useful agricultural work in St. Vincent and other adjacent colonies.

The total cost of the school's upkeep during the year was £655, of which £201 was spent on special work, such as a thorough painting of the entire building and outhouses to preserve the woodwork, and the installation of drains and gutters.

A beginning was made in the laying out and preparation of plots adjacent to the principal Primary School buildings in the Island as school gardens, to afford an opportunity to the young generation to acquire some knowledge of the rudiments of skilled agriculture.

V.—GOVERNMENT INSTITUTIONS.

(A.) Hospitals.

The number of patients treated at the Colonial Hospital during the year 1903-4 was 1,014, of whom 897 were discharged cured or relieved, 15 discharged not improved, 50 died, and 52 remained in hospital. The daily average was 61·38. The figures for the 12 months of 1903-4 are:—

Remaining at 31st March, 1903	47
Admissions	967
Total ...	1,014

Discharged cured or relieved	897
Discharged not improved	15
Died	50
Remaining	52
Total ...	1,014

The admission figure for 1902-3 was 864.

The above admission figure, which is the highest yet recorded, includes 239 cases of anchylostoma.

There were also 266 operations performed, exclusive of such minor matters as teeth extractions and catheterizations, which is a high figure and a testimony to the value of the Institution.

The expenditure was nevertheless kept well within the limit of the estimate, the actual saving being £120.

(B.) Asylums.

Lunatics.

A portion of the old military barracks at Fort Charlotte is set aside for temporary detention of lunatics prior to their removal to the asylum at Grenada.

There were 17 cases under treatment during the year (nine being new admissions), of whom two were discharged cured, two died, and six were transferred to the asylum at Grenada.

The total number of St. Vincent lunatics under care there was 32, at a cost to the Colony of £559 18*s.* 3*d.*

Lepers.

The number of inmates of the Leper Asylum on the 31st March, 1903, was 13; three fresh cases were admitted during the year 1903-4.

The Medical Officer who has this Institution under his care writes:—

> "The inmates are steadily decreasing in number. Two who were merely syphilitic and had recovered were discharged. One case of anæsthetic leprosy who had recovered was allowed to go home, and one case of doubtful diagnosis was also allowed to go.
>
> "There is no compulsory segregation, nor is any attempt made to collect all the lepers of the Colony into an asylum. It will shortly be a matter for consideration whether it be worth while continuing this Institution. It will be cheaper to afford outdoor help to the few lepers now there, and close the building."

(C.) Poor Houses.

The Colony's paupers are housed in the old military buildings at Fort Charlotte, on a considerable elevation, commanding the town of Kingstown.

There were 115 inmates on 31st March, 1903, and the admissions and discharges in 1903-4 were:—

—	Male.	Female.	Total.
Admissions ...	39	33	72
Discharged ...	31	16	47
Died	14	8	22
	45	24	69

leaving 118 on 31st March, 1904.

The total expenditure in 1903-4 was £1,098 on the Institutions, including lepers, and lunatics kept locally, as against £1,287 in 1902-3, in which last period there was special expenditure authorized on equipment.

The actual cost of maintenance exclusive of officers' salaries and upkeep of buildings was as near as possible 5*d.* a day for each inmate.

Chronic tertiary syphilis accounts for the vast majority of cases to whom this Institution offers asylum for the closing stage of their lives.

(D.) Reformatories.

Nil.

(E.) Savings Bank.

The following is a statement of the work of the bank for the last five years:—

Year.	Number of Depositors at 31st December.	Amount of Deposits.	Amount of Withdrawals.	Balance at credit of Depositors at 31st December.
		£	£	£
1899	1,036	5,375	5,123	9,716
1900	900	7,790*	7,122	10,594
1901	907	6,108†‡	6,015	10,687
1902	992	8,781	6,501	11,975
1903	987	6,587	6,171	12,653

* Includes £2,926 under Land Settlement Ordinance.
† Includes £1,200 under Land Settlement Ordinance.
‡ Includes Interest.

Up to 1900 the bank was established at Kingstown only, but in that year branches were opened at the small towns of Chateaubelair and Georgetown.

The amount due to depositors was distributed thus:—

—	1902.	1903.
	£	£
Kingstown	11,180	11,627
Georgetown	357	487
Chateaubelair	438	539
Total	11,975	12,653

In view of the substantial increase in the amount of deposits as compared with the perpetual outcry of poverty and distress with which the Government is at all times assailed, a close scrutiny of the bank ledger was made by me which disclosed the fact that the major part of the money belongs to shopkeepers, professional men, Government officers, pensioners, charities and trust accounts, and that the figures indicate no real increase in the wealth of the community in general or its poorer class in particular. The money is kept in the Savings Bank because the Colonial Bank has no outlet for it and does

not wish to take it, and there has been small opportunity locally of late years for the investment of such savings.

A further analysis showed that of the above total of £12,653 there was held—

in sums of £100 and over	... ...	£5,108
" " £50 and under £100	...	2,840
" " £20 and under £50	...	2,230
" " £10 and under £20	...	889
" " under £10 ...	... ...	1,322
add interest for the year	... ...	264
		£12,653

The Government made a profit in the working of the bank of £69 1*s.* 3*d.*

There was invested of Savings Bank Funds at 31st December, 1903, £9,500, since when a further investment of £1,500 has been made.

VI.—JUDICIAL STATISTICS.

(A.) Police.

The Colonial Police Force consists of a Chief, a Sergeant-major of European birth and late of the Royal Irish Constabulary, and 53 West Indian non-commissioned Officers and Privates. They are, in addition to their civil duties, drilled and have some training in the use of arms, and are armed with Martini-Enfield rifles. Besides ordinary police work, they render assistance to the Government in many details of the administration, being charged with the supervision of the Excise duty on rum, and with co-operating in the collection of Customs duties, district post office work, registration of births, &c., poor relief, and the management of the small district telephone exchanges. In Kingstown they are responsible for extinguishing fires, receiving from the Town Board additional pay for this service.

(B.) Prisons.

188 persons were committed to prison in the year—109 men, 77 women, and two juveniles. The daily average was 15·2, against 14·3 in the previous year.

(C.) Criminal Statistics.

The total number of offences reported to the Police or to the Magistrates in 1903 was 1,055, against 954 in 1902.

Of the offences reported in 1903, 264 were for offences against the person, 128 were for prædial larceny, 157 were for offences against property other than prædial larceny, 506 were for other offences.

The total number of convictions in the Inferior Court in 1903 was 630, against 529 in 1902.

These convictions are classed as follows:—142 for offences against the person, two for malicious injuries to property, 67 for prædial larceny, 69 for offences against property other than prædial larceny, 107 for offences against Revenue Acts, &c., one for offence against Masters and Servants Acts, &c., 242 for other offences.

The convictions in the Supreme Court were as follows:—11 for offences against the person, two for offences against property.

The acquittals were as follows:—In the Inferior Court, 139; in the Supreme Court, three.

VII.—VITAL STATISTICS.

(A.) Population.

The population at the 1891 census was 41,054. No census was taken in 1901 on account of the expense involved, which the Colony was not in a position to afford. By the estimate of the Registrar-General, the population at 31st March, 1904, was 48,424. This figure, however, as explained in last year's report, is generally considered to be inaccurate and reducible by about 15 per cent.

The births registered in 1903-4 were 1,518—760 male and 758 female—as against 1,551 in 1902. Of these 836, or 55·07 per cent., were illegitimate.

Still-births were 119—42 legitimate and 77 illegitimate; the figures being, curiously enough, all precisely the same as for the year 1902.

Marriages appear to be appreciably on the increase, there having been 66 in the first quarter of 1903, against 30 in the similar period of 1902, and 241 in the year 1903-4, as against 226 in the calendar year 1902. The preponderance is among the Wesleyan denomination, owing, I understand, to a special

crusade in this direction in one of the country districts, and I am afraid, therefore, the figures cannot be taken as necessarily indicating a better financial condition of the labouring classes.

The total registered deaths were 875, being 18·07 per 1,000 of the estimated population.

The infant mortality (infants under one year exclusive of still-births) was 222, being about 25 per cent. of the whole.

(B.) Public Health.

If the death-rate may be taken as an index of the public health, then 1903-4 was an exceptionally healthy year; the number of deaths registered being 52 below the average of the ten preceding years, which was 927.

Anchylostoma, syphilis, and intestinal parasites are the three great evils with which the medical staff have to contend.

Malaria was severe in certain localities, and there was also an epidemic of whooping cough.

The peculiar form of small-pox, to which the hybrid designation of "varioloid varicella" was given, was introduced from Trinidad, but fortunately was prevented from spreading.

After a personal experience of 23 years, which embraces every single one of the British insular colonies in the West Indies and several foreign ones, I am inclined to set down St. Vincent as the healthiest and pleasantest in climate of all, for the European dweller who has to spend two or three years at a stretch in one place without a break.

(C.) Sanitation.

There is nothing special under this head to call attention to. In the villages of the peasantry, the ideas and methods in sanitary matters are elementary in the extreme. In the towns, things are passable, but could be much improved if there were money to lay out. On the whole, however, there are no glaring evils.

Public Health Regulations were passed during the year, which empower action to deal with any serious epidemic that may appear.

(D.) Climate.

The rainfall for the year 1903-4 was 100·45 inches, as against 108·37 in 1902.

Rain fell on 261 days throughout the year.

The maximum fall in one day was 5·25 inches, on 19th December.

October was the wettest month with 19·84 inches, and February the driest with only 2·97 inches.

The mean monthly temperature was 79°.7 F. Maximum for the year 88°.5 F. in November, minimum 66° in February.

VIII.—POSTAL, TELEGRAPH, AND TELEPHONE SERVICES.

The postal service is performed by a fortnightly service of steamers of the Royal Mail Steam Packet Company, from and to Barbados, where they meet the ocean packets, under contract with His Majesty's Government. There are also lines of steamers from Halifax, Nova Scotia, under contract with the Canadian Government, fortnightly, and other steamers also, from and to the United States, and direct from and to London, call at the Port of Kingstown, though at somewhat irregular intervals.

There is an inland postal system by which the Windward and Leeward Districts of the Colony are served daily, and the islets of the Grenadines weekly.

The volume of business of the Post Office was normal, save for an increase in the number of parcels.

The old Post Office, which was in great disrepair, was thoroughly renovated and enlarged, and is now a really presentable and commodious building.

The revenue of the Telephone Department was £447, and the expenditure £339. The lines run from Kingstown to Chateaubelair on the Leeward side and to Georgetown on the Windward side of the Island, about 24 miles either way, and the service is a most useful one.

IX.—MILITARY FORCES AND EXPENDITURE.

Nil.

X.—GENERAL OBSERVATIONS.

Sir Robert Llewelyn, K.C.M.G., Governor of the Windward Islands, visited the Colony in May, 1903, remaining 18 days. His Excellency proceeded to England on leave in June and remained to November, during which time the Windward Islands Government was administered by Sir George Melville, K.C.M.G., Administrator of St. Lucia.

The question of the local Attorney Generalship was settled by the nomination in July, 1903, of Mr. D. T. Tudor, the new Attorney-General of Grenada, to be also titular Attorney-General of St. Vincent. Mr. Tudor visits the Island three times a year and conducts prosecutions at the Criminal Sessions, but the usual duties of legal adviser to the Government now devolve on the Chief Justice, an arrangement brought about by the absolute necessity of reducing the expenditure.

There were several changes in the medical staff of the Colony, and the numbers were reduced by one, the boundaries of the medical districts being correspondingly altered—this economy being rendered possible by the eruption having denuded the northern Windward District of its former population.

The financial year opened gloomily, a very serious outburst of the Soufrière having taken place on the 22nd of March, 1903 (after a lull of five months), spreading yet another carpet of volcanic dust and ashes over the Carib country, and causing fresh disturbance and unsettlement of the dwellers in the vicinity of the mountain. Happily there has been no renewal of activity since the date last mentioned, and it is hoped that the subterraneous forces have now settled to rest, though, even so, for many years to come, the grim possibilities of a new development in the mountain's womb must remain a factor to reckon with.

No attempt was made to re-establish cultivation proper on the devastated estates, which remained stricken and deserted, though surface vegetation was fast asserting itself and softening with its green mantle the jagged and dust-covered fields and ravines.

The feature of the year was the re-introduction of the cotton industry, already referred to under the head of "Agriculture." This has been taken up well and bids fair to be a success and to help in improving the Island's condition.

To some extent also the recent rise in the price of sugar should do good, but this did not operate during the period under review.

The general condition of the Colony in 1903-4 may be said to have been one of gradual recovery after the terrific experiences of the previous ten months, but its strength has been greatly impaired by this second convulsion, following on the terrible 1898 hurricane, and recuperation cannot be, even if assisted by much improved circumstances, other than a very gradual process. Moreover the "Relief" remedy, which has had perforce to be so largely applied in these two illnesses, is a dangerous drug, and apt to leave enduring ill-effects on the constitution.

EDWARD J. CAMERON,

Administrator.

31st January, 1905.

COLONIAL REPORTS.

The following recent reports relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page :—

No. 463.

GRENADA.

(For Report for 1903, *see* No. 436.)

GOVERNOR SIR R. B. LLEWELYN to MR. LYTTELTON.

St. Lucia,
2nd September, 1905.

SIR,

I HAVE the honour to transmit the report on the Blue Book of the Colony of Grenada for the year 1904.

I have, &c.,

R. B. LLEWELYN,
Governor.

1000 Wt 23792 10/05 D & S 5 22623 A 2

BLUE BOOK REPORT FOR THE YEAR 1904.

FINANCIAL.

Financial Position of the Colony.

The financial year 1904-5 opened with a balance of assets amounting to £22,649, and closed with a similar balance of £22,408. In Table A, details of the colonial assets and liabilities are given, the principal items of the surplus being as follows:—

Reserve Fund, invested	£12,645
Carriacou Land Settlement Fund ...	4,660
Advances to towns for water works...	1,483
Advances to towns for other works...	236
	£19,024

The Carriacou Land Settlement Fund represents a portion of the Colony's balance invested in the purchase of land in the island of Carriacou; this land has been re-sold by the Government to peasants, who pay for their lots by instalments, the unpaid balances bearing interest, and being secured on the land itself. £1,416 of the advances for water works is repayable by instalments of £500 per annum without interest, the balance being the initial advances on account of loans to be made to the towns of St. George's and Sauteurs, bearing interest, and extinguishable by sinking funds. The other advances to towns are minor loans from general revenue, repayable by instalments.

Revenue and Expenditure.

2. The figures for the last five years are:—

Year.	Revenue	Expenditure.
	£	£
1900	70,363	62,718
1901-2	70,075	65,490
1902-3	72,802	68,669
1903-4	70,265	70,113
1904-5	68,993	69,509

3. Details of the revenue and expenditure for the financial year under review will be found in Tables B and C in the

Appendix, on reference to which it will be seen that the reduction of the revenue of the year by £1,267, as compared with its predecessor, is due to shortage under Customs, £237; internal revenue, £927; water supplies, £358; and Imperial grant for agriculture, £143. In all but the second item the shortage is apparent only. Under Customs, it is attributable to a temporary deficit in the cocoa crop, caused by weather conditions, and resulting in decreased receipts from export duty in the first three months of 1905; at this date the crop deficit has nearly disappeared. The reduction under water supplies is due to recent legislation, which brought about a change in the date of payment of rates, which are being received in the current financial year, and a vacancy in the office of Curator of the Botanic Station led to less of the usual Imperial grant for agricultural services being required. The decline in internal revenue is, however, of more serious significance, for it is chiefly due to decreased receipts from the excise duty on rum, £1,138 less being received than in the preceding year. Smuggling and illicit distillation of spirits are responsible for this, and to this subject reference will be made later on.

4. The expenditure was kept under careful control, and although it exceeded the revenue by £516, was less than that of 1903-4 by £604. But for the necessity for granting certain pensions, and the payment of a special grant for the Colonial Exhibition at the Crystal Palace in 1905, it would have been kept within the revenue.

Public Debt.

5. The public debt of the Colony is £123,670, in four per cent. inscribed stock, redeemable between the years 1917 and 1942 from a sinking fund to which annual contributions at the rate of one per cent. on the nominal value of the stock are made. The Crown Agents for the Colonies are Trustees of this fund, which amounted at 31st March, 1905, to £16,131.

Town Boards' Finances.

6. The debts of the town Boards amounted at 31st March, 1905, to £12,901, as under:—

Board.	Amount.
	£
St. George's	6,077
Grenville	1,090
Sauteurs	1,100
Victoria	1,384
Gouyave	3,250

These are all owed to the Government, and are repayable either by annual sinking fund contributions, or by annual instalments, which are now nearly always regularly paid.

7. The revenue and expenditure of the Board in the last five years are shown in Table D in the Appendix. The last financial year closed, in regard to each of them, with a balance of pecuniary assets; two Boards, however, owed merchants' bills amounting to £106 and £13, respectively.

8. The Hillsborough Town Board ceased to exist on 30th September, a system of official and unofficial town wardens being substituted for it.

TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and Exports.

9. The trade of the Colony showed a marked increase in 1904, as will be seen from the figures for the last five years, given below:—

Year.	Imports.	Exports.	Total Volume.
	£	£	£
1900...	232,790	311,681	544,471
1901...	246,567	303,934	550,501
1902...	239,108	310,602	549,710
1903...	235,440	283,565	519,005
1904...	256,269	321,766	578,035

This was due to the satisfactory output of the staple products, the cocoa crop being the largest on record, spices fairly good, and the results of the cotton industry nearly twice as much as usual. It is probable that the imports would have been much larger, but towards the end of the year there were indications of a shortage in the cocoa output, and a certain amount of caution was displayed by importers. Table E shows that the increase of imports took place chiefly under Class I., *i.e.*, live animals, food, drink, and narcotics, and Tables F and G indicate the principal items of increase or decrease both of imports and exports. As regards the imports, attention may be directed to the increased consumption of imported foodstuffs, such as biscuits, fish, wheaten flour, and rice, and to the presence in the table for the first time of the

fresh vegetables, known in the West Indies as "ground provisions," the quantity imported in 1904 having been of sufficient volume to justify its separate inclusion in the statement; these provisions nearly all came from St. Vincent and Barbados. The table of the principal exports shows a satisfactory increase under almost every item.

10. The direction of trade is indicated in Table H, which, as regards the imports, may be summarised as follows:—

—	1901.	1902.	1903.	1904.
	Per cent.	Per cent.	Per cent.	Per cent.
United Kingdom	46	44	48	46
British Colonies	24	21	18	22
Foreign Countries	30	35	34	32

In effect, therefore, the mother country supplies about one-half of the imported goods, British Colonies about one-fifth, and foreign countries about one-third, and the change from year to year is but slight.

11. The exports, however, show a growing tendency to favour foreign countries. In 1904, one-third of the trade went thither, Great Britain receiving nearly all of the remaining two-thirds, the exports to British Colonies, which showed a marked increase in 1902 and 1903, returning to their normal average of about £5,000.

12. Following up in Table I this tendency of the export trade, we find that the steady increase of that to the United States of America, which has been a feature for many years, is being closely approached by that to France and her colonies. The French market for a certain grade of cocoa supplied by this Colony is fortunately improving year by year, just as the American market for another grade tends to improve, and in this happy trade connection with the two great republics the Colony has legitimate ground for a hopeful outlook for the future of her main product.

13. The value of the imports from Canada in the last five years was:—

Year.	Amount.
	£
1900	7,946
1901	11,263
1902	9,140
1903	15,686
1904	11,811

The principal items in the last two years were:—

—	1903.	1904.
	£	£
Timber and shingles ...	10,593	6,948
Wheaten flour	1,246	1,301
Butter	882	936
Salt fish	815	729
Oats	684	510
Ropes and cordage ...	483	643
Peas	171	84

There were no exports to Canada in the year under review, and this section of the trade with the Dominion is usually insignificant. More Canadian foodstuffs would doubtless be introduced here if means of communication were simpler and more frequent, but as there are three direct steamers per month from New York, and only one from Halifax, and as the latter takes a long time to reach Grenada, after calling first at nearly all of the northern islands of the Caribbean, it is not surprising that commerce prefers the former channel.

Agricultural Industries.

14. The staple products of the Colony are cocoa, spices (chiefly nutmegs), and cotton. There is a certain amount of sugar cane and coffee cultivated for local consumption, and a small quantity of kola nuts (value about £300 per annum) for export.

Cocoa.

15. A record has been kept of the cocoa crops, for the years ending 30th September, since 1878, and the average crops for quinquennial periods from 1880 to 1904, inclusive, are given below:—

Quinquennial Period.	Bags.
For 5 years ending 30th September, 1884	29,267
" " " 1889	36,620
" " " 1894	46,418
" " " 1899	49,891
" " " 1904	59,661

The bag averages 180 pounds.

The crop for the year under review was the largest on record, 67,225 bags, exceeding that of the previous year by 4,206, and the five years' average by 7,564 bags.

Spices.

16. Owing to the absence of uniformity in the packages in which spices are shipped, a comparison by crops is not so easy as in the case of cocoa, so the figures, by weight, of the quantities exported are resorted to for comparison:—

—	Cwt.
Average for 5 years ended 31st December, 1901	4,624
Exported in 1902 (Nutmegs 5,999 cwt.)	6,839
" 1903 (" 6,944 ")	7,959
" 1904 (" 5,900 ")	6,915

The output of 1904 was, therefore, about 1,000 cwts. less than in the preceding year, a result which is doubtless attributable to the irregular incidence of the rainfall in the year under notice.

Cotton.

17. This industry is almost entirely confined to the Dependency of Carriacou, where conditions are highly favourable to its growth. The statistics of the exports, given below, show a steady increase:—

—	Raw Cotton.	Cotton Seed.
	Cwt.	Cwt.
Average for 5 years ended 31st December, 1901.	2,095	4,537
Exported in 1902	2,212	4,536
Exported in 1903	2,688	6,757
Exported in 1904	2,807	6,844

18. It may be safely prophesied that with the present demand in England for British-grown cotton and with the changed conditions affecting the tenure of land in Carriacou, brought about by the Land Settlement Scheme of the Government, this industry has an important future before it. A feature of the current year is the opening up by one of the largest landowners of the island of some valuable estates there for the cultivation of Sea Island cotton, an example which the peasant settlers will not be slow in following.

19. The Land Settlement Scheme continues to make highly satisfactory progress. The details given in last year's report

will not be repeated here, but it may be stated that the Government have this year purchased two more properties, the cultivable lands of which will soon be sold out on the system adopted, while both estates include valuable reserves for forest conservancy and other public objects. Other important details of the development of the island, such as the improvement of the water supply, the provision of a fine hospital, the erection of a new police station, and the preliminary survey for the erection of a jetty, are being steadily pushed forward under the energetic supervision of the Commissioner, Mr. Whitfield Smith, and the value to the Colony of her long neglected annex is daily becoming more apparent.

20. This value is likely to be felt by the lower and middle classes in the future, in one way, not yet fully realised, viz., in the capacity of Carriacou, with its crops of annuals, to supply the principal island with "ground provisions." Reference has been made to the appearance of these articles among the imports of the Colony of late years; twenty years ago, not only were none imported, but the exports were worth about £600 per annum. The change is due to (1) the increase of population, which proceeds at the rate of 20 per cent. in 10 years; and (2) the permanent absorption of the cultivable land of the island by cocoa and nutmegs. The result, while favourable to the large landowner, is distinctly unfavourable to the peasant, be he proprietor or labourer, for whereas years ago he had his provision "garden" always available for the support of himself and his family, and probably had also a small piece of pasture for his cattle, the areas thus beneficially occupied either have been or are being absorbed by permanent cultivation, on the proceeds of which he is becoming more and more dependent. Inasmuch as this permanent cultivation does not provide continuous employment for a large number of labourers, such as cultivation of annuals does, it will be seen that a situation full of possible difficulty is being created for the future. Were it not for liberal expenditure on public roads and works, the pressure would have been felt already more than it has been.

21. An additional agricultural industry, which requires annual cultivation and reaping, such as that of sugar cane or cotton, would be a boon to Grenada, where some of the low-lying coast lands still remain uninvaded by the ruling industries. Such cultivation would admit of vegetables being grown along with it, and alternatively to it, and would also provide steady employment for a number of labourers, thus solving what is likely to become within the next decade a pressing question for the community. Meanwhile the agricultural development of the land of Carriacou, within a few hours' sail of the principal island, is a factor in the situation, which may be of considerable assistance by providing supplies of

vegetables at cheaper rates than those at which they could be imported from other colonies.

Mines, Manufactures, and Fisheries.

22. There are no mines and no fisheries. Cane sugar of a low grade, rum, and ice are manufactured in the Colony for local consumption, and in the case of ice for export also; in 1903, 245 tons, and in 1904, 172 tons, were exported to neighbouring colonies. There is no means of estimating the quantity of sugar made, which is entirely inadequate both in quality and quantity for the wants of the population, and in 1904, 3,357 cwts. of refined, and 6,472 cwts. of muscovado sugar, were imported, worth nearly £7,000.

23. Returns of the rum made are required by law, there being an excise duty levied, and the figures so returned in the last five years were as follows:—

Year.	Quantity made.	Excise Duty paid.
	Gallons.	£
1900	47,942	11,327
1901	53,204	11,669
1902	45,054	11,853
1903	43,314	12,723
1904	46,911	11,812

24. The quantities of rum returned and of duty paid do not keep pace with the increase of population and with the increased money circulation in the Colony. In 1892, with a population of about 54,000, the excise duty amounted to £11,775; in 1904, the population being about 68,000, it was only £11,812.

It is unfortunately the fact that contraband trade in spirits both externally and internally is going on, though every effort is being made to suppress it. A revenue cruiser is kept on preventive duty among the Grenadines, and, amongst other good work done in this direction, during 1904 a seizure of a sloop was made off Carriacou in November, with a contraband cargo of spirits worth about £600, which, together with the vessel, was forfeited, while her crew were imprisoned. Two complete illicit stills were seized by the police during the year, and portions of several others; there were eight prosecutions, resulting in fines being paid amounting to £150, while four offenders went to prison in default of payment of their fines.

SHIPPING.

25. The subjoined statement of the total tonnage of shipping, inwards and outwards, in the last five years shows that there was a substantial increase in 1904, both as compared with 1903 and with the average for the period: —

Year.	Tonnage.	
	Entered.	Cleared.
1900	222,899	216,110
1901	267,972	275,770
1902	287,000	290,035
1903	280,862	288,328
1904	316,223	316,068
Average	274,991	277,262

26. In the Appendix Table J, a comparison of shipping entered and cleared in the last two years is made, distinguishing between steam and sailing vessels and also between nationalities. It will be observed that the French and German steam tonnage, commented upon last year as being due to exceptional causes in that year, has disappeared. The appearance of a small quantity of American steam tonnage in 1904 is explained by two visits of a steamer, of United States registry, belonging to the Asphalt Company of Trinidad.

LEGISLATION.

27. Among the 15 Ordinances passed during the year are three important measures:—

The Taxes Management Ordinance,

The Carriacou District Ordinance,

The Registration of Births and Deaths Ordinance.

The first consolidates, with amendments and improvements suggested by experience, the several laws which provided for the collection of the tax on land and houses; the second provides for the first time for the effectual government of the islands of Carriacou and Petit Martinique, which (with the adjacent islets) are made into a district and placed under the care of a resident Commissioner; and the third consolidates and amends the previous local enactments relating to the registration of vital statistics, following as far as possible the English model, so that much improvement may be expected in the accuracy of future records.

EDUCATION.

Primary.

28. There are two classes of primary schools—Government, entirely supported from colonial revenue, and grant-in-aid, receiving contributions from public funds. The system in force is one of payment by results, grants being paid to teachers from the Colonial Treasury monthly upon the certificates of the school managers (who are usually the clergy of the several religious denominations), based upon the educational results of the schools as shown by an annual examination by the inspector, who is a Government officer. Managers are also paid a grant at the rate of one shilling per annum for each pupil who attends school on not less than 100 days in the year, this grant being intended to assist them in supplying school furniture and apparatus. They are further allowed to receive the whole of the school fees paid by the pupils; these are, however, but indifferently collected. The administration of the system is under the control of a Board, composed of equal numbers of Roman Catholic and non-Roman Catholic members, the Governor presiding, but having only a casting vote.

29. The statistics of the year, contained in Table K in the Appendix, show an increase of one in the number of schools and increases in the number of pupils on the roll and in the average attendance. The Government grant is as usual on the increase, but there is an entire absence of voluntary contributions. As before, comment must be made upon the disparity in the collection of school fees; the Anglicans, with 9 schools, and the Government schools, also 9 in number, collected £132 and £114, respectively, while the Roman Catholics, with 21 schools, collected only £117.

30. It is self-evident that a system which can admit of such differential treatment must have some inherent defect, and in the opinion of those qualified to pass judgment on it, it is radically unsuited to the requirements of the Colony. During the year a Committee of the Board of Education sat with instructions from the Board to propound a new scheme, but its labours were not completed by the end of the year.

Secondary.

31. Statistics furnished in respect of the Secondary Schools of the Colony are given and compared with 1903 in Table L. Here, too, the system may be described as being in a stage of transition. An elaborate scheme, prepared by a Committee appointed by the Governor in 1902, having for its object the establishment of a boys' college, somewhat on the lines of the Mauritius Royal College, fell through, because a condition prescribed by the Secretary of State, that a portion at all

events of the initial outlay should be provided by private generosity, failed to commend itself to those interested; and it has since been proposed, and is now under consideration, that Government should take over the existing schools (except the Roman Catholic Convent School, which holds its own satisfactorily), and manage them entirely.

GOVERNMENT INSTITUTIONS.

32. The general results of the year's work in the charitable institutions are tabulated below:—

Institution.	Number at 1st January.	Admitted during the year.	Daily Average.	Cured.	Relieved or not improved.	Died.	Remaining at 31st December.	Cost of Institution.
								£
Colony Hospital	61	734	69·32	505	185	39	66	1,838
Yaws "	53	139	37·95	138	—	1	53	678
St. Andrew's "	11	122	10·35	107	4	11	11	577
Carriacou "	10	169	14·8	117	45	2	15	387
Lunatic Asylum	121	40	127	16	2	12	131	1,860
Pauper "	33	28	36	1	4	16	40	393

33. It may be recorded that the steady improvement which has of late years been going on at the Colony Hospital has resulted in that institution being now entirely creditable to the Colony. Mention should be made of one special item of good work, which was commenced in 1904 by Dr. T. M. R. Leonard, who assumed the duties of House Surgeon on 30th March. He found that ankylostomiasis was largely prevalent among patients, and 150 cases were satisfactorily dealt with during the year, the treatment being by thymol. The current year will show even better results.

34. Fewer cases were admitted at the Yaws Hospital than in 1903, the activity exhibited of late years in hunting up cases being apparently on the wane: the following are the admissions of the last four years:—

Year.	No.
1901	150
1902	163
1903	189
1904	138

A few cases are now occasionally admitted from Carriacou, which was once regarded as quite free from the disease.

35. Much activity was exhibited at the St. Andrew's Hospital. More patients were admitted than in 1903, and 1,901 more prescriptions were compounded at the Dispensary, of which 3,570 were paid for at the shilling rate, realising £179. The buildings are in good condition and well kept.

36. At the Carriacou Hospital the highest number of patients on record, 179, was treated. Of these there were only two deaths, one being due to double pneumonia and the other to traumatic tetanus. Another noteworthy feature for a small district hospital was the successful performance of no less than 22 operations. The dilapidated condition of the buildings and the unhealthy nature of the site have been so frequently commented upon that it is a relief to be able to record this year that a fine new hospital is in course of erection on one of the healthiest spots in the West Indies.

37. A change of Medical Superintendent took place at the lunatic asylum, Dr. P. F. Macleod, who had held the office since 1881, retiring on pension, his long and faithful services there and elsewhere being recognised by His Majesty conferring upon him the Imperial Service Order; he was succeeded on 1st of March by Dr. E. F. Hatton.

38. As will be seen from the figures given above, there were at 31st December, 1904, 131 patients in the asylum; of these, 73 were from Grenada, 29 from St. Lucia, and 29 from St. Vincent, the daily average under treatment being 127. As the buildings can only properly provide for 120, undesirable conditions are created, which can only be remedied by St. Lucia erecting its long-promised asylum, or by a corresponding increase of the structural accommodation in this Colony. As they stand, they are only capable of dealing with the Grenada and St. Vincent patients effectively.

39. The poor asylum (or asylum for incurables) provided as usual for more male than female patients, the daily average of the sexes being 26 and 10, respectively. Steps were taken towards the end of the year to carry out much needed improvements in the buildings and premises generally, which are being effected in the current year. Additional accommodation for males is becoming a pressing necessity; for females there remains plenty of room.

Savings Bank.

40. The transactions of 1904 show a healthy increase, although the number of depositors continues to decrease. £12,000 of the balance to credit of depositors at the close of

the year was either invested in Colonial Securities (£9,500) or held on deposit by the Colonial Bank (£2,500) at 3 per cent. interest. The principal figures of the last five years are compared below:—

Year.	Number of Depositors at 31st December.	Amount of Deposits (including interest capitalised).	Amount of Withdrawals.	Balance to credit of Depositors at 31st December.
		£	£	£
1900	1,387	9,379	9,136	11,168
1901	1,355	8,603	8,561	11,21[illegible]
1902	1,847	9,184	9,378	11,417
1903	1,544	7,480	7,674	11,658
1904	1,465	9,279	8,416	12,790

JUDICIAL STATISTICS.

Police.

41. The strength of the police force is 74 rank and file, the details being 1 chief, 1 sub-inspector, 7 sergeants, 7 corporals, and 58 constables. They are trained to the use of the Martini-Henry rifle, and maintained on a semi-military footing. Attached to the department at present are the duties connected with the supervision of the collection of the excise duty on rum, and the St. George's fire brigade is the headquarters detachment. A Government band, consisting of a bandmaster and 13 performers, is maintained, and, for disciplinary purposes, kept under the control of the chief of police.

Prisons.

42. On 1st January, 1904, the new annex to the Richmond Hill Prison was occupied for use as the female prison of the Colony. It is a well-constructed, substantial, and airy building, and marked improvement in the disciplinary treatment of the female prisoners has resulted from the change, little having been possible hitherto under previous conditions. The Richmond Hill Prison is now the sole prison for the Colony, and it may safely be said that its management and discipline will stand the test of criticism. It is and has been for years practically self-supporting, and is generally a credit to the Colony.

43. The committals for the year under review were 208 in number—149 male and 56 female adults and 3 boys; of these,

23 males were from the other Colonies of the Windward Islands' Government—20 from St. Lucia, and 3 from St. Vincent. In the case of St. Vincent, a standing arrangement exists whereby all convicts with sentences of two years and upwards are transferred to Grenada, and St. Lucia sends as many convicts as can be accommodated by Grenada, her prison room being limited.

44. The daily average in prison was 63·9, of which only 50 were Grenada convicts; the cost of the institution was £1,352, and the value of the work done was £1,379; the cost per prisoner was £21, of which £11 10*s.* represents the cost of the staff, and £5 the dietary; this last contains no animal food other than a small quantity of fish, and costs 3¼*d.* per head per diem. The scale of dietary has been in force for 17 years, and has worked with marked success; in respect of 1904, the Superintendent reports as follows on it: "The dietary, as in the past, has proved quite sufficient for the physical requirements of the prisoners, most of whom gain weight upon it, and are usually more robust on discharge than on receipt into prison."

CRIMINAL STATISTICS.

45. A comparison is instituted in Table M between the criminal statistics of 1904 and 1903 and also with the averages for the years 1900-2. The Attorney-General in his report on the year's statistics makes the following remarks: " . . it is satisfactory to find that the amount of crime in general during the year 1904 was below the average for the previous eight years, and in particular it is to be noted that there was during 1904 a marked decrease in the number of convictions for certain classified offences, as well as in the total number of persons acquitted (in comparison with those recorded during the previous eight years); . . . . It is also of interest to observe that the diminution in the number of persons acquitted is accompanied by a slight decrease in the number of 'Cases which fell through for want of prosecution, etc.' (that is in proportion to the increased total for charges investigated). These are gratifying facts, as tending to show the greater care and efficiency taken by the police and others in obtaining evidence; and also as pointing towards the continued vigilance exercised by the Courts in discountenancing the compounding of felonies and the compromising of other offences."

VITAL STATISTICS.

Population.

46. The population according to the Census of April, 1901, was 63,438, and by natural increase was estimated at 31st December, 1904, to be 68,253, an increase of 4,815, or about 7½ per cent. The proportions of the sexes in this estimate are—males, 32,389; females, 35,864. The birth-rate for the year, calculated on the mean estimated population, was 43·19, and the death-rate 21·10 per 1,000.

Public Health.

47. No disease was epidemic during the year, and the usual endemic, malarial fever, resulted in only 99 deaths, a decrease on the two preceding years. The death-roll returned to normal figures, the previous year having been an exceptionally bad one in this respect. The principal causes of death in the year were as follows:—

Disease.	No. of Deaths.
Enteritis	116
Diarrhœa...	107
Dysentery	69
Fevers	99
Phthisis	64

48. On the 29th of December a case of the eruptive disease, which had been epidemic in Trinidad in 1903, and which is possibly a very mild and unusual type of small-pox, was detected in the St. Andrew's district and isolated. Thanks to the energetic action of the Local Health Authority, ably seconded by the medical officers and police, the outbreak has been confined to that district and was stamped out in June of the current year.

Climate.

49. The principal meteorological statistics of the year are as follows:—

Rainfall—

North of Island	105·22 inches.
Centre „ „	176·49 „
South „ „	69·41 „
Carriacou	56·38 „
Relative humidity (mean)	74·7 per cent.
Mean temperature (maximum) ...	91·4° Fahr.
„ „ (minimum) ...	68·4° Fahr.
Mean pressure	29·987 inches.
Days of rain	253.

The rainfall at the Meteorological Station in the south of the island was 9½ inches less than in the preceding year, and below the average for the previous 12 years. In the centre and north of the island, however, and in Carriacou the record of 1903 was exceeded. The rainy season commenced on 4th June.

50. The average annual rainfall at the above station for the 14 years 1891-1904 is 78·37 inches, the maximum for one year (1892) 105·89 inches, and the minimum (1891) 56·69 inches. The maximum for one month was recorded in November, 1896, 20·90 inches, and the minimum in May, 1899, ·49 inches. There are now 13 rain-recording stations in the Colony, and statistics of some value will in a few more years be available.

51. Three shocks of earthquake were felt during the year, and volcanic dust (from Mont Pelée in Martinique) fell on several occasions.

Sanitation.

52. The Governor and the members of the Executive Council form the General Board of Health for the Colony, and there are six District Health Authorities, consisting of the Medical Officers, the Chief and Sub-Inspector of Police, and other official and unofficial members. Fixed monthly meetings are held, at which the reports of the non-commissioned officers of police, detailed as district sanitary inspectors, are considered. These authorities have more than once done excellent work, and are a valuable part of the administrative machinery, unofficial co-operation in details of this description being particularly useful in these Colonies.

POSTAL AND TELEPHONE SERVICES.

Post Office.

53. The business of the Post Office continues steadily to increase, as will be seen from the statistics for the last three years given below:—

—	1902.	1903.	1904.
Letters and post cards	440,934	470,173	530,231
Newspapers, books, &c.	147,628	148,915	169,806
Parcels	6,147	8,431	9,323
	£	£	£
Money orders issued and paid ...	20,808	20,227	20,465

Among other improvements effected during the year may be mentioned the introduction on 1st October of British postal orders for every sixpence in value from 6*d.* to 10*s.* 6*d.*, thus furnishing a cheap and simple method for small remittances to the mother country, other British Colonies, and locally.

TELEPHONES.

54. The service was satisfactorily conducted during the year. Receipts for the financial year amounted to £1,430, and expenditure to £1,337, inclusive of £226 for loan charges; besides the ordinary expenditure, £202 was spent on re-construction work, which is being gradually pushed on. A feature of the year's work was the introduction of the telephone into Carriacou, where at 31st December there were five installations.

MILITARY FORCES AND EXPENDITURE.

55. There is no military force in the Colony. The police are drilled and trained to use arms, and laws have been passed enabling the Government to enrol a volunteer force and also volunteer reserve corps. For these latter the Imperial Government has kindly supplied the necessary rifles and equipment, and a rifle range has been prepared adjacent to the principal town, and is ready for use.

GENERAL REMARKS.

56. On the 4th of March, at a meeting presided over by the Governor, it was decided by the Grenada Agricultural Society to incorporate the mercantile interests of the Colony in the Society, and new rules were then passed providing for an "Agricultural and Commercial Society of Grenada." The combined Society has already done some good work, and there can be no doubt as to the importance of the future which is possible to it.

57. On the 1st of April a new light on Point Salines, the south-western extremity of the harbour of St. George's, was lighted by the Governor for the first time. This light, with the buildings and adjacent land, was presented to the Colony by the Honourable C. Macaulay Browne, C.M.G., and G. G. Browne, Esquire, in memory of their late father, Jonas Browne, Esquire, who was long and honourably connected with the Colony, commercially. It is a white light of the fourth order,

enclosed in a lantern on an iron column, 120 feet above sea-level, and visible 12 miles.

58. On the 5th of August a new town clock for St. George's commenced to work. This clock, which rings the "Westminster Chimes" for the quarters and is an excellent time-keeper, was erected by the Government in the re-constructed steeple of the Anglican Church, the most prominent and suitable place for it, and removes a serious defect, the absence of a thoroughly reliable public timepiece.

59. In June, new waterworks for the town of Gouyave were commenced by the Public Works Department, the water rights and land for reservoirs, &c., on Dougaldston Estate having been generously presented by the Honourable D. S. De Freitas. These works have been rendered necessary by the collapse years ago of the former works owing to defective foundations. The Government is paying the cost of new works from Colonial revenue, the cost of the first works remaining charged as a loan to the town authority.

60. Probably the most important public event of the year was the passing by the Legislative Council, on the 16th of August, of a resolution approving of the creation of semi-elective District Boards for the administration of all purely parochial details, and of the maintenance of the main roads of the island by a system of official and unofficial Road Wardens, to be appointed by the Governor. Local self-government in the districts of Grenada has been on its trial now for 19 years, and an impartial judgment on results would infallibly declare that there has been such a margin of success as to justify the present consolidation of effort in this direction, and thus afford the growing community its only possible arena of training in that co-operation in the administration of public affairs which is the pride of the British race wherever it finds itself. On 1st October in the current year, the scheme comes into legal effect, and the Government, in common with the community generally, entertain a sincere conviction that success may be hoped for from this important new departure.

EDWARD DRAYTON,

Administrator.

Grenada,

31st August, 1905.

			28,266			26,515

NOTE.—This Table includes receipts from the Imperial Agricultural grant, and expenditure charged against the same, both of which are omitted in Table 1.

The total local revenue of the Colony for the year 1904-5 was £22,448, being £493 more than the estimate, and £1,504 in excess of the receipts of the previous year.

The gross excess of receipts over estimate was £1,582, of which £1,093 was under the head of "Licences, Excise and Internal Revenue," and the gross deficiency on estimated receipts was £1,089, of which £1,026 was under "Customs," the result being a net increase of £493, as above stated.

On a comparison of the revenue details of 1904-5 with those of the previous year, it is seen that there is an increase under nearly every head other than Customs, the most notable rise being under Licences, Excise, and Internal Revenue, amounting to £1,968. This last is the result mainly of greater police activity and consequent suppression of illicit distillation. The fall in Customs was, however, £786, owing to reduced importations, there being a difference on flour alone of £450.

Other minor fluctuations contribute to the net result of £1,504 increase—the figure already given.

The gross revenue, including Parliamentary grant of £4,500 in aid of deficit, was £26,948, and in addition to this a sum of £1,318 was paid by the Imperial Government, being the annual grant for Botanic Station and Agricultural School.

The expenditure of the Colony for the same period was £25,228, as against an estimate of £26,685, and a further amount of £1,287 was expended on upkeep of the agricultural institutions.

The corresponding figures of expenditure in 1903-4 were £26,657 and £1,458.

Comparison shows a decreased expenditure of £358 on account of Public Debt, the liability on which is lessening annually, £208 on pensions, £462 on Medical Department and hospitals together, £174 on poor relief, £250 on Post Office, and £229 on miscellaneous, while the only appreciable increase is £244 on public works.

The net result of the year's working is therefore:—

Actual local revenue	£22,448
" " expenditure	25,228
Deficit	£2,780

as against an estimated deficit of £4,730.

(B.) Taxation.

No changes took place during the year under review.

(C.) Assets and Liabilities.

An examination of the statement subjoined shows an excess of assets of £688.

At 31st March, 1904, the account showed an excess of liabilities of £1,032.

unpaid balance of the Hurricane Loan to planters from the Imperial

Treasury, St. Vincent,
26th May, 1905.

EDWARD J. CAMERON,
Treasurer.

(D.) Public Debt.

The public debt of the Colony at 31st March, 1905, stood at £5,050, as against £5,750 at the end of the previous financial year.

Of the above sum, however, the amount for which Colonial revenue is actually liable is £1,000 only.

The remainder, though guaranteed by the Colony, is repayable from the municipal funds of the towns of Kingstown and Georgetown.

(E.) Currency.

Gold, American and British, notes of the Colonial Bank and British silver and copper constitute the currency of the Island.

The Government's accounts are kept in sterling, and commercial accounts in dollars and cents.

(F.) and (G.) Finances of Municipalities or Public Boards.

The management and control of the affairs of the town of Kingstown are vested in a Board, half of whom are elected by the ratepayers and the other half nominated by the Government. The small towns of the Colony are controlled by wardens, annually appointed by the Government.

The following comparative statements give the total revenue and expenditure of these towns for the last five years:—

Revenue.

Town.	1900.	1901.	1902.	1903.	1904.
	£	£	£	£	£
Kingstown	1,961	1,805	1,495	1,873*	1,657
Georgetown	120	194	179	90	164
Chateaubelair	25	38	31	27	23
Calliaqua	13	33	40	36	31
Barrouallie	38	42	33	38	29
Layou	15	18	22	28	16
Bequia	6	8	6	6	15

* Inclusive of £201 1902 revenue not passed to account till 3rd January, 1903.

Expenditure.

Town.	1900.	1901.	1902.	1903.	1904.
	£	£	£	£	£
Kingstown	1,902	1,759	1,637	1,609	1,650
Georgetown	133	175	204	137	120
Chateaubelair	26	35	33	31	26
Calliaqua	36	36	27	33	40
Barrouallie	36	40	60	20	27
Layou	16	15	17	23	34
Bequia	3	12	5	7	4

Debts of Towns.

The debts of the towns at 31st March, 1905, are as follows:—

Kingstown water supply	£3,200	
Kingstown town improvement ...	400	
		£3,600
Georgetown water supply		450
		£4,050

Provision for repayment of these loans is made by rates levied annually on the townspeople, and the debts are secured on the general revenue of the Colony. The Kingstown Water Supply Loan is being repaid at the rate of £300 per annum, the Town Improvement Loan at the rate of £50 per annum, and the Georgetown Loan by annual instalments of £50.

In addition to the above, the town of Georgetown was indebted to general revenue for advances made in previous years for certain specific purposes in the sum of £389, as against £405 at the end of 1903-4.

The existence of this liability and the encroachment which even the small annual repayment of £15 makes on the frail revenue of this eruption-shattered village, already burdened with an annual legalised debt charge, have been frequently referred to by me, and a full representation of the circumstances has recently been sent forward with a view to an adjustment.

The town of Chateaubelair was similarly indebted in the sum of £36, its resources having admitted of no repayment during the year.

II.—TRADE, AGRICULTURE, AND INDUSTRY.

(A.) Imports and Exports.

The following comparative statement gives the value of the chief articles of import in 1904-5 and the previous year:—

Imports.

Chief Articles.	Value.	
	1903-4.	1904-5.
	£	£
Class I.—		
Beef, salted or cured	482	605
Biscuits	1,412	1,780
Butter	1,568	1,688
Coffee	287	201
Fish, salted, &c.	4,754	5,671
Flour, wheaten	8,840	7,951
Flour, other kinds...	477	445
Oilmeal and cake	323	362
Pork, salted	1,847	2,056
Rice	1,866	2,399
Salt	445	458
Spirits	758	908
Sugar, muscovado	128	54
Sugar, refined	309	436
Wine	581	601
Food and drink supplies, unenumerated	1,075	1,092
Tobacco, cigars, &c.	894	949
Class II.—		
Manure	51	12
Petroleum oil	1,116	1,179
Timber and shingles	6,815	4,158
Class III.—		
Textile manufactures, other than rope, cordage, and canvas.	15,717	16,262
Metal, manufactured	5,295	4,385
Boots and shoes	869	855
Cement	462	498
Rope, cordage and canvas	935	1,326
Soap	1,467	1,498
Articles unenumerated, other than textiles or metal manufactures.	6,049	4,200

The figures given in the annual report of the Supervisor of Customs show a decrease in value of imports of £3,616, as compared with the figures of 1903-4, the distribution being as follows:—

Value of Imports.

Decrease from United Kingdom	...	£2,330
" " foreign countries	...	4,685
		£7,015
Increase from British Colonies ...	...	3,399
Net decrease ...	...	£3,616

The items in which there is the principal falling off are flour and lumber, the first being attributable to the large quantity of land in cultivation by small settlers, who are thus able to support themselves by the ground produce and do not in consequence consume the same quantity of shop provisions.

The decrease from the United Kingdom is distributed among a number of heads, the chief item being £1,576 under unenumerated manufactured articles other than textile and metal.

The figure of increase from British Colonies merely denotes the entry of provisions and goods from the United States *viâ* Barbados instead of direct, partly on account of its being cheaper to obtain the supplies at Barbados and convey them thence to St. Vincent by small sailing vessel, than to order direct from New York, owing to the difference in the rate of freight to the two places, and also partly to the fact that the amount of freight offering is an insufficient inducement to the direct steamers to come here.

The value of the principal exports is given in the annexed table:—

Exports.

Articles.	1903–4.	1904–5.
	£	£
Cassava starch	921	1,379
Whale oil	1,150	437
Turtle shell	472	341
Firewood	588	627
Cotton and cotton seed	900	4,857
Vegetables	1,329	2,340
Manure	137	97
Syrup	382	648
Sugar, muscovado	2,298	9,777
Sugar, crystallized	521	Nil
Pease	550	458
Molasses	198	652
Rum	28	204
Ground-nuts	926	1,258
Live stock	2,682	3,993
Fresh fruit	52	227
Farine	80	343
Arrowroot	21,686	20,674
Cocoa	2,155	2,255

The increase on sugar, molasses, and syrup is noticeable, also in vegetables and other ground produce and live stock, all tending to show a better condition of things among the peasantry.

This is the second year of the revival of the cotton industry in St. Vincent. Although the output was not so large as was anticipated, owing to the failure in some portions of the Island, yet it shows an encouraging increase, and in quality the St. Vincent cotton has surpassed any put on the English market.

The total imports and exports for the five years, 1900 to 1904-5, are given below:—

Imports.

Classes.	1900.	1901.	1902.	1903-4.	1904-5.
	£	£	£	£	£
I. Live animals, food, drink, &c.	39,900	31,828	37,861	31,643	32,534
II. Raw materials... ...	15,398	7,980	11,292	10,076	8,628
III. Manufactured articles	40,893	35,111	29,970	36,134	33,076
Totals	96,191	74,919	79,123	77,853	74,238

Exports.

Classes.	1900.	1901.	1902.	1903-4.	1904-5.
	£	£	£	£	£
I. Live animals, food, drink, &c.	91,154	47,243	38,781	33,023	43,374
II. Raw materials... ...	1,452	2,651	3,201	3,572	6,648
III. Manufactured articles	5,163	2,093	2,112	1,579	1,880
Totals	97,769	51,987	44,094	38,174	51,902

The volume and direction of the Colony's trade in the five years, 1900 to 1904-5, are shown in the following tables:—

Imports.

—	1900.	1901.	1902.	1903-4.	1904-5.
	£	£	£	£	£
United Kingdom	35,538	31,733	24,579	31,146	28,816
British Colonies	35,882	26,756	25,107	26,162	29,562
Foreign Countries	24,771	16,430	29,437	20,545	15,860
Totals	96,191	74,919	79,123	77,853	74,238

Exports.

—	1900.	1901.	1902.	1903-4.	1904-5.
	£	£	£	£	£
United Kingdom	71,584	28,306	22,333	19,204	22,192
British Colonies	14,584	12,983	15,146	16,470	26,881
Foreign Countries	11,601	10,698	6,615	2,499	2,829
Totals	97,769	51,987	44,094	38,173	51,902

(B.) Mines, Manufactures, and Fisheries.

A whale fishery, which is a very material benefit to the inhabitants of the St. Vincent Grenadines, is carried on in those Islands, notably Bequia and Canouan, but, unfortunately, in 1904-5 it was somewhat of a failure, and the value of whale oil exported was £437 only, as against £1,150 in the year previous.

The cotton ginnery, the erection of which was mentioned in my last report, started work in January, and dealt with the season's crop under the supervision of the officers of the Imperial Agricultural Department.

Owing to defects in the oil engine by which it was originally intended that the gins should be worked, a steam engine, which gives more effective power, was imported from Barbados to supply its place. A disintegrator for the crushing of cotton seed was also supplied.

(C.) Agricultural Industries and Botanic Station.

Agriculture.

There has been some advance made during the year under this head.

The demand on the Agricultural Department for the supply of economic plants was very considerable, and from the returns it is evident that an appreciable area is being planted in cacao and other permanent crops.

The export of cacao was 742 bags, as against 443 in 1900, and in the absence of any further set-back the figure should in a few years rise to beyond what it was (1,500 bags) before the disastrous hurricane of 1898.

It should be noted, too, that a considerable quantity of cacao is consumed locally by the peasantry, and it is therefore a product of great importance to the community.

The cotton prospects are also encouraging, though disease occasioned loss in some localities, and the total yield in comparison with acreage in cultivation was in consequence disappointing.

The cotton-ginning factory was opened on January 4th last, and up to 31st March, 222,262 lbs. of seed cotton had been ginned, giving 171 bales containing 61,011 lbs. of lint.

In quality the cotton left little to be desired, and an all round price of 1*s.* 5*d.* per lb. was realised.

St. Vincent, indeed, is in the position of having produced the highest priced cotton in the Empire, and as a result, there has been a great demand for the St. Vincent seed, large quantities of which have been disposed of at a satisfactory price, after undergoing careful selection and disinfection at the hands of the agricultural officers.

In the areas devastated by the eruption, on the Leeward side, one of the estates has changed hands, and a commencement has been made in re-starting cultivation.

On the windward side, the Carib country estates, with the exception of Mt. Bentinck, are still untouched, save for the reaping of a considerable quantity of ratoon cane which, having had vitality enough to survive the effects of the volcanic blast, has now sprouted and thrown up luxuriant stools.

Large areas of land on these estates are still, however, no more than a cinderous waste, and in an ascent which I made to the summit of the Soufrière crater in April last for the purpose of observing conditions, I was much struck by the havoc wrought by water, as well as the depth and uncompromising consistency of the scoriæ, and the consequent difficulties and expense that must be attendant on any attempt at systematised cultivation.

No further lands were acquired under the Land Settlement Scheme, attention being rather directed to securing a fuller and more beneficial use of those already taken up and given out in allotments. The services of the Agricultural instructor in this direction continued to be of great use. Over 15,000 economic plants, mainly cacao, were distributed, the windbreak system was proceeded with and instructions were given, by direction of His Excellency the Governor, as to the preparation and maintenance of compost manure heaps, compliance with which has been insisted on under regulations which give the requisite power.

Considerable improvement has also been effected in the matter of the approaches to the allotments and the roads connecting with the acquired estates, a special sum from the fund having on my representations been approved by the Secretary

of State for this object, with due provision for annual expenditure on upkeep so as to ensure a state of permanent fair repair.

An agricultural show—the second—was held on March 9th under the auspices of the Imperial Department of Agriculture, at which the exhibits showed considerable advance in number and quality, but the success of the day was unfortunately somewhat marred by the weather.

(D.) Land Grants and General Value of Land.

The price of ordinary Crown land is £1 an acre, cash, and £2 if paid in instalments. A certain area is rented out in small lots at 6*s*. 3*d*. an acre.

The law governing the disposition and administration of these lands, which is in great need of revision, is now being dealt with.

To the ordinary Crown lands, which are for the most part mountain land, have been added since the eruption of 1902 the estates acquired from the eruption fund for the location of refugees, and their administration has entailed a good deal of additional work. Over 300 grants for small tracts of these lands were issued during the year, as well as 70 for tracts of Crown land proper.

A long outstanding and thorny matter was also disposed of by the survey, sub-division, and grant to 33 persons of a tract of 142 acres which had been in years gone by apportioned to the use of the inhabitants of the so-called Carib Settlement of Greig's, by which action the tenure of these people is placed on a proper and intelligible footing, and their rights and tax obligations defined.

Arrears were steadily dealt with, and this evil has now been in large measure arrested.

The Crown lands, exclusive of eruption estates, gave the appreciable little revenue of £528 during the year under review.

(E.) Shipping.

A table of the entries and clearances of steamers and sailing vessels during the 15 months ended 31st March, 1904, and the year 1904-5 is annexed, as also a comparative statement of the total shipping for the last five years. These figures do not include ships-of-war, of which three British and one German visited the Colony during the year:—

Totals	289,741	361,467	380,559	435,477	498,587

III.—LEGISLATION.

Thirteen Ordinances were passed during the year 1904, of which several were of importance, viz.:—

No. 1 of 1904. The Coroners' Ordinance, a well-prepared and useful piece of legislation, replacing several less clear enactments.

No. 9 of 1904. The Licences Amendment Ordinance, which reduces the rates of liquor licences to a figure more in keeping with modern conditions, and is of importance in its connection with the suppression of illicit distillation.

Nos. 12 and 13 of 1904. The Land and House Tax Ordinance and the Income Tax Ordinance, 1904.

The first of these provides for the imposition of a house tax, which is a new direct impost in St. Vincent, levies a tax on fractional parts of an acre which were previously exempted, and institutes an entirely new system of assessment.

The second repeals the old tax law, disconnects income tax from the land tax with which it was previously united, and provides for it in a separate enactment. Being, however, only a consolidation, the imperfections of the old law are retained, and the subject is one which will require further handling. Various regulations under the authority of Ordinances were also issued.

IV.—EDUCATION.

The results of primary education in 1903-4 and 1904-5 compare as follows:—

—	1903-4.	1904-5.
Number of Schools	27	27
Number on Roll	5,466	5,244*
Average Attendance ...	2,555	2,535*
Government Grant-in-aid ...	£ 1,326	£ 1,361

* During last quarter of 1904-5.

An examination of the schools was held from May to July, by the Inspector of Schools, Grenada, on whom this duty now devolves annually.

There are no features of special interest in the report. The various teachers do their duty for the most part in a conscientious and painstaking manner, but they labour under considerable difficulties, and until the Colony can afford to provide for regular supervision of detail throughout the year by a resident educational officer, nothing great in the way of progress can be expected. The schools, however, continue to do fair work, and exercise a distinctly civilising influence in return for the money spent on their maintenance.

(B.) Secondary Education.

The Kingstown Grammar School for boys and girls was maintained throughout the year, the amount of the Government grant amounting to £124. This grant has, however, now been withdrawn.

(C.) Industrial, Technical, and Agricultural Schools.

An Agricultural School was established under the auspices of the Imperial Department of Agriculture with Imperial money in 1900, and between then and now several boys have completed their course and found employment in useful agricultural work in St. Vincent and the neighbouring Colonies.

There were 22 boys at the school on 31st March last, and the year's work was of a satisfactory character.

In the primary schools some measure of progress has been achieved by the teachers through the medium of the school gardens, in imparting the rudiments of agricultural knowledge.

V.—GOVERNMENT INSTITUTIONS.

(A.) Hospitals.

During the year there were 697 admissions to the Colonial Hospital, making, with those remaining from the previous year, 748 cases treated. This is a much lower figure than that of the previous year, which was 1,014.

The daily average was 55, as against 65 and 66 in the previous two years.

The death-rate was 6·95 of the total cases, which is higher than in the preceding year, attributable to the admission of a somewhat large proportion of moribund cases.

229 operations were performed, which figure includes no minor matters such as teeth extractions and the like, and the classification attached to the Medical Officer's report shows skilful and valuable work performed.

The expenditure of the institution continues to be carefully and economically supervised, there being a very considerable saving on the figures of the estimate.

The Medical Officer-in-Charge has also done much good by the establishment of an out-patient department, whereby a large number of persons from all over the island have been treated for syphilis and other diseases, and have derived great benefit.

(B.) Asylums.

Lunatics.

A portion of the old military citadel at Fort Charlotte is available for detention of male lunatics who are violent or manifest destructive tendencies; other males, as to whom it is judged that they may be so treated with safety, are kept under supervision in the pauper asylum, and female lunatics are also detained there. A portion of the wards had during the year to be partitioned off into cells to provide further and more suitable accommodation for these female cases, some of which are acute. Really, any detention of lunatics at Fort Charlotte was meant to be but provisional and temporary, pending the opportunity for their removal to the asylum at Grenada.

That asylum has had, however, latterly so many calls upon its space as to be unable to accommodate any more patients from here, and the Medical Officer of the Fort Charlotte poor house and asylum is thus compelled to make the best arrangements he can, and is confronted with considerable difficulties at times.

There were 22 cases under treatment during the year (11 being new admissions) of whom seven were discharged cured, one died, and four were transferred to the Grenada asylum.

The total number of St. Vincent lunatics under care there was 30, at a cost to the Colony of £558 19*s.* 9*d.*

Lepers.

The number of inmates of the leper asylum on the 31st March, 1904, was nine, and the same number were there at the close of 1904-5.

There is no compulsory segregation.

(C.) Poor Houses.

The Colony's paupers are housed in the old military buildings at Fort Charlotte, on a considerable elevation, commanding the town of Kingstown.

There were 106 inmates on 31st March, 1904, and the admissions and discharges in 1904-5 were:—

—	Male.	Female.	Total.
Admissions ...	32	34	66
Discharged ...	15	16	31
Died	22	13	35
	37	29	66

leaving 106 on 31st March, 1905.

The total expenditure in 1904-5 was £1,033 on the institutions, including lepers, and lunatics kept locally, as against £1,098 in 1903-4.

Chronic tertiary syphilis accounts for the vast majority of cases to whom this institution offers asylum for the closing stage of their lives.

(D.) Reformatories.

Nil.

(E.) Savings Bank.

The following is a statement of the work of the bank for the last five years:—

Year.	Number of Depositors at 31st December.	Amount of Deposits.	Amount of Withdrawals.	Balance at credit of Depositors at 31st December.
		£	£	£
1900	900	7,790*	7,122	10,594
1901	907	6,108†‡	6,015	10,687
1902	992	8,781	6,501	11,975
1903	987	6,587	6,171	12,653
1904	976	5,012	5,467	12,465

* Includes £2,926 under Land Settlement Ordinance.
† Includes £1,200 under Land Settlement Ordinance.
‡ Includes Interest.

Up to 1900 the bank was established at Kingstown only, but in that year branches were opened at the small towns of Chateaubelair and Georgetown.

The amount due to depositors was distributed thus:—

—	1903.	1904.
	£	£
Kingstown	11,627	11,323
Georgetown	487	545
Chateaubelair	539	597
Total	12,653	12,465

The Government made a profit in the working of the bank of £158 14*s*.

There was invested of Savings Bank funds at 31st December, 1904, £11,000.

VI.—JUDICIAL STATISTICS.

(A.) Police.

The Colonial police force consists of a chief, a sergeant-major of European birth and late of the Royal Irish Constabulary, and 53 West Indian non-commissioned officers and privates. They are, in addition to their civil duties, drilled and have some training in the use of arms, and are armed with Martini-Enfield rifles. Besides ordinary police work, they render assistance to the Government in many details of the administration, being charged with the supervision of the excise duty on rum, and with co-operating in the collection of Customs duties, district post office work, registration of births, &c., poor relief, and the management of the small district telephone exchanges. In Kingstown they are responsible for extinguishing fires, receiving from the Town Board additional pay for this service.

(B.) Prisons.

277 persons were committed to prison in the year—154 men, 87 women, and 36 juveniles. The daily average was 16·6, against 15·2 in the previous year.

(C.) Criminal Statistics.

The total number of offences reported to the police or to the magistrates in 1904 was 909, against 1,055 in 1903.

Of the offences reported in 1904, 206 were for offences against the person, 104 were for prædial larceny, 84 were for offences against property other than prædial larceny, 515 were for other offences.

The total number of convictions in the Inferior Court in 1904 was 622 against 630 in 1903.

These convictions are classed as follows:—101 for offences against the person, 2 for malicious injuries to property, 73 for prædial larceny, 47 for offences against property other than prædial larceny, 194 for offences against Revenue Acts, &c., 1 for an offence against Masters and Servants Acts, &c., 204 for other offences.

The convictions in the Supreme Court were as follows:—2 for offences against the person, 6 for offences against property.

The acquittals were as follows:—In the Inferior Court 75; in the Supreme Court 4.

VII.—VITAL STATISTICS.

(A.) Population.

The population at the 1891 Census was 41,054. No census was taken in 1901 on account of the expense involved, which the Colony was not in a position to afford. By the estimate of the Registrar-General, the population at 31st March, 1905, was 49,236. This figure, however, as explained in previous reports, is generally considered to be inaccurate and reducible by about 15 per cent.

The births registered in 1904-5 were 1,788—922 male and 866 female—as against 1,518 in 1903-4. Of these, 1,008, or 56·38 per cent., were illegitimate.

Still-births were 130—33 legitimate and 97 illegitimate; the figures for the previous year having been 42 and 77, respectively.

Marriages show a slight decrease on last year's figures, but as explained in the last report, special influences were at work during that period.

The figures are given in the following comparative table:—

—	1902.	1903–4.	1904–5.
Church of England ...	113	79	82
Roman Catholic... ...	15	26	24
Wesleyan...	77	125	83
Church of Scotland ...	21	11	13

The total registered deaths were 876, as against 875 in 1903-4, being 17·79 per 1,000 of the estimated population.

The infant mortality (infants under one year, exclusive of still-births) was 191, being 21·80 per cent. of the whole. The similar figures in 1903-4 were 222, 25·37.

Although the estimated figure of total population is, as I have said, believed to be appreciably in excess of the reality,

yet it is pretty plain from the statistics given year by year that the number of the inhabitants of the Colony must be on the increase. There is a steadily increasing excess of birth-rate over death-rate; in the country villages and hamlets one passes through, children are largely "en evidence" at every door-step, and there are no indications to-day of any continuous drain in the other direction by emigration.

(B.) Public Health.

The figures of 1903-4 showed that year to be a particularly healthy one, the death-rate being 52 below the average of the ten years preceding. In 1904-5 the same conditions prevailed, the number of deaths registered being 876, as against 875 the year previous.

A table of the causes of death, properly classified and stated, has been prepared under the supervision of the Medical Officer of Kingstown, Dr. C. W. Branch, and it may be interesting to quote in an abridged form the information it gives:—

Cause of Death.

General (includes syphilis, 86; tubercle, 90; tetanus, 27; malarial fever, 26)	277
Nervous system	24
Circulatory system	61
Respiratory system	55
Digestive system	116
Parasites	48
Age	69
Still-born	130
Other	96
	876

(C.) Sanitation.

There is nothing special under this head to which to call attention. In the villages of the peasantry, the ideas and methods in sanitary matters are elementary in the extreme. In the towns, things are passable, but could be much improved if there were money to lay out. On the whole, however, there are no glaring evils.

(D.) Climate.

The rainfall for the year 1904-5 was 97·74 inches, as against 100·45 in 1903-4.

Rain fell on 284 days throughout the year.

The maximum fall in one day was 4·50 inches, on 17th August.

August was the wettest month with 15·77 inches, and February the driest, with only 2·85 inches.

The mean monthly temperature was 77·8° F. Maximum for the year 88·5° F., in October; minimum, 67°, in January and March.

VIII.—POSTAL, TELEGRAPH, AND TELEPHONE SERVICES.

The postal service was performed during the year under the contract with His Majesty's Government, since terminated, by a fortnightly service of steamers of the Royal Mail Steam Packet Company from and to Barbados, connecting there with the ocean packets. There are also lines of steamers from Halifax, Nova Scotia, under contract with the Canadian Government, fortnightly; and other steamers, also, from and to the United States, and direct from and to London, call at the port of Kingstown, though at somewhat irregular intervals.

There is an inland postal system by which the Windward and Leeward districts of the Colony are served daily, and the islets of the Grenadines weekly.

The volume of business in the Post Office was in excess of the year previous. A direct money order system with the United States of America was inaugurated; the British postal order system was brought into force, and arrangements for insurance of letters in the post were perfected, the year being thus altogether one of progress in postal matters.

The revenue of the Telephone Department was £455, and the expenditure, £341. The lines run from Kingstown to Chateaubelair, on the Leeward side, and to Georgetown, on the Windward side of the Island, about 24 miles either way, and the service is a most useful one.

IX.—MILITARY FORCES AND EXPENDITURE.

The first steps towards establishment, under the provisions of an Ordinance passed in 1903, of a Volunteer Reserve in St. Vincent were taken, and a small expenditure of £38 10*s.* 11*d.* incurred, but the movement has not yet assumed live and practical proportions.

X.—GENERAL OBSERVATIONS.

Sir Robert Llewelyn, K.C.M.G., Governor of the Windward Islands, visited the Colony in April, June, and December, 1904. The Administrator, Mr. Edward J. Cameron, proceeded to England, on leave, in June, and remained till December, the duties of the office being performed during such absence by Mr. E. D. Laborde, I.S.O., Chief of Police of St. Lucia.

Various useful public work in the direction of repairs of public buildings and property, notably the renovation throughout of the fine Court House, was carried out, and the improvement of the roads was continued.

The year was, on the whole, it may be said, uneventful, and taken up in furthering the working and progress of existent schemes for betterment of the Island, rather than in the institution of new departures.

The retrenchment and strict economy of the past few years is beginning to show, and the conditions at the commencement of the new financial period seem to justify (though the light is a little dim as yet) the hope that the Colony may ere long be able to cast off the slur of being annually dependent on financial aid from the Imperial Treasury.

Towards this desired end a very considerable stride was made during the year under review by the suppression of illicit distillation, which has for many years past been a canker undermining the financial and political health of the Colony. This suppression was carried out effectively and without mishap by the local police under the directions of Mr. F. W. Griffith, the Acting Chief, to whom great praise is due, on instructions issued as the result of correspondence arising out of the visit of inspection to the West Indies of the Excise Expert, Mr. Steele, C.B.

With regard to the cotton industry, if the results as far as yield is concerned did not come quite up to expectations, the quality at least was unquestionable, and with care and attention and a good use of the knowledge gained by experience, it is certain that planters will secure a fair return for the capital they are able to lay out.

The rise in the price of sugar was another factor tending to an improvement of agricultural conditions.

The comparatively large area of land now held in small holdings by the peasantry gives them a stake in the country such as they did not previously possess, and while it is too much to hope just at once for a thoroughly strenuous use of such lands to their full capacity, it is clear that such ownership tends to increase the comfort and physical well-being of the individual holders and their families, and, if only to such extent, must make for good.

To the Imperial Government which has, through all these dark days dating from before the hurricane of 1898, through that catastrophe and the further dire volcanic upheaval of 1902-3, stood by the Island with generous financial aid, and sound direction as to its affairs, the inhabitants of the Colony stand greatly indebted.

EDWARD J. CAMERON,
Administrator.

30th August, 1905.

COLONIAL REPORTS.

The following recent reports relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page :—

ST. LUCIA.

(For Report for 1903, *see* No. 443.)

ADMINISTRATOR CORK to GOVERNOR SIR R. B. LLEWELYN.

Government House,
30th January, 1906.

SIR,

I HAVE the honour to transmit herewith the Annual Report on the Blue Book for 1904.

I have, &c.,

P. C. CORK,
Administrator.

His Excellency
Sir Robert B. Llewelyn, K.C.M.G.,
&c., &c., &c.,
Grenada.

1125 Wt 23907 3/06 D & S 5 24133

REPORT ON THE BLUE BOOK FOR 1904.

I.—FINANCIAL.

(A.) Revenue.

The General Revenue for the financial year ended on the 31st March, 1905, amounted to £69,272 14*s.* 6*d.*, inclusive of £1,196, the Imperial Grant-in-Aid of Agriculture.

The revenue for the previous five years was as follows:—

Year.	Amount.
	£
1899	71,479
1900	72,108
1901–2	67,365
1902–3	72,193*
1903–4	66,009

The revenue for the financial year, therefore exceeded by £3,264 that for the previous year, and the estimate by £4,419. The excess was principally due to the reimbursement by the Admiralty of £3,085 12*s.* 3*d.*, being the amount expended in previous years by the Colonial Government in the construction of a naval coal depôt, and to the transfer to General Revenue of sums of £2,002 10*s.* 6*d.* and £1,094 4*s.* 11*d.* from the Sale of Work Yard Lots Account and Police Reward Fund respectively.

In revenue from ordinary local sources there were increases under various heads amounting to £725 7*s.* 4*d.*, and decreases under other heads amounting to £3,157 3*s.* 7*d.*, the net result being a decrease of £2,431 16*s.* 3*d.* As will be seen from the following statement, the principal decreases occurred under "Customs," "Rum Duty," and "Road Tax."

* Includes the special Imperial Grant of £3,000 in aid of the sugar industry.

Comparative Statement of the Revenue of the Colony for the Year ended 31st March, 1905.

Heads of Revenue.	Estimate for 1904–5.	Actual Revenue to 31st March, 1905.	Revenue for same period of preceding year.	Increase.	Decrease.

(B.) Expenditure.

The total expenditure for the year was £65,508, of which £61,725 was on account of general services, and £3,782 on those of a special nature, *i.e.*:—

Public Works Extraordinary	£2,562
Agriculture	1,220

The expenditure for the previous five years was as follows:—

Year.	Amount.
	£
1899	63,821
1900	64,750
1901–2	67,486
1902–3	69,408
1903–4	70,692

The following statement details the expenditure of 1904-5 under the heads of the estimate:—

Comparative Statement of the Expenditure of the Colony for the Year ended 31st March, 1905.

	63,134 1 7	64,287 5 5	69,323 0 10	2,734 16 8	7,770 12 1
19A. Agriculture (from Imperial funds) ...	1,216 10 0	1,220 9 8	1,368 14 5	—	148 4 9
Total	64,350 11 7	65,507 15 1	70,691 15 3	2,734 16 8	7,918 16 10

The total estimated expenditure was £64,351, and the actual expenditure, therefore, exceeded the estimate by £1,157, but was less than the total revenue by £3,765.

(C.) Assets and Liabilities.

The surplus assets of the Colony amounted at the 31st March, 1905, to £23,189, arrived at as follows:—

Surplus at 31st March, 1904	£16,864
Add the amount of the excess of revenue over expenditure for 1904-5 (exclusive of receipts and disbursements on account of Imperial Grant for Agriculture)	3,789
Interest received on investments of Surplus Funds	2,536
	£23,189

The details of the assets and liabilities are given below:—

(D.) Surplus Funds.

The investments held on this account at the 31st March, 1905, amounted to £24,903 against £22,774 on the same date in the previous year.

It is to be noted, however, that the statement of assets and liabilities shows a surplus of only £23,189, the difference of £1,714 representing a portion of the proceeds of the sale of Work-yard lots.

(E.) Public Debt.

At the 31st March, 1905, the public debt stood at £164,680, as compared with £167,880 at the same date in the previous year. Of the former amount, the Castries Town Board is responsible for £17,000.

Of the total debt £79,200 is due to debenture holders, receiving rates of interest varying from 4½ per cent. to 6 per cent. per annum; and £85,480 to holders of inscribed stock, receiving interest at 4 per cent. per annum.

(F.) Towns and Villages.

The following statement shows the revenue and expenditure for the last five years of the towns and villages of the Colony, and their indebtedness at the 31st March, 1905:—

Town or Village.	1900.		1901–2.		1902–3.		1903–4.		1904–5.		Indebtedness at 31st March, 1905.	Balance at 31st March, 1905.

* For a Water Supply. The Loan was made from Savings Bank Funds, and is repayable in 27 years from the 1st July, 1902.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

(A.) Imports and Exports.

The value of the imports in 1904 was £370,706, and of the exports £172,030, including bunker coal supplied to steamers to the value of £70,580.

The imports and exports for the last five years were as follows:—

Year.	Imports.	Exports.		Total.
		General.	Bunker Coal.	
	£	£	£	£
1900	403,597	104,881	124,555	229,436
1901	382,652	77,871	110,196	188,067
1902	326,324	73,458	84,295	157,753
1903	351,086	105,983	63,506	169,489
1904	370,706	101,449	70,581	172,030

The values of the chief articles imported in 1904 are given below, as also those for the previous year:—

Articles.	1904.	1903.
Class 1.	£	£
Live animals—		
Cattle	5,867	5,998
Horses and Mules	672	1,460
Sheep	1,835	1,640

Perfumery...	927	778
Soap (common)	2,510	2,727
Stationery...	1,114	937

Of the imports in 1904, goods to the value of £241,027 came from the United Kingdom; £29,401 from British Colonies; and £100,278 from foreign countries.

(B.) Mines, Manufactures, and Fisheries.

There are no mines of any description in operation. The proposal to work the sulphur mine at Soufrière fell through.

A fairly large number of boats is engaged in fishing around the coast of the Island, but solely for the purpose of supplying the local market, and no attempt is made at preserving for export purposes.

In addition to the quantity exported, the sugar and rum consumed in the Colony are almost entirely the produce of the local factories and distilleries.

(C.) Agricultural Industries, &c.

The growth of the sugar cane and of cocoa are the only considerable agricultural industries of the Island. The people grow native foodstuffs for their own consumption, but the amount exported is inappreciable. A small quantity of fruit is exported, but fruit cultivation cannot be considered a serious industry. During the past ten years little or no progress has been made, as the following comparative statement of exports will show:—

—	1894.	1904.
	£	£
Cocoa ...	28.513	29,008

Musk Seeds ...	—	156
Timber (local)	—	90

It may be observed with regard to cocoa that 1904 appears to have been an unfavourable year, as the yield was 1,803 bags less than in 1903, and the price was low as compared with 1894. Generally, progress in agriculture made in one direction seems to have been counterbalanced by retrogression in another, the principal interests affected being sugar and logwood, this latter being almost wiped out.

The reports on the cotton experiments show that, though good samples of lint were obtained, they resulted in failure to cover expenses. I learn on enquiry that the cultivation was done by hand labour, and I do not think that cotton on a considerable scale can be made to pay unless level land can be secured, where ploughs, cultivators, and cotton planters can be used, and where plantations are sheltered from high winds and excessive rainfall when the cotton is becoming dry and the lint exposed. The number of places where cotton could be grown to advantage is probably not large, as the bulk of the land is hilly and more suitable for rubber and cocoa. The Central American Rubber (*Castilloa elastica*) seems particularly adapted to these latitudes, and would probably handsomely repay intelligent cultivation and treatment. Cocoa has long passed the experimental stage, and may be regarded as a staple industry of the Colony.

Botanic Station.

Since the opening of the Agricultural School at "Union" in 1901, this Station has been principally of use as a plant nursery and a distributing centre for economic and decorative plants, and as a public garden for the enjoyment of residents and visitors to Castries.

Agricultural School and Experiment Stations.

The average number of boys at the school was twenty. Progress was maintained in the indoor work. Discipline was good, and the health of the boys satisfactory. Increased interest in their individual gardens was reported, and excellent vegetables were produced. Four boys left the school—one being expelled for insubordination, one discharged on special grounds, and two having completed their terms at the school.

Experiments were made at the school in the growth of Sea Island and Upland cotton, yams, cow peas, cacao, rubber, kola, cassava, sweet potatoes, musk okra, papaw, Bhabar grass, Egyptian beans, Egyptian clover, yam bean.

The live stock at the school includes one cow, eleven woolless sheep, and fifteen Belgian hares. There were two colonies of bees, which it was contemplated to increase to a sufficient number to allow of each pupil having one hive under his management.

The experiments in other parts of the Island consisted of manurial and other treatment of established cocoa, some of which was in a diseased condition, planting cotton, pine-apples, limes, and vanilla. Bee-keeping also engaged attention, and the number of colonies in the Island is reported to be 400.

All these experiments have an educational value, and indicate from actual experience the directions in which planters may expect to succeed when embarking in agricultural pursuits in the Island.

The number of plants distributed from all the Stations or imported for distribution was 34,995, of which 2,192 were returned as decorative plants. In addition 714 packets of seeds, 1,373 cuttings, 338 bouquets, and 6 wreaths were disposed of.

The total expenditure on agriculture in the Colony as shown by the auditor's report was:—

	£	s.	d.
From local funds	359	3	4
From Imperial funds	1,220	9	8
	£1,579	13	0

(D.) Crown Lands.

One hundred and twenty-two new applications were received for the purchase of Crown lands of an area totalling 843 acres. In the previous year the number of applications was 58.

No cases were submitted to the Governor-in-Council for alienation during the year, the Commissioner of Crown Lands reporting that it was not possible to put the applications through the various stages.

The revenue of the Crown lands and Survey Department for the year was as follows:—

	£	s.	d.
Survey fees	273	15	0
Deposits on account	87	0	0
Instalments	492	17	3
Sundries	47	19	9
Refunds: Sale of lots, "Union"...	224	3	5
,, "Malgré Tout"...	224	2	10
	£1,349	18	3

The expenditure was as follows:—

	£	s.	d.
Survey fees, private	100	15	6
,, allotments	322	17	4
Roads	254	15	4
Advances, "Union"	111	18	0
,, "Malgré Tout" ...	47	6	10
Refunds of deposits	39	9	0
Miscellaneous	140	10	5
	1,017	12	7
Pay of staff, &c.	642	16	4
	£1,660	8	11

The net result of the operations of the Department during the year was, therefore, an excess expenditure of £310 10*s.* 8*d.* with no work completed.

(E.) Shipping.

The number of steamers which entered Castries (the only port of entry in the Island) was 450 with an aggregate tonnage of 643,437 tons. This is an improvement on 1903 when only 420 steamers of 426,486 tons visited the port. The great majority of these steamers called for coaling purposes, and the export of bunker coal amounted in value to £70,581, an increase of £7,075 over 1903.

Vessels Entered.

1899	367	528,883	219	6,450	113	101,019	51	5,463
1900	473	749,172	266	8,530	147	156,988	39	5,480
1901	460	768,110	266	9,788	124	142,488	15	5,509
1902	432	685,282	346	10,994	108	141,240	68	3,579
1903	352	540,122	280	7,664	66	84,391	150	4,564
1904	374	546,795	237	7,537	77	98,544	45	2,869

The large number of steamers which coaled at Castries during the three years 1900-2 has been attributed to the South African war, a large number of transports having called here *en route* from American ports to the Cape. Trade has now resumed its normal level.

III.—LEGISLATION.

Fourteen Ordinances were placed on the Statute Book during the year. Of these four were the ordinary Appropriation Ordinances. Ordinance No. 1 prohibited the keeping of carrier pigeons; No. 4 provided for the punishment of persons neglecting to maintain relatives dependent on them; No. 5 amended the Vaccination Ordinance; No. 6 was passed to restrict the introduction of paupers and of criminal and vicious immigrants; No. 7 consolidated and amended the Laws relating to medical and dental practitioners, the practice of midwifery, and the qualifications of chemists and druggists; No. 8 gave effect in this Colony to His Majesty's Order-in-Council with respect to foreign marriages; Nos. 9, 10, 13, and 14 amended the Post Office Ordinance, 1881, the Civil Code, the Coroners Ordinance, 1891, and the Law relating to police pensions and retiring allowances.

IV.—EDUCATION.

(A.) Primary.

The general statistics for the year are given in the following table:—

Schools.	No.	Number on Rolls.	Average Attendance.	Number Examined.	Government Grant.
					£
Anglican	4	644	340	445	395
Wesleyan	1	320	160	186	119
East Indian Mission ...	1	58	25	25	36
Roman Catholic	37	5,996	3,159	4,197	2,880
Total	43	6,998	3,684	4,853	3,430

The number of children on the rolls was substantially the same as last year, the increase being only 9, and the number of schools the same—43. The actual average attendance, however, fell from 3,845 in 1903 to 3,684. The number examined was 4,853, as against 4,811 in 1903. The estimated population of the Colony is stated as 52,682, and the Inspector of Schools bases on this estimate the following averages, assuming the children of school-age to be about one-fifth of the population:—Children, about 10,000; on rolls, about 70 per cent., or over 13 per cent. of total population; in daily average attendance, about 37 per cent.; presented for examination, rather less than 50 per cent. I am inclined to think that the estimate of population is high, as emigration has not apparently been made a factor in the calculation, but as I believe that the bulk of the people who emigrate are men, the proportion of children to population may be high.

A compulsory Education Ordinance was passed in 1902, but the Inspector reports that it has remained a dead letter, and alleges that there are various causes which make it extremely difficult to enforce it in this Colony. He further reports:—"The Colony does not possess the machinery necessary to force masses of recalcitrant children into school, nor does it possess sufficient school accommodation to receive them." I may observe, that the main difficulty is a financial one, but the irregularity and unpunctuality of attendance seem to indicate considerable apathy on the part of the parents, and I conceive that it would be next door to impossible to make compulsory attendance general throughout the remote country districts without a large expenditure on school officers, who would need

to be provided with horses, and a considerable addition to the business of the District Courts.

The amount of school fees collected was £17 5*s*. 3½*d*. only. The two Anglican schools in Castries are the only primary schools which receive fees.

The Government grant amounted to 18*s*. 8*d*. per unit of average attendance, but the Inspector reports that certain schools had for a time been drawing higher grants than they were entitled to, and an adjustment had to be made which will slightly reduce the average for 1905. The amount of £5 3*s*. 11*d*. was spent on requisites for school gardens.

(B.) Secondary.

Secondary education is provided for boys by the Saint Mary's College, and for girls by the Saint Joseph's Convent. The former school received a Government grant of £400, and the latter one of £50.

There were 51 boys on the roll of the College with 49 in average attendance, the similar figures for Saint Joseph's Convent being 100 and 90, respectively.

The boys are prepared for the Cambridge Local Examinations, and the girls for those of the London College of Preceptors.

One of the conditions attached to the grant to Saint Mary's College is the right to have 10 Government scholars educated at the College free of charge. Through some misunderstanding, 12 instead of 10 competitors were admitted after the examination in December, 1903. The report on these boys shows work "very good" in 5 cases, "good" in 3, "fair" in 3, "profitless" in 1. In 2 cases the scholarships were withdrawn, but in 1 of these the boy returned as a paying pupil. Two passed the Cambridge Junior and four the Cambridge Preliminary Examinations. Four entered the Government Service.

At the examination in December, 1904, to fill four vacancies, nine candidates presented themselves. The successful ones obtained out of a total of 400 marks 326, 252, 250, 244.

V.—GOVERNMENT INSTITUTIONS.

(i.) Hospitals and Asylums.

The following statement tabulates the principal statistics for 1904 relating to the hospitals and asylums of the Colony: —

Institutions.	No. of patients at beginning of year.	No. admitted during 1904.	Daily Average.	Patients discharged.		No. of Deaths.
				Cured.	Relieved.	
Victoria Hospital, Castries ...	81	1,262	63	804	319	82
Soufrière Hospital	22	63	7	54	11	18
Vieux-Fort Hospital	11	94	7	79	5	8
Dennery "	7	214	7	160	34	15
Yaws Hospital, Soufrière ...	20	60	20	26	1	11
Poor Asylum " ...	43	94	37	—	73	24

(ii.) Dispensaries.

Out-door medical relief is given through the medium of a dispensary in each district, at which a medical officer attends every week.

The number of patients treated in 1903 and 1904 was as follows:—

Dispensary.	1903.	1904.
Castries	7,637	16,728
Gros-Islet	684	514
Dennery	989	924
Anse-la-Raye	853	384
Soufrière	1,387	1,224
Choiseul	295	198
Vieux-Fort	1,204	1,034
Laborie	325	518
Micoud	627	546
Total	14,001	22,070

Of the 1,971 cases treated in the hospitals and asylums the bulk are traceable to preventable causes. The following list indicates the principal diseases:—

Syphilis	351	
Gonorrhœa	14	
Urinary and generative system	102	
	——	467
Malaria		282
Parasites (Ankylostoma, &c.)		203
Wounds, fractures, burns, &c.		122
Ulcers		100
Yaws		69
Pulmonary tubercle		42

The Surgeon of the Victoria Hospital and Castries Dispensary reports: "7,102 cases were treated at the Castries Dispensary and 9,626 ulcers were dressed. It appears needless to classify the ailments treated, as was done in former years, under the various systems of the body. The type of cases treated presents no difference from the more correct classification afforded by the hospital returns. The prominent features in both are syphilis, malaria, and intestinal parasites."

(iii.) Out-door Relief of Paupers.

The number of persons in receipt of out-door relief on the 31st December, 1904, was 222.

Under the present system of relief each person on the list is seen at least once a month by the Relieving Officer of the district, who issues to each recipient a ticket, and the allowance is paid on the next pay-day by the Pay Officer on the production of this ticket. By this arrangement the Relieving Officer is able to keep himself acquainted with the circumstances of each recipient, particularly those who are only temporarily on the list, and also to ascertain that each allowance reaches its proper destination. The system apparently works satisfactorily.

(iv.) Savings Bank.

The principal bank is in Castries, and there are branches at Soufrière (II. District), and Vieux-Fort (III. District).

The following statement shows the transactions of the bank for the five years ended the 31st December, 1904:—

Year.	Total number of depositors on 31st December of each year.	Total deposits inclusive of Interest.			Total Withdrawals.			Amount on deposit at the end of each year.		
		£	s.	d.	£	s.	d.	£	s.	d.
1900	1,405	17,487	18	10	16,953	12	4	14,418	16	5
1901	1,467	20,891	5	3	22,022	7	5	13,287	14	3
1902	1,590	20,365	12	6	17,696	8	6	15,956	18	3
1903	1,584	18,338	16	7	17,084	5	11	17,211	8	11
1904	1,642	18,990	15	5	20,568	7	1	15,633	17	3

The decrease in the amount on deposit at the end of the year is attributed by the Manager chiefly to withdrawals for transmission to India of the savings of East Indian immigrants repatriated. On the other hand, it will be observed that the balance at the end of the year rose from £15,957 in 1902 to £17,211 in 1903.

The accounts under £1 numbered 969; £1 and under £5, 262; £5 and under £10, 81; £10 and under £20, 106. It is therefore evident that the class of persons for which the benefits of the institution are primarily intended avails itself of them to a large extent.

Investments to the extent of £14,916 14*s.* 11*d.* were held in England by the Crown Agents on behalf of the Bank.

The working account of the Bank showed a revenue of £664 1*s.* 8*d.*, and an expenditure of £437 8*s.* 1*d.* The excess of revenue, £226 13*s.* 7*d.*, was transferred to General Revenue.

(v.) Friendly Societies.

There are 13 Friendly Societies in the Island with an aggregate number of members on the rolls on the 31st December, 1904, of 1,508, and of balances at the same date of £994 2*s.* 1½*d.*

The disbursements during the year were:—

Sick benefits	£702	0	7
Funeral claims	109	10	2
Working expenses	689	10	4½
Purchase of property	70	16	0
Payments to withdrawing members ...	48	1	9½
	£1,619	18	11

The working expenses appear disproportionate to other disbursements.

VI.—JUDICIAL STATISTICS.

(A.) Police.

The strength of the Force is one officer and 69 non-commissioned officers and men.

Eleven men joined the Force during the year, taking the place of five who resigned, four who were dismissed, and two pensioned.

On 1st January the Police Reward Fund had a credit balance of £1,841 7*s.* 2*d.* The fund was closed in December under authority of Ordinance No. 14 of 1904, and after the repayment to all contributors of the amount each claimant was entitled to receive, the balance of £1,094 4*s.* 11*d.* was transferred to the general revenue of the Colony, from which source police pensions will in future be paid.

There were 1,370 prosecutions by the police during the year, 42 being for indictable offences, and 1,378 for those amenable to summary jurisdiction.

(B.) Prisons.

At the commencement of the year there were 66 prisoners in the Royal Gaol—55 males and 11 females.

The number of committals during the year was 876—615 adult males, 237 adult females, and 24 juveniles.

—	1903.	1904.
For Statutory Offences ...	476	536
„ Non-payment of Road Tax	71	117
„ Military Offences	54	36
„ Safe custody, trial, &c. ...	186	187
	767	976

The daily average number of prisoners in custody was 60·67, not taking into account the long-sentence St. Lucia prisoners who are undergoing their sentences in the Grenada Prison—the daily average of whom was 12·27. The corrected daily average for St. Lucia would be 72·94, as against a similar total of 63·51 in 1903.

One prisoner escaped during the year from a gang employed outside the prison. He was recaptured within a few days by the police.

The labour of the prisoners during the year is valued at £699 13*s.* 3*d.*; the principal item is for quarrying and breaking stones.

The expenditure on the prison was £1,505, of which £191 was for the maintenance of St. Lucia prisoners at Grenada.

The Medical Officer reports the health and sanitary conditions of the prison and its inmates to have been most satisfactory. The daily average on the sick list was 1·1. No death from disease occurred in the prison, but three prisoners were executed.

(C.) Criminal Statistics.

The following figures summarise the chief items of the criminal statistics for the last four years:—

—	1901.	1902.	1903.	1904.
Offences reported to the police ...	2,258	2,790	1,942	2,032
Summary convictions—				
For offences against the person	272	333	255	355
" prædial larceny	21	48	28	29
" offences against property ...	138	133	77	124
" other offences	1,185	1,430	877	1,059
Convictions by the Superior Court—				
For offences against the person	5	6	12	17
" " " property ...	5	17	11	13
" other offences	4	1	2	2

VII.—VITAL STATISTICS.

(A.) Population.

The estimated total population on the 31st December was 52,682, which shows an increase of 15·4 per thousand during the year, and was composed of 25,240 males and 27,442 females.

The birth-rate of the year was 34·8 per thousand, as compared with 38·2 per thousand in 1903; and the death-rate 19·4 per thousand, compared with 19·6 per thousand in 1903. The number of births was 1,950, and of deaths 1,149.

The population on the 7th April, 1901, according to the Census taken on that date, was 49,883, made up of 23,821 males and 26,062 females. The natural increase of the population by excess of births over deaths from the date of the Census to the 31st December, 1904, has been, therefore, approximately, 2,801, or about 5 per cent., equivalent to an annual increase for the same period of about 1·87 per cent.

The number of marriages during the year was 332, as against 311 in the previous year.

These figures are obtained from the Report of the Registrar-General, but as no deduction was made of persons leaving the Island, they appear to me to be subject to modification.

A return, compiled by the Chief of Police from figures supplied to him by the agents of passenger steamers and other vessels calling here, shows that 4,407 persons left the Island in 1903 and 4,485 in 1904. The number who arrived was not ascertained.

(B.) Public Health.

No epidemic disease occurred, and the mortality-rate of 19·4 per thousand shows that in spite of the number of cases of preventable diseases which were treated in the hospitals and dispensaries, St. Lucia is a healthy tropical island. The hospital and dispensary returns may be accepted as an almost complete index of the condition of the public health, because, with the exception of a few comparatively well-to-do people, no one pays for medical attendance or medicines, which are supplied freely at Government expense.

(C.) Climate.

The rainfall for the year, as recorded at the Botanic Station in Castries, was 77·72 inches, and it fell on 210 days; but at the Agricultural School at Union, only $1\frac{3}{5}$ miles off in a direct line, the fall recorded was 75·52 inches. At Errard Estate, towards the eastern centre of the Island, 74·86 inches were recorded, and at Soufrière, on the south-western coast, 95·03 inches fell.

The wettest months of the year were January and July to October, whilst the driest were March and December.

The Botanic Station is the only place in the Colony at which continuous meteorological observations of a reliable nature have been made for any length of time, and the following figures are taken from its records: —

Rainfall.

Year.	Inches.
1899	84·64
1900	73·25
1901	99·71
1902	91·43
1903	86·84
Average	87·17
1904	77·72

The absolute maximum temperature registered during 1904 was 95·5° in the month of July, and the absolute minimum temperature 59° in February. The mean maximum and minimum for the year were 85·1° and 70·3°, respectively. The mean barometrical pressure for the year was 30·007 inches at 10 feet above mean sea-level.

VIII.—POSTAL AND TELEPHONE SERVICES.

(A.) Post Office.

The revenue of the Department was £2,628 14*s.* 3*d.*, of which £2,271 11*s.* 6*d.* was received from letters, post-cards, &c., and £123 5*s.* 11*d.* from sales of stamps to collectors.

The expenditure was £2,068 14*s.* 7*d.*, and the surplus of revenue over expenditure was, therefore, £559 19*s.* 8*d.*

The total number of letters and post-cards dealt with was 360,789, as compared with 327,637 in 1903; newspapers, &c., 139,837, as compared with 119,663 in the previous year; and 4,201 parcels, as compared with 4,029 in 1903. The major portion of the correspondence was with the United Kingdom.

The total value of the money order business was £11,068, the share of the United Kingdom in which was £5,688.

(B.) Telephones.

The length of telephone lines open was 125 miles, and there were 124 subscribers.

The receipts amounted to £608 15*s.* 5*d.*, and the expenses to £997 5*s.* 3*d.*, the amount including a charge of £225 for interest, &c., on the loan raised for the construction of the system.

IX.—GENERAL OBSERVATIONS.

I regret that my observations must be of a very fragmentary nature. This report relates to a period which ended ten and a half months before my arrival in the Island, and since I assumed the administration of the Government in November it has not been possible to devote attention to it except at odd moments, as I have been carrying on the current work and considering the Estimates for 1906-7, assisted only by an inadequate staff of two clerks.

The year 1904, though, perhaps, not quite so prosperous as regards imports, exports, public revenue, or the volume of shipping as other recent years which might be selected as records in one or other of these evidences of prosperity, was, nevertheless, on the whole a good year for trade. Imports increased, as compared with 1903, by £19,620, exports by £2,541, and shipping, entered and cleared, by 33,523 tons. The public revenue from ordinary local sources declined to the amount of £2,432, and as this is doubtless entirely due to the stoppage of military works and the Imperial expenditure thereon, the decision to remove the troops was a severe blow to St. Lucia, and swept away at one stroke one of the foundations of its recent prosperity. Speaking after the event, as I only arrived in the Colony a little over a month ago, and, therefore, have no need to prophesy, the revenue continues to decline and may for the future be expected not to recover the high level of recent years until the lands in the interior are opened up and settled and the production of exportable articles increased.

The slight revival in the coal trade of nearly £7,000 more than counterbalanced the decrease of 1,803 bags of cocoa exported.

Nothing was done during the year towards deepening the harbour of Castries, and the question has had to be relegated to the future for want of means to carry through the project.

Action on the report of the Commission on Roads was not perfected till 1905, when a new Ordinance was passed. The matter, therefore, cannot be properly dealt with in this Report.

P. C. Cork,

Administrator.

Government Office,

St. Lucia,

31st December, 1905.

COLONIAL REPORTS.

The following recent reports relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page :—

No. 501.

GRENADA.

(For Report for 1904, *see* No. 463.)

THE GOVERNOR to THE SECRETARY OF STATE.

Grenada,
31st August, 1906.

MY LORD,

I HAVE the honour to transmit the Report on the Blue Book of this Colony for the year 1905.

I have, &c.,

R. B. LLEWELYN,
Governor.

1125 Wt 23907 10/06 D & S 5 26020 A 2

BLUE BOOK REPORT FOR THE YEAR 1905.

FINANCIAL.

Financial Position of the Colony.

The financial year 1905-6 was somewhat less satisfactory in its results than its immediate predecessors, and it became necessary during the year to utilise £1,440 of the surplus assets for current expenditure; at 31st March, 1906, the surplus was only £20,968, as compared with £22,408 at the same date of the previous year. This result was due to failure of the revenue from import duties to realise the forecast. In February, 1905, a revised tariff of those duties was passed, and it was anticipated, upon the basis of the average volume of imports, that increased revenue of at least £3,000 per annum should result. At the end of November the Customs revenue was £1,845 in excess of that for the preceding year; thereafter it failed, and at the end of the financial year it was only £827 more than in 1904-5.

2. The cause of this was the unexpected collapse of the crop of the chief staple of the Colony, cocoa, both in quantity and prices. Not only did the crop for the economic year ended 30th September, 1905, fall about 3,000 bags short of the previous year, but that for the current year has been seriously curtailed, the shortage at date of this report being (even as compared with the previous short crop) 9,838 bags. The satisfactory prices ruling in 1904 and early part of 1905 also fell rapidly and heavily, thereby adding to the difficulties of the situation, which at once developed a shrinkage of imports. Every effort was made by the Government to check expenditure, and an estimated outlay of £73,341 for the year was reduced to an actual expenditure of £71,968; but as the estimated revenue of £73,468 fell to £69,954, absorption of a portion of the surplus assets was an unavoidable necessity.

3. The important items of the balance of £20,968 at 31st March, 1906, are:—

Investments in Crown Agents' hands ...	£12,981
Carriacou Land Settlement Fund	5,335
Loans to St. George's and St. Patrick's District Boards for water works ...	1,731
Advances to District Boards for other works	437
	£20,484

The assets and liabilities of the Colony in detail are given in the Appendix (Table A.).

Revenue and Expenditure.

Year.	Revenue.	Expenditure.
	£	£
1901–2	70,075	65,490
1902–3	72,802	68,669
1903–4	70,265	70,113
1904–5	68,993	69,509
1905–6	69,954	71,968

4. Comparative statements of the revenue and expenditure in the last two financial years are contained in the Appendix (Tables B. and C.), from which it appears that the revenue of 1905-6 was £961 more than in 1904-5. The heads under which increases chiefly appear are Customs, £827, explained above, and Post Office, £515, due to a new issue of stamps and to the printing on paper with a different watermark of some of the other denominations of stamps; the principal decreases, rents £158, and refund of interest, &c., £326, are due to uncollected arrears. The item land sales is a variable one, and the decrease appearing thereunder is unimportant.

5. The expenditure of 1905-6 is shown to have exceeded that of 1904-5 by £2,459, which was principally due to a larger programme of public works being attempted in view of the anticipated increase of revenue arising from revision of the Customs tariff; other causes are to be found in the expenditure for suppression of an outbreak of mild small-pox in St. Andrew's District (medical, £361) and to the large number of hospital and asylum patients during the year (hospital and asylums, £680). Other increases appearing in the table under Treasury £337, Excise £317, and Carriacou District £546, are mainly due to re-arrangement of departments and creation of an Inland Revenue and a Carriacou Department; the apparent savings under tax collection, £498, police, £245, and water supplies, £146, are thereby largely accounted for, while that under Post Office, £574, is due to the disappearance of the contribution to the Imperial subsidy for carriage of mails.

Changes in Taxation.

6. As has been stated above, the tariff of import duties was revised in February, 1905. The general object of the revision was (*a*) to produce increased revenue of about £3,000 per annum, and (*b*) to make the incidence of this indirect taxation more fair by reducing duties on articles principally consumed by the labouring class, while increasing those on luxuries and articles consumed by the more well-to-do of the community.

The first object has so far not been attained owing to the shrinkage in the quantity of imports, but with improved conditions it is still hoped for, as being a simple and effectual method of raising a portion of the increased public revenue which the Colony absolutely needs at this stage of its growth.

Public Debt.

7. The debt of the Colony is unchanged in its amount, viz., £123,670. It is all held in four per cent. inscribed stock, redeemable between 1917 and 1942, annual contributions of one per cent. being made to a sinking fund which is in the hands of the Crown Agents for the Colonies. At 31st March, 1906, this fund amounted to £17,940.

Finances of District Boards.

8. The Town Boards became merged on 1st October, 1905, in the new District Boards (*see* "Legislation"), and a statement is appended in Table D. of their revenue and expenditure for the last five years. The increased expenditure appearing in the last financial year is due to the new bodies being responsible for upkeep of public by-ways, for which they receive a grant-in-aid from general revenue.

9. The debts of the Boards at 31st March, 1906, were as follows:—

Board.	Amount.
	£
St. George's	5,981
St. John's (Gouyave)	3,250
St. Mark's (Victoria)	1,484
St. Patrick's (Sauteurs)	1,340
St. Andrew's (Grenville)... ...	1,070
Total...	13,125

These were all incurred for public works connected with the towns, and are owed to the Government, repayable either by sinking funds or annual instalments.

TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and Exports.

10. The subjoined figures of the trade of the Colony in the last five years show that in 1905 there was a sharp recoil from the satisfactory conditions of 1904.

Year.	Imports.	Exports.	Total volume.
	£	£	£
1901	246,567	303,934	550,501
1902	239,108	310,602	549,710
1903	235,440	283,565	519,005
1904	256,269	321,766	578,035
1905	237,256	283,955	521,211

11. The principal cause of this has been indicated above, and it may be here added that the other important staple products of the Colony, spices and cotton, also yielded diminished values, as will be seen in a subsequent paragraph.

12. The usual tables illustrative of the trade are appended, and from Table E. it will be seen that the shrinkage of imports resulting from the circumscribed purchasing power caused by the crop failure was evidenced chiefly under class 3—manufactured articles. Tracing this further, we gather from Table F. that, while items of food and drink maintained in most cases the values which they reached in 1904 and occasionally even increased, wearing apparel, textiles, boots and shoes, and metal manufactures showed a marked decrease. The growing dependence of the labouring class upon imported foodstuffs is clearly shown from this table, wherein not only do wheaten flour, biscuits, and preserved fish hold their own, but sugar shows a distinct increase, as do "ground provisions."

13. Table G. shows the decrease in the value of the crops of Colonial produce to which reference has been already made, cocoa realising only £243,790 as against £272,226 in 1904. spices £27,992 as against £33,767, and cotton and cotton seed £3,365 as against £8,521.

14. Table H. indicates the direction of the Colony's trade in the five years 1901-5, and shows that in the year under review, although the bulk of the trade was, as usual, with the United Kingdom, there is a tendency to its reduction. In 1905 42 per cent. of the imports came from the United Kingdom, 27 per cent. from British Colonies, and 31 per cent. from foreign countries, as compared with 46, 22, and 32 per cent., respectively, in the preceding year. About one-third of the exports now go to foreign countries.

15. Table I. contains a comparative statement of the foreign trade, and from it it appears that the United States of America take the leading position both in regard to imports and exports, about 96 per cent. of the former and 62 per cent. of the latter being tabulated thereunder. France receives about one-third of the exports to foreign countries, the amount shown being nearly all of it cocoa.

16. Returning to Table H. it will be seen that the trade with British Colonies is in a healthy condition, and in the year which we are dealing with that with Canada deserves special mention, having amounted to, imports, £21,353, and exports, £805. The growth of this trade, which has occupied the special attention of the Colonial Government, is shown by the subjoined figures for the last five years:—

Year.	Imports.	Exports.
	£	£
1901	11,263	91
1902	9,140	—
1903	15,686	52
1904	11,811	—
1905	21,353	805

The exports, which form a marked feature of 1905, consisted of 175 cwt. of cocoa and 104 cwt. of nutmegs, an indication of future possibilities in this direction which should not be lost sight of.

17. The nature of the goods imported from the Dominion is shown by the following statement of the values of the principal items in the last three years:—

—	1903.	1904.	1905.
	£	£	£
Timber and shingles	10,593	6,948	10,002
Wheaten flour	1,246	1,301	3,209
Butter	882	936	1,033
Salt fish	815	729	5,967
Oats	684	510	22
Ropes and cordage	483	643	331
Pease	171	84	162
Whisky	6	—	51
Carriages	35	48	50

18. The Canadian trade with Grenada is, therefore, steadily on the increase, and if it were nourished by adequate and regular fortnightly steam communication, such as exists with the

United States, it would not fail to develop considerably, to the advantage of both countries. The future development of the consumption of cocoa and nutmegs in the Dominion should be kept steadily in view by Grenadian planters and merchants, to whom new and extended markets for those staples are of paramount importance.

AGRICULTURAL INDUSTRIES.

19. The Colony is entirely dependent upon its agricultural resources, and its leading products are cocoa, spices (chiefly nutmegs), and cotton; the first-mentioned contributes about 85 per cent. of the exports, and the second about 10 per cent. Kola nuts, coffee, and sugar-cane are also cultivated, but there is hardly any export trade in the last two products, which are mostly grown for local consumption; while the value of kola nuts exported only amounts to about £300 per annum.

Cocoa.

20. The cocoa crop for the year ended 30th September, 1905, was only 64,319 bags (of about 180 lbs. average weight), as compared with a record crop in the preceding year of 67,225 bags, and prices also fell towards the close of the year. The shortage was probably due to unequal incidence of rainfall during the year, and the unsatisfactory prices were undoubtedly attributable to the largely-increased influx of West African cocoa into the market, which seriously affected the sale of the lower grades of West Indian cocoa. Fortunately there is no indication of anything like a decrease in consumption, and many countries of the world remain practically undeveloped to the trade.

21. Improved methods of cultivation and curing continue to occupy the close attention of planters, and the introduction of Gordon's drying apparatus on some of the leading estates deserves special mention, as it is probably the best of its kind on the market at present.

Spices.

22. The crop of spices was satisfactory in quantity, if not in pecuniary result. 8,862 cwt. were exported in the calendar year, as compared with 6,915 cwt. in 1904; of this, 7,947 cwt. were nutmegs. The comparison in this case cannot be made by annual crops, owing to the absence of uniformity in the packages in which shipment is made. It is worthy of note that 1,631 cwt. of the nutmegs and 159 cwt. of the other spices went to the United States of America, and 104 cwt. of the nutmegs to Canada.

Cotton.

23. The growth of this product is practically confined to the Carriacou district of the Colony, where it has never ceased to be

cultivated, and where, in view of the present demand for British-grown cotton, there is a hopeful future for it.

24. The steady increase of the output which had obtained up to the end of 1904 was rudely interrupted in 1905, when only 1,899 cwt. of raw cotton and 4,849 cwt. of seed were exported, as compared with 2,807 cwt. and 6,844 cwt., respectively, in the preceding year. Of this the Commissioner of the district reports as follows: "The cotton crop of 1905 was one of the smallest known here for many years, and was due to the abnormally showery weather which prevailed just at the time when the trees were setting the bolls. This, I may add, had been preceded by unfavourable weather during the growing period. Altogether, throughout the year the rainfall was so fitful and scanty that a short crop was only the natural result."

Cultivation of Sea Island cotton was resumed (after many long years' interval) on a moderate scale during the year.

Carriacou Land Settlement Scheme.

25. It will be convenient at this point to review the position and results of the land settlement scheme in the dependency at the end of the year 1905.

26. Active operations in connection with it date from October, 1902, when the survey of the first estate selected (Beau Séjour) commenced. The estate was finally acquired on the 6th May, 1903, and allotment of it to peasant proprietors commenced in June, 1903. A second estate, Harvey Vale, was acquired on the 20th August, 1903, and a third on the 1st June, 1905. A fourth was purchased towards the end of 1905, but the acquisition was not completed and possession taken until the current year, so that it need only be referred to here as having been taken over by Government mainly in connection with forest conservancy. It occupies the crest of the highest elevation in the island ("High North," 980 feet), and it is of importance that the remaining timber on it be preserved.

27. The expenditure in connection with the scheme at 31st December, 1905, was as follows:—

Purchase of estates, cost of surveys, and legal expenses	£6,910
Other expenditure, repair of houses, provision of cotton ginneries, fencing of pasture lands, construction of roads, and pay of officers for the first 15 months	1,130
Total	£8,040
Received in cash up to 31st December, 1905 ...	2,405
Nett disbursement ...	£5,635

28. The number and value of the allotments are:—

—	Number.	Value.
		£
Beau Séjour ...	216	3,831
Harvey Vale ...	77	2,285
Belair	75	1,350
Total ...	368	7,466

The number sold at
31st December, 1905, was 272, value £5,628

leaving 96 lots, „ £1,838

unsold at that date, most of which were the lots on Belair, which were then only just being offered for sale.

29. Of the total value of the lots sold—£5,628—£1,942, or more than one-third, has been already received in cash, the balance due on them—£3,686—being payable in annual instalments, bearing interest.

30. Besides the above, which represents the pecuniary value of the transaction, there have accrued to the Colony valuable reserves of land and other real property, in the shape of residences for public officers, cotton factories, rain-water reservoirs, pastures, building sites, forests, &c., which, assessed even at nominal values, show a total valuation of £2,700; their real value to the community is far in excess of that.

31. It is not too much to claim for the scheme that it has infused new life into Carriacou, which for too many long years had suffered through the absence of proprietors and the collapse of the sugar industry. It has now an assured future, in which the cotton and lime industries are bound to play an important part, and if capital were available to develop some of the larger estates side by side with the peasant proprietors' cultivation, Carriacou might become one of the most prosperous of the minor British possessions in the West Indies.

32. The success of this scheme of land settlement has been so great and its beneficial results are already so marked as to encourage the hope of similar developments in the future, both in Carriacou and elsewhere in these islands.

Botanic Station.

33. On the 1st of October Mr. R. D. Anstead, B.A. (Cantab.), was appointed as Agricultural Superintendent, and Mr. G. F. Branch as Agricultural Instructor. A fresh arrangement was

arrived at between the Colonial Government and the Commissioner of the Imperial Department, whereby the Colony pays the cost of the Botanic Station and the salary of the Agricultural Instructor (not exceeding £500 per annum). while the Department contributes from the Imperial Grant-in-Aid the salary of the Agricultural Superintendent (who is, however, allowed a house, rent free, by the Colony), and the cost of experimental stations, &c., not to exceed £500 per annum altogether. The arrangement, of course, only holds good until the end of the ten years for which the Imperial Grant was given to the West Indies.

34. The officers are under the direction and control of the Imperial Commissioner, and their work is carried on in touch with the local Agricultural and Commercial Society, the Colonial Government being only responsible for discipline.

Mines, Manufactures, and Fisheries.

35. A certain quantity of cane sugar of a low class is manufactured locally for consumption, but it is quite insufficient for the wants of even the labouring class. Ice and rum are also made for local consumption. The quantity of rum made and the duty paid on it in 1901-5 are given hereunder:—

Year.	Quantity made.	Excise Duty paid.
	Gallons.	£
1901	53,204	11,669
1902	45,054	11,853
1903	43,314	12,723
1904	46,911	11,812
1905	42,943	11,359

36. The consumption recorded does not keep pace with the increase of population, and the duty received in 1905 is actually slightly less than it was in 1892, when the population was only about 54,000. This is no doubt attributable to smuggling, which is facilitated by the nature of the country and the easiness of access from the sea.

37. With a view to improving the collection of excise duty in the Windward Islands, Mr. John M. Adams, of the Inland Revenue Department of the United Kingdom, has been appointed to be Supervisor of Excise for the three Colonies. In Grenada an Inland Revenue Department was created with Mr. Adams as its head, but it did not come into working order until the 1st January, 1906.

38. There are no mines in the Colony, and no fisheries, properly so called. A quantity of fish is, of course, caught daily around the coasts for consumption.

SHIPPING.

39. The total tonnage of shipping, inwards and outwards, is given below, and the year under review is seen to have the highest record of the period. Table J., appended, contains the details of the shipping in the last two years, comparing it under the heads of nationality, steamers, and sailing vessels; there is nothing therein worthy of special comment.

Year.	Tonnage.	
	Entered.	Cleared.
1901	267,972	275,770
1902	287,000	290,035
1903	280,862	288,328
1904	316,223	316,068
1905	319,499	319,799
Average	294,311	298,000

LEGISLATION.

40. Thirteen Ordinances were enacted in 1905, of which the most important are those relating to—

Import Duties,
Quarantine,
Main Roads and By-ways,
Towns Administration,
District Boards,
Contagious Diseases (Animals), and
Public Health (Diseases Prevention).

41. The revision of the Customs tariff effected by the Import Duties Ordinance has already been dealt with.

42. The Quarantine Ordinance legalises the West Indian Intercolonial Sanitary Convention of 1904, which was settled by a representative conference of delegates from the West Indian Colonies sitting at Barbados in April, 1904, and whereby the antiquated system of quarantine hitherto enforced in this part of the British dominions was placed upon a more modern footing. The law was, however, not brought into operation until the 1st January, 1906.

43. The three laws next on the above list can be conveniently referred to together, as they represent the legislation which was required to bring into force on the 1st of October, 1905, a complete change in the administration of certain details of government by local authorities, and to confer on the Colony a system of district municipal self-government. Briefly stated, Boards, half elected by ratepayers and half nominated by Government, were created for each district of the island of Grenada (the Carriacou district being otherwise administered), and under their administration were placed the towns and their water supplies, sanitation, and the upkeep of by-ways. The main roads of the island were at the same time placed in the care of a body of official and unofficial road wardens, directly responsible to the Government and appointed annually. These important measures may be taken as the consolidation of the experience of the Colony in this direction in the last nineteen years, since Parochial Boards were established in 1886 by the wise political foresight of Sir Walter Sendall, and their far-reaching effect on the future of Grenada can best be estimated by those who have witnessed their gradual development.

44. The enactment of a law dealing with contagious diseases of animals was unfortunately rendered necessary by an outbreak of anthrax, a disease hitherto unknown to Grenada, which was imported from a neighbouring island in April, 1905. The measures which this law enabled the Government to take proved successful in checking the further spread of the disease, but much damage and loss were suffered by those whose stock was thus attacked.

45. The Ordinance dealing with the Public Health Administration was a sort of corollary to the Quarantine Ordinance; it makes certain diseases notifiable and provides more effective machinery for dealing with outbreaks of contagious and infectious diseases.

EDUCATION.

Primary.

46. There are two classes of primary schools, viz., Government, entirely supported from Colonial revenue, and Grant-in-Aid, receiving contributions from public funds. The system in force is one of payment by results, grants being paid to teachers from the Colonial Treasury monthly upon the certificates of the school managers (who are usually the clergy of the several religious denominations), based upon the educational results of the schools as shown by an annual examination by the inspector, who is a Government officer. Managers are also paid a grant at the rate of one shilling per annum for each pupil who attends school on not less than 100 days in the year, this grant

being intended to assist them in supplying school furniture and apparatus. They are further allowed to receive the whole of the school fees paid by the pupils; these are, however, but indifferently collected. The administration of the system is under the control of a Board, composed of equal numbers of Roman Catholic and non-Roman Catholic members, the Governor presiding, but having only a casting vote.

47. Table K. in the Appendix contains the figures relating to the primary schools in 1905, and compares the total results with those of the preceding year. The numbers on the roll fell off by 450, and the average attendance by 247; in fact, there is a decrease shown under every head except "Government Contributions" and "Expenditure." The system in force is unsuited to the present needs of the Colony, and on the 6th of June, 1905, the Governor laid before the Board of Education a memorandum with proposals for a complete change, which, with modifications, has recently been adopted by that body and by the Legislature; it is hardly probable, however, that the change of system will commence to operate before the 1st of April, 1907, with the commencement of the new financial year.

Secondary.

48. In this case also the present system is unsuited to the Colony's requirements, and there is a pressing necessity for a radical change. This was felt so keenly in the year under review that on the 8th of November the governing bodies of the girls' and boys' schools presented a petition to the Governor, asking that the Government would abolish them, take over the schools, and create one efficient body of control. This has been effectuated by legislation passed early in the current year, but the preliminary measures are still under discussion and the law has not yet been brought into operation.

49. The statistics for 1905 are given in Table L., and, as will be seen therefrom, the results show a decrease in comparison with 1904. It should be added that these remarks do not apply to the Roman Catholic Convent School.

GOVERNMENT INSTITUTIONS.

50. Following, in tabular form, is a statement of the principal statistics of the charitable institutions supported by the public revenue during the year 1905:—

Institution.	Number at 1st January.	Admitted during the year.	Daily Average.	Cured.	Relieved or not improved.	Died.	Remaining at 31st December.	Cost of Institution.
								£
Colony Hospital	66	708	89·70	520	108	62	84	2,131
Yaws "	54	161	62·63	165	—	—	50	761
St. Andrew's "	11	108	11·2	98	5	5	91	581
Carriacou "	16	175	15·1	118	37	4	16	516
Lunatic Asylum	131	25	131	13	5	9	129	1,920
Poor "	40	38	41·37	14	—	23	41	435

51. The improvements at the Colony Hospital, to which reference has been made in previous recent reports, continued, and in the year under review the staff of nurses was placed on an efficient footing and a head nurse appointed; an Analytical Laboratory, which supplies a much-felt want in the Colony, was established; and a Colonial Drug Store, whence all medicines, disinfectants, &c., required by the several institutions are issued at cost prices, was started on the 1st of April. A commencement was also made with a Pathological Museum and a library of medical works of reference, papers, &c. 249 cases of ankylostomiasis were treated during the year, as compared with 150 in 1904. The receipts on account of paying patients amounted to £123.

52. There were more admissions at the Yaws Hospital than in the previous year, and, as will be seen from the above figures, of the 215 cases treated 165 were discharged cured, while there were no deaths. The institution is conducted on an economical scale, the cost per patient per diem being a little under 8*d.*; sea-bathing, personal cleanliness, and regular wholesome food are apparently the factors of success in dealing with this disease.

53. Fewer patients were admitted to the St. Andrew's Hospital than in 1904, while the daily average was higher, showing that cases of a more chronic nature were treated. 8,624 prescriptions were compounded at the District Dispensary, of which only 2,970 were paid for, as compared with 3,570 in the previous year. The dispensary receipts were £150.

54. Similar remarks as to admissions and averages in 1905 apply to the Carriacou District Hospital, and the cause is in

both cases doubtless the same, viz., the number of ulcer cases treated. This institution is also used by patients from the St. Vincent Grenadines, in respect of whom a small charge is payable by the St. Vincent Government.

55. The erection of a fine new hospital was commenced during the year on a site in the centre of the island, about 700 feet above sea-level, which became Government property in connection with the land settlement scheme and is known as Bellevue. Here there were formerly a small fort and military buildings, and these are being utilised for the new structure, a particularly fine rain-water reservoir in an excellent state of preservation deserving special mention. The medical officer's quarters, which also became the property of the Colony at the same time, are on an adjacent hill, within a quarter of a mile as the crow flies.

56. The daily average of patients at the lunatic asylum was 131, *i.e.*, 11 in excess of nominal capacity. Of the 129 patients remaining at the end of the year, 74 were from Grenada, 24 from St. Lucia, and 31 from St. Vincent. The cost per patient per diem is about 9½*d*.

57. Many important improvements were effected at the Poor Asylum in 1905 and were continued in the current year, and the institution now presents a very different appearance to what it did a short time ago. The demand for admission of males continues to be largely in excess of that for females, the daily average being: Males, 28·35; females, 13·12. The cost per patient per diem is only about 7*d*.

Savings Bank.

58. In 1905, while the number of depositors increased, the amount deposited decreased and that withdrawn increased; at the end of the year, however, the amount at credit of depositors was only £400 less than at end of 1904, and of that amount (£12,394) there were held investments, or bank deposits bearing interest, amounting to £12,000. The following are the figures for the last five years:—

Year.	Number of Depositors at 31st December.	Amount of Deposits (including interest capitalised).	Amount of Withdrawals.	Balance to credit of Depositors at 31st December.
		£	£	£
1901	1,355	8,603	8,561	11,211
1902	1,847	9,184	9,378	11,417
1903	1,544	7,480	7,674	11,658
1904	1,465	9,279	8,416	12,790
1905	1,470	8,105	8,773	12,394

59. The comparatively (to the population) small amount of money deposited in the Savings Bank in Grenada is not necessarily an evidence of want of thrift, as has been supposed by some. It is due to the popularity of investment of savings in purchase of real property, and, as this gradually becomes more costly and difficult to obtain, the Savings Bank deposits may be expected to increase. In 1895 the depositors' balances only totalled £6,426 at the 31st December.

JUDICIAL STATISTICS.

Police.

60. The strength of the police force was reduced at the 31st December, 1905, from 74 to 71 rank and file, consequent upon the transfer of the duty of supervising the collection of the excise duty on rum to the newly-formed Inland Revenue Department; it now consists of the chief, the sub-inspector, five sergeants, seven corporals, and 57 privates. The men receive a semi-military training, and are armed with the Martini-Enfield rifle. The Government band is attached to the force for disciplinary purposes, and fire brigade duties in the principal town are entrusted to the headquarters' detachment.

Prisons.

61. The committals in 1905 numbered 210, of which 202 were from local courts, six from St. Lucia, and two from St. Vincent, the Richmond Hill Prison having been utilised since 1900 for long-sentence convicts from the other islands of the Windward Islands Government. The daily average was 69·5, of which only 40·73 were Grenada convicts, while 24·65 were from St. Lucia and 4·12 from St. Vincent; the corresponding figures for 1904 were: Grenada, 50·2; St. Lucia, 11·9; St. Vincent, 1·8; total, 63·9.

62. The marked reduction that has taken place of late years in the number of prisoners from the Grenada Courts is well worth notice, as it coincides with a steady increase of population and with an increase in the statistics of crime in the Colony. In 1894, with an estimated population of 57,692, the daily average of prisoners was 84; in 1905, with a population estimated at 69,530, the daily average was only 41. Without doubt, the marked moderation now exhibited in sentences of the Courts, both Magisterial and Supreme, has had its effect in lowering the average, but the conclusion also seems unavoidable that a large percentage of offences must somehow be escaping punishment. Living in Grenada is by no means easier now than it was years ago, and, with the pressure of population, praedial larceny, to

mention only one offence, is bound to be on the increase; the Colony's statistics relating to crime and prisons do not, however, disclose a sufficient rate of increase to keep pace with the known facts.

63. The Richmond Hill Prison is in a satisfactory condition, and is economically conducted. A prisoner nominally cost the Colony 1*s.* 1*d.* per diem in 1905, of which 3¼*d.* represents the dietary; the cost is said to be "nominal," because the institution has now for many years been practically self-supporting, as the value of the prisoners' work exceeds the prime cost of the prison. To take one item alone—in 1905, 141,437 lb. of bread were baked and issued to the public institutions at cost price, representing a saving to the revenue of £737 as compared with local contract prices. The value of the tailor's work done in making uniforms, clothing, and bedding for the public institutions also totalled £169.

Criminal Statistics.

64. The usual analysis of the criminal statistics of the Colony is appended (Table M.), in which the figures for 1905 are compared with those of the preceding year and with the average for the three years 1901-3; and an increase is apparent under every head. This should not be taken, however, as indicating any very marked increase in criminality. An examination of the nature of offences for which convictions were obtained shows that out of the total of 1,476, 957 were for "other offences," and this item includes no less than 568 summary convictions for offences against laws relating to the social economy of the Colony, such as breaches of the revenue and health laws. "Offences against the person," it is true, compare unfavourably with the record of 1904, and among the cases was one of murder, which is fortunately rare in Grenada; two men were convicted of the offence, and executed. Praedial larceny continues to show a slight upward tendency, and here the actual convictions probably only represent a fraction of the offences committed.

VITAL STATISTICS.

Population.

65. According to an estimate based on the natural increase since the Census of the 7th of April, 1901, when 63,438 persons were returned as resident in the Colony, the population at the 31st of December, 1905, amounted to 69,530—males 33,089, females 36,441—the increase on the Census population being 9·6 per cent. The birth-rate per thousand of the mean estimated population was 41·56, and the death-rate 23·02 for the year. The former is up to the average rate, and the latter in excess of it, the new Births and Deaths Registration Ordinance, which commenced to operate on the 1st of January, 1905, having, as was anticipated, resulted in an improvement of the death records.

Public Health.

66. The year under review was the seventh in which a fairly accurate classification of the causes of death under medical certificates was secured, so that it is possible to compare its record with a six years' average, and the result, as regards the principal causes, is shown hereunder:—

Disease.	Average for 6 years 1899–1904.	1905.
Diarrhœa	124	203
Dysentery	122	69
Fevers	92	110
Enteritis	81	157
Phthisis	64	63
Bronchitis	30	34
Pneumonia	24	28
Influenza	12	12
Whooping cough ...	22	—
Cardiac disease	46	79

A noticeable feature of the table is the number of deaths recorded as due to enteritis, which have steadily increased from 33 cases in 1899 to nearly five times that number in 1905. As usual diarrhœa and dysentery take easy precedence of other causes of death, and a comparison of the record of 1905 in this

respect with the preceding six years' average is instituted, by districts, in the following table:—

District.	Diarrhœa.		Dysentery.	
	Average for 6 years 1899–1904.	1905.	Average for 6 years 1899–1904.	1905.
St. George's	49	55	31	17
St. John's	9	1	22	26
St. Mark's	6	33	5	1
St. Patrick's	14	27	12	8
St. Andrew's...	31	50	40	14
St. David's	8	29	11	1
Carriacou	7	8	1	2
	124	203	122	69

As heretofore, Carriacou maintains its comparative immunity from dysentery.

67. No serious disease was epidemic during the year, but an outbreak in the St. Andrew's district of the eruptive disease, now generally recognised as a very mild and unusual type of small-pox, which commenced on 29th December, 1904, continued on through the first half of the year, the last case being discharged from the Isolation Station on the 15th of July, after 81 cases had been dealt with therein. The local health authority, medical officers, and police deserve much credit for their successful fight with this disease.

Climate.

68. The principal meteorological statistics of the years are as follows:—

Rainfall:

North of Island	89·89 inches
Centre of Island	151·90 ,,
South of Island	77·89 ,,
Carriacou	40·04 ,,
Relative Humidity (mean)	77·4
Mean Temperature (maximum)	89·4°
,, ,, (minimum)	68·0°
Mean Pressure	29·980
Days of Rain	244

69. In the south of the island the rainfall was of average quantity, but in the centre it was 25 inches, in the north 15½ inches, and in Carriacou 16½ inches less than in 1904. The rainy season commenced on the 16th of May, and a severe drought began in November and lasted for six months.

70. The following analysis of the rainfall returns at the Richmond Hill Station, in the south of the island, for the 15 years 1891-1905, being the period in which a continuous record has been kept, may be of interest and serve for future reference:—

Month.	Average rainfall for each month in 15 years.	Year.	Total rainfall in each year.
	Inches.		Inches.
January	4·39	1891	56·69
February	2·78	1892	105·89
March	3·05	1893	84·52
April	2·70	1894	67·88
May	4·58	1895	78·47
June	7·80	1896	99·94
July	9·22	1897	83·64
August	9·59	1898	81·77
September	8·14	1899	64·29
October	5·98	1900	63·45
November	3·39	1901	92·15
December	7·92	1902	70·19
		1903	78·93
		1904	69·41
		1905	77·89

Average annual rainfall in the 15 years	78·34 inches.
Minimum rainfall in one month ...	·49 inch in May, 1899.
" " " " year... ...	56·69 inches in 1891.
Maximum " " " month ...	29·90 inches in November, 1896.
" " " " year	105·89 inches in 1902.

71. Four shocks of earthquake were felt during the year, and between 3 p.m. on the 5th and noon on the 7th of March a series of earth-tremors were experienced in the extreme north of the island. Volcanic dust from the Montagne Pelée, in Martinique, fell on several days, and distant explosions were heard on the 5th of June and 12th of July.

Sanitation.

72. Sanitary measures are under the control of a Central Board of Health, comprised of the Governor and the members of the Executive Council, and of local health authorities, which are the District Boards in the main island, and a small board in the Carriacou district, of which the Commissioner is the

Chairman. A medical officer has a seat on each such authority. The general revenue is responsible for expenditure on sanitation in the rural districts, and in towns it is borne by the rates.

73. An important public work of sanitation was commenced by the Government in 1905, having for its object the drainage of a large area of marshy land on the eastern boundary of the principal town, known as the Tanteen Swamp, which has doubtless been responsible for the malarial fever which prevails in its vicinity. If, as is hoped, the operation is successful, an important residential suburb (now impracticable on account of its unhealthiness) will be added to the town, and the expenditure, estimated at about £1,000 to be spread over three years, should be amply recouped, as the land is Crown property.

POSTAL AND TELEPHONE SERVICES.

Post Office.

74. The following is a comparison of the Post Office statistics for the last two years:—

—	1904.	1905.
Letters and post cards...	530,231	509,990
Newspapers, books, &c.	169,806	166,751
Parcels	9,323	8,140
Registered Articles	—	8,379
	£	£
Money orders issued and paid ...	20,390	19,652
British Postal Orders ditto	75	1,250

75. The system of remittances by British postal orders, introduced on the 1st October, 1904, was found to be so useful and popular that their sale, which had at first been limited experimentally to values not exceeding 10*s.* 6*d.*, was extended to include all of the values up to and including 21*s.*; the result is shown above.

76. A district post office was established at Petit Martinique, one of the Grenadines now included in the Carriacou district, and an issue of postage stamps was made. The values were ½*d.*, 1*d.*, 2*d.*, and 2½*d.*; they have the Colony's new badge, and are of the prescribed Postal Union colours.

TELEPHONES.

77. The receipts for this service amounted in 1905 to £1,459, as compared with £1,430 in 1904, and the ordinary expenditure for maintenance of the system to £1,054, against £1,111 in that year. Besides this, £226, as annually customary, was repaid to the Colonial Revenue for charges on the original construction loan, and £245 was expended on reconstruction work. The service was satisfactorily conducted during the year, and at its close Mr. E. Drayton resigned the office of manager of the Department, thus severing a connection which dates from the inception of the system in 1891. The control of the Department is now vested in the Public Works Department, which was strengthened on the 1st of October by the appointment of district road surveyors, and has consequently adequate means for supervising the work in the out-districts, hitherto dependent upon such supervision as could be given from headquarters.

MILITARY FORCES AND EXPENDITURE.

78. There is no military force, either volunteer or regular, in the Colony. As has been explained above, the police constables are kept on a semi-military footing, and provision has been made by legislation for the formation of a volunteer force and of volunteer reserve corps. For these, as well as for the police, a supply of Martini-Enfield rifles has been given by the Imperial Government, and a good rifle range has been established at Queen's Park, near to the principal town, which was used by the police for the first time in the current year.

GENERAL REMARKS.

79. Mr. C. J. Tarring retired, on pension, from the office of Chief Justice on 31st October, and Mr. John Bayldon Walker, the Chief Justice of St. Lucia, succeeded him.

80. The only other event of importance that has not been already referred to was the publication in the Government Gazette of the 12th September of a notice to the effect that His Majesty's Government considered the union of Grenada and St. Vincent into one Colony desirable, and wished for an expression of public opinion thereon. The question was temperately discussed in the public press and by the District Boards of this Colony, but did not reach the stage of debate in the Legislative Council, as it was evident that the general feeling was opposed to union with St. Vincent alone, while it

tended strongly in the direction of a fusion of the Colony with that of Trinidad and Tobago, with which Grenada has many ties, historic and commercial, and before which, it is fully recognised, that an important future lies, with which this Colony desires to be associated.

81. Most persons who have the requisite experience of the British West Indies, and who look ahead, are prepared to admit that consolidation of their more important interests is a vital necessity to a successful future for them, and that unity and uniformity in regard to the higher administrative and judicial offices and in the general body of legislation can be with advantage attained, provided that full autonomy in local municipal details is at the same time accorded to each Colony.

EDWARD DRAYTON,

Colonial Secretary.

Grenada,

27th August, 1906.

No. 505.

ST. LUCIA.

(For Report for 1904, *see* No. 482.)

THE ADMINISTRATOR TO THE GOVERNOR.

Government House,
29th August, 1906.

SIR,

I HAVE the honour to transmit herewith the Annual Report on the Blue Book for 1905.

I have, &c.,

P. C. CORK,
Administrator.

His Excellency
Sir Robert B. Llewelyn, K.C.M.G.,
&c., &c., &c.,
Grenada.

1125 Wt 23907 10/06 D & S 5 26094 A 2

REPORT ON THE BLUE BOOK FOR 1905.

I.—FINANCIAL.

(A.) Revenue.

The general revenue for the year 1905-6 amounted to:—

Ordinary Revenue	£59,307	16	9
Part Proceeds of Reclaimed Lands Fund carried to Revenue	1,342	0	1
Imperial Grant-in-Aid of Agriculture	1,227	8	1
	£61,877	4	11

The ordinary revenue was less than the estimate by £2,438 18*s.* 10*d.*, and less than the previous year's collections by £2,586 0*s.* 1*d.* The total revenue was £3,596 18*s.* 9*d.* under the estimate.

The following table shows the revenue of the Colony for the past five years:—

Year.	Amount.
	£
1901–2	67,365
1902–3	72,193*
1903–4	66,008
1904–5	69,273†
1905–6	61,877

* Including Imperial Grant of £3,000 in aid of the sugar industry.
† Including refund by Imperial Government of £3,085 12*s.* 3*d.*, being the cost of coal shed.

The principal decreases were in the receipts of Customs duties, which were £3,624 11*s.* 9*d.* less than in 1904-5, and in Excise duties on rum and in road taxes, but an increase of port and harbour dues partly compensated for this loss. There were small decreases under three other heads, and increases under four. Moreover, the special receipts credited were £4,808 less than in the previous year.

Comparative Statement of the Revenue of the Colony for the Year ended 31st March, 1906.

Heads of Revenue.	Estimate for 1905–6.	Actual Revenue to 31st March, 1906.	Revenue for same period of preceding year.	Increase.	Decrease.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1. Customs	29,500 0 0	26,762 2 1	30,386 13 10	—	3,624 11 9
2. Port, Harbour, &c., Dues	4,500 0 0	5,670 7 0	4,696 8 3	973 18 9	—
3. Licences, Excise, and Internal Revenue not otherwise classified	19,620 0 0	18,172 10 1	17,977 6 3	195 3 10	—
4. Fees of Court or Office, Payments for Specific Services, and Re-imbursements in Aid	3,319 10 0	3,502 9 11	3,404 16 5	97 13 6	—

Re-imbursement of Expenditure on Admiralty Coal Shed	—	—	3,085 12 3	—	3,085 12 3
Net Balance transferred from Police and Revenue Officers' Reward Fund ...	—	—	1,094 4 11	—	1,094 4 11
Imperial Department of Agriculture—Grant-in-Aid	1,227 8 1	1,227 8 1	1,196 10 0	30 18 1	—
Total	65,474 3 8	61,877 4 11	69,272 14 6	1,351 10 11	8,747 0 6

(B.) Expenditure.

The expenditure was £62,521 8*s.* 4*d.*, of which £1,197 17*s.* 11*d.* was paid out of the Imperial Grant for Agriculture, and £1,342 0*s.* 1*d.* from the Reclaimed Lands Fund for further reclamation works. Thus, the revenue from ordinary sources and the ordinary expenditure for carrying on the Government were:—

Ordinary Revenue ...	...	£59,307 16 9
„ Expenditure	...	59,408 10 5

—showing an excess expenditure over the revenue for the year of £100 13*s.* 8*d.*

Towards the end of 1905, when the falling off in revenue had become apparent, orders were issued to restrict expenditure as much as possible, and the net saving on the total original estimates was £2,361 3*s.* 8*d.*, in spite of a few unavoidable excesses under different heads.

The total expenditure was less than in any of the preceding four years:—

Year.	Amount.
	£
1901–2	67,486
1902–3	69,408
1903–4	70,691
1904–5	65,508
1905–6	62,521

(C.) Assets and Liabilities.

The surplus at the 1st April, 1905, was £23,189 5*s.* 3*d.*, and although the expenditure was, as shown above, slightly in excess of the revenue, it had been augmented by accretions of interest to £23,314 10*s.* 5*d.* on the 31st March, 1906.

To this should be added a sum of £1,909 12*s.* 5*d.*, set aside as a fire insurance fund on public buildings. This appears to me to be a portion of the true surplus, hypothecated to a particular purpose.

(D.) Surplus Funds.

The investments held on 31st March, nominally on this account, amounted to £24,123 14*s.* 10*d.*, being in excess of the actual surplus by £809 4*s.* 5*d.* The difference represents the balance of an amount realized by the sale of work-yard lots, which is earmarked for expenditure on reclamation of land in Castries, and which was invested pending its being required for the purpose stated.

(E.) Public Debt.

The public debt has been further reduced during the year, and now stands at £161,179 11*s.* 0*d.*, with accumulated sinking fund amounting to £12,421 10*s.* 2*d.* available, making the net liability £148,758 0*s.* 10*d.* as yet unprovided for. This debt is apportioned as follows:—

Colony's Share.

Public Works Loan under Ordinance No. 19 of 1892	£50,579	11	0
Central Factory	13,300	0	0
Immigration	10,400	0	0
Harbour Works	57,900	0	0
Water Works	12,000	0	0
	£144,179	11	0
Castries Town Board's Share	17,000	0	0
	£161,179	11	0

I find an amount of £2,304 14*s.* 8*d.* not included in the schedule of debts and for which no debentures or scrip have been issued, but on which 4 per cent. interest is being paid, namely, the Baron Trust Fund. This represents the value of

buildings taken over by the Government from the Trust and used for public purposes, and is therefore an undischarged debt. As, however, the proceeds are intended for charitable purposes, it has been arranged that an annuity of £92 a year, representing approximately interest at the above rate, should be paid subject to the reservation that the debt may be paid off at the will of the Government.

(F.) Towns and Villages.

The following statement shows the revenue and expenditure for the last five years of the towns and villages of the Colony, and their indebtedness at the 31st March, 1906:—

Town or Village.	1901–2.		1902–3.		1903–4.		1904–5.		1905–6.		Indebtedness at 31st March, 1906.	Balance at 31st March, 1906.

* For a Water Supply. The Loan was made from Savings Bank Funds, and is repayable in 27 years from the 1st July, 1902.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

(A.) Imports and Exports.

The value of the imports in 1905 was £285,987, and of the exports £211,654, including bunker coal supplied to steamers to the value of £102,626.

The imports and exports for the last five years were as follows:—

Year.	Imports.	Exports		Total.
		General.	Bunker Coal.	
	£	£	£	£
1901	382,652	77,871	110,196	188,067
1902	326,324	73,458	84,295	157,753
1903	351,086	105,983	63,506	169,489
1904	370,706	101,449	70,581	172,030
1905	285,987	109,028	102,626	211,654

The values of the chief articles imported in 1905 are given below, as also those for the previous year:—

Articles.	1904.	1905.
Class 1.	£	£
Live animals—		
Cattle	5,867	4,332
Horses and Mules	672	918
Sheep	1,835	1,125
Food and Drink Supplies—

Stationery...	1,114	684

Of the imports in 1905, goods to the value of £95,087 came from the United Kingdom, £56,891 from British Colonies, and £134,008 from foreign countries.

(B.) Mines, Manufactures, and Fisheries.

There are no mines of any description in operation. The proposal to work the sulphur mine at Soufrière fell through.

A fairly large number of boats is engaged in fishing around the coast of the Island, but solely for the purpose of supplying the local market, and no attempt is made at preserving for export purposes.

In addition to the quantity exported, the sugar and rum consumed in the Colony are largely the produce of the local factories and distilleries.

(C.) Agricultural Industries.

Sugar and cocoa continue to be the principal products grown for exportation, and native foodstuffs for local consumption. The price of sugar in 1905, as declared for exportation, was £1 per ton less than in 1904, and the total value exported was £45,163, as against £53,799 in 1904. A temporary rise in price had occurred, but unfortunately it had fallen before the sugar was put on the market, and the anticipation of large profits was not realised. The quantity of cocoa exported was larger than in any previous year, being 9,468 bags of 200 lbs., valued at £38,041, as against 6,679 bags, valued at £29,008 in 1904. The evidence seems to point to a moderate but steady increase of the area under cultivation in recent years, and it is the most hopeful sign for the future prosperity of the Island which I have observed. Many of the plots have, however, a neglected appearance, indicating a want of proper cultivation and pruning, and the reports of the Agricultural Instructor show that in cases where the Department of Agriculture has taken over patches of cocoa in bad order for experimental purposes and devoted proper attention to them, the yield speedily increased and satisfactory returns were obtained. If the people could be induced to assimilate the lessons taught by these experiments, the exports would probably be doubled in two or three years. The community, however, appears to be intensely conservative and somewhat suspicious of suggestions, and it may take some time to convince them generally of the truth of the results established by the experiments conducted under the direction of the Imperial Commissioner of Agriculture. Some progress has nevertheless been made, and after consultation with Sir D. Morris it has been agreed that the Agricultural Instructor should arrange for a series of meetings at which lectures should

be delivered. The Roman Catholic body is much the most numerous in the Colony, and the Archbishop, Vicar-General, and Priests are cordially lending their assistance in organizing these meetings. I trust that with the co-operation of the other religious bodies and of the Press it may generally become possible to arouse greater interest in the subject so as to reach all persons engaged in the cultivation of the soil, and to impress upon them the material benefit to be derived from an intelligent application of the teachings of experience to the cultivation and preparation of their crops.

From the returns made by proprietors under the Minor Products Protection Ordinance, 1899, it would appear that there are in the Island 1,315 persons who cultivate cocoa, of whom 505 have from one to two acres; 177, from two to three acres; 293, from three to five acres; 212, from five to 10 acres; 51, from 10 to 15 acres; 20, from 15 to 20 acres; 31, from 20 to 30 acres; 12, from 30 to 40 acres; six, from 40 to 50 acres; and eight, over 50 acres under cultivation—the total acreage being 6,161 acres. It is possible that these returns are in some cases suspectible of modification, but they afford the most reliable information available to me, and on these it is necessary to base my calculations of the condition and progress of the industry. From the passing of the Ordinance in 1899 to 1901, the number of proprietors from whom returns were received was 876 and the acreage 4,496, or an average of 5⅛ acres each; from 1902 to May, 1906, there were 439 additional proprietors with 1,665 acres, or an average of a little over 3¾ acres each, indicating an increase of small proprietors. I have been informed that some of these latter represent properties which have changed hands, as the reports are not corrected from year to year, as they should be, through lack of information, and when sales are effected the same property, though remaining on the old register, is re-entered under the name of the new purchaser. While it is quite possible that there are some discrepancies of this nature, it has been ascertained that out of 761 plots of Crown lands which have been sold since the commencement of the scheme for settling the people on the land, only 135 of the names of the purchasers appear on the register, and I apprehend that, unless the record is incorrect, the people are not making the use of the land which was anticipated. The Agricultural Instructor thinks that the acreage in cocoa is fairly correct, the two opposing factors balancing each other. The export of cocoa for the year was 1,893,600 lbs., showing an average return of 307 lbs. per acre, which, taking into consideration young plantations yielding nothing, he believes to be a fair average. He adds: "The comparatively low average is due here, as elsewhere, to neglect of cultivation on the part of the uneducated peasant proprietors, who as a class probably do not obtain more than 2 cwt. per acre, while the more intelligent planter may get an average of 5 to 6 cwt.

The latter yield is distinctly good as an average over a large area, though it is not unusual for certain favoured cocoa spots to yield 12 cwt. or more."

The maturity of the young plantations now in existence, coupled with more intensive cultivation, might reasonably be expected to bring about the increase of production which I have above indicated as possible, but the difficulty of persuading the people to abandon unthrifty methods and to adopt thrifty ones will probably militate against entire success, unless the Government obtains the cordial support of all classes in the endeavour to overcome it.

Agricultural Department.

The agency through which efforts are being made to improve tropical agriculture has its headquarters in Barbados, under the direction of Sir Daniel Morris, Commissioner of Agriculture, and is supported by the Imperial Government. Locally there is a Botanic Station, and an Agricultural School, and from time to time plots of cacao or sugar cane are singled out on plantations and taken under the care of the Department to be worked up as demonstrations of how the yield can be increased by improved methods of cultivation and treatment. The station is situated in Castries, and is an ornamental garden with a nursery attached for the propagation of economic and ornamental plants, and is used as the distributing centre.

The total number of growing plants distributed from this centre and from the nursery at the Agricultural School was 25,675, of seeds 563 packets and 400 countable seeds, bulbils 25, cuttings of potatoes, cassava, &c., 2,241, a few cacao pods, and 437 bouquets. Included in the foregoing are 385 plants, 218 packets, and 5 lbs. of seeds, which were distributed free to school gardens. The greatest demand was for lime plants, of which 11,834 were supplied, cacao 7,738, nutmeg 1,211, rubber 531, banana (Chinese) 872, and strawberry 550.

Nine Central American rubber trees (Castilloa elastica) of various sizes, growing at the station, were tapped in August, September, and November; also a number growing in the cacao fields at the Errard estate. Samples of the prepared rubber were submitted to experts in London for valuation and report. The best samples in biscuit form were valued at 5*s.* per lb., a second quality not sufficiently dried at 4*s.* 6*d.*, and the scrap was classed as "good black" and valued at 3*s.* 9*d.* per lb. Mr. Moore, the agricultural superintendent who conducted the operations, states that as the result of the experiments it is estimated that well-grown trees of about 12 years of age will yield 2 lbs. of cured rubber per tree.

Four experimental plots of cacao maintained on private estates by the Department during the year were given up on

the 31st March, 1906. The records of two of these plots which have received attention for five years are as follows:—

Plot 1, area 1 acre, taken in charge January, 1901, trees about 7 years old, diseased and failing.

Yield	1900-1	Nil.			
,,	1901-2	217	lbs.	cured	cacao.
,,	1902-3	236	,,	,,	,,
,,	1903-4	343	,,	,,	,,
,,	1904-5	717	,,	,,	,,
,,	1905-6	1,081	,,	,,	,,

Within 15 months of being taken in hand it yielded sufficient to cover expenses; last year the expense, including manures, was £2 19*s.*, the gross return £27 0*s.* 6*d.*, leaving net profit for the year of £24 1*s.* 6*d.*

Plot 2, area 1 acre, taken in charge January, 1901, in dying condition. Age of trees not stated.

Yield	1900-1	Nil.			
,,	1901-2	260	lbs.	cured	cacao.
,,	1902-3	650	,,	,,	,,
,,	1903-4	765	,,	,,	,,
,,	1904-5	580	,,	,,	,,
,,	1905-6	450	,,	,,	,,

Cacao in the vicinity reported as suffering badly from deplodia—a fungoid disease. This plot yielded quicker to treatment than Plot 1, but the return last year was less. The working expenses for the five years have been £30 17*s.* 5*d.*, while the gross return has been £70 5*s.*, leaving a net profit of £39 7*s.* 7*d.* When it is noted that these cultivations were in a diseased or dying condition, yielding no return when taken over, and have been brought back to health and vigour and have in the process yielded good profit, the value of the experiments as indicating what intelligent cultivation and treatment can accomplish is manifest, and the example should spur planters to closer study and to the practice of good husbandry.

Agricultural School.

This school was opened in 1901, with an experiment station attached, at an estate named Union, about four miles from Castries, purchased by the local government.

The average number of pupils maintained in the school was 20·6. Nine of the senior pupils, who had gone through the whole course of training, were discharged between October and December last. Of these five secured employment on estates, two on their parents' land, and two left the Island. These are

the first youths of the Island who have ever undergone a course of agricultural education, and that they, and those who are to follow them, may be able by their example to assist in bringing about improved methods of cultivation, and thus of contributing to the welfare of their country, will undoubtedly be the hope of all persons interested in St. Lucia.

The practical agricultural instruction at the school occupies 3½ hours daily, and includes root grubbing, cutlassing, forking, draining, cultivating, weeding, sowing, transplanting, cultage, pruning, budding, grafting, preparation and application of fungicides and insecticides, manuring, harvesting, and preparing crops for market, management of the apiary, sheep, hares, and poultry, land measuring, &c.

The usual half-yearly examinations were held in June and December, and embraced the following subjects:—Essay, dictation, arithmetic, geography, agriculture, botany, and agricultural chemistry. In the December term elementary practical geometry and surveying were added to the work of the senior class. In June the average percentage of marks obtained was 62·9, ranging from 73·3 to 46·6 per cent. of possible marks. In December the average percentage of marks was 54·5, ranging from 74·2 to 41 per cent.

Cricket, quoits, and several indoor games are provided for the pupils, and when the troops were leaving the Island the garrison, through the officer commanding, made to the school a very welcome contribution of 60 books for the library.

Discipline has been satisfactorily maintained, and the health of the pupils has been excellent.

The experimental plots annexed to the school embrace bananas, yams, cacao, rubber (Castilloa Elastica and Funtumia Elastica), oranges, corn (maize), cabbages, grasses (such as sour grass, Japanese millet, doura, Kaffir corn, broom corn, teosinte), sunflowers, Japanese buckwheat, and limes; and onions, pulse, and other foodstuffs were grown in quantities sufficient to supply the needs of the school or to afford instruction as to their proper method of cultivation.

The pupils are permitted during recreation hours to cultivate small gardens, the product of which they sell for pocket money.

The total expenditure on agriculture in the Colony, as shown in the auditor's report, was:—

From Local Funds	...	...	£437 7 9
From Imperial Funds	...	...	1.197 17 11
			£1.635 5 8

(D.) Crown Lands and Surveys.

A change was made in the management of this Department during the year, and the Colonial Engineer was appointed Commissioner of Crown Lands on the amalgamation of the Public Works and Lands Departments. On his assumption of the duties on the 1st October last, the work was found to be very much in arrear, there being 324 grants for lands sold which had not been prepared, and 140 applications for the purchase of land which had not received the requisite attention. This mass of arrears will take a long time to wipe out, but it is anticipated that better results will immediately be apparent in consequence of the more energetic control.

The transactions for the year 1905 were:—149 applications for the purchase of 1,626 acres 2 roods 9 perches of Crown lands were filed, of which six were for less than 5 acres, 111 for areas exceeding 5 acres and not exceeding 10 acres, and 20 exceeding 10 acres. The area applied for was more by 783 acres than that applied for in 1904. There were in addition 12 applications for village lots.

Four estates were escheated, namely:—In the quarter of D'Ennery—Bois Jolie, Desbrosses Dumouliere, and Moyer l'Anse. In the quarter of Dauphin—Theotiste or Raymond Dampiere.

Nine Crown grants were issued.

The Land Sales Fund transactions were as follows:—

Balance on 31st December, 1904 ...	£556	11	7
Revenue, 1905	1,162	19	2
	£1,719	10	9
Expenditure, 1905	865	4	3
Balance on 31st December, 1905 ...	£854	6	6

Salaries and departmental expenses are not charged to the fund. These amounted to £600 6*s.* 3*d.*, so that the total expenditure for the year was £1,465 10*s.* 6*d.*, or £302 11*s.* 4*d.* more than the receipts, while the work finally disposed of was, as above stated, four estates escheated and nine Crown grants issued.

(E.) Public Works.

The public works of the Colony have hitherto received but passing notice in the annual Blue Book Reports, but I apprehend that they are of sufficient importance to merit a chapter

of description and explanation, as the future prosperity of the Island largely depends on the prudent application of all available means to public works of various kinds.

An indication of the policy adopted in the past may be gathered from a perusal of the statistics relating to the public debt. These statistics show that when sugar, the dominant interest, began to decrease in price some years ago, the Government came to its rescue and invested large sums of borrowed money in the Cul de Sac Sugar Factory and in East Indian immigration, to provide labour for the growth and manufacture of sugar. The only tramways in the Island—those at Cul de Sac, Roseau, Vieux Fort, and Dennery—are private undertakings, but most of the good roads were constructed by Government for the conveyance of sugar. The Cul de Sac factory did not pay, and the money invested in it by Government has been lost, the factory passing into other hands. There is amongst the evidence tendered to the West India Royal Commission in 1897 a list of 86 sugar estates which formerly manufactured muscovado. Sixty-three of these appear to have been abandoned, one converted into a rum manufactory, and the others absorbed into the factories to which they were adjacent. Four have, however, recently re-started work. The public roads which served these estates remain in existence, principally in the southern portion of the Island, but the amount of produce carried over them is relatively very small, as the land has not in many instances been used for growing other crops. The produce of the factories is carried by tramway. In place of the sugar lands which are near the coast the tendency of the population in recent years has been to take up virgin lands in the interior, on which to plant cacao and other foodstuffs, but these are only very indifferently supplied with bridle-paths or foot-paths, and the problem of the immediate future is to provide suitable roads to enable the produce grown to be brought to market and to encourage more systematic settlement and improved cultivation and preparation of the crops. As the result of a report made by Mr. Wrightson, Superintendent of Public Works of Trinidad, who was appointed to advise on the road system, a Public Works and Roads Ordinance was passed during the year abolishing the office of Superintendent of Public Works and the Road Boards and creating the office of Colonial Engineer, under whose management the "public highways" are placed, and constituting District Road Boards for the control of "public byways." At the same time a new Road Tax Ordinance was passed, imposing a small graduated tax on incomes exceeding £30, and continuing the tax of 6*s*. per annum on persons with small incomes. Only males above the age of 18 years are liable, and persons 60 years old, whose incomes do not amount to £100, newcomers, and certain others are exempt. The yield of the tax has so far been disappointing, but a final decision

on the subject cannot be arrived at until adequate measures of collection have been in force for at least a year. In the meantime the current revenue is insufficient to enable the Government to grapple fully with the road question, and it is under consideration to withdraw £5,000 from the surplus funds to be expended on the most urgent work.

In 1885 an important scheme for the improvement of the harbour of Castries was embarked on, and a loan of £70,000 raised. In 1888 a further sum of £14,000 was raised under the Public Works Loan Ordinance, 1887, for the same purpose. This was over-expended by £700, and the following amounts were also disbursed under Ordinance 19 of 1892:—

Western Wharf	£4,952	8	2
Dredging Central Shoal	1,698	5	0
Harbour Improvement	1,471	8	1
Maintenance of Dredger	1,812	18	2
Fenders, Northern Wharf	408	13	2
	£10,343	12	7

—making the total expenditure out of loan moneys £95,044. Certain construction work, such as piling the Prince Alfred Basin at a cost of £913, and putting up wharf railings and barriers £700, were paid for out of current revenue.

A solid concrete wharf was built and dredging done to a depth of 27 feet at low water alongside. The business of the port as a coaling depôt rapidly increased, and during the past year 551 steamships, with a total tonnage of 904,340 tons, entered, in addition to 245 sailing vessels, with a total tonnage of 11,109 tons. Within recent years an urgent demand has been made for increased wharf accommodation, and for extensive dredging operations to enlarge the navigable portion of the harbour for deep draught ships by the removal of shoals. Motives of prudence prompted delay when the decision of the Imperial Government to abandon Castries as a fortified port became known, and no further addition has been made to the public debt. A great deal of work has, however, been done in the nature of piling the foreshore and reclaiming swampy land to the east of the concrete wharf. This work is estimated to cost £4,513, and what has been accomplished has been paid for out of funds derived from the sale of reclaimed land. The present wharf accommodation consists of 646·9 lineal feet, constructed of cement concrete with 27 feet of water, 362 feet of hard-wood piling with 18 feet of water and 1,157 feet of lesser depth for small craft.

In 1888 a debt of £3,300 was incurred under the authority of the Public Works Loan Ordinance, 1888, for erecting a lunatic asylum, but the money was diverted to other purposes, and in 1894 inscribed stock to the amount of £66,479 11*s.* was issued for converting £17,300 of the above debt, £5,900 for immigration, and the balance for the undermentioned works:—

Building Government House	£8,800
Constructing Government House Road ...	1,690
Police Barracks (Castries)	1,564
Construction of Telephones	4,521
Roads	5,174
Water Works	1,311
Yaws Hospital	1,894
Police Barracks (Soufrière)	700
Loan to Castries Town Board for Water Works and Market	10,000

—besides a few minor works.

As regards the operations of the past year, the changes in the staff and in the system of conducting work hardly afford sufficient time to indicate with accuracy what results will be attained. The new officers have had to study pre-existing conditions, and seek to improve the system and organize labour gangs and teach them their work, so that the measure of success attained has been in spite of the difficulties inseparable from attempts at reform and increased efficiency. I have on more than one occasion been told that the high class of road work being performed was in advance of the needs of the Island, and therefore wasteful, but inspection of the new work and comparison with the old shows the new work to be of a better and more lasting description, and the following comparative statement shows a reduction of expenditure in place of the waste of money which my informants warned me to expect:—

—	1904.	1905.
	£	£
Public buildings recurrent	753	364
Roads and bridges	5,291	3,875
Jetties	259	210
Harbour works	725	558
Miscellaneous works	343	440
Reclamation piling	1,138	1,811
Public buildings extraordinary ...	111	378
Other works	383	301
Roads and bridges (from land sales fund)	270	406

So much work remains to be done in the direction of providing or improving public buildings, in improving the existing roads and in making new ones, and the country through which the roads run is so broken and difficult, that much more money will be needed to bring matters into a satisfactory condition, but I am impressed with the belief that no improvident expenditure is taking place and that persistence in present methods will result in the highways being brought into a much better state than formerly.

The mileage of roadway in the Colony is approximately:—

	Miles.
Main Roads	115
Byways	117
Unclassified	33
Total ...	265

(F.) Shipping.

The number of steamers which entered Castries (the only port of entry in the Island) was 551, with an aggregate tonnage of 904,340 tons. This is an improvement on 1904, when 450 steamers of 643,437 tons visited the port. The great majority of these steamers called for coaling purposes, and the export of bunker coal amounted in value to £102,626, an increase of £32,045 over 1904.

Vessels Entered.

Year.	British.				Foreign.			
	Steamers.		Sailing Vessels.		Steamers.		Sailing Vessels.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
1900	473	751,463	271	9,009	147	154,695	41	6,258
1901	461	770,443	273	9,634	124	148,488	15	4,260
1902	430	682,878	338	11,001	108	141,240	71	3,869
1903	354	542,095	269	7,470	66	84,391	152	5,212
1904	373	544,895	231	7,349	77	98,544	45	2,899
1905	452	748,494	207	6,941	99	155,846	43	4,774

Vessels Cleared.

Year.	British.				Foreign.			
	Steamers.		Sailing Vessels.		Steamers.		Sailing Vessels.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
1900	473	749,172	266	8,530	147	156,988	39	5,480
1901	460	768,110	266	9,788	124	142,488	15	5,509
1902	432	685,282	346	10,994	108	141,240	68	3,579
1903	352	540,122	280	7,664	66	84,391	150	4,564
1904	374	546,795	237	7,537	77	98,544	45	2,869
1905	452	748,494	207	6,941	98	153,905	43	4,774

The shipping business of 1905 was nearly equal to that of 1900 or 1901, in which years the South African war was in progress.

III.—LEGISLATION.

Eleven Ordinances were passed during 1905, the most important of which relate to public works and roads, road tax, quarantine, and lands (acquisition for public purposes). The ordinances relating to the St. Lucia Library, the Criminal Code, Customs, the Post Office, and the District Courts were amended, and two Appropriation Ordinances were placed on the Statute Book.

IV.—EDUCATION.

(A.) Primary.

The general statistics for the year are given in the following table:—

Schools.	No.	Number on Rolls.	Average Attendance.	Number Examined.	Government Grant.
					£
Anglican	3	476	313	382	322
Wesleyan	1	310	153	165	137
East Indian Mission ...	1	43	25	30	24
Roman Catholic	41	6,427	3,341	4,480	2,856
Total	46	7,256	3,832	5,057	3,339
The figures for 1904 were	43	6,998	3,684	4,853	3,430

There has been a satisfactory increase of the number of pupils on the rolls, of those in average attendance, and of the number examined, and three more schools have been recognized.

The Inspector of Schools states that in addition "some hundreds of children are receiving instruction not only in the secondary schools of Castries, St. Mary's College, and St. Joseph's Convent, and in the Agricultural School at Union, but also in a large number of schools of different types, paying schools in the towns regarded as more select than assisted primary schools, and "bush" schools scattered all over the country. No exact figures with regard to these schools can be given as Government has no right of control or inspection."

The amount of school fees collected was £18 6*s*. 9*d*. only. The two Anglican schools in Castries are the only primary schools which receive fees.

The Government grant amounted to 17*s*. 5*d*. per unit of average attendance, but the Inspector reports that certain schools had, for a time, been drawing higher grants than they were entitled to in 1904, and an adjustment had to be made by deductions from the grants in 1905.

(B.) Secondary.

Secondary education is provided for boys by the St. Mary's College, and for girls by the St. Joseph's Convent. The former school received a Government grant of £400, and the latter one of £50. The total expenditure on these schools was £699 and £650, respectively, the school fees collected being £194 and £240.

There were 59 boys on the roll of the College, with 56 in average attendance, the figures for St. Joseph's Convent for girls being 85 and 80, respectively.

The boys are prepared for the Cambridge Local Examinations, and the girls for those of the London College of Preceptors.

One of the conditions attached to the grant of St. Mary's College is the right to have 10 Government scholars educated at the college free of charge. The report on these boys shows work and conduct "very good" in four cases, "good" in two, "very fair" in three, "fair" in one. Two passed the Cambridge junior and two the Cambridge preliminary examinations in December, 1905.

At the examination in December, 1905, to fill two vacancies, eight candidates presented themselves. The best candidates obtained, out of a total of 75 marks, 63·5, 62, 61, 58, 50, but one was disqualified, being a few days over age.

V.—GOVERNMENT INSTITUTIONS.

(i.) Hospitals and Asylums.

The following statement tabulates the principal statistics for 1904, relating to the hospitals and asylums of the Colony:—

Institutions.	No. of patients at beginning of year.	No. admitted during 1905.	Daily Average.	Patients discharged.		No. of Deaths.
				Cured.	Relieved.	
Victoria Hospital, Castries ...	57	1,269	65	845	319	92
Soufrière Hospital	2	29	2·3	23	1	1
Vieux-Fort Hospital	13	115	10	82	18	7
Dennery "	12	155	11	126	25	15
Yaws Hospital, Soufrière ...	42	61	41	56	6	7
Poor Asylum " ...	40	104	44·7	—	59	42
Lunatic Asylum " ...	8	16	11	2	—	3

(ii.) Dispensaries.

Out-door medical relief is given through the medium of a dispensary in each district, at which a medical officer attends every week.

The number of patients treated during the past three years was as follows:—

Dispensary.	1903.	1904.	1905.
Castries	7,637	16,728	7,399
Gros-Islet	684	514	619
Dennery	989	924	1,067
Anse-la-Raye	853	384	724
Soufrière	1,387	1,224	887
Choiseul	295	198	171
Vieux-Fort	1,204	1,034	1,193
Laborie	325	518	693
Micoud	627	546	610
Total	14,001	22,070	13,363

Of the 1,923 cases treated in the hospitals and asylums, the bulk are traceable to preventable causes. The following list indicates the principal diseases:—

Syphilis and gonorrhœa	320	
Urinary and generative system ...	112	
	——	432
Malaria		239
Parasites (ankylostoma, &c.)		298
Wounds, fractures, burns, &c.		80
Ulcers		61
Yaws		83
Tubercle		69

A curious circumstance connected with the Victoria hospital is that for years past the benefits of the institution have been principally enjoyed by natives of other countries. For the first time the St. Lucian patients predominate, in 1905. The figures for the past three years show the following admissions:—

—	1903.	1904.	1905.
Natives of St Lucia	364	553	797
Natives of other countries including India	1,275	709	472
Total	1,639	1,262	1,269

Of the strangers treated, 10 were from Europe or the United States, and were probably sailors. Excluding these, it would appear that the Government maintained 1,913 patients in the hospitals and asylums, and provided medical aid for 13,363 at the dispensaries, a total of 15,276, or nearly one-third of the whole estimated population of the Island.

(iii.) Out-door Relief of Paupers.

The number of persons in receipt of out-door relief on the 31st December, 1905, was 190.

Under the present system of relief each person on the list is seen at least once a month by the Relieving Officer of the district, who issues to each recipient a ticket, and the allowance is paid on the next pay-day by the Pay Officer on the production of this ticket. By this arrangement the Relieving Officer is able to keep himself acquainted with the circumstances of each recipient, particularly those who are only

temporarily on the list, and also to ascertain that each allowance reaches its proper destination. The system apparently works satisfactorily.

(iv.) Savings Bank.

The principal bank is in Castries, and there have been branches at Soufrière (II district), and Vieux Fort (III district) for some years. Two new branches were started during 1905, at Dennery and Gros Islet.

The following statement shows the transactions of the bank for the five years ended the 31st December, 1905:—

Year.	Total number of depositors on 31st December of each year.	Total deposits inclusive of Interest.			Total Withdrawals.			Amount on deposit at the end of each year.		
		£	s.	d.	£	s.	d.	£	s.	d.
1901	1,467	20,891	5	3	22,022	7	5	13,287	14	3
1902	1,590	20,365	12	6	17,696	8	6	15,956	18	3
1903	1,584	18,338	16	7	17,084	5	11	17,211	8	11
1904	1,642	18,990	15	5	20,568	7	1	15,633	17	3
1905	1,231	15 025	16	3	16,285	13	7	14,373	19	11

The decrease in the amount on deposit, and the number of depositors at the end of the year, is attributed by the manager to a number of depositors who had been employed on military works having, on the cessation of the works, closed their accounts, and gone elsewhere in quest of employment.

Investments to the extent of £13,416 14*s.* 11*d.* were held in England by the Crown Agents on behalf of the bank.

The working account of the bank showed a revenue of £481 14*s.* 2*d.*, and an expenditure of £392 9*s.* 2*d.* The excess of revenue, £89 5*s.*, was transferred to general revenue.

(v.) Friendly Societies.

There are 12 Friendly Societies in the Island, with an aggregate number of members on the rolls on the 31st December, 1905, of 1,247, and of balances at the same date of £935 1*s.* 10*d.*

Four hundred and eighty-four members seceded, and 22 died during 1905, and one new society was registered—the net decrease of membership being 351.

The disbursements during the year were:—

Sick benefits	£790	6	8½
Funeral claims	157	19	2
Working expenses	555	1	1
Purchase of property	74	8	0
Payments to withdrawing members...	145	14	2½
Payments to travelling and distressed members	37	13	2
Loans received and disbursed... ...	3	10	0
Loans written off	14	0	0
	£1,778	12	4

The working expenses represent 31 per cent. of the disbursements. The auditors' reports show several small discrepancies in the books.

VI.—JUDICIAL STATISTICS.

(A.) Police.

The strength of the force is one officer and 71 non-commissioned officers and men.

Ten men joined the force during the year, while four resigned, two were dismissed, and one pensioned.

There were 920 cases taken up by the police during the year, of which 639 were summarily convicted, and 55 for indictable offences were sent on to the higher court, 91 being withdrawn and 116 dismissed.

(B.) Prisons.

At the commencement of the year there were 51 prisoners in the royal gaol—39 males and 12 females.

The number of committals during the year was 394, 241 adult males, including 13 military prisoners, 79 adult females, and 43 males and 31 females under 21 years of age.

—	1904.	1905.
For Statutory Offences ...	536	301
„ Non-payment of Road Tax	117	80
„ Military Offences	36	13
„ Safe custody, trial, &c. ...	187	166
	976	560

The daily average number of prisoners in custody was 51·11, not taking into account the long-sentence St. Lucia prisoners, who are undergoing their sentences in the Grenada prison, the daily average of whom was 24·54. The corrected daily average for St. Lucia would be 75·65, as against a similar total of 72·94 in 1904. This is apparently the highest average ever attained, but it is due to longer sentences, the number of committals having decreased very considerably.

The labour of the prisoners during the year is valued at £531 14*s.* 3*d.*; the principal item is for quarrying and breaking stones.

The expenditure on the prison was £1,514, of which £307 was for the maintenance of St. Lucia prisoners at Grenada.

The daily average on the sick list was 1·1, being the same as that for the previous year. No death occurred in the prison.

A feature of the St. Lucia prison returns which merits comment is that while by the last census the natives of the Island stood in relation to the natives of other places residing here as 5·15 to 1, only 41·47 per cent. of the prisoners sentenced in 1905 were St. Lucians, the natives of other places, of which Barbados supplies the bulk of the criminal element, contributing 58·53 per cent.

I have already commented, under the head of hospitals and asylums, on the number of strangers who benefit by the Victoria hospital. It appears that a good many roughs and bad characters from other Colonies made this their temporary home, and a proportion of them spent their time between the hospital and gaol at the expense of the Government. No doubt a good many left when the garrison was removed, but the prison records bear evidence that a sufficient number remain to affect the statistics.

(C.) Criminal Statistics.

The following figures summarise the chief items of the criminal statistics for the last five years:—

—	1901.	1902.	1903.	1904.	1905.
Offences reported	2,258	2,790	1,942	2,032	1,595
Summary convictions—					
For offences against the person	272	333	255	355	405
„ prædial larceny	21	48	28	29	60
„ offences against property ...	138	133	77	124	226
„ other offences	1,185	1,430	877	1,059	904
Convictions by the Superior Court—					
Child murder	—	—	—	—	1
For offences against the person	5	6	12	17	3
„ „ „ property ...	5	17	11	13	23
„ other offences	4	1	2	2	5

VII.—VITAL STATISTICS.

(A.) Population.

The estimated total population on the 31st December was 53,389, which shows an increase of 13·4 per thousand during the year, and was composed of 25,619 males and 27,770 females.

The birth-rate of the year was 35·2 per thousand, as compared with 34·8 per thousand in 1904; and the death-rate 21·8 per thousand, compared with 19·4 per thousand in 1904. The number of births was 1,856, and of deaths, 1,149.

The population on the 7th April, 1901, according to the census taken on that date, was 49,883, made up of 23,821 males and 26,062 females. The natural increase of the population by excess of births over deaths from the date of the census to the 31st December, 1905, has been, therefore, approximately 3,506, or about 7 per cent., equivalent to an annual increase for the same period of about 1·75 per cent.

The number of marriages during the year was 340, as against 332 in the previous year.

These figures are obtained from the report of the Registrar-General, but as no deduction was made of persons leaving the Island, the estimate of population appears to me to be subject to modification.

(B.) Public Health.

No epidemic disease occurred, and the public health statistics indicate no unusual conditions during the year.

(C.) Climate.

The rainfall for the year, as recorded at the Botanic station in Castries, was 72·64 inches, and it fell on 243 days; but at the Agricultural School at Union, only 13 miles off in a direct line, the fall recorded was 78·83 inches.

The wettest month of the year was August, with 10·01 inches, whilst the driest was February, with 1·71 inches.

The Botanic station is the only place in the Colony at which continuous meteorological observations of a reliable nature have been made for any length of time, and the following figures are taken from its records:—

Rainfall.

Year.	Inches.
1900	73·25
1901	99·71
1902	91·43
1903	86·84
1904	77·72
1905	72·64

The average rainfall for the past 16 years is 94·07 inches or 21·43 inches above that of 1905.

The absolute maximum temperature registered during 1905 was 94·5° in the month of June, and the absolute minimum temperature 56·5° in January. The mean monthly temperature for the year was 78·3. The mean barometrical pressure for the year was 30·002 inches at 10 feet above mean sea-level.

VIII.—POSTAL AND TELEPHONE SERVICES.

(A.) Post Office.

The revenue of the Department was £2,018 8*s.* 10*d.*, of which £1,345 12*s.* 4*d.* was received from letters, post-cards, &c., £499 9*s.* 5*d.* from sales of stamps to collectors, and £173 7*s.* 1*d.* from commissions on postal and money orders.

The expenditure was £1,356 4*s.* 2*d.*, and the surplus of revenue over expenditure was, therefore, £662 4*s.* 8*d.*

The total number of letters and post-cards dealt with was—	Number.	Total.
Foreign sent	133,720	
Foreign received	122,262	
		255,982
Inland	...	85,378
		341,360
The number last year was	...	360,789
A net decrease of	...	19,429
Newspapers and book packets sent	8,379	
Newspapers and book packets received... ...	98,326	
		106,705
Inland	...	17,257
		123,962
The number last year was	...	139,837
A net decrease of	...	15,875
Parcels sent	608	
Parcels received	2,838	
		3,446
The number last year was	...	4,201
A net decrease of	...	755

The decrease in foreign mails amounted to 39,314 letters and postcards, 16,081 newspapers and book packets, and 755 parcels, while the increase of inland mails was 18,884 letters, &c., and 206 newspapers and book packets.

The number of registered letters dealt with was 6,747 and 3,613 letters passed into the dead letter office, of which 1,565 were returned to the countries of origin, and 2,048 to the writers.

The money order business amounted to £6,074 11*s.* 9*d.* against £11,068 last year, but £973 0*s.* 7*d.* in imperial postal orders were issued, and £238 2*s.* 5*d.* paid—this method of transmitting money having been adopted during the year.

The inland postal orders issued only amounted to £35 8*s.* 10*d.*

The contract with the Royal Mail Steam Packet Company for the carriage of mails expired on the 30th June, 1905, and since then there has been no subsidized mail service, letters and parcels being paid for at fixed rates by number or weight.

One branch post office was opened during the year at the village of Anse la Raye.

(B.) Telephones.

A committee which had been appointed in August, 1904, to enquire into the working of the telephone department submitted its report in January, 1905, recommending various alterations and improvements. The department has been placed under the control of the Colonial Engineer, the telephone supervisor has been replaced, and a new operator appointed at Castries. The village of Canaries was connected with the system, a police station having been established at that village during the year. A sum of £132 6*s.* 9*d.* was expended on reconstruction, and £115 15*s.* 6*d.* on maintenance, the Colonial Government also purchasing the War Department telephone system and stores at a cost of £500, and connecting the quarantine station at Rat Island with the mainland by a submarine cable.

The system now consists of 112½ miles of trunk line, and 53⅛ miles of branch lines, a total of 165⅝ miles.

On the 31st December there were 111 subscribers.

The receipts were £551 5*s.*, being £43 15*s.* less than in 1904, and the expenditure £1,567 10*s.* 7*d.*, or £1,016 5*s.* 7*d.* in excess of the revenue.

The line, which is alleged to have been badly constructed in the first instance, was, it appears, falling into a condition of great inefficiency, and it had become necessary to rescue it from this state, hence the large outlay. Unfortunately, at the

close of the year much remained to be done on it, and the expenditure for improvement and upkeep will continue high for two or three years longer. As the revenue from the rental of private telephones is only about £400 a year, the balance being made up of charges against the different Departments of Government, there is not much chance of the system paying for itself for a long time to come.

IX.—GENERAL OBSERVATIONS.

Towards the end of the year Castries was definitely abandoned as a fortified port, and the troops were withdrawn by the Imperial Government. Naturally this exerted a depressing influence on the revenues, although the year was a good one for trade, as the business of coaling was very brisk, and the general exports were in excess of what they had been for several years past. As was to be anticipated, a great falling off in imports occurred. Compared with 1904 the decline was £84,719, or nearly 23 per cent., and it is to be doubted whether the downward tendency has yet been arrested. The Colony has been suddenly thrown on its own resources by the discontinuance of large annual imperial expenditure, and the income of the people has *pro tanto* been decreased.

The prices returned for the two principal items of export were less than in 1904; sugar by £1 per ton, and cacao by 3*s*. per cwt.; the producers' profits were, therefore, diminished.

The decline in revenue from ordinary sources during the past two years is shown below:—

Ordinary Revenue.	Amount.	Decline.
	£	£
1903–4	64,326	—
1904–5	61,894	2,432
1905–6	59,308	2,586
		5,018
		Or nearly 8 per cent.

There seems no doubt that the future prosperity of the Island depends on the coal business and on agriculture. The former fluctuates very considerably, and is apparently governed by the volume of trade between North and South America, the ships carrying the traffic finding St. Lucia a convenient stopping place to replenish their stocks of coal. As regards agriculture, the Colony's struggle to maintain the sugar

industry was more plucky than well advised, and resulted in its being hampered with a load of debt which has since crippled its resources. The area of cane land in the immediate vicinity of the factories is not of such extent as to admit of a sufficiently large quantity of sugar cane being produced to enable the manufacture of sugar to be carried on on as large a scale as in Cuba, Demerara, and other places, where efforts have been made to cheapen production by large operations. At present experiments are being made with seedling canes in order to endeavour to produce a larger quantity of sugar from the same area. The estimated area in canes in 1905 was:—

Factory canes	2,667 acres
Muscovado estates	360 ,,
	3,027 ,,

Had St. Lucia made roads and planted cacao and spices as Grenada did, her prosperity would have long since been more assured. Some years ago a praiseworthy scheme was conceived of settling the peasantry on the land, and 761 lots have been disposed of, with very few exceptions, to small proprietors. Hardly more than half this number had received their titles up to the end of 1905, and the Lands Department, under the new management, is greatly hampered in its work in the endeavour to wipe off arrears. This blot on a good scheme has prevented entire success, and detracted from its usefulness. I consider also that the best results would have been secured by encouraging at the same time a number of more intelligent and experienced agriculturists with capital to settle on the land with the object of furnishing examples for the small proprietors to follow, and also of providing them with centres at which their spare time could be employed in working for wages while their own crops were maturing.

A Committee of the Agricultural Society is preparing a handbook of information for this class of agriculturist in the hope of attracting colonists to the Island, and a scheme of roads to give access to the land is now awaiting the report of a general committee, acquainted with the different districts, appointed to advise on the question.

A matter which merits, and should receive, early attention is the question of lessening the enormous amount of suffering to individuals which is entailed by the almost general disregard of measures to prevent diseases from which recent research shows that persons living in the tropics can be protected, and incidentally of diminishing the Government's heavy medical bill entailed by disregard of proper precautions

in this direction. The initial expense would be a good and lasting investment, but so far it has not been found possible to provide the money out of current revenue.

The three main lines on which it appears to me that most beneficial results will accrue to the inhabitants if consistently followed are the adoption of measures to prevent tropical diseases, the general spread of knowledge of agriculture, so as to prevent wasteful methods of cultivation and induce prosperity, and the general brightening of intelligence by sound utilitarian education.

REPORT ON THE BLUE BOOK OF ST. VINCENT FOR THE YEAR 1905-6.

I.—FINANCIAL.

(A.) General Revenue and Expenditure.

The following comparative statements and table give the heads of revenue and expenditure, and the amounts received under those heads, for the years 1904-5 and 1905-6, as well as the total revenue and expenditure for each of the last five years, 1901-2 to 1905-6:—

(Table 1.)

Comparative Statement of Revenue for the Years 1905-6 *and* 1904-5.

Heads of Revenue.	1905-6.	1904-5.	Increase.	Decrease.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1. Customs:—				
Import	9,771 11 9	10,333 15 0	—	562 3 3
Export	619 5 11	639 16 10	—	20 10 11

1904–5.	Local	22,448		Local	25,228	
	Imperial Grant	5,818	28,266	Imperial Grant	1,287	26,515
1905–6.	Local	24,928		Local	24,625	
	Imperial Grant	1,972	26,900	Imperial Grant	1,286	25,911

The total local revenue of the Colony for the year 1905-6 was £24,928, being £756 more than the estimate and £2,480 in excess of the receipts of the previous year.

The gross excess of receipts over estimate was £2,206, of which £1,710 was under the head of "Licences, Excise, and Internal Revenue," and the gross deficiency on estimated receipts was £1,450, of which £1,309 was under "Customs," the result being a net increase of £756, as above stated.

On a comparison of the revenue details of 1905-6 with those of the previous year, it is seen that the three main factors contributing to the very substantial rise in the revenue are excise, land and house tax, and reimbursements-in-aid, the increases under which are respectively £1,143, £1,157, and £667. The first is due to continued police activity, which has gradually almost killed out illicit distillation; the second is the result of the new ordinance passed at the end of 1904 imposing a tax on houses and enlarging the scope of the land tax; while the third arises from the passing to general revenue of £750, interest on the invested balance of the Eruption Fund, which is now used to assist the Colony in defraying its heavy poor relief bill.

There was, unfortunately, however, again a fall in Customs receipts of £583.

Other minor fluctuations contribute to the net result of £2,480 increase—the figure already given.

The gross revenue, including Parliamentary grants of £750 in aid of the anticipated deficit and £1,222 on account of the annual grant for Botanic station and Agricultural School, was £26,900.

In reviewing this revenue result it should be borne in mind that the local revenue figure of 1904-5, as shown in my last report, represented an increase of £1,504 over that of the year previous. The two increases together constitute a somewhat notable revenual improvement, and especially when considered with the co-existing reduction in expenditure referred to in the next and following paragraphs.

The expenditure of the Colony for the same period was £24,625, as against an estimate of £26,444, and a further amount of £1,286 was spent on upkeep of the agricultural institutions.

The corresponding figures of expenditure in 1904-5 were £25,228 and £1,287.

Comparison shows a decreased expenditure of £354 on account of public debt, the liability on which is lessening annually, £487 on pensions, £361 on police and prisons, £142 on poor relief (following on £174 decrease in 1904-5), £255 on post office, and other minor reductions.

There is a net increase of £236 under the two Public Works Heads 18 and 19, due to the obligation assumed by the

Government, coincident with the passing of the new Land and House Tax Ordinance to take over the cost of the repair of by-roads.

An increase of £218 under "Miscellaneous" is consequent on the Government having paid off, or rather remitted and charged to this head, a sum of £425, due to it for advances made to the towns of Georgetown and Chateaubelair in years gone by which those towns could never repay. Under Heads 4 and 5, Government Office and Treasury, Customs, and Excise (now separately estimated for), the increase of £467 is due to the removal of excise expenditure from the Police Vote to the Treasury Head, to the cost of inauguration of the new Land and House Tax Ordinance, and to certain other minor necessities.

The net result of the year's working is therefore:—

Actual local revenue	£24,928
Actual local expenditure	24,625
Surplus ...	£303

—as against an estimated deficit of £2,272.

The reduction of local expenditure effected between 1903-4 and 1905-6 amounts to the appreciable sum of £2,032. Add to this £3,984, the increase in local revenue within the same period, and the result is a total financial betterment of over £6,000.

(B.) Taxation.

During 1905-6 the new Land and House Tax Ordinance, passed in December, 1904, came into effect. This imposes a graduated tax from 1*s.* on houses of an assessed annual rental of £1 10*s.* and under, to 15*s.* on houses of between £15 and £20, and 4 per cent. of rental on houses over £20. This tax is altogether new. With regard to land tax, there is no change from the old rate or 1*s.* an acre, but the same 1*s.* is made payable on fractional parts of an acre, thus bringing in a large number of small holdings which formerly were untaxed. The increase to the revenue produced by this law is about £1,200, from which, however, the expenses of assessment and collection, which are considerable, must be deducted.

(C.) Assets and Liabilities.

An examination of the statement subjoined shows an excess of assets of £1,744.

At 31st March, 1905, the account showed an excess of assets of £688.

unpaid balance of the Hurricane Loan to planters from the Imperial

Treasury, St. Vincent,
18th May, 1906.

EDWARD J. CAMERON,
Treasurer.

(D.) Public Debt.

The public debt of the Colony at 31st March, 1906, stood at £4,650, as against £5,050 at the end of the previous financial year.

Of the above sum, however, the amount for which Colonial revenue is actually liable is £1,000 only.

The remainder, though guaranteed by the Colony, is repayable from the municipal funds of the towns of Kingstown and Georgetown.

(E.) Currency.

Gold, American, and British, notes of the Colonial Bank and British silver and copper constitute the currency of the Island.

The Government's accounts are kept in sterling, and commercial accounts in dollars and cents.

(F.) and (G.) Finances of Municipalities or Public Boards.

The management and control of the affairs of the town of Kingstown are vested in a Board, half of whom are elected by the ratepayers and the other half nominated by the Government. The small towns of the Colony are controlled by wardens, annually appointed by the Government.

The following comparative statements give the total revenue and expenditure of these towns for the last five years:—

Revenue.

Town.	1901.	1902.	1903.	1904.	1905.
	£	£	£	£	£
Kingstown	1,805	1,495	1,873*	1,657	1,664
Georgetown	194	179	90	164	137
Chateaubelair	38	31	27	23	32
Calliaqua	33	40	36	31	38
Barrouallie	42	33	38	29	33
Layou	18	22	28	16	19
Bequia	8	6	6	15	11

* Inclusive of £201 1902 revenue not passed to account till 3rd January, 1903.

Expenditure.

Town.	1901.	1902.	1903.	1904.	1905.
	£	£	£	£	£
Kingstown	1,759	1,637	1,609	1,650	1,472
Georgetown	175	204	137	120	103
Chateaubelair	35	33	31	26	24
Calliaqua	36	27	33	40	24
Barrouallie	40	60	20	27	20
Layou	15	17	23	34	19
Bequia	12	5	7	4	10

Debts of Towns.

The debts of the towns at 31st March, 1906, are as follows:—

Kingstown water supply ...	... £2,900	
Kingstown town improvement ...	350	
		£3,250
Georgetown water supply		400
		£3,650

Provision for repayment of these loans is made by rates levied annually on the townspeople, and the debts are secured on the general revenue of the Colony. The Kingstown water supply loan is being repaid at the rate of £200 per annum, the town improvement loan at the rate of £50 per annum, and the Georgetown loan by annual instalments of £50.

The indebtedness of the town of Georgetown to general revenue for advances made in previous years for certain specific purposes in the sum of £389, which has been alluded to in previous reports, has now been wiped out by the Government having written off the amount and charged it under the head of miscellaneous expenditure.

The same applies to the £36 due by the town of Chateaubelair.

These towns are thus relieved from a burden which was too heavy for them, and should not again be allowed to become encumbered.

II.—TRADE, AGRICULTURE, AND INDUSTRY.

(A.) Imports and Exports.

The following comparative statement gives the value of the chief articles of import in 1905-6 and the previous two years:—

Imports.

Chief Articles.	Value.		
	1903-4.	1904-5.	1905-6.
	£	£	£
Class I.—			
Beef, salted or cured	482	605	448
Biscuits	1,412	1,780	2,042
Butter	1,568	1,688	1,518
Coffee	287	201	315
Fish, salted, &c....	4,754	5,671	4,875
Flour, wheaten	8,840	7,951	7,864
Flour, other kinds	477	445	513
Oilmeal and cake	323	362	368
Pork, salted	1,847	2,056	1,922
Rice	1,866	2,399	2,179
Salt	445	458	426
Spirits	758	908	826
Sugar, muscovado	128	54	333
Sugar, refined	309	436	508
Wine	581	601	623
Food and drink supplies, unenumerated ...	1,079	1,092	986
Tobacco, cigars, &c.	894	949	971
Class II.—			
Manure	51	12	181
Petroleum oil	1,116	1,179	1,211
Timber and shingles	6,815	4,158	2,595
Class III.—			
Textile manufactures, other than rope, cordage, and canvas.	15,717	16,262	15,185
Metal, manufactured	5,295	4,385	4,822
Boots and shoes	869	855	740
Cement	462	498	398
Rope, cordage, and canvas	935	1,326	745
Soap	1,467	1,498	1,375
Articles unenumerated, other than textiles or metal manufactures.	6,049	4,200	2,822

The figures given in the annual report of the Supervisor of Customs show a decrease in value of imports of £5,141, compared with the figures of 1904-5, the distribution being as follows:—

Value of Imports.

Decrease from United Kingdom ...	... £3,346
Decrease from foreign countries ...	... 2,924
	£6,270
Increase from British Colonies ...	... 1,129
Net decrease	... £5,141

The items in which there is a marked falling off are pork and lumber and unenumerated miscellaneous articles, but generally trade has been dull and money scarce throughout the year.

The decrease from the United Kingdom is distributed among a number of heads, the chief items being £1,483 under textiles and £1,571 under unenumerated manufactured articles other than textile and metal.

The figure of increase from British Colonies merely denotes the entry of provisions and goods from the United States, viâ Barbados, instead of direct, as explained in my last report.

The value of the principal exports is given in the annexed table:—

Exports.

Articles.	1903–4.	1904–5.	1905–6.
	£	£	£
Cassava starch	921	1,379	1,531
Whale oil	1,150	437	254
Turtle shell	472	341	551
Firewood	588	627	685
Cotton and cotton seed	900	4,857	8,280
Vegetables	1,329	2,340	3,545
Manure	137	97	57
Syrup	382	648	344
Sugar, muscovado	2,298	9,777	3,793
Pease	550	458	379
Molasses...	198	652	895
Rum	28	204	431
Ground-nuts	926	1,258	2,444
Live stock	2,682	3,993	5,076
Fresh fruit	52	227	75
Farine	80	343	378
Arrowroot	21,686	20,674	20,522
Cocoa	2,155	2,255	2,426

There is again a marked increase in cassava starch, fruit, vegetables, and ground-nuts, all products shipped mainly by the peasantry. The increase in live stock is also really due to the brisk trade in small stock, pigs, goats, &c., carried on with Trinidad by sailing vessels, and the figure is the more remarkable as in consequence of the anthrax trouble, shipment of cattle from St. Vincent has practically ceased for nearly a twelvemonth. Fortunately the Colony of Trinidad has not deemed it necessary to extend the prohibition to cover small stock.

The value of the cotton export has nearly doubled, and with the very satisfactory prices that have obtained (higher than for the product of any other island) further encouragement has been given to planters to extend their operations in connection with this industry, on which St. Vincent's hopes for the future are at present centred.

Sugar is again down, and little can be hoped for from this source under the existing conditions and prices.

The total imports and exports for the five years 1901 to 1905-6 are given below:—

Imports.

Classes.	1901.	1902.	1903-4.	1904-5.	1905-6.
	£	£	£	£	£
I. Live animals, food, drink, &c.	31,828	37,861	31,643	32,534	31,575
II. Raw materials... ...	7,980	11,292	10,076	8,628	6,566
III. Manufactured articles	35,111	29,970	36,134	33,076	30,956
Totals	74,919	79,123	77,853	74,238	69,097

Exports.

Classes.	1901.	1902.	1903-4.	1904-5.	1905-6.
	£	£	£	£	£
I. Live animals, food, drink, &c.	47,243	38,781	33,023	43,374	40,935
II. Raw materials... ...	2,651	3,201	3,572	6,648	10,289
III. Manufactured articles	2,093	2,112	1,579	1,880	1,854
Totals	51,987	44,094	38,174	51,902	53,078

The volume and direction of the Colony's trade in the five years 1901 to 1905-6 are shown in the following tables:—

Imports.

—	1901.	1902.	1903–4.	1904–5.	1905–6.
	£	£	£	£	£
United Kingdom	31,733	24,579	31,146	28,816	25,471
British Colonies	26,756	25,107	26,162	29,562	30,691
Foreign Countries	16,430	29,437	20,545	15,860	12,935
Totals	74,919	79,123	77,853	74,238	69,097

Exports.

—	1901.	1902.	1903–4.	1904–5.	1905–6.
	£	£	£	£	£
United Kingdom	28,306	22,333	19,204	22,192	24,405
British Colonies	12,983	15,146	16,470	26,881	27,920
Foreign Countries	10,698	6,615	2,499	2,829	753
Totals	51,987	44,094	38,173	51,902	53,078

(B.) Mines, Manufactures, and Fisheries.

The Grenadines Whale Fishery was, I regret, again somewhat of a failure, though there appeared to be more than the usual number of whales on the usual fishing ground during the season. It would seem that the islanders are either less active than formerly or that the younger generation are less expert than their forbears. Few whales were actually caught, and the export of whale oil was only 6,482 gallons, valued at £254, as against 10,326 gallons of the value of £437 in 1904-5 and an average of 33,046 gallons of the value of £1,163 for the three years previous.

The cotton ginnery erected in 1903-4 was again successfully worked by the officers of the Imperial Agricultural Department, and the high price obtained for the St. Vincent lint is testimony to the care and attention bestowed on the ginning and preparation for export.

The disintegrator for crushing cotton seed, referred to in my last report, was not much used. A certain amount of seed from St. Vincent is sent to Barbados and returned crushed by the factory there, which offers special facilities and turns out a finer meal, but the use of cotton-seed meal for feeding to the local stock has not as yet been adopted to any great extent, though strongly advocated by the Department.

(C.) Agricultural Industries and Agricultural Department.

The advance made under this head noted in last year's report has been continued.

The Agricultural Department distributed a large number of economic plants, chiefly cacao and nutmegs, but there was also a small demand for rubber plants (Castilloa) for planting through cacao cultivations, and a larger demand is anticipated during the coming season. Many parts of the island of St. Vincent are adapted to the cultivation of this rubber.

The export of cacao is slowly increasing. The number of bags shipped was 789, as against 742 in 1904-5, and 443 in 1900. There is also considerable local consumption of this product.

A distinct advance was made in the cultivation of Sea Island cotton. The total acreage planted was about 790 acres, which was actually less than in the previous year, but the land was more judiciously selected and the cultivation more cared for, with the result of a correspondingly better yield. Diseases did little damage.

The crop of Sea Island cotton amounted to 338 bales, of an estimated weight of 121,680 lbs., of which amount 121,174 lbs. were ginned at the Central Cotton Factory by the Agricultural Department.

The prices realised were very satisfactory, a large number of the bales being sold at the rate of 20*d.* per lb., the highest figure as yet realised by West Indian cotton. The value of cotton and cotton-seed exported amounted to £8,282, and it thus now takes the second place in importance among St. Vincent exports.

The encouragement afforded by this result has, I am glad to say, led to an appreciable further development of this valuable industry in the present year.

The sugar industry continues in an unsatisfactory condition, owing to the low price of muscovado sugar, such as is manufactured here, and a further decrease in the area planted may be looked for. In some cases cotton has been put in as a "catch-crop" on cane lands to assist in keeping down losses.

The export of sugar shows a further decline, only 786,293 lbs. of an estimated value of £3,794 being shipped, as against 6,411,564 lbs. valued at £25,592 in 1897, the year before the hurricane.

The large areas of cane land devastated by the eruptions of the Soufrière in 1902-3 are still uncultivated to any extent, a few small parcels of land only being taken up by the peasantry for ground-provision crops.

On two estates which were not completely devastated the cultivation of cotton has been tried, and good quality cotton has been produced, but the yield was not very high. The trial serves to show, however, that certain parts of the land will soon be capable of producing average crops, provided a system of deep cultivation and manuring is carried out.

The continuous occurrence of "sporadic" cases of anthrax, and the consequent prohibition of the importation of cattle from St. Vincent into neighbouring Colonies, caused some inconvenience and loss. Energetic measures were adopted by the Government to keep down the disease, and no outbreak in epidemic form made its appearance, although cases were diagnosed in all districts. Cattle were, however, accepted from the St. Vincent Grenadines by Barbados under certificate, and the Colony of Trinidad happily placed no prohibition on small stock (pigs, goats, &c.), in which a very brisk trade is now carried on by the peasantry, which is a great assistance to them in meeting rent and taxes.

The appointment of a veterinary surgeon to deal specially with the serious anthrax trouble has recently been approved.

On the land settlement estates progress continued to be made in the cultivation of the lands.

The Agricultural Department, by direction of the Government, insisted on the preparation of compost-heaps and manure, and a considerable amount of good work was done. To those allottees who carried out instructions satisfactorily, a small supply of artificial manures was given free and was applied to the different crops under the supervision of the Agricultural Instructor.

The number of economic plants—cacao, nutmegs, coffee, &c.—distributed free was 11,770, of which a proportion was raised in nurseries newly formed in the Linley and Cumberland valleys.

Prizes were offered for the best cultivated allotment during the year. By the encouragement of the competitive spirit among allottees it is hoped that further good will be done.

The further opening up and improvement of roads through the estates, coupled with a satisfactory system of up-keep of both old and new, has been a great help in the matter of access to allotments and the bringing out of produce.

The third annual Agricultural Show held under the auspices of the Imperial Department of Agriculture and the Agricultural and Commercial Society was successfully held on March 7th. The exhibits of produce were again better in every way than those shown in previous years, but the stock was disappointing. A large number of visitors of all classes were present.

An Agricultural and Commercial Society in connection with the Cotton Growers' Association was formed. All the chief planters and merchants are members. A body such as this has long been a desideratum, and should be capable of doing much good. The demand for the advice and assistance of the officers of the Agricultural Department in connection with various industries was frequent, and various visits were paid by them to estates.

(D.) Land Grants and General Value of Land.

The price of ordinary Crown land is £1 an acre, cash, and £2 if paid in instalments. A certain area is rented out in small lots at 6*s*. 3*d*. an acre.

The law governing the disposition and administration of these lands, which was in great need of revision, has now been consolidated and simplified.

The amount of Crown land proper granted during 1905-6 was 320 acres, the number of grants issued being 47, while of eruption lands (the latter being the estates acquired from the Eruption Fund in 1902 for location of refugees, on which, however, there were numerous tenants found, many of whom have since acquired their holdings) grants were issued to 289 persons, to the amount approximately of 411 acres and 165 house-spots.

The revenue from sales and rental of Crown lands, not including eruption estates, was £444.

(E.) Shipping.

A table of the entries and clearances of steamers and sailing vessels during the years 1904-5 and 1905-6 is annexed, as also a comparative statement of the total shipping for the last five years. These figures do not include ships-of-war, of which two British, one German, one United States, and a Venezuelan armed transport, visited the Colony during the year:—

Sailing Vessels.

III.—LEGISLATION.

Twelve Ordinances were passed during the year 1905, the only one of noticeable importance being No. 1 of 1905, "The Quarantine Ordinance, 1905," which provides for the adoption of the West Indian Intercolonial Sanitary Convention and the Regulations agreed upon by the representatives of the various Colonies at the Barbados Quarantine Conference.

IV.—EDUCATION.

The results of primary education in 1904-5 and 1905-6 compare as follows:—

—	1904-5.	1905-6.
Number of Schools	27	27
Number on Roll	5,244*	4,945*
Average Attendance ...	2,535*	2,488*
	£	£
Government Grant-in-aid ...	1,361	1,308

* During the March quarter of the year in each case.

An examination of the schools was held from May to July, by the Inspector of Schools, Grenada, on whom this duty now devolves annually.

The Inspector's report shows that the teachers have been doing fair work, but, as stated in previous reports, one cannot look for much actual progress without expenditure on a somewhat more generous scale than the present and without any educational officer resident in the Colony.

(B.) Secondary Education.

The grant in aid of this was withdrawn, owing to financial stress at the close of the previous financial year.

(C.) Industrial, Technical, and Agricultural Schools.

Twenty-one pupils were on the books of the Agricultural School on March 31st last, seven left during the year, and their places were filled with new boys.

Several boys found useful employment on estates in the Island and others in neighbouring Colonies.

The work of the school showed much progress during the year.

A stock farm for small stock is established at the school, and useful work has been done. New buildings were erected in the school grounds for the accommodation of a horse stallion, a donkey stallion, and one or more bulls, the cost being defrayed from the Eruption Fund, with the approval of the Secretary of State.

V.—GOVERNMENT INSTITUTIONS.

(A.) Hospitals.

During the year there were 741 admissions to the Colonial Hospital, making, with those remaining from the previous year, 794 cases treated. This is a slightly larger figure than that of the previous year.

The daily average was 55·8, as against 55 and 65 in the previous two years.

The death-rate was 6·2 of the total cases. Six deaths, however, took place within twenty-four hours of admission.

Operations totalled the large number of 294, which figure includes no minor matters, such as teeth extractions and the like, and the classification attached to the medical officer's report shows important work performed.

The expenditure of the institution continues to be carefully and economically supervised, there being again an appreciable saving on the figures of the estimate.

The Medical Officer-in-Charge is greatly facilitated in his work by the presence of an efficient European nurse-matron, selected by the Colonial Nursing Association, whose services are of the greatest value.

(B.) Asylums.

Lunatics.

A portion of the old military citadel at Fort Charlotte is available for detention of male lunatics who are violent or manifest destructive tendencies; other males, as to whom it is judged that they may be so treated with safety, are kept under supervision in the pauper asylum, and female lunatics are also detained there. A portion of the wards is partitioned off into cells to provide further and more suitable accommodation for these female cases, some of which are occasionally acute.

As soon as practicable any violent or difficult case is sent to the asylum at Grenada, but sometimes that institution has not got the requisite accommodation, and the transfer is delayed.

There were 21 cases under treatment during the year (11 being new admissions) of whom nine were discharged cured, one died, and five were transferred to the Grenada Asylum.

The total number of St. Vincent lunatics under care there was 35, at a cost to the Colony of £599 13*s.* 7*d.*

Lepers.

The number of inmates of the Leper Asylum on the 31st March, 1905, was nine; two cases were admitted and there was one death, leaving ten at the commencement of the new year.

There is no compulsory segregation.

(C.) Poor Houses.

The Colony's paupers are housed in the old military buildings at Fort Charlotte, on a considerable elevation, commanding the town of Kingstown.

There were 106 inmates on 31st March, 1905, and the admissions and discharges in 1905-6 were:—

—	Male.	Female.	Total.
Admissions ...	34	34	68
Discharged ...	14	11	25
Died	15	26	41
	29	37	66

leaving 108 on 31st March, 1906.

The total expenditure in 1905-6 was £1,090 on the institutions, including lepers, and lunatics kept locally, as against £1,033 in 1904-5.

Chronic tertiary syphilis accounts for the vast majority of cases to whom this institution offers asylum for the closing stage of their lives.

(D.) Reformatories.

Nil.

(E.) Savings Bank.

The following is a statement of the work of the bank for the last five years:—

Year.	Number of Depositors at 31st December.	Amount of Deposits.	Amount of Withdrawals.	Balance at credit of Depositors at 31st December.
		£	£	£
1901	907	6,108*†	6,015	10,687
1902	992	8,781	6,501	11,975
1903	987	6,587	6,171	12,653
1904	976	5,012	5,467	12,465
1905	933	4,883	5,276	12,232

* Includes £1,200 under Land Settlement Ordinance.
† Includes Interest.

Up to 1900 the bank was established at Kingstown only, but in that year branches were opened at the small towns of Chateaubelair and Georgetown.

The amount due to depositors was distributed thus:—

—	1904.	1905.
	£	£
Kingstown	11,323	11,258
Georgetown	545	488
Chateaubelair	597	486
Totals	12,465	12,232

The Government made a profit on the working of the bank of £118 18*s.* 2*d.*

There was invested of Savings Bank funds at 31st December, 1905, £11,499.

VI.—JUDICIAL STATISTICS.

(A.) Police.

The St. Vincent police force consists of a chief, a sergeant-major of European birth and late of the Royal Irish Constabulary, and 48 West Indian non-commissioned officers and privates. Owing to the necessity for retrenchment, the numbers were during the year under review reduced by five. In addition to their ordinary police work they are charged with many duties in connection with all the details of administration, such as excise supervision, district post office work, births and deaths registration, poor relief, and the management of district telephone exchanges.

They are also drilled and have some training in the use of arms, and are supplied with Martini-Enfield rifles. In Kingstown they form a fire brigade for the town, receiving supplementary pay for this service from the funds of the Town Board.

During the year an appreciable increase of work was thrown on the police in the carrying out of the regulations in respect to anthrax, which required blood-specimens to be taken from all stock reported dead throughout the island, necessitating a large amount of extra travelling.

(B.) Prisons.

277 persons were commited to prison in the year—142 men, 69 women, and 16 juveniles. The daily average was 17·7, against 16·6 in the previous year.

Prisoners with sentences of over two years were sent to serve their time in the Penitentiary at Grenada.

(C.) Criminal Statistics.

The total number of offences reported to the police or to the magistrates in 1905-6 was 893, against 909 in 1904.

Of the offences reported in 1905-6, 225 were for offences against the person, 74 were for praedial larceny, 122 were for offences against property other than praedial larceny, 472 were for other offences.

The total number of convictions in the Inferior Court in 1905-6 was 601, against 622 in 1904.

These convictions are classed as follows:—132 for offences against the person, four for malicious injuries to property, 55 for praedial larceny, 76 for offences against property other than praedial larceny, 109 for offences against Revenue Acts, &c., 225 for other offences.

The convictions in the Supreme Court were as follows:—Three for offences against the person, five for offences against property.

The acquittals were as follows:—In the Inferior Court, 107; in the Supreme Court, 2.

VII.—VITAL STATISTICS.

(A.) Population.

The population at the 1891 census was 41,054. No census was taken in 1901 on account of the expense involved, which the Colony was not in a position to afford. By the estimate of the Registrar-General, the population at 31st March, 1906, was 50,170. This figure, however, as explained in previous reports, is generally considered to be unreliable, as it takes no account of the flow of emigration. Probably about 44,000 is a more correct total.

The births registered in 1905-6 were 1,709, 860 male and 849 female—as against 1,788 in 1904-5. Of these, 935, or 54·71 per cent., were illegitimate.

Still-births were 103—31 legitimate and 72 illegitimate—the figures for the previous year having been 33 and 97 respectively.

Marriages were 196, a decrease of six on last year's figures. The figures are given in the following comparative table:—

Denomination.	1903–4.	1904–5.	1905–6.
Church of England ...	79	82	84
Roman Catholic... ...	26	24	10
Wesleyan...	125	83	96
Church of Scotland ...	11	13	6

The total registered deaths were 775, as against 876 in 1904-5, being 15·44 per 1,000 of the estimated population.

The infant mortality (infants under one year, exclusive of still-births) was 169, being 21·80 per cent. of the whole. The similar figures in 1904-5 were 191, 21·80.

(B.) Public Health.

The year 1905-6 was a very healthy one, the number of deaths registered being 775, as against 876 and 875 in the two previous ones.

A table of the causes of death, properly classified and stated, has been prepared under the supervision of the Medical Officer of Kingstown, Dr. C. W. Branch, and it may be interesting to quote in an abridged form the information it gives:—

Causes of Death.

General diseases (includes syphilis 119, tubercle 66, tetanus 37, malarial fevers 18)	294
Diseases of nervous system	32
„ „ circulatory system	32
„ „ respiratory system	38
„ „ digestive system	81
Parasites	30
Age	90
Still-born	103
Other diseases	75
	775

(C.) Sanitation.

There is nothing special under this head to which to call attention. In the villages of the peasantry, the ideas and methods in sanitary matters are elementary in the extreme. In the towns things are passable, but could be much improved if there were money to lay out. On the whole, however, there are no glaring evils.

(D.) Climate.

The rainfall for the year 1905-6 was 90·40 inches, as against 97·74 inches in 1904-5.

Rain fell on 280 days throughout the year.

The maximum fall in one day was 4·35 inches, on 15th November.

November was the wettest month, with 16·07 inches, and February the driest, with only 2·56 inches.

The mean monthly temperature was 78·4° F. Maximum for the year, 88·5° F., in October; minimum, 62° F., in January.

VIII.—POSTAL, TELEGRAPH, AND TELEPHONE SERVICES.

The contract of the Royal Mail Steam Packet Company with the Imperial Government expired at the end of June, 1905. Mails to and from the United Kingdom continued, however, to be conveyed by the inter-colonial and ocean steamers of this company as ship-letter mails, and a further service by the Direct Line steamers at Barbados, with an inter-colonial connection four times a month, was available for the greater part of the year.

Both these channels of connection with the ocean steamers at Barbados are, however, at the time of writing closed, and an irregular conveyance by small sailing craft has now to be relied on.

The saving, however, to the Colony by the cessation of its proportionate contribution to the cost of the contract was £246.

The Pickford and Black Line from Halifax, Nova Scotia, under contract with the Imperial and Canadian Governments, continued to run as usual, and occasional calls were made at the port of Kingstown by steamers of other lines.

There is an inland postal system by which the Windward District of the Colony is served three times a week, the Leeward District daily and the Grenadines weekly.

The postal order system introduced in the previous year gained in popularity, and there was a large increase in the numbers issued.

Generally, the volume of the post office business was normal.

The revenue of the telephone department was £415, including £175 transferred to that head on account of the Government installations. The expenditure was £333. The lines run from Kingstown to Chateaubelair on the Leeward side of the Island, and to Mesopotamia and Georgetown on the Windward side, about 24 miles either way, and the service is a most useful one.

IX.—MILITARY FORCES AND EXPENDITURE.

Circumstances conspired to check any practical advance in the movement referred to in my last report towards the establishment of a volunteer reserve force, and this matter was throughout the year in abeyance.

X.—GENERAL OBSERVATIONS.

Sir Robert Llewelyn, K.C.M.G., Governor of the Windward Islands, visited the Colony in May and November, 1905, for periods of ten and four days respectively.

In my last report, dated August, 1905, I wrote that there appeared to be some hope of the Colony ere long freeing itself from annual dependence on the Imperial Treasury. This hope

has, I am glad to say, been realised. The financial year under review closed leaving St. Vincent with a satisfactory little surplus, and in the estimates for the current year the expected revenue from local sources suffices to cover the probable sum to be expended.

One of the chief contributing factors to this result is the much increased revenue from Excise, owing to the suppression of illicit distillation referred to in last year's report, the collections of 1905-6 being more than double that of 1903-4, and in excess of any for the past 12 years.

The year 1905-6 was also the first of the working of the new Land and House Tax Ordinance passed in December, 1904, which entailed a very considerable increase of work on the small official staff. The actual net increase of revenue is about £800, but this is practically absorbed by the additional road expenditure which the Government assumed responsibility for when passing the measure.

The cotton industry has now taken firm hold in the island. The results of last year's crop were very encouraging, and a considerably larger area of land has this year been placed under cultivation. The labour question would appear to be the main difficulty to be surmounted in this connection.

Conditions on the Carib Country Estates are, unfortunately, unchanged, and no attempt to restore cultivation has been made by the owner of these properties, which are still lying deserted.

The road from Overland to Fancy, which was destroyed by the eruption of the Soufrière, has now been re-made, and a good many of the former occupants of land at Sandy Bay and Owia have resumed residence there.

A proposal by His Majesty's Government to unite the two Colonies of Grenada and St. Vincent into a single Colony with a common Executive and Legislature and a common purse was announced by Order in the local Gazette in September, and caused considerable feeling and excitement, which lasted for some months.

In view, however, of the pronounced disfavour with which the proposed scheme was received it was ultimately decided to take no further action in the matter at the present time.

In concluding this—my sixth—annual report from St. Vincent, I am glad to note that the prospects of the Colony are certainly appreciably brighter than they have been for many years past. Administration here is, however, bound to be a very uphill task for a considerable time to come, calling for the exercise of much painstaking care and patience, but the tide of adversity has, I hope, at last turned.

EDWARD J. CAMERON,
Administrator.

24th July, 1906.

COLONIAL REPORTS.

The following recent reports relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page :—

No. 546.

GRENADA.

(For Report for 1905–6, *see* No. 501.)

THE GOVERNOR to THE SECRETARY OF STATE.

St. Vincent,
18th September, 1907.

MY LORD,

I HAVE the honour to forward the Blue Book of the Colony of Grenada for the year 1906-7, together with a report thereon by Mr. Drayton, the Colonial Secretary of Grenada.

I have, &c.,

RALPH WILLIAMS,
Governor.

The Right Honourable
The Earl of Elgin, K.G.,
&c., &c., &c.

1125 Wt 24282 10/07 D & S 5 30100

BLUE BOOK REPORT FOR THE YEAR 1906.

FINANCIAL.

Financial Position of the Colony.

The pecuniary assets of the Colony at 31st March, 1907 (*see* Table A in Appendix), amounted to £40,880, and the liabilities to £18,558, showing a surplus of assets of £22,328, as compared with £20,968 at 31st March, 1906. The loss which had occurred on the transactions of the financial year 1905–6 was thus made good during 1906–7, a result obtained by close control of expenditure combined with a slight improvement in revenue returns.

2. The revenue, expenditure, and surplus assets in the last five financial years were as follows :—

Year.	Revenue.	Expenditure.	Surplus.
	£	£	£
1902–3	72,802	68,669	22,199
1903–4	70,260	70,101	22,649
1904–5	68,993	69,510	22,408
1905–6	69,954	71,968	20,968
1906–7	71,786	70,379	22,322

Revenue.

3. The revenue of 1906–7 was £71,786, or £1,832 in excess of the previous year (*see* Table B). A tendency to increase is shown under several heads, Customs receipts being £463 in excess of 1905–6, fees of office, &c. £591, and land sales £531 ; this last was due to the sale of valuable escheated property.

Expenditure.

4. The expenditure (*see* Table C) was £70,379, or £1,589 less than in 1905–6, the gross decrease being £4,391, and the gross increase £2,802, under the several heads. The increase under the head "Governor" is due to the emoluments of the new staff officer for the Windward Islands being brought on charge for the first time. Those under "Excise" and "Port and Marine" are partly accounted for by savings under "Treasury" and "Police." "Education" shows a large decrease upon the high figures of the preceding year, in consequence of the unsettled state of matters educational during the year, to which reference will be made in its proper place. The increase of special expenditure of the Telephone Department was caused by the purchase of the premises

in St. George's used as the Central Exchange, for which rent had previously been paid. A decrease of £1,423 altogether is shown under Public Works, outlay in this direction being necessarily restricted during the year. The Imperial Grant to the Agricultural Department exhibits an increase of £175, consequent upon the new arrangement adopted during 1906 being in force during the whole financial year, and also because of the Windward Islands' Agricultural Scholarships being now held by a Grenadian.

Changes in Taxation.

5. There was a slight alteration in the land tax during the year, land in the small islets surrounding the island being taxed at the lower rate of three pence an acre, instead of one shilling as heretofore, and the exemption of holdings used solely for pasturing of stock being abolished. The effect either way on the revenue of the Colony is unimportant.

Public Debt.

6. The Public Debt stands at £123,670 in four per cent. inscribed stock, redeemable between 1917 and 1942 from a sinking fund in the hands of the Crown Agents for the Colonies, as Trustees, to which annual contributions of one per cent. on the nominal value of the stock are made, and which amounted at 31st March, 1907, to £19,807.

District Boards' Finances.

7. A statement of the revenue and expenditure of the local authorities, either as town, or, as at present, district boards, is included in the Appendix (Table D) for the five financial years ended 31st March, 1907. The increases shown in the last two years are due to the fact that the town authorities were absorbed in the district boards on the 1st October, 1905, and that these latter bodies received grants from Colonial revenue for upkeep of public by-ways. In St. David's District there is no town, and Hillsborough, Carriacou, remains in charge of a town authority only.

8. The loan debt of the district boards at 31st March, 1907, amounted to £17,024, the details being as follows :—

Board.	Amount.
	£
St. George's	9,981
St. John's	3,274
St. Mark's	1,469
St. Patrick's	1,250
St. Andrew's	1,050
Total...	17,024

9. The debt of the St. George's Board was increased by £4,000 during the year by a loan from surplus assets of the Colony for the extension and improvement of the water supply of the town; it bears interest at the rate of 3½ per cent. per annum, and is repayable by a sinking fund to which annual contributions of 1½ per cent. on the amount of the loan are to be made. A great improvement of the water supply has been effected by this expenditure, but a further loan of £1,000 has been found necessary to satisfactorily complete the whole scheme, and is being advanced by Government this year.

TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and Exports.

10. As will be seen from the following figures, the trade of the Colony continued on the down grade during the year 1906 :—

Year.	Imports.	Exports.	Total volume.
	£	£	£
1902	239,108	310,602	549,710
1903	235,440	283,565	519,005
1904	256,269	321,766	578,035
1905	237,256	283,955	521,211
1906	223,448	210,149	433,597

11. Two short cocoa crops following each other, the last being nearly 10,000 bags less than its already diminished predecessor, could not fail to produce this effect, and had it not been for the rise in prices of the staple product during the year, to which reference will be made later on, a more serious result would have ensued.

12. Table E, appended, classifies the trade of the last five years under the usual four statistical heads, and in Table F details of the principal items imported in the last two years are given. From this latter table it will be observed that the reduced purchasing power of the lower classes caused a diminution last year of imported food stuffs other than fresh vegetables, the urgent necessity for importing which still continues. The value of the imports of these has risen from £309 in 1903 to £2,538 in 1906.

13. Table G gives striking evidence of the shrinkage of exports of Colonial produce, cocoa appearing therein in 1906 as valued at only £166,538, compared with £272,226 in 1904, and spices as £24,941, against £33,767 in 1904. Fortunately cotton regained its former good position, and shows a value of £8,003.

14. The direction of the Colony's trade in the period 1902-6 is shown by Table H. This, as regards imports, can best be summarised here by tabulating the percentages of the totals as follows :—

—	1902.	1903.	1904.	1905.	1906.
	Per cent.	Per cent	Per cent.	Per cent.	Per cent.
United Kingdom ...	44	48	46	42	39
British Colonies ...	21	18	22	27	30
Foreign Countries ...	35	34	32	31	31

The tendency, therefore, to diminution of the import trade with the United Kingdom, which was commented upon in last year's report, continues, but the displacement appears to be in favour of British Colonies and not of foreign countries. Of the exports in 1906, 57 per cent. went to the United Kingdom, 39 per cent. to foreign countries, and 4 per cent. to British Colonies.

15. The trade with Canada in 1906 showed a reduction, consequent upon the subsidised steamship line ceasing to call at Grenada. Following are the figures of the trade in the last five years :—

Year.	Imports.	Exports.
	£	£
1902	9,140	91
1903	15,686	—
1904	11,811	52
1905	21,353	805
1906	15,257	469

16. Of the trade with foreign countries the United States of America, as usual, absorbed (*see* Table I.) the greater part, but neither in exports nor imports did it amount to as much as in any of the three preceding years. Compared with 1905 the imports thence were valued last year at £66,897 (90 per cent. of total) against £69,526 (96 per cent. of total), and the exports at £44,680 (54 per cent. of total) against £58,995 (62 per cent. of total).

Agricultural Industries.

17. The staple product of the Colony is cocoa, spices (chiefly nutmegs) coming next in importance, and cotton third.

Cocoa.

18. Throughout the British West Indies (except perhaps Jamaica) the year under review seems to have been a bad one

for cocoa, and a decreased importation therefrom into London alone of 2½ million pounds was recorded. Grenada shared in this bad season, her crop for the year ended 30th September, 1906, only amounting to 54,381 bags, against 64,319 in 1905 and 67,225 in 1904. Fortunately there was a remarkable rise in prices during the year, commencing about August, so that whereas the year opened with prices at 46*s.* to 52*s.* per cwt., it closed at 75*s.* to 82*s.* Another promising feature of the statistics of the year 1906 for a cocoa-producing colony is the steady increase shown in the world's consumption of the article. Reliable estimates show that since 1902 the quantity consumed has increased by about 40 per cent., and that in that period the United States of America and Germany have each nearly doubled the amount they consume. It may here be noted that the phenomenal rise in prices has continued up to the date of this report, when cocoa stands at 108*s.* per cwt. in the London market, the highest figure it has ever reached.

Spices.

19. The exports of spices in the last three years were as follows:—

Year.	Cwt.	£
1904 ...	6,915 (5,908 nutmegs) ...	33,767
1905 ...	8,862 (7,947 „) ...	27,992
1906 ...	8,166 (7,263 „) ...	24,941

Neither in quantities nor values was the year, therefore, a satisfactory one. 1,781 cwt. of the exports of the year went to the United States of America, with which country the trade in this product unfortunately shows no tendency at present to increase.

Cotton.

20. The cotton and cotton seed exported are the product of the Colony's principal dependency, Carriacou,* where it has never ceased to be cultivated. The crop for 1906 was satisfactory as compared with the average, and 2,779 cwt. of cotton and 7,526 cwt. of seed were exported, worth £8,003, as compared with 1,899 cwt. of cotton and 4,849 cwt. of seed, worth £3,365 in 1905, when the crop failed in consequence of abnormally showery weather prevailing when the trees were setting the bolls. Another satisfactory feature of the output of 1906 was that a marked proportion of it consisted for the first time of Sea Island cotton, the acreage of which under cultivation in the dependency is steadily increasing year by year as the peasants come to realise

* Population, 1906, 7,430.

its value. At the Government Cotton Ginnery in Hillsborough, which is run so as to gin the peasant settlers' cotton at cost price, 33 bales of Sea Island and 136 bales of Marie Galante cotton were ginned during the year.

Carriacou Land Settlement Scheme.

21. Continued successful progress may again this year be recorded of this scheme. A fourth estate, Bellevue North, was acquired during 1906, but not so much for allotment (as very few holdings can be sold from it) as for conservation of the forest on the highest elevation in the island (980 feet), the crest of which it covers to the extent of 115 acres.

22. The following brief statement will show the pecuniary working of the scheme :—

		£
Total expenditure for purchase of estates, surveys, legal expenses, &c., up to 31st December, 1906		8,405
Cash returns up to 31st December, 1906 ...		3,295
Net disbursement		£5,110
Lots surveyed for sale on the first three estates	368 lots, value	7,466
Lots sold...	346 „ „	6,977
Lots not yet sold	22 „ „	£489
Approximate (nominal) value of reserves and other property resulting from the acquisition of the estates, as improved in some cases by expenditure		£3,642

23. The Commissioner of the district remarks as follows in his report for the year 1906 :—

"It is again my pleasing duty to record the marked improvement displayed by many of the allottees in the care and cultivation of their holdings. At no period was this more observable than during the terrible drought which prevailed at Carriacou from December, 1905, to June, 1906. Throughout this trying time one could not help noticing the marked contrast between the condition of the lands in the hands of industrious allottees and those gardens held under the metayer or share system. On the one hand there was always a show of something green, on the other the greatest picture of vegetative desolation imaginable. It is also gratifying to mention that the cultivation of Sea Island cotton may now be regarded as assured among peasant cultivators. Hitherto, although desirous of embarking on an industry

which, from the satisfactory results obtained by the few pioneers of 1905, and for pecuniary reasons, seemed specially attractive, the Carriacou peasant clung hard (and with good reason) to his catch crops of peas and corn, and was somewhat sceptical as to whether the cultivation of Sea Island cotton might not interfere with these, or entail a greater expenditure of care and labour than he was prepared to outlay. The experience of 1906 has, however, convinced the doubting ones that good results are obtained with Sea Island even under local conditions of culture, and further, that in the peculiarly adapted soil of Carriacou, Sea Island cotton is quite as hardy as its Marie Galante *confrere*."

24. Mention should also be made of a highly successful Cottagers' Show, the first ever attempted in the little island, which was held on 26th January. The Governor, accompanied by a large and representative party from Grenada, attended, opened the show, and distributed the prizes at its close. The Commissioner and his assistants and the peasant exhibitors all deserve credit for the encouraging results which attended this effort, which was praiseworthy from every point of view.

Mines, Manufactures, and Fisheries.

25. Cane sugar of a low grade, rum, and ice are manufactured for local consumption. No returns of the quantity of sugar and ice made are available, but the sugar is quite insufficient for the wants of the labouring population, and large quantities have to be imported. As an excise duty is levied on rum made, the subjoined results in the last five years can be given :—

Year.	Quantity made.	Excise Duty paid.
	Gallons.	£
1902	45,054	11,853
1903	43,314	12,723
1904	46,911	11,812
1905	42,943	11,359
1906	35,978	10,555

26. It will be seen that both the quantity made and the amount of duty paid are diminishing. In the year under review two factors contributed to this result, viz., the reduced purchasing power of the lower classes consequent upon failure of the staple crop, and the large exodus of male labourers to the Canal Zone of the Panama Isthmus, but it is well known that, notwithstanding all efforts to combat it, smuggling of spirits is taking place, and this is proved by occasional important seizures made by the officers.

27. Fourteen distilleries of rum were at work in 1906, and there were altogether 160 premises licensed for the sale of spirits, which may be classified as follows :—

Wholesale licences	17
Retail licences	143
Revenue therefrom	£3,455

28. On the 1st of January, 1906, an Inland Revenue Department was established, with Mr. John M. Adams, of the Inland Revenue Department of the United Kingdom, at its head, and a steady improvement in methods of control and management was effected during the year.

SHIPPING.

29. As was to be expected from the general shrinkage of trade during the year, the shipping tonnage entering and clearing in 1906 fell below the results of the immediately preceding years, and below the average of the five years 1902–6, as will be seen from the following figures :—

Year.	Tonnage.	
	Entered.	Cleared.
1902	287,000	290,035
1903	280,862	288,328
1904	316,223	316,068
1905	319,499	319,799
1906	297,725	297,809
Average	300,262	302,408

30. In Table J in the Appendix shipping details for the last two years are given and compared, but there is nothing therein of more than passing interest.

LEGISLATION.

31. Fifteen ordinances were passed by the Legislature in 1906, but three of them have not yet been brought into operation, viz.:—

The Primary Education Ordinance,
The Secondary Education Ordinance,
The Forestry Ordinance.

To the first two reference will be made under the proper head, the third has for its object the protection and conservation of the forests and water sources of the colony other than those on

the block of Crown lands in the centre of the island, for the conservation of which effectual provision was made by another ordinance of the year. This Forestry Ordinance has not yet commenced to operate because it was passed before arrangements for the executive officers thereunder were complete.

32. Of the ordinances of the year which were brought into operation the most important were :—

The Grand Etang Forest Reserve (alluded to in the preceding paragraph),
The Plant Protection Ordinance,
The Licences Ordinance.

The Plant Protection Ordinance aims at preventing the introduction into this colony of diseases of plants, and was passed upon the recommendation of, and in consultation with, the Imperial Commissioner of Agriculture for the West Indies. The Licences Ordinance effected a much needed amendment of the law relating to licences, other than liquor or distillation licences or those for purchase of cocoa and nutmegs, the last law on the subject, passed in 1884, being both defective and out of date.

EDUCATION.

Primary.

33. A definite attempt was made during 1906 to amend the system of primary education, which was last revised in 1895, and which is admittedly unsuited to the real wants of the colony. During 1904–5 a committee of the Board of Education sat to consider a change of system, but its report was not actually taken into consideration for action, because the Governor on the 6th of June, 1905, laid a memorandum before the Board in which he made certain proposals for a more complete change than was contemplated by the Committee's report. These proposals found favour locally, and early in 1906 the Governor introduced into the Board a Bill to carry out his proposals. This Bill, after much discussion and extensive alteration, was then presented to the Legislative Council, and finally passed that body in June, the date of its commencement to operate being, however, postponed to the 1st of April, 1907. Its subsequent history is not, therefore, matter for review in connection with the year 1906, but it may be remarked that it has been found necessary in the current year to suspend its operation, and that, at the date of this report, another Bill is before the Legislative Council for consideration.

34. In Table K appended, the usual statistical details for 1906 are given and compared with those of the preceding year.

As will be seen from the decrease under every head, the transition state of affairs which obtained during 1906 had an undoubted effect upon the educational results of the year.

SECONDARY.

35. The system of secondary education may also be described as having been in the transitional stage during 1906. A Select Committee of the Legislative Council, which had been appointed in 1905, to consider the question, reported in December of that year that the existing governing bodies of the boys' and girls' schools in St. George's should be dissolved, and the management of secondary education in future controlled by Government, and conducted, in detail, by a board to be called the "Board of Directors of Secondary Education," to consist of 12 members. To give effect to their recommendations the Committee prepared and presented a Bill, which was passed by the Council on February 12th, 1906, but was not brought into operation, and is not yet in force, largely on account of difficulties connected with the provision of proper premises for the boys' school. In these circumstances no useful comment can be made on the usual statistics contained in Table L, except it be that the St. Joseph's Convent School, which is not affected by the new law or its suspension, continues to prosper.

GOVERNMENT INSTITUTIONS.

36. Some of the more important figures relating to the public charitable institutions in the year 1906 are tabulated hereunder :—

Institution.	Number at 1st January.	Admitted during the year.	Daily Average.	Cured.	Relieved or not improved.	Died.	Remaining at 31st December.	Cost of Institution.
								£
Colony Hospital	84	874	94·09	655	153	64	86	2,309
Yaws "	50	199	58·4	165	—	2	82	687
St. Andrew's "	11	133	10·3	115	5	5	9	545
Carriacou "	16	152	13	128	25	3	12	542
Lunatic Asylum	129	53	135	24	8	22	128	1,973
Poor "	41	44	47·63	7	—	21	57	498

37. At the Colony Hospital 874 patients were admitted as compared with 708 in 1905, the cause being the abnormal prevalence of malarial fever in August—November. Two

hundred and sixty cases of it were admitted to the hospital, and treated by Dr. Leonard, the House Surgeon, by hypodermic injection of quinine with great success, only 9 deaths occurring out of 252 cases of the malignant sub-tertian variety of the disease, and in each case of death the patient was admitted practically moribund and only survived admission for a few hours.

38. The out-patients' department of the hospital work has increased enormously since its inception a few years ago, and in 1906 there were no less than 2,182 attendances recorded. The house surgeon attends to this department between the hours of 8 and 10 a.m. on week-days. Fifty-six paying patients were admitted to hospital during the year, and paid £107 altogether for their treatmeut. The cost of a patient at this institution per diem in 1906 was about 1*s.* 3*d.* The Colony Drug Store, opened on 1st April, 1905, for the supply of drugs at cost price to Government institutions, worked most successfully, and enabled considerable savings to be effected under this item of expenditure.

39. The Yaws Hospital, which is practically a detached ward of the Colony Hospital, also showed good results for the year, and the buildings were thoroughly repaired and improvements effected both in them and in the grounds. A patient costs about 8*d.* a day.

40. There were 133 admissions to the St. Andrew's Hospital as compared with 108 in 1905, and the daily cost of a patient was 2*s.* 2½*d.*, which is much higher than in any other institution of the Colony. 8,438 prescriptions were compounded at the dispensary, of which 2,768 were for "labourers," and paid for at the shilling rate. Structural alterations in the dispensary, effecting much needed improvement, were carried out.

41. At the Carriacou Hospital 152 cases were admitted, and the daily cost of a patient was 1*s.* 8½*d.* 3,575 prescriptions were compounded at the dispensary, of which 938 were paid for. Work on the new Bellevue Hospital proceeded, and the new buildings, which are perhaps the best ever provided for a district hospital in the West Indies, will be occupied in the current year.

42. There were 53 admissions to the lunatic asylum in 1906, of whom 10 were from St. Lucia and three from St. Vincent, and the daily average was 135, which is in excess of the accommodation, but during the year space for 10 beds was added by converting two small store-rooms into a ward. Of the 128 patients remaining on at the end of the year 76 were from Grenada, 27 from St. Lucia, and 25 from St. Vincent.

43. Continued improvement was effected at the Poor Asylum (or Home for Incurables), and, owing to the continuous greater demand for accommodation for males, eight extra beds for them were provided, the capacity of the building being now

for 38 males and 20 females, and it is always full. There were 44 admissions in the year, and the cost per head per diem was about 7*d*.

Savings Bank.

44. Financial conditions in the Colony in 1906 are clearly illustrated by the savings bank operations during the year, as shown in the subjoined tabular statement for the last five years. As will be seen, the number of depositors and the balance to their credit at the close of the year remained practically stationary, deposits and withdrawals, both of diminished amount, balancing each other, and merely representing a temporary movement of the money in the bank.

Year.	Number of Depositors at 31st December.	Amount of Deposits (including interest capitalised).	Amount of Withdrawals.	Balance to Credit of Depositors at 31st December.
		£	£	£
1902	1,847	9,184	9,378	11,417
1903	1,544	7,480	7,674	11,658
1904	1,465	9,279	8,416	12,790
1905	1,470	8,105	8,773	12,394
1906	1,475	7,875	7,889	12,379

JUDICIAL STATISTICS.

Police.

45. The police force consists of two officers (a chief and a sub-inspector), six sergeants, five corporals, and 58 privates. It receives a semi-military training, and is armed with the Martini-Enfield rifle. In 1906 musketry training, which had been suspended, was resumed at a new and fairly satisfactory range on the Queen's Park, near the principal town, which had just been completed, and good results were obtained. The force at headquarters was inspected on 25th April by Brigadier-General Caulfeild, commanding the troops in Jamaica.

Prisons.

46. The committals in 1906 were 209 in number, or only one more than in 1905, and of these 199 were from Grenada courts, seven from St. Lucia, and three from St. Vincent. The daily average was 61 (56 males, 4·3 females, and ·7 juveniles), of which 34·3 were Grenada convicts, 19·8 St. Lucia, and 6·9

St. Vincent. The reduction of prisoners from Grenada, which has been commented upon in previous reports, therefore, continues, as the following daily averages in past years will show :—

1894 (the record year)...	84
19 4 (ten years later)	50
1905	41
1906	34

47. The Richmond Hill Prison is a most satisfactory institution, and credit is due to the Superintendent, Mr. Heels, for his untiring efforts to keep it in that condition. Its gross cost in 1906 was £1,342, against which should be set the payments from St. Lucia and St. Vincent for maintenance of their convicts at the rate of £1 per month per head, amounting altogether to £308. The official estimate of the nominal value of the work done by the prisoners during the year is £1,328, and the average cost of a prisoner for the last ten years is £22 15*s.* per annum, of which food contributes £5 2*s.* 6*d.* per annum.

Criminal Statistics.

48. The Attorney-General reports of the statistics relating to crime in 1906 that they were "exceptionally satisfactory, for on the one hand they prove that a larger mass than usual of petty charges and minor offences was subjected to magisterial enquiry and correction, whilst on the other hand they clearly show that crime in general had diminished very considerably." The usual comparative statement is inserted in the Appendix, Table M.

VITAL STATISTICS.

Population.

49. For the first time since an official record of vital statistics has been kept in the colony, it becomes necessary in respect of the year 1906 to take notice of emigration. Of permanent emigrants from Grenada there have hitherto been so few that it was not worth while to keep a record of them, but the commencement of activity on the Panama Canal under the United States Government has proved a strong attraction to the labourers of the Colony, who are beginning to feel the increased stringency of local conditions under the pressure of population and the now restricted area of cultivable lands.

50. During 1905 a few individuals left for the Canal Zone, but it was not until the 4th of January, 1906, that the first body of labourers departed, and steps were at once taken by the Government to establish a record of those going and returning. Up to 31st December, 1,534 had left and 813 returned, making a net deduction of 721 from the population. Many of those who have not returned have died or may die, but it may be expected that only a few of those who survive will eventually remain away

from the Colony altogether, the ruling idea of those who leave being to acquire as much money as possible on the Isthmus,* and return with it to Grenada. The effect on the Colony's population will not, therefore, be a very large permanent reduction.

51. Allowing for this unwonted emigration, the estimated population of the Colony at 31st December, 1906, was 69,784, being an increase of 6,346 since the Census of 1901. The death rate per thousand was 24·53, which, as in last year, was above the average of the preceding ten years (21·33), a result largely attributable to improved registration of deaths since January, 1905; and the birth-rate was only 38·54, the preceding ten years' average being 41·52. This is perhaps due to the large exodus of male labourers to Panama.

Public Health.

52. The year was remarkable for the abnormal prevalence of malarial fever, and it must be recorded with regret that some of the returning emigrants from Panama brought back with them a far more severe type of malarial fever than has hitherto prevailed in this Colony, and this naturally spread in those low-lying districts on the sea-board where the *anopheles* mosquito is found. Diarrhœa, dysentery, and enteritis were also very troublesome, as the subjoined statement of the principal causes of death in 1906 compared with the preceding six years' average, shows :—

Disease.	Average for 6 years 1900–1905.	1906.
Diarrhœa	135	204
Dysentery	126	135
Fevers	98	175
Enteritis	102	190
Phthisis	66	73
Bronchitis	32	44
Pneumonia	26	36
Influenza	14	12
Whooping cough ...	16	—
Cardiac disease	104	90

53. There was an outbreak in the St. John's district of the usual type of mild small-pox, which first appeared in the Colony in 1903, and it became necessary to open an Isolation Station there in June, which was closed in October. Fifty cases of the disease altogether occurred in this district, and there were also two cases in St. Andrew's, which did not spread. There were, of course, no deaths from this cause, as the disease is quite innocuous.

* Between 27th July, 1906, when a money order system with the Canal Zone commenced to operate, and 31st December, the sum of £2,228 was remitted to the Colony by emigrants in post office orders alone; large sums also came in greenbacks and bank orders, but of these there is no record.

Climate.

54. The principal meteorological statistics of the year are as follows :—

Rainfall :	
North of Island	116·92
Centre of Island	169·45
South of Island	83·27
Carriacou	68·40
Relative Humidity* (mean)	76·2
Mean Temperature* (maximum)	91·5
" " (minimum)	69·0
Mean Pressure*	29·979
Days of Rain*	234

55. The average rainfall in the south of the Island for the preceding 15 years was 78·34, so that 1906 yielded about 5 inches above average. In the north 27 inches more than in 1905 were recorded, and in the centre, 18 inches more, while at Carriacou the abnormal quantity of 28½ inches in excess of 1905 was recorded. This heavy rainfall succeeded an exceptional drought which commenced in November, 1905, and lasted until May, 1906, a fact which of itself accounts for much of the high death record of the year.

Sanitation.

56. Work on the drainage of the Tanteen Swamp, to the east of the principal town, begun in 1905, was proceeded with, and the main drain was completed, but much yet remains to be done before completion of this desirable improvement.

POSTAL AND TELEPHONE SERVICES.

Post Office.

57. The business of the Post Office shows an apparent falling off in 1906 according to the figures below, but the Postmaster attributes this to the fact that in July, the month for taking the statistics, the mails were abnormally small, owing to the cessation in June of the call of the Canadian steamers as well as of the Royal Mail Steam Packet Company's contract for the inter-colonial service. As will be seen, those items of the statistics below which are taken from actual and not estimated figures show an increase.

—	1905.	1906.
Letters and post cards...	509,990	446,927
Newspapers, books, &c.	166,751	142,710
Parcels	8,140	6,950
Registered Articles	8,379	11,020
	£	£
Money orders issued and paid ...	19,652	20,287
British Postal Orders issued and paid	1,250	2,442

* These are for the south of the island.

As the rapidly increasing amount used gives evidence, the British Postal Order system is much appreciated, and in July a further reduction of the local poundage paid for them was effected.

TELEPHONES.

58. On the 1st January the Telephone Department became a sub-department of the Public Works Department, and the service was satisfactorily maintained during the year under review. An improvement, affecting other details of administration than the telephone service, was made by affixing metal numbers to the poles on the main roads, so that any spot thereon can now be indicated with facility by reference to the number of the nearest pole.

MILITARY FORCES AND EXPENDITURE.

59. There is no military force in the Colony, Legislative provision exists for the establishment of a volunteer force and of volunteer reserve corps, and the Imperial Government has considerately provided the rifles for such forces, but none has yet been started. The Police Force is maintained on a semi-military footing, and a good rifle range was provided in 1906 close to the principal town.

GENERAL REMARKS.

60. Two old and respected public servants, who had recently retired on pension, died during the year—Dr. P. F. Macleod, I.S.O., late Medical Superintendent of the Asylums, and Dr. Paulin Orgias, late Colonial Surgeon.

61. On the 4th of August the appointment of Mr. Ralph C. Williams, C.M.G., Resident Commissioner of the Bechuanaland Protectorate, to be Governor of the Windward Islands was announced, but His Excellency did not assume the office until January, 1907. On the 15th of October Sir Robert Llewelyn left the Colony on leave of absence, and retired on pension in December. The Windward Islands Government was administered *ad interim* from St. Lucia by Mr. P. C. Cork, C.M.G., the Administrator of that Colony.

EDWARD DRAYTON,
Administrator.

Grenada,
31st August, 1907.

D. of D.

No. 553.

ST. LUCIA.

(For Report for 1905, *see* No. 505.)

THE GOVERNOR TO THE SECRETARY OF STATE.

Grenada,
16th November, 1907.

MY LORD,

I HAVE the honour to forward the Blue Book of the Colony of St. Lucia for the year 1906-7, together with a report thereon by Mr. E. D. Laborde, who has been acting as Administrator.

I have, &c.,

RALPH WILLIAMS,
Governor.

The Right Honourable
The Earl of Elgin, K.G.,
&c., &c., &c.

1125 Wt 24282 1/08 D & S 5 30730 A 2

REPORT ON THE BLUE BOOK FOR 1906-7.

I.—FINANCIAL.

(A.) Revenue.

The general revenue for the year 1906-7 was as follows:—

	£	s.	d.
Ordinary Revenue	57,940	1	4
Part Proceeds of Sale of reclaimed Lands	388	19	0
Balance of Immigration Fund transferred to General Revenue	840	1	3
Total Local Revenue ...	59,169	1	7
Amount granted to the Colony from Imperial Funds in aid of Agriculture	843	0	0
Total Revenue ...	£60,012	1	7

The revenue was £1,865 less than the revenue for the previous year and was the lowest collected during the past ten years. The ordinary revenue was £441 below the estimate.

The following is a comparative statement of the revenue:—

Comparative Statement of the Revenue of the Colony for the Year ended 31st March, 1907.

	£	s.	d.
The estimated expenditure was ...	60,946	1	2
and the estimated revenue	59,672	1	2
showing an estimated deficit of ...	£1,274	0	0

By careful economy small savings were effected in several directions amounting to £2,326, but this was counterbalanced to the extent of £1,674 of unforeseen expenditure that had to be incurred.

The actual expenditure was therefore £60,294, or £652 less than the estimate, against an actual revenue of £60,012, showing a deficit on the year's transactions of £282.

(C.) Assets and Liabilities.

The following is a statement of the assets and liabilities of the Colony at 31st March, 1907:—

Statement of Assets and Liabilities of the Colony at 31st March, 1907.

Liabilities.		£ s. d.	£ s. d.	Assets.		£ s. d.	£ s. d.

			£49,397 14 6				£49,397 14 6

1907. March 31. Excess of Assets over Liabilities of the Colony of St. Lucia, exclusive of sums due to Debenture and Stock Holders on 31st March, 1907, £25,199 10*s.* 8*d*

(D.) Surplus Funds.

The surplus funds of the Colony on 31st March, 1907, amounted to £25,199 10*s.* 8*d.*, which included the sum of £2,283 14*s.* 2*d.*, being the amount of contributions at the rate of £300 a year set aside from general revenue as an insurance fund on public buildings. The investments on this account including the insurance fund amounted at the close of the year to £20,790 10*s.* 8*d.* as shown below:—

	£	s.	d.
Government of Zanzibar 3% debentures	3,000	0	0
Transvaal Government Stock 3% ...	9,970	13	3
Gold Coast Government Stock 3% ...	4,477	7	11
Sheffield Corporation Stock 3% ...	3,342	9	6
	£20,790	10	8

(E.) Public Debt.

The public debt at the 31st March, 1907, amounted to £157,779 11*s.*, apportioned as follows:—

Colony's Share.

	£	s.	d.
Castries Harbour Loan ...	56,600	0	0
Central Factory	11,500	0	0
Public Works Loan ...	50,579	11	0
Water Works	12,000	0	0
Immigration	10,100	0	0
	140,779	11	0
Castries Town Board share...	17,000	0	0
	£157,779	11	0

The sinking fund amounted to £13,529 19*s.* 3*d.*

(F.) Towns and Villages.

Besides Castries, the chief town, there are nine towns and villages in the Island. The following table shows their order of importance as regards population according to the Census of 1901, and the revenue and expenditure in 1906 and the balance to the credit of each town or village fund at the close of the year:—

Population, Revenue and Expenditure and Balance to Credit of each Town or Village Fund at close of year.

Name of town or village.	Population.	Revenue.	Expenditure.	Credit Balance.
		£	£	£
Castries	7,910	5,217	5,601	298
Soufrière	2,394	508	446	142
Vieux Fort	1,619	165	131	109
Dennery	1,072	140	100	254
Anse la Raye... ...	885	66	46	80
Laborie	808	66	54	49
Gros Islet	705	104	93	187
Micoud	577	73	61	42
Canaries	522	38	28	122
Choiseul	409	44	17	79
Total	16,901	6,421	6,577	1,362

The rates were in Castries and Soufrière 8 per cent. on assessed rental value of houses and 2 per cent. for water rate. In Vieux Fort, Gros Islet, and Canaries the rate was 6 per cent. on the assessed rental value of houses, and in the other villages the rate was 5 per cent.

The revenue in Castries was the lowest received since 1899, and was £719 less than the receipts for the previous year. This may be attributed to the depreciation of the rental value of property consequent on the emigration that followed the withdrawal of the garrison.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

(A.) Imports.

The value of imports in 1906 was £242,469, as compared with £285,987 in 1905.

The following figures shew the value of the imports from the countries specified, as compared with the previous year:—

Year.	United Kingdom.			British Colonies.			Foreign Countries.			Total.		
	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.
1905 ...	95,086	10	11	56,891	7	11	134,008	15	11	285,986	14	9
1906 ...	87,842	19	2	34,077	11	4	120,548	17	5	242,469	7	11

The importations of coal amounted to 76,304½ tons, of the value of £94,056, as compared with 79,225 tons in 1905, of the

value of £96,620, not including 362 tons imported for the use of the military.

Of the coal imported in 1906, 13,236 tons came from the United Kingdom, and 63,068½ tons from the United States.

The imports are divided into the following classes:—

	£
Class I.—Live Animals, Food and Drink Supplies, and Narcotics ...	87,702
Class II.—Raw Materials	111,568
Class III.—Manufactured Articles	67,511
Class IV.—Coin and Bullion	5,867

The following table shows the principal articles and values imported under the different Classes:—

Articles.	Quantity.		Value.
Class I.			
Live Animals—			£
Cattle	137		840
Horses and Mules	14		344
Sheep	21		129

(B.) Exports.

The value of the exports in 1906 was £220,313, as compared with £211,654 in the preceding year. £102,457 represented the produce and manufacture of the Colony, and £117,856 the produce of other Countries, of which £105,696 was for bunker coal exported.

The exports are divided into the following classes:—

	£
Class I.—Live Animals, Food and Drink Supplies, and Narcotics ...	100,101
Class II.—Raw Materials	114,165
Class III.—Manufactured Articles	2,037
Class IV.—Coin and Bullion	4,010

The following table gives the principal articles, the produce of the Colony, and the value exported under Classes I. and II.

Articles.	Quantity.	Value.
Class I.		£
Live animals—		
Cattle	14	68
Horses and Mules	40	666
Food and Drink Supplies—		
Cocoa (unmanufactured)...	1,579,200 lbs.	42,300
Honey	310 cases	386
Rum...	6 276 galls.	316
Sugar (Usine)	5,441 tons	51,689
Sugar (Muscovado)	230 tons	1,610
Sugar (Melhado)	313 casks	939
Sugar (Molascuit)...	1,517 bags	379
Class II.

Logwood	478 tons	836
Pimento Logs	176	350
Pimento Sticks	15,374 bndls.	684

(C.) Coal Trade.

The following return shows the imports and exports of coal and the declared value during the past ten years:—

Year.	Imports.		Exports.	
	Tons.	Value.	Tons.	Value.
		£		£
1897...	63,902	58,809	78,130	76,177
1898...	76,046	72,149	73,411	73,411
1899...	61,487	45,196	76,417	72,596
1900...	99,864	89,090	100,578	125,154
1901...	85,819	99,959	85,743	110,516
1902...	57,169	67,220	72,426	84,641
1903...	58,333	70,138	50,307	64,446
1904...	50,443	63,199	59,376	71,080
1905...	79,587	97,261	82,149	103,478
1906...	76,304	94,056	86,997	106,000

(D.) Shipping.

The number of steamers that entered was 617 with an aggregate tonnage of 1,055,473 tons. The number that cleared was 618 and their tonnage 1,057,414 tons.

In addition 13 ships of war and four yachts visited the port, as against 16 and 5 in 1905, and 38 and 8 in 1904. The year was an unusually busy one for shipping. The number of steamers that entered has only been exceeded twice during the past ten years, namely, in 1897 and in 1900, when the number reached 620, but the aggregate tonnage in those years was respectively 869,739 and 906,158 tons, proving that larger ships are now visiting the port.

The following return shows the number of vessels, British and foreign, that entered and cleared, and the aggregate tonnage during the past seven years:—

Vessels Entered.

Year.	British.				Foreign.			
	Steamers.		Sailing Vessels.		Steamers.		Sailing Vessels.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
1900	473	751,463	271	9,009	147	154,695	41	6,258
1901	461	770,443	273	9,634	124	148,488	15	4,260
1902	430	682,878	338	11,001	108	141,240	71	3,869
1903	354	542,095	269	7,470	66	84,391	152	5,212
1904	373	544,895	231	7,349	77	98,544	45	2,899
1905	452	748,494	207	6,941	99	155,846	43	4,774
1906	534	931,449	246	7,310	83	124,024	38	3,749

Vessels Cleared.

(E.) Mines, Manufactures, and Fisheries.

There are no mines in the Colony.

The only manufactures of any consequence are sugar and rum. There are four well-equipped central sugar factories, but the area of land in sugar cultivation is not as extensive as it might be, owing to want of labour and other causes. The exported produce amounted to 5,441 tons of crystallized sugar, 230 tons of Muscovado, and 313 casks of Melhado. Of this output Canada took 980 tons of Usine sugar and 60 tons of Muscovado, and the rest of the produce went to London markets.

There are two rum distilleries. Rum is produced principally for local consumption, and as the consumption is declining the quantity distilled keeps pace with its declension as the following table indicates:—

Year.	Quantity Distilled.	Consumed.	Exported.
	Galls.	Galls.	Galls
1903...	72,470	53,558	16,286
1904...	57,429	52,562	5,684
1905...	56,150	50,337	8,655
1906...	49,553	46,950	6,319

The quantity in stock on the 1st January, 1903, was 21,911 gallons, and the quantity distilled during the four years, 235,582=257,493 gallons. The quantity consumed or exported was 240,351 gallons, and 6,307 gallons remained in stock, while 10,835 gallons or 4·20 per cent. was lost by leakage and evaporation.

There is a number of boats, principally small canoes, engaged in fishing, and fresh fish in abundance can be obtained for local consumption all the year round. There is no attempt at preserving fish for exportation.

(F.) Agricultural Industries.

The staple industries are sugar and cocoa.

There was a marked increase in the sugar crop over 1905. The usine sugar exported was 5,441 tons of a declared value of £51,689, as compared with 3,721 tons of the declared value of £37,210 in the preceding year.

During the past ten years there has been a considerable fluctuation in the cocoa crop. In 1897, calculating at 200 lbs. to the bag, 4,768 bags were exported. In 1900 the exports rose to 6,490 bags, but in the following year fell to 3,285 bags. In 1902 the exports reached 7,524 bags, and in 1905, 9,468, the highest record. The average for the five years from 1897 to

1901 was 4,865 bags, and the average for the next five years, from 1902 to 1906, was 8,045 bags. It will be seen, therefore, from these figures, that the cocoa industry has been nearly doubled during the past ten years; but the progress of the industry has nevertheless been very slow considering the quantity of land suitable for cocoa in the possession of large and small proprietors. The attention directed this year to improvements in the methods of cultivation will have good and widespread results, especially among the peasant growers, as time goes on, while the great rise that has recently taken place in the price of cocoa will be the strongest inducement to planters to extend their cultivation.

The lime industry made great strides and appeared for the first time as an export produce. 571 packages of limes and 12 packages of lime juice were shipped. The cultivation is being extended. 40,000 plants were distributed by the Agricultural Department during the year.

Rubber also for the first time appeared as an article of export, a small quantity from trees of the Castilloa Elastica having been shipped. This industry has not however been started to any extent, and must be regarded as being still in an experimental stage.

The cultivation of Sea Island cotton has not yet been taken up. Some few years ago, at the instance of the Imperial Department of Agriculture, an effort was made to induce local growers to start the industry, but the trial was made in a lukewarm manner and proved a failure, which has since exercised a discouraging effect on any further attempts. Owing however to the successful results that have been obtained in the neighbouring Colonies, the desire to make another trial is manifesting itself, and it is hoped that this industry will soon again be started. There are large areas of cleared land, apparently well adapted for the cultivation, that are available for enterprise in this direction.

Agricultural Department.

The Botanic Station, and Agricultural School and Experiment Station, were maintained in efficient working order, and several minor improvements were effected during the year. Several of the nursery plant beds were reconstructed on an improved plan by which better drainage and greater means of checking insect and fungoid pests were secured.

A plant fumigating chamber for the treatment of imported plants by the hydrocyanic acid gas method, for preventing the introduction of insect pests, was established at the Botanic Station, and is now in use.

There was a great increase in the demand for economic plants for local planting. The total number of plants distributed was 64,850, being the highest annual record in the history of the station. Limes headed the list with 37,116

plants, being 25,282 above the previous year's record. 6,967 rubber plants were issued to local applicants

Useful leaflets on "The Improvement of Cocoa Plantations" and on "Rubber Growing" were prepared and distributed by the department for the information of the planting community.

The total expenditure on the Botanic Station and connexions, excluding building repairs and the cost of the fumigating chamber, was £809 13*s.* 9*d.* The sale of plants, &c., realised £64 2*s.*

Agricultural School.

The average number of pupils maintained during the year was 18·9. One pupil was admitted and three discharged to take up situations obtained for them.

All the ground provisions required for the Institution were produced on the premises, and a large number of economic plants was raised for distribution. The routine work associated with the training of the pupils in agricultural science and practice received careful attention.

The half-yearly examinations of the pupils show that good progress was made in their school and field work. The Medical Officer's report on the health of the boys and the sanitary condition of the institution was very satisfactory. The expenditure on the Agricultural School and Experiment Station was £586 14*s.* 3*d.* The receipts from the sale of plants and produce amounted to £55 12*s.* 3*d.*

With a view to making the institution partially self-supporting, a scheme was sanctioned for extending the cocoa cultivation and for supplying the hospital and prison with milk and ground provisions. To effect this purpose a sum of £300 was placed on the estimates to be expended in 1907 for clearing and planting six additional acres of cocoa, for increasing the area in ground provisions, and for the purchase of live stock. It is estimated that an additional annual expenditure of £144, to be expended on labour and stock food and other necessaries, will be required for the next five years to carry out the proposal. In the meanwhile it is expected that the returns from 1908 will more than cover this recurrent annual expenditure, and that at the end of five years, when the additional cocoa comes into bearing, the original outlay will be recouped. If the cultivation can be subsequently further extended the institution might ultimately be made entirely self-supporting.

(G.) Crown Lands and Surveys.

During the year 160 applications were received for 1,423 acres. On 32 of these applications the usual survey fee and deposit was paid. 75 surveys were executed. The acreage alienated amounted to 1,197 acres. Grants to the number of 79 were issued, and at the close of the year there were 59 further grants prepared and awaiting delivery.

The Land Sales Fund transactions were as follows:—

	£	s.	d.
Balance on 31st December, 1905 ...	854	6	6
Revenue, 1906	1,027	14	9
Expenditure, 1906	809	0	5
Balance on 31st December, 1906 ...	£1,073	1	0

(H.) Public Works.

The total expenditure on public works amounted to £10,552 17*s.* 6*d.*, as shown under the heads below:—

	£	s.	d.
Public Buildings—repairs and maintenance	643	4	2
Roads and Bridges—repairs and maintenance	5,919	0	7
Jetties—repairs and maintenance ...	162	9	11
Harbour Works	491	14	10
Miscellaneous Works	284	0	9
Works executed for Government Departments	212	1	9
Public Buildings and works extraordinary	715	11	10
Reclamation Piling—extraordinary ...	761	13	9
Roads and Bridges—Land Sales Fund	290	7	8
Telephones — reconstruction, repairs, and maintenance	1,072	12	3
	£10,552	17	6

There were no new works of any considerable importance started during the year.

The expenditure on public buildings and works extraordinary included £544 5*s.* 11*d.* for repairing damages to public buildings and bridges caused by the earthquake on 16th February, 1906. This amount does not represent the entire expenditure for making good all the injuries sustained by Government buildings. The work of repairs was delayed for a considerable period owing to the frequency of the shocks that recurred for some months, and all the damaged structures had not been repaired at the close of the year.

There are approximately 265 miles of road in the Colony:—

	Miles.
Main Roads	115
Byways	117
Unclassified	33
	265

There was no increase of roadway made during the year, but the expenditure of a sum of £5,000 from surplus funds was

sanctioned for the opening up of new roads which are very much needed for bringing within easy reach the fertile land in the interior of the Island.

III.—LEGISLATION.

Six Ordinances were passed during 1906, two of which were Appropriation Ordinances, while the others related to Contagious Diseases of Cattle, Telephones, Savings Banks, and the Pauper Asylum.

IV.—EDUCATION.

(A.) Primary.

The general statistics for the year are given in the following table:—

Schools	No.	Number on Rolls.	Average Attendance.	Number Examined.	Government Grant.
					£
Anglican	3	480	290	389	285
Wesleyan	1	216	108	137	126
East Indian Mission ...	1	33	26	33	33
Roman Catholic	39	6,012	3,473	4,423	2,946
Total	44	6,741	3,897	4,982	3,390
The figures for 1905 were	46	7,256	3,832	5,057	3,339

(B.) Secondary.

Secondary Education is provided for boys by the St. Mary's College, and for girls by the St. Joseph's Convent. The former school received a Government grant of £400, and the latter one of £50. The total expenditure on these schools was £730 and £500 respectively, the school fees collected being £277 and £235.

There were 71 boys on the roll of the college, with 68 in average attendance, the figures for St. Joseph's Convent for girls being 104 and 77 respectively.

The boys are prepared for the Cambridge Local examinations, and the girls for those of the London College of Preceptors. The girls are also taught needlework—plain and fancy, drawing, and painting.

One of the conditions attached to the grant to St. Mary's College is the right to have ten Government scholars educated at the College free of charge. The report on these boys shows work and conduct "satisfactory" 'in seven cases, work "very

fair," conduct "satisfactory" in two, and work "unsatisfactory," conduct "satisfactory" in one.

At the examination in December to fill four vacancies, nine candidates presented themselves. The best candidates obtained, out of a total of 100 marks, 75, 70, 68, and 67.

V.—GOVERNMENT INSTITUTIONS.

(A.) Hospitals and Asylums.

The following statement tabulates the principal statistics relating to the hospitals and asylums of the Colony:—

Institutions.	No. of patients at beginning of year.	No. admitted during 1906.	Daily Average.	Patients discharged.		No. of Deaths.	Remaining in Hospital at end of year.
				Cured.	Relieved.		
Victoria Hospital, Castries	69	1,362	72	869	393	105	64
Soufrière Hospital ...	2	27	1·22	21	6	2	—
Vieux-Fort Hospital ...	4	44	3	28	9	2	4*
Dennery " ...	1	16	1	9	4	4	—
Yaws Hospital, Soufrière	34	52	29	47	4	1	34
Poor Asylum "	43	96	55	—	50	31	58
Lunatic Asylum "	19	13	17	3	—	4	17†

* Five patients discharged, condition not improved.
† Eight sent to Grenada Lunatic Asylum.

(B.) Dispensaries.

Outdoor medical relief is given through the medium of a dispensary in each district, at which a medical officer attends every week.

The number of patients treated during the past two years was as follows:—

Dispensary.	1905.	1906.
Castries	7,399	8,007
Gros-Islet	619	654
Dennery	1,067	992
Anse-la-Raye	724	655
Soufrière	887	1,245
Choiseul	171	314
Vieux-Fort	1,193	1,481
Laborie	693	490
Micoud	610	518
Babonneau (opened September 14th, 1906) ...	—	88
Total	13,363	14,444

The growing recognition of the advantages offered by the Victoria Hospital under an improving system of administration is marked by the increasing number of natives of the Colony admitted to the Institution during the past four years.

—	1903.	1904.	1905.	1906.
Natives of St. Lucia ...	364	553	797	979
Natives of other countries including India	1,275	709	472	452
Total	1,639	1,262	1,269	1,431

The emigration of many natives of other Colonies who had been attracted to Castries by the military works and left the Island on the abandonment of St. Lucia as a military station, accounts for the large fall that appears in the admission of patients not belonging to the Colony.

Dr. King observes: "A bad type of malaria is common in returned (Panama) Canal labourers, who not infrequently have ankylostoma as well. The latter seems to be universal in returned Cayenne gold diggers."

Of the strangers treated, 21 were from Europe or Canada. Excluding these it would appear that the Government maintained 1,761 patients in the hospitals and asylums and provided medical aid for 14,444 exclusive of repeats at the dispensaries, a total of 16,205, or nearly 30 per cent. of the whole estimated population of the Island.

(C.) Out-door Relief of Paupers.

The number of persons in receipt of outdoor relief on the 31st December, 1906, was 200.

The expenditure amounted to £532 11*s.* 9*d.* including £131 10*s.* 10*d.* for pauper burials.

(D.) Sanitary.

Considerable attention was paid to the improvement of sanitary matters in the towns and villages, and to the destruction of breeding places of mosquitoes.

The police are charged with the duty of enforcing the sanitary regulations of the Board of Health, but as they were found to possess no special training for this purpose, instructions were issued for the non-commissioned officer in charge of each station to apply to the medical officer for advice and assistance, and the Health Officer was good enough to undertake the special training of a selected European non-commissioned officer whose services could be made available in any part of the Colony where they may be needed.

(E.) Savings Banks.

The principal bank is in Castries, and is managed by the Treasurer of the Colony. There are four district branches in different parts of the Island.

The following statement shows the transactions of the bank for the five years ended the 31st December, 1906:—

Year.	Total number of depositors on 31st December of each year.	Total deposits inclusive of Interest.			Total Withdrawals.			Amount on deposit at the end of each year.		
		£	s.	d.	£	s.	d.	£	s.	d.
1902	1,590	20,365	12	6	17,696	8	6	15,956	18	3
1903	1,584	18,338	16	7	17,084	5	11	17,211	8	11
1904	1,642	18,990	15	5	20,568	7	1	15,633	17	3
1905	1,231	15,025	16	3	16,285	13	7	14,373	19	11
1906	1,584	13,750	12	6	13,397	7	1	14,727	5	4

Investments through the Crown Agents on account of the Savings Bank on the 31st December amounted to £13,416 14*s.* 11*d.* The interest derived from the investments was £461 13*s.* 3*d.*

The working account of the bank showed a revenue of £479 12*s.*, and an expenditure of £384 16*s.* 4*d.* for interest paid or credited to depositors. The balance of £94 15*s.* 8*d.* was transferred to general revenue.

(F.) Friendly Societies.

There are 13 Friendly Societies, being one in excess of the previous year. The total number of members on the rolls on 31st December was 1,114, as against 1,247 in 1905.

				£	s.	d.
The aggregate balance at 31st December, 1905, was ...				933	14	6
Total receipts in 1906 ...				1,442	7	3½
				£2,376	1	9½
The disbursements during the year were:—						
Sick benefits	525	9	7½			
Funeral claims	166	5	0			
Working expenses ...	431	19	3			
Payment for regalias ...	23	4	0			
Loans written off	10	12	7			
Payments to withdrawing members	48	4	5½			
				1,205	14	11
Balance at 31st December, 1906 ...				£1,170	6	10½

VI.—JUDICIAL STATISTICS.

(A.) Police.

The strength of the force on the 31st December was one officer and 70 non-commissioned officers and men, being two short of the authorized number.

Twenty-two men joined the force during the year, while nineteen resigned, four were dismissed, and one died. The canal works at Colon attracted many of the men who left the service in the hope of bettering their fortunes there.

There were 1,088 summary prosecutions and 29 indictable cases taken up by the police during the year, also 76 arrests made by the police and Town Board constables in Castries for breaches of Town Board bylaws, which were prosecuted by the Town Board authority, and 48 arrests prosecuted as private cases. Eighty-three per cent. of the cases resulted in convictions.

The police were for the first time entrusted with the duty of summoning and arresting road tax defaulters. This duty had hitherto been performed by bailiffs selected for the purpose, but the result was not satisfactory, and on the 2nd February regulations were made under the Road Tax Ordinance, 1905, transferring the responsibility to the police. 3,051 summonses were served and 1,796 warrants were executed, thus greatly increasing the work of the police department and reducing the costs to defaulters from 7*s.* to 2*s.*, and making it easier for the people to pay. The result was a better collection of the current taxes and the recovery of £284 10*s.* of arrears.

The force was armed early in April after the departure of the military, and has since undergone a course of training under the supervision of the staff officer of the Windward Islands. An inspection was held by Brigadier-General Caulfield on the 27th April, very shortly after the commencement of the course.

(B.) Prisons.

At the commencement of the year there were 48 prisoners in the Royal Gaol—38 males and 10 females.

The number of committals during the year was 642, 445 being adult males, 178 adult females, and 19 juveniles.

—	1905.	1906.
For Statutory Offences ...	301	387
„ Non-payment of Road Tax	80	193
„ Military Offences	13	—
„ Safe custody, trial, &c. ...	166	62
	560	642

The convictions from the Royal Court fell to 14, as against 29 in 1905.

The daily average number of prisoners in custody was 55·49, not taking into account the long-sentence St. Lucia prisoners who are undergoing their sentences in the Grenada Prison, the daily average of whom was 19·28. The corrected daily average for St. Lucia would be 74·77, as against a total of 75·65 in 1905.

The labour of the prisoners during the year is valued at £596 4*s.* 9*d.*, and the profits of the Prison Manufacturing Account amounted to £76 19*s.* 7*d.*

The expenditure on the prison was £1,696 9*s.* 10*d.*, of which £251 19*s.* 1*d.* was for the maintenance of St. Lucia prisoners at Grenada. The cost of the prison establishment and of the maintenance of prisoners was £1,447 11*s.* 5*d.*, the balance being made up of sums expended in repairing damage caused to the buildings by the earthquake of 16th February, 1906, in erecting a work shed, in improving ventilation, and in general repairs.

The daily average on the sick list was 1·85. One death occurred in the prison.

The convictions of natives of St. Lucia increased to 53 per cent., as against an average for the past five years of 43·8, natives of other places contributing 47 per cent. to the prison population.

(C.) Criminal Statistics.

The following figures summarise the criminal statistics for the past five years:—

—	1902.	1903.	1904.	1905.	1906.
Offences reported	2,790	1,942	2,032	1,595	1,706
Summary convictions—					
For offences against the person	333	255	355	405	220
„ prædial larceny	48	28	29	60	37
„ offences against property ...	133	77	124	226	77
„ other offences	1,430	877	1,059	904	1,126
Convictions by the Superior Court—					
Child murder	—	—	—	1	—
For offences against the person	6	12	17	3	2
„ „ „ property ...	17	11	13	23	14
„ other offences	1	2	2	5	1

VII.—VITAL STATISTICS.

(A.) Population.

The estimated total population on the 31st December, according to the returns of the Registrar-General, was 54,073, an increase of 684 during the year, and was composed of 25,997 males and 28,076 females.

The birth-rate of the year was 31·9 per thousand, as compared with 35·2 per thousand in 1905; and the death-rate 19 per thousand, compared with 21·8 per thousand in 1905. The number of births was 1,702, and of deaths 1,018.

The population by the Census of 1901 was 49,883. The natural increase by excess of births over deaths from the date of the Census to the 31st December, 1906, has been approximately 4,190. No deduction is made of persons who have left the island since the withdrawal of the garrison in 1905, and since the Panama Canal works were started. The estimate of the present population appears, therefore, to be subject to modification.

The number of marriages during the year was 352, as compared with 340 in the previous year.

(B.) Public Health.

Epidemics of influenza and malarial fever followed each other at Vieux Fort, but otherwise the public health was normal.

(C.) Climate.

The rainfall for the year at different stations was:—

	Inches.
At Botanic Station, Castries	81·84
Agricultural School, near Castries ...	88·15
Rivière Dorée	48·95
Anse la Raye	100·47
Soufrière	90·26
Errard	97·99
	507·66
Mean for six Stations	84·61

The absolute maximum temperature registered during 1906 was 91° on 3rd May, and the absolute minimum temperature 60° on 5th January. The mean monthly temperature for the year was 78·0°. The mean barometrical pressure for the year was 29·998 inches at 10 feet above mean sea-level.

VIII.—POSTAL AND TELEPHONE SERVICES.

(A.) Post Office.

The revenue of the Department was £1,330 3*s.* 11*d.*, of which £990 11*s.* 7*d.* was received from letters, post cards, &c., £206 5*s.* 7*d.* from sales of stamps to collectors, and £133 6*s.* 9*d.* from commissions on postal and money orders.

The expenditure was £1,013 19*s.* 2*d.*, and the surplus of revenue over expenditure was, therefore, £316 4*s.* 9*d.* No portion of the subsidy of the coastal steamer which carries mails to and from the outports is, however, charged against the Post Office:—

The total number of letters and post cards dealt with was—	Number.	Total.
Foreign sent	103,294	
Foreign received	103,289	
		206,583
Inland	—	84,190
		290,773
The number last year was	—	341,360
A net decrease of	—	50,587
Newspapers and book packets sent	10,354	
Newspapers and book packets received ...	65,807	
		76,161
Inland	—	17,404
		93,565
The number last year was	—	123,962
A net decrease of	—	30,397
Parcels sent	399	
Parcels received	1,877	
		2,276
The number last year was	—	3,446
A net decrease of	—	1,170

The number of registered articles sent was 3,920, and the number received 3,903. The number of insured letters sent was 27, and the number received 21. 6,100 letters were dealt with in the Returned Letter Branch, of which 1,704 were returned to the countries of origin, and 4,396 to the writers.

The money orders issued amounted to £7,488, and the orders issued elsewhere and paid here £2,088. British postal orders were sold to the amount of £1,310, and paid to the amount of £415.

The inland postal orders issued only amounted to £37 14*s.*

In August last a contract was made between the Crown Agents and the Royal Mail Steam Packet Company for a mail service between certain of the West Indian Colonies. The

itinerary provided for a service every four weeks between St. Lucia, Barbados, Dominica, and other Northern Islands. A provisional fortnightly service was also provided for by the S.S. "Yare." Towards the end of the year, however, the mails from Europe had to be brought from Barbados by chance opportunities involving delay in their receipt.

(B.) Telephones.

The system consists of 112½ miles of trunk line, 54¾ miles of branch lines, or a total of 167¼ miles.

The lines were maintained in good working order throughout the year, and a sum of £218 16*s.* was expended on reconstruction and improvements.

On 31st December there were 110 subscribers, as compared with 111 in 1905.

The receipts were £564 17*s.* 11*d.*, being £13 12*s.* 11*d.* more than in 1905, and the expenditure £1,072 13*s.* 3*d.*, or £507 15*s.* 4*d.* in excess of the revenue.

The expenditure included £500 paid for the purchase of the military telephone system and stores, which were taken over by the Government on the removal of the troops.

IX.—GENERAL REMARKS.

Changes in the Civil Establishment included the departure of Sir R. B. Llewelyn, K.C.M.G., who had been Governor and Commander-in-Chief of the Windward Islands since November, 1900. Having completed his term of office, he left the Government on 14th November on three months' leave prior to his retirement. Pending the appointment of his successor, Mr. Cork, C.M.G., the Administrator of St. Lucia, by virtue of his dormant Commission, assumed the Government as Acting Governor.

Other important changes were the appointment on 5th April of Mr. P. M. C. Sheriff as Chief Justice in succession to Mr. J. B. Walker, who had been transferred to Grenada; and the resignation on 31st October of Mr. Edward Bateson, the Attorney-General, a successor to whom had not been appointed by the end of the year.

A severe earthquake occurred on the 16th February, 1906, which did considerable damage to property. The shock was felt all over the Colony but with greater violence in Castries and in the northern part of the island, where the seat of the disturbance appeared to be chiefly located. All the public buildings in the town sustained injury to some extent. The walls of the Treasury premises were badly cracked and had to be shored up until they could be repaired. The Male Prison was

seriously damaged and the Keeper's quarters rendered uninhabitable. The churches and many private dwellings received injury, and in some cases broken walls had to be taken down and rebuilt, while much loss occurred in the shops from the destruction of bottled liquor, crockery, and other breakable goods that were thrown from shelves and destroyed. Fortunately no person received any hurt from falling *débris*. The shock took place early in the afternoon, which probably saved the chance of further loss by fire which might have happened had the earthquake occurred in the night-time.

The Colony having been happily free from such occurrences for a great number of years, the event produced much alarm, which lasted for some while owing to the recurrence of further disquieting shocks, though of no severity, that continued at intervals. These mild disturbances were not felt, as a rule, beyond the quarter extending from Castries to Gros Islet, and they gradually diminished in frequency as time passed.

While the removal of the Imperial garrison has thrown back the Colony on its own natural resources, the island is fortunate in possessing many opportunities in favour of great future prosperity. Only a small portion of the available land is at present under cultivation, and there are large areas in untouched localities suitable for the production of every description of economic produce that can be grown in the West Indies. There is plenty of land suitable for growing cocoa, and large areas that are well adapted for the lime industry as well as for rubber planting, while the lower lands, in many directions lying near the sea coast, offer favourable selections for the Sea Island cotton industry.

It is specially characteristic of St. Lucia that the island possesses suitable soils within easy access in different parts that are favourable to extensive cultivation of various products. From this point of view it has exceptional capabilities for agricultural development as its resources are not limited to any particular industry.

Apart from the sugar lands occupied by the four central factories, there are large tracts that can be taken up for cocoa or limes or any other tropical-paying cultivation. The land is comparatively cheap, and in these respects it may be said that St. Lucia offers many exceptional advantages to settlers of moderate capital.

There is a daily steam coastal service on the leeward side of the island between Castries and Vieux Fort at the extreme southern end, with several intermediate places of call. This provides a quick and easy means of communication and transport, and brings the out-districts in that extensive quarter into close touch with Castries.

Another factor in the prosperity of the Colony is the importance of Castries as a coaling station. The Port affords quick

facilities for supplying bunker coal and fresh water alongside the wharves. The shipping statistics indicate an increasing trade. 617 steamers called during the year, and 83,733 tons of bunker coal were taken.

The fine military buildings in the neighbourhood of Castries that are now no longer required for the purposes for which they were built, offer an excellent opportunity for the establishment of hotel accommodation for tourists to the West Indies. The new and commodious brick buildings at the Vigie are especially well adapted for such a project. The Vigie is a narrow promontory jutting out from Castries, and forms the northern arm of the harbour. The climate is dry and cool and extremely healthy. There is excellent sea-bathing, and the town of Castries is within a few minutes' reach by boat across the harbour or by easy carriage road. Enterprise in this direction, if well advertised in Canada and in the United States, would probably have most successful results.

The mail steamers of the Royal Mail Steam Packet Company from England, the steamers of the Quebec Steamship Company from New York, and the Pickford and Black steamers from Canada, call regularly, while the frequent visits of other steam vessels place the Colony in constant communication with the outer world.

E. LABORDE,

Administrator (Acting).

24th October, 1907.

COLONIAL REPORTS.

The following recent reports relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page :—

ST. VINCENT.

(For Report for 1905-6, *see* No. 510.)

THE GOVERNOR TO THE SECRETARY OF STATE.

Grenada,
6th January, 1908.

MY LORD,

I HAVE the honour to forward the Blue Book of the Colony of St. Vincent for the year 1906-7, prepared by Mr. D. T. Tudor, Acting Administrator.

I have, &c.,

RALPH WILLIAMS,
Governor.

The Right Honourable
The Earl of Elgin, K.G.,
&c., &c., &c.

1125 Wt 24282 2/08 D & S 5 31220

REPORT ON THE BLUE BOOK OF ST. VINCENT FOR THE YEAR 1906-7.

I.—FINANCIAL.

(A.) General Revenue and Expenditure.

The following comparative statements and table give the heads of revenue and expenditure, and the amounts received under those heads, for the years 1905-6 and 1906-7, as well as the total revenue and expenditure for each of the last five years, 1902-3 to 1906-7:—

(Table 1.)

Comparative Statement of Revenue for the Years 1906-7 *and* 1905-6.

Heads of Revenue.	1906-7.	1905-6.	Increase.	Decrease.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1. Customs:—				
Import	10,549 7 10	9,771 11 9	777 16 1	—

			26,900			25,911
1906-7.	Local	24,723		Local	23,503	
	Imperial Grant	1,308		Imperial Grant	1,146	
			26,031			24,649

The total local revenue of the Colony for the year 1906-7 was £24,723, being £480 more than the estimate and £206 less than the receipts of the previous year.

The gross excess of receipts over estimate was £1,054, of which £599 was under the head of "Customs," and the gross deficiency on estimated receipts was £574, of which £295 was under "Excise" and £60 under "Liquor Licences," the result being a net increase over estimate of £480 as above stated.

On a comparison of the revenue details of 1906-7 with those of the previous year, it will be seen that there was a satisfactory increase in the customs revenue during the year, both under import and export. The increase of £778 in the receipt of import duties shows that the spending capacity of the community has been materially enlarged; whilst the advance of £50 in the receipt of export duties is most significant, especially when one bears in mind the very low rate of these duties in this Colony. Both of these totals provide direct and forcible evidence of a substantial improvement in the financial conditions and unprecedented development of agriculture in St. Vincent.

The decrease in the total amount of port dues is principally attributable to the fact that an important line of steamers have ceased to make their fortnightly calls at our port in Kingstown.

The gross revenue, including the Parliamentary grant of £1,308 in aid of the annual grant for Botanic Station and Agricultural School, was £26,031.

The expenditure of the Colony for the year was £23,503 (as against an estimate of £25,034), and a further amount of £1,146 was spent out of the Imperial Grant on upkeep of the agricultural institutions.

The corresponding figures of expenditure in 1905-6 were £24,625 and £1,286.

Comparison with the previous year's expenditure is most satisfactory, although it shows an increased expenditure of £79 on account of public debt, the liability on which had up to last year been lessening annually; the present increase has arisen on account of the Crown Lands Roads Loan, the first repayments on which have now begun to fall due. By similar comparison, an increase of £139 is to be noted against the "Treasury," due principally to higher emoluments, and an increase of £122 against "Police," caused by a larger purchase of new uniforms.

On the other hand, substantial savings appear under other heads of expenditure, notably, £193 from reduction in salaries against the "Legal Department," £252 from the exercise of general economy in "Hospitals and Dispensaries," and a net saving of £165 in Public Works under the three heads 17, 18, and 19. The large decrease of £612 against the heading "Miscellaneous" is somewhat illusory as it is only made apparent after comparing these returns with the previous year's; which latter returns included two extraordinary items

whereunder the bad debts due by the towns of Chateaubelair and Georgetown, amounting to £425, were remitted, the explanation for which remission is set forth in last year's report.

The net result of the year's working is therefore:—

	£
Actual local revenue	24,723
Actual local expenditure	23,503
So further increasing the surplus by	£1,220

as against an estimated deficit, for the year, of £739.

This estimated deficit, if realised, could have been paid out of the Colony's Surplus Fund; hence it was that it had not been found necessary to apply this year for an Imperial Grant in aid of such anticipated shortage.

(B.) Taxation.

No changes took place during the year under review.

(C.) Assets and Liabilities.

An examination of the statement subjoined shows an excess of assets of £2,964.

At 31st March, 1906, the account showed an excess of assets of £1,744.

unpaid balance of the Hurricane Loan to planters from the Imperial

Treasury, St. Vincent,
4th June, 1907.

EDWARD J. CAMERON,
Treasurer.

(D.) Public Debt.

The public debt of the Colony at 31st March, 1907, stood at £4,150, as against £4,650 at the end of the previous financial year. Of the above sum, however, the amount for which Colonial revenue is actually liable is £800 only. The remainder, though guaranteed by the Colony, is repayable from the municipal funds of the towns of Kingstown and Georgetown.

(E.) Currency.

Sterling money of Great Britain, and British silver and copper coins constitute the legal money for tender in the Colony; although American gold is occasionally found in circulation and the notes of the Colonial Bank are most commonly used in the larger daily monetary transactions.

The Government's accounts are kept in sterling and commercial accounts in dollars and cents.

(F.) and (G.) Finances of Municipalities or Public Boards.

The management of the affairs of the town of Kingstown is vested in a Board, one half of the members of which body are elected by the ratepayers and the other half nominated by the Government. The small towns of the Colony are controlled by Wardens, appointed annually by the Government.

The following comparative statements give the total revenue and expenditure of these towns for the last five years:—

Revenue.

Town.	1902.	1903.	1904.	1905.	1906.
	£	£	£	£	£
Kingstown	1,495	1,873*	1,657	1,664	1,708
Georgetown	179	90	164	137	105
Chateaubelair	31	27	23	32	34

Barrouallie	60	20	27	20	34
Layou	17	23	34	19	12
Bequia	5	7	4	10	27

Debts of Towns.

The debts of the towns at 31st March, 1907, are as follows:—

	£	£
Kingstown water supply	2,700	
Kingstown town improvement ...	300	
		3,000
Georgetown water supply		350
		£3,350

Provision for repayment of these loans is made by rates levied annually on the townspeople, and the debts are secured on the general revenue of the Colony. The Kingstown water supply loan is being repaid at a rate varying from £200 to £400 per annum, the town improvement loan at the rate of £50 per annum, and the Georgetown loan by annual instalments of £50.

II.—TRADE, AGRICULTURE, AND INDUSTRY.

(A.) Imports and Exports.

The following comparative statement gives the value of the chief articles of imports in 1906-7 and the two previous years:—

Imports.

Chief Articles.	Value.		
	1904-5.	1905-6.	1906-7.
Class I.—	£	£	£
Beef, salted or cured	605	448	382
Biscuits	1,780	2,042	1,611
Butter	1,688	1,518	1,654
Coffee	201	315	357

Imports—cont.

Chief Articles.	Value.		
	1904–5.	1905–6.	1906–7.

Food and drink supplies, unenumerated ...	1,092	986	939
Tobacco, cigars, &c.	949	971	889
Spirits	908	826	868
Class II.—			
Manure	12	181	581
Petroleum oil	1,179	1,211	1,383
Timber and shingles	4,158	2,595	7,000
Class III.—			
Textile manufactures, other than rope, cordage and canvas.	16,262	15,185	16,581
Metal, manufactured	4,385	4,822	5,922
Boots and shoes	855	740	958
Cement	498	398	467
Rope, cordage and canvas	1,326	745	1,134
Soap	1,498	1,375	1,569
Articles unenumerated, other than textiles or metal manufactures.	4,200	2,822	2,817

Generally speaking, trade has been very brisk during the year, and the importation of foodstuffs has increased, particularly in fish and flour, the respective values of which were £1,079 and £576 above the previous year's importations; but, on the other hand, the values of biscuits and sugar show decreases, being respectively £431 and £430 below the previous year's valuations.

All the chief articles enumerated under Class II. and under Class III. were imported in larger quantities, and an especially large rise is to be noted in building materials, timber and shingles having amounted to the value of £7,000. The imported timber, alone, amounted in value to £4,144, and of this a quantity, valued at £944, was exported to neighbouring colonies.

The figures given in the annual report of the Supervisor of Customs show an increase in value of imports of £8,911 com-

pared with the figures of 1905-6, the distribution being as follows:—

		£
Increase from the United Kingdom	...	1,655
" " British Colonies	...	2,179
" " Foreign Countries	...	5,077
		£8,911

The returns under "British Colonies" show a marked change in the origin of importation; there having been a decrease of £3,411 from British West Indies, but an increase of £5,558 from British North America.

The value of the principal exports is given in the annexed table:—

Exports.

Articles.	1904-5.	1905-6.	1906-7
	£	£	£
Cassava starch	1,379	1,531	1,439
Whale oil	437	254	250
Turtle shell	341	551	433
Firewood	627	685	493
Cotton and cotton seed	4,857	8,280	18,949
Vegetables	2,340	3,545	2,690
Manure	97	57	14
Syrup	648	344	452
Sugar, muscovado	9,777	3,793	3,555
Pease	458	379	689
Molasses...	652	895	1,111
Rum	204	431	—
Ground-nuts	1,258	2,444	1,929
Live stock	3,993	5,076	5,192
Fresh fruit	227	75	38
Farine	343	378	286
Arrowroot	20,674	20,522	24,351
Cocoa	2,255	2,426	3,838

It was noted with satisfaction in last year's report that the value of exported cotton during the year then under review was nearly double what it had been in the previous year (1904-5). The most remarkable features in this return are that, although the record of exported cotton is now more than double even the previous year's increased record, the exportation of arrowroot in no way suffered, for the figure under this head has increased by nearly 20 per cent., and moreover that cocoa was also exported to a very much larger extent, showing an increase of more than 25 per cent.

The values of exported cassava starch, vegetables, and ground-nuts were very satisfactory, although they do not equal the grand totals achieved in the previous year.

The decrease under "Vegetables" is entirely due to the comparatively small exportation of sweet potatoes which was less by £831 than in the previous year. This decrease was accompanied by a considerable drop in the exportation of fresh fruit. As these products are mainly shipped by the peasantry class it would seem as if the cultivation of cotton is found to be more attractive.

Much less firewood was exported during the year, the value of exports of this class having been £141 less than the average amount exported during the previous three years, and £192 less than in 1905-6.

The increase of £116 in the value of live stock exported is to be attributed solely to a brisker trade in the exportation of pigs, because this trade shows an excess in value, over the previous year's figures, of £648; whilst the horses and sheep exported were lower in value respectively by the sums of £219 and £148. The presence of anthrax in St. Vincent has had, as explained in previous reports, and will probably continue to have, a discounting influence upon the exportation of the larger and more valuable kinds of live stock, although the islands of the Grenadines now enjoy complete immunity from the disease.

Sugar shows a lower return, as regards value, although the weight exported was greater than in the previous year. No rum was exported during the year.

The total imports and exports for the five years 1902 to 1906-7 are given below:—

Imports.

Classes.	1902.	1903-4.	1904-5.	1905-6.	1906-7.
	£	£	£	£	£
I. Live animals, food, drink, &c.	37,861	31,643	32,534	31,575	32,000
II. Raw materials... ...	11,292	10,076	8,628	6,566	12,268
III. Manufactured articles	29,970	36,134	33,076	30,956	33,740
Totals	79,123	77,853	74,238	69,097	78,008

Exports.

Classes.	1902.	1903-4.	1904-5.	1905-6.	1906-7.
	£	£	£	£	£
I. Live animals, food, drink, &c.	38,781	33,023	43,374	40,935	46,393
II. Raw materials... ...	3,201	3,572	6,648	10,289	21,899
III. Manufactured articles	2,112	1,579	1,880	1,854	15,463
Totals	44,094	38,174	51,902	53,078	83,755

By comparison with previous year's returns, and allowing for the large importations of relief and other stores consequent upon the distress following the eruptions of 1902-3, these totals, it is claimed, are entirely satisfactory and indicative of sound progression, notwithstanding that the total now extended opposite Class III. under Exports includes a sum of £13,200 representing shipments of specie.

The volume and direction of the Colony's trade in the five years 1902 to 1906-7 are shown in the following tables:—

Imports.

—	1902.	1903-4.	1904-5.	1905-6.	1906-7.
	£	£	£	£	£
United Kingdom	24,579	31,146	28,816	25,471	27,126
British Colonies	25,107	26,162	29,562	30,691	32,870
Foreign Countries	29,437	20,545	15,860	12,935	18,012
Totals	79,123	77,853	74,238	69,097	78,008

Exports.

—	1902.	1903-4.	1904-5.	1905-6.	1906-7.
	£	£	£	£	£
United Kingdom	22,333	19,204	22,192	24,405	39,878
British Colonies	15,146	16,470	26,881	27,920	43,184
Foreign Countries	6,615	2,499	2,829	753	693
Totals	44,094	38,173	51,902	53,078	83,755

The shipments of specie, above mentioned, were consigned mainly to British Colonies, £12,400 having seen sent to other West Indian Colonies, whilst only £800 of the total £13,200, was sent to the United Kingdom.

(B.) Mines, Manufactures, and Fisheries.

The Grenadines Whale Fishery was again a failure. The export of whale oil was only 5,824 gallons, valued at £250, as against 6,482 gallons of the value of £254 in 1905-6.

The Central Cotton Ginnery erected in 1903-4 still remains under the successful management of the officers of the Imperial Department of Agriculture. The rate charged for ginning and baling is fixed at 1*d* per lb., and at this low rate a considerable profit results after paying for labour and other outgoings.

The lint again secured the highest price in the English market, which fact is in a great measure due to the care and expert supervision bestowed on the ginning and preparation of the produce for export.

The disintegrator for crushing cotton seed was not used, and practically all of the seed produced locally was sent to Barbados for sale. It is much to be regretted that this should be the case, but it is difficult to see how it can be altered until effective oil-extraction machinery has been erected in the Colony.

(C.) Agricultural Industries and Agricultural Department.

The advance, noted under this head in previous reports, has continued most satisfactorily.

The Agricultural Department distributed a large number of economic plants, *i.e.*, 10,134; but this total is somewhat lower than that of previous seasons, owing to the planters' attention and efforts having been directed more to cotton cultivation than to the cultivation of permanent crops.

The export of cacao showed a substantial increase in volume, and higher prices were obtained for this class of produce. The number of bags shipped during the year was 1,129, as against 789 in the previous year and in marked contrast to the smaller returns of preceding years, and especially to that of 1900 when only 443 bags were shipped. Moreover, a considerable amount of cacao is always consumed locally by the peasant and labouring classes.

The cultivation of Sea Island cotton has advanced in a very marked degree. The total acreage planted was about 1,534 acres as against 790 in 1905-6, and the yield was also better. "Anthracnose" disease made its appearance in the bolls, and leaf-blister mite late in the season, but on the whole the damage done to the plants was not serious.

The exports of Sea Island cotton during the financial year amounted to 225,632 lbs., the crop for the whole season having been estimated at 252,104 lbs.; and practically all the exported cotton was ginned at the Central Cotton Factory by the Agricultural Department.

The prices realised were very satisfactory on the whole; no less than 31 pence per lb. having been obtained for a few bales, whilst a considerable number sold at 30 pence. The average price for white lint was from 27 pence to 28 pence per lb.

The value of the exports in cotton and cotton-seed amounted to £18,949, cotton thus maintaining its place as second in importance on the list of St. Vincent exports.

The sugar industry is being rapidly replaced by cotton in every direction. An effort was made to encourage the pro-

duction of "fancy" molasses for the Canadian market, but with partial success only.

Although the weight of sugar exported during the year showed a slight increase over that of the previous year, yet its estimated value was less; the sugar shipped having been 967,445 lbs., valued at £3,516, as against the shipment in 1905-6 of 786,293 lbs., valued at £3,794.

The large areas of land devastated by the eruptions of the Soufrière (1902-3), were not cultivated to any extent during the year under review, but I am glad to state that, at the time of writing this report, some few more hundreds of acres in that locality are once again being put into cultivation in sugar-cane, arrowroot, pigeon-peas, and cotton. The remark made in last year's report, to the effect that cotton cultivation in this district had so far been only a partial success must be repeated in connection with this year's working.

The continuous recurrences of "sporadic" cases of anthrax and the consequent prohibition by the Government of neighbouring colonies of the shipment thereto of cattle from St. Vincent, have continued to cause much anxiety, inconvenience, and loss. This Government and the Imperial Department of Agriculture, who took the matter in hand, were successful in obtaining, temporarily, the services of Professor H. E. Annett, of the Liverpool School of Pathology, to investigate the disease and advise as to the best measures for stamping it out; and a Government veterinary surgeon was subsequently added to the official staff. Certain other and practical measures for fighting the disease have been resorted to and energetically carried out, such as the vaccination of all kinds of stock, the microscopic examination of the ears of every animal which dies, and the proper disposal of all diseased carcasses. Most of the neighbouring colonies accepted stock which had been vaccinated, some even without an interval of quarantine, and so the scheme received practical as well as moral support.

On the Land Settlement estates, progress continued to be made in the cultivation of the land.

A number (8,363) of economic plants, cacao, nutmeg, coffee, &c., was distributed free amongst the allottees, of which plants a proportion was raised on nurseries in the Linley and Cumberland Valleys.

(D.) Land Grants and General Value of Land.

The price of ordinary Crown land is £1 per acre for cash, and £2 if paid in instalments. A certain area is rented out in small lots at 6*s*. 3*d*. an acre.

The law governing the disposition and administration of these lands was consolidated and simplified.

The amount of Crown land proper granted during 1906-7 was 253 acres, the number of grants issued being 55, as against 47 in the previous year; while of eruption lands (the latter being the estates acquired from the Eruption Fund in 1902 for location of refugees, on which, however, there were numerous tenants found, many of whom have since acquired their holdings) grants were issued to 131 persons, of which 34 were for small lots and 97 for house-spots.

The revenue from sales and rental of Crown lands, not including eruption estates, was £407, as against £444 in the previous year; whilst the revenue from the eruption lands aggregated £233, as against £208 in the previous year.

(E.) Shipping.

A table of the entries and clearances of steamers and sailing vessels during the years 1905-6 and 1906-7 is annexed, as also a comparative statement of the total shipping for the last five years. These figures do not include ships-of-war, of which two British and two French visited the Colony during the year:—

Sailing Vessels.

Nationality.	1905-6.				1906-7.			
	Inwards.		Outwards.		Inwards.		Outwards.	
	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.	Vessels.	Tons.
British	460	10,151	452	10,419	394	9,563	386	9,545

Norwegian ...	1	1,298	—	—
Totals ...	167	223,775	99	143,145

The large decrease appearing in this latter table was caused by one important line of steamers having ceased in the month of July to call here. For two years prior to July this line had maintained a fortnightly connection with St. Vincent, but the company owning these steamers (viz., Messrs. Scruttons Direct Line) have abandoned this port.

Total Shipping for last Five Years.

Totals	380,559	435,477	498,587	470,519	308,158

III.—LEGISLATION.

During the year 1906 seventeen Ordinances were passed by the Legislative Council, some of which are unusually important. Ordinance No. 8, "The Criminal Evidence Ordinance," and Ordinance No. 15, "The Married Women's Property Ordinance," assimilated the law of the Colony with the more modern law of England, in relation to the subjects referred to in their short titles. Ordinance No. 14, "The Passenger Boats Ordinance," which amends the law by introducing fresh provisions for ensuring the safety of passengers in boats and small vessels on and around the coasts of the Colony, and Ordinance No. 11, "The Agricultural Products Protection Ordinance," which regulates the sale and purchase of certain valuable agricultural products, and which is designed to so check the common and rampant offence of prædial larceny, are also noteworthy enactments of great utility, whilst Ordinance No. 3, "The Crown Lands Ordinance," effected a much-needed consolidation of the laws relating to Crown lands. The remaining Ordinances deal with matters of comparatively minor importance.

IV.—EDUCATION.

The results of primary education in 1905-6 and 1906-7 compare as follows:—

Number of schools	1905-6	27	1906-7	27
Number on roll	,,	4,945*	,,	4,876*
Average attendance	,,	2,488*	,,	2,162
		£		£
Government grant-in-aid	,,	1,348	,,	1,354

An examination of the schools was held from May to July by the Inspector of Schools, Grenada, on whom this duty devolves annually.

(B.) Secondary Education.

The grant-in-aid of this was withdrawn at the close of the financial year 1904-5 owing to financial stress.

(C.) Industrial, Technical, and Agricultural Schools.

The average number of pupils on the books of the Agricultural School was 23. The four vacancies which occurred during the year in consequence of boys leaving the school were filled with new boys; and boys who left found useful employment on estates in the island. It is satisfactory to record that the demand for boys trained at the school was greater than the supply, and that the object of the institution is, in this and other respects, being rapidly realised.

The work of the school continued to show progress during the year, and it is worthy of remark that a pupil of this school was recently awarded the First Prize in the competitive examination between the three West Indian Agricultural Schools at St. Vincent, Dominica, and St. Lucia.

A good deal of most useful work was done at the stock farm attached to the school. The animals purchased and kept at the farm were a thoroughbred horse stallion, donkey stallion, Ayrshire bull, and a grade Ayrshire cow, besides small stock of good breeds, and poultry.

V.—GOVERNMENT INSTITUTIONS.

(A.) Hospitals.

During the year there were 688 admissions to the Colonial Hospital, making, with those remaining from the previous year, 744 cases treated, as against a total of 794 in the previous year.

* During the March quarter of the year.

The daily average dropped to 52·4, from averages of 55·8, 55, and 65 in the previous three years.

The death-rate was 7·8 of the total cases.

Operations numbered only 238, as against 294 in the previous year.

The Medical Officer-in-Charge was greatly facilitated in his work by the presence of an efficient European nurse-matron, selected by the Colonial Nursing Association, whose services continued to be of the greatest value.

(B.) Asylums.

Lunatics.

A portion of the old military citadel at Fort Charlotte is available for detention of male lunatics who are violent or manifest destructive tendencies; other males, as to whom it is judged that they may be so treated with safety, are kept under supervision in the pauper asylum, and female lunatics are also detained there. A portion of the wards is partitioned off into cells to provide further and more suitable accommodation for these female cases, some of which are occasionally acute.

As soon as practicable any violent or difficult case is sent to the asylum at Grenada, but sometimes that institution has not got the requisite accommodation, and the transfer is delayed.

There were only 10 cases under treatment during the year (four being new admissions), of whom two were discharged cured, two died, and one was transferred to the Grenada Asylum.

The total number of St. Vincent lunatics under care there was 25, at a cost to the colony of £499 10*s*.

Lepers.

The number of inmates of the Leper Asylum on the 31st March, 1906, was ten; one case was admitted and there were four deaths, leaving seven at the commencement of the new year.

There is no compulsory segregation.

(C.) Poor Houses.

The Colony's paupers are housed in the old military buildings at Fort Charlotte, on a considerable elevation, commanding the town of Kingstown.

There were 108 inmates on 31st March, 1906, and the admissions and discharges in 1906-7 were:—

—	Male	Female.	Total.
Admissions ...	36	29	65
Discharged ...	16	14	30
Died	25	23	48
	41	37	78

leaving 95 on 31st March, 1907.

The total expenditure in 1906-7 was £969 on the institutions, including lepers and lunatics kept locally, as against £1,090 in 1905-6.

Chronic tertiary syphilis accounts for the vast majority of cases to whom this institution offers asylum for the closing stages of their lives.

(D.) Reformatories.

Nil.

(E.) Savings Bank.

The following is a statement of the work of the Bank for the last five calendar years:—

Year.	Number of Depositors at 31st December.	Amount of Deposits.	Amount of Withdrawals.	Balance at credit of Depositors at 31st December (including Interest capitalised).
		£	£	£
1902	992	8,781	6,501	11,975
1903	987	6,587	6,171	12,653
1904	976	5,012	5,467	12,465
1905	933	4,883	5,276	12,232
1906	907	5,282	5,687	12,095

Up to 1900 the bank was established in Kingstown only, but in that year branches were opened at the small towns of Chateaubelair and Georgetown.

The amount due to depositors was distributed thus:—

		£		£
Kingstown,	31st Dec., 1905	11,258	31st Dec., 1906	10,914
Georgetown	,, ,,	488	,, ,,	635
Chateaubelair	,, ,,	486	,, ,,	546
	Totals	£12,232		£12,095

The Government made a profit on the working of the bank of £128 1*s*.

There was invested of Savings Bank funds at 31st December, 1906, £11,698.

VI.—JUDICIAL STATISTICS.

(A.) Police.

The St. Vincent police force consists of a chief, a sergeant-major of European birth, late of the Royal Irish Constabulary, and 48 West Indian non-commissioned officers and privates. In addition to their ordinary police work they are charged with many duties in connection with all such details of administration as excise supervision, district post office work, births and deaths registration, poor relief, and the management of district telephone exchanges.

They are drilled and have some training in the use of arms, and are supplied with Martini-Enfield rifles. The force also commenced a special and systematic course of musketry during the year, under the supervision of Captain Barker, the newly-appointed Staff Officer for the Windward Islands. In Kingstown they form a fire brigade for the town, receiving supplementary pay for this service from the funds of the Town Board.

(B.) Prisons.

226 were committed to prison in the year—148 men, 66 women, and 12 juveniles. The daily average was 12, against 17·7 in the previous year.

Prisoners with sentences of over two years were sent to serve their time in the Penitentiary at Grenada.

(C.) Criminal Statistics.

The total number of offences reported to the police or to the magistrates in 1906-7 was 982, against 893 in the previous year.

Of the offences reported in 1906-7, 218 were for offences against the person, 75 were for prædial larceny, 136 were for offences against property other than prædial larceny, 553 were for other offences.

The total number of convictions in the Inferior Courts was 680, against 601 in the previous year.

These convictions are classed as follows:—129 for offences against the person, 6 for malicious injuries to property, 54 for prædial larceny, 87 for offences against property other than prædial larceny, 156 for offences against Revenue Acts, &c., and 248 for other offences.

The convictions in the Supreme Court were as follows:—4 for offences against property, and 3 for other offences.

The acquittals were as follows:—In the Inferior Courts, 119; in the Supreme Court, 3.

VII.—VITAL STATISTICS.

(A.) Population.

The population at the 1891 census was 41,054. No census was taken in 1901 on account of the expense involved, which the colony was not in a position to afford. By the estimate of the Registrar-General, the population at 31st March, 1907, was 51,009. This figure, however, as explained in previous reports, is generally considered to be unreliable, as it takes no account of the flow of emigration which during the past two years has been very considerable in consequence of the exodus of labourers to Panama.

The births registered in 1906-7 were 1,768—856 male and 912 female—as against 1,709 in 1905-6. Of these, 1,018, or 57·57 per cent. were illegitimate.

Still-births were 104—37 legitimate and 67 illegitimate—the figures for the previous year having been 31 and 72 respectively.

Marriages were 141, a decrease of 55 on last year's figures, a decreased total which coincides with the increased percentage of illegitimacy. The figures are given in the following comparative table of marriages:—

Denomination.	1904–5.	1905–6.	1906–7.
Church of England ...	82	84	64
Roman Catholic... ...	24	10	23
Wesleyan...	83	96	46
Church of Scotland ...	13	6	6
Plymouth Brethren ...	—	—	2

The total registered deaths were 929, as against 775 in 1905-6, being 18·2 per 1,000 of the estimated population, a general rate of mortality which, after taking into account the deplorably high rate of infant mortality, must be regarded as very favourable.

The infant mortality (infants under one year, exclusive of still-births) reached no less a total than 311, being 33·5 per cent. of the whole. The similar figure in 1905-6 was 169, or 21·8 per cent.

(B.) Public Health.

A table of the causes of death, properly classified and stated, has been prepared under the supervision of the Medical Officer of Kingstown, Dr. C. W. Branch, and it may be interesting to quote in an abridged form the information it gives:—

Causes of Death.

General diseases (includes syphilis 119, tubercle 66, tetanus 37, malarial fevers 18)	356
Diseases of nervous system	36
,, ,, circulatory system	25
,, ,, respiratory ,, ...	51
,, ,, digestive ,, ...	132
Parasites	47
Age	87
Still-born	104
Other diseases	91
Total	929

(C.) Sanitation.

There is nothing special under this head to which to call attention. In the villages of the peasantry, the ideas and methods in sanitary matters are elementary in the extreme. In the towns things are passable.

(D.) Climate.

The rainfall for the year 1906-7 was 104·45 inches, as against 90·40 inches in 1905-6.

Rain fell on 292 days throughout the year.

The maximum fall in one day was 3·18 inches, on 7th October.

June was the wettest month, with 16·88 inches, and April the driest, with only 1·63 inches.

The mean monthly temperature was 78·3° F. Maximum for the year 90° F., in November, minimum, 63° F., in March.

VIII.—POSTAL, TELEGRAPH, AND TELEPHONE SERVICES.

During the year very unsatisfactory and uncertain conditions prevailed in connection with the Royal Mail services between Europe and this colony; for although there was a regular service across the Atlantic to and from Barbados, the inter-colonial steam communication with that colony was always unpunctual, and indeed it ceased entirely for several weeks (June to August).

To add to these difficulties, Messrs. Scrutton's Direct Line of steamers, as stated above under "Shipping," discontinued their fortnightly service during the month of July.

All mails to and from Europe were carried to and from Barbados as ship-letters by such sailing or steam opportunities as from time to time presented themselves; and, although some little saving has resulted on public expenditure from not having to pay a mail subsidy during the year, it is a matter of general congratulation at the time of writing that a new inter-colonial mail service has been lately arranged and is only awaiting final ratification by the Imperial Parliament.

The mail service to and from Canada was renewed in July, 1906, for a further period of four years, with improved conditions. Under the new contract with Messrs. Pickford and Black's Steamship Company, which is generously supported and encouraged by the Imperial and Canadian Governments, St. Vincent now secures a 24-days' return service instead of the monthly service which formerly existed, and also gains extra facilities for communicating with all the most important West Indian colonies excepting Grenada. The weekly connection with Grenada was, however, continued by the arrangement whereunder our inland postal contractor for the Grenadines takes his sloop on to Carriacou, where he exchanges mails with the Grenada coasting steamer every week.

The inland postal system was also continued, whereunder the Windward district of the Colony is served three times a week, the Leeward district daily, and the Grenadines, as already stated, weekly.

The postal order system introduced in 1904 maintained its growing popularity, and there was a large increase in the numbers issued. The issue of orders for amounts exceeding 10*s.* 6*d.* was initiated during the year. In other respects the volume of the post office business was normal, except that the sale of stamps declined.

The revenue of the telephone department was £405, including £175 transferred to that head on account of the Government installations. The expenditure was £335. The lines run from Kingstown to Chateaubelair, on the Leeward side of the Island, and to Mesopotamia and Georgetown on the Windward side, about 24 miles either way, and the service is a most useful one.

IX.—MILITARY FORCES AND EXPENDITURE.

In March last active measures were set on foot towards the establishment of a volunteer reserve force, which are now developing in a satisfactory and practical manner; and in that month considerable impetus, more particularly in the way of firing exercise, occurred on the occasion of the first visit to this colony of the recently appointed military adviser, the Staff Officer of the Windward Islands.

X.—GENERAL OBSERVATIONS.

In August, 1906, the appointment of Ralph Champneys Williams, Esquire, C.M.G., to be Governor and Commander-in-Chief of the Windward Islands was announced; and in October Sir Robert Llewelyn, K.C.M.G., paid his last visit to this colony prior to his retirement from the Governorship. That visit was for a period of four days, and His Excellency, our present Governor, arrived in the Windward Islands and passed through St. Vincent on his way to Grenada on the 15th of January. From October, 1905, until His Excellency's arrival, Philip Clarke Cork, Esquire, C.M.G., assumed the office of Administrator-in-Chief of the Windward Islands by virtue of his Dormant Commission in that behalf.

During the year the expansion in all agricultural industries, especially in the cultivation of Sea Island cotton, was remarkable, and this development in the natural resources of the colony has materially improved the economical conditions of the people generally, whilst the bright prospects foreshadowed in last year's report have been fully realised up to date.

The colony's balance sheet discloses a sound position financially, as the surplus assets were increased during the past year by the sum of £1,220, making the grand total of assets amount to £2,964 at the 31st March, 1907. From these assets it is proposed to repay to the Imperial Treasury the sum of £1,441, which had been advanced to the colony by the mother country in aid of anticipated deficits in previous years, which deficits did not in fact ultimately accrue.

The present excess of assets in the local treasury is to be mainly attributed, however, to the long-continued policy of exercising strict economy and retrenchment in every detail of the local administration; in the course of exercising this policy, the grants which were formerly made towards the encouragement of secondary education in the colony have been stopped, and the annual subsidy of £400 hitherto paid to the Telegraph Company for supplying to the public daily bulletins of the world's news and of commercial quotations has been

discontinued. The colony's expenditure has also been largely curtailed by numerous reductions in the salaries voted for various public offices, and some saving incidentally arose during the past year from the temporary cessation in payment of the mail contract subsidy. It is hoped that, with the colony's returning prosperity and increasing public assets, the Government will, at no distant date, be in a position to relax its present frugal policy in certain directions without having again to avail itself of financial assistance which His Majesty's Government has, for so many years and in such large sums, accorded to the colony from the Imperial Exchequer.

The terrible effects of misery and devastation caused by the successive blows sustained from the hurricane of 1898 and the eruptions of the Soufrière in 1902-3 are, it is most gratifying to be able to report, fast disappearing, both morally and physically; and I think there is no question that, given a succession of seasons, under the present favourable conditions without any throw-back through the recurrence of a further catastrophe similar to either of those referred to above, the colony of St. Vincent will eventually be restored to its old-time sound position.

DANIEL T. TUDOR,

Administrator (acting).

31st December, 1907.

No. 577.

ST. VINCENT.

(For Report for 1906–7, *see* No. 555.)

THE ACTING GOVERNOR to THE SECRETARY OF STATE.

St. Lucia,

21st August, 1908.

Forwarded.

P. C. CORK,

Acting Governor.

The Right Honourable
Earl of Crewe, K.G.,
&c., &c., &c.

Government House,

St. Vincent, 10th August, 1908.

SIR,

I HAVE the honour to forward herewith for transmission to the Secretary of State, my report on the Blue Book of the Colony of St. Vincent for the year 1907-8.

I am, &c.,

EDWARD J. CAMERON,

Administrator.

His Excellency
P. C. Cork, C.M.G.,
Acting Governor of the Windward Islands,
&c., &c., &c.,
St. Lucia.

1125 Wt 24282 10/08 D & S 5 33740

REPORT ON THE BLUE BOOK OF ST. VINCENT FOR THE YEAR 1907-8.

I.—FINANCIAL.

General Revenue and Expenditure.

The following comparative statements and table give the heads of revenue and expenditure, and the amounts received under those heads, for the years 1906-7 and 1907-8, as well as the total revenue and expenditure for each of the last five years, 1903-4 to 1907-8:—

(Table 1.)

Comparative Statement of Revenue for the Years 1907-8 *and* 1906-7.

Heads of Revenue.	Amount collected in the year 1906-7.	Amount collected in the year 1907-8.	Increase.	Decrease.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1. Customs:—				
Import	10,549 7 10	12,167 2 11	1,617 15 1	—
Export	669 8 10	682 2 9	12 13 11	—

(Table 2.)

Total Revenue and Expenditure for Five Years 1903-4 *to* 1907-8.

Year.	Revenue.			Expenditure.		
	—		Total.	—		Total.
		£	£		£	£
1903–4.	Local	20,944		Local	26,657	
	Imperial Grant	5,572		Imperial Grant	1,458	
			26,516			28,115
1904–5.	Local	22,448		Local	25,228	
	Imperial Grant	5,818		Imperial Grant	1,287	
			28,266			26,515
1905–6.	Local	24,928		Local	24,625	
	Imperial Grant	1,972		Imperial Grant	1,286	
			26,900			25,911
1906–7.	Local	24,723		Local	23,503	
	Imperial Grant	1,308		Imperial Grant	1,146	
			26,031			24,649
1907–8.	Local	27,543		Local	23,508	
	Imperial Grant	913		Imperial Grant	1,145	
			28,456			24,653

The total local revenue of the Colony for the year 1907-8 was £27,543, being £2,983 more than the estimate and £2,820 more than the receipts of the previous year.

The total local expenditure, on the other hand, was £23,508, being £1,593 less than the estimate and just £5 more than the figure of the previous year.

The Colony thus made £4,035 clear profit on the year's working.

This result is due to a general revival of prosperity induced mainly by the growing success of the cotton industry and to some extent by the improved market for arrowroot.

The larger revenue returns from imports and excise are clear indications of increased spending power among the people, and the whole present outlook is distinctly encouraging, and a vast change from the conditions of a few years back, when a grant of some thousands from the Imperial Treasury had to be annually made to make good the local deficit.

No changes in taxation took place during the year under review.

Assets and Liabilities.

The excess of assets at 31st March, 1908, was £6,258.

At 31st March, 1907, the account showed an excess of £2,964. From this last sum, however, £741 is to be deducted, which amount was paid back to the Imperial Treasury on account of an excess of deficit grant received in previous years. The remainder, £2,223, with the £4,035 profit on the year added, gives the £6,258 above mentioned.

Public Debt.

The public debt of the Colony at 31st March, 1908, stood at £3,550, as against £4,150 at the end of the previous financial year. Of the above sum, however, the amount for which the Colonial revenue is actually liable is £600 only, which will be redeemed by 1910. The remainder, though guaranteed by the Colony, is repayable from the municipal funds of the towns of Kingstown and Georgetown.

In the same way the Colony is responsible for the unpaid balance of the Hurricane Loan to planters from the Imperial Treasury, which is £12,861 12*s*. 0*d*. This last is being steadily paid off by the borrowers at the rate of about £750 per annum to the local Government, by which annual payments are in turn made to the Imperial Treasury through the Crown Agents.

Currency.

Gold, American and British, notes of the Colonial Bank, and British silver and copper constitute the currency of the Island.

The Government's accounts are kept in sterling, and commercial accounts in dollars and cents.

Finances of Municipalities.

The management of the affairs of the town of Kingstown is vested in a Board, one-half of the members of which body are elected by the ratepayers and the other half nominated by the Government. The small towns of the Colony are controlled by Wardens, appointed annually by the Government.

The following comparative statements give the total revenue and expenditure of these towns for the last five years:—

Revenue.

Town.	1903.	1904.	1905.	1906	1907.
	£	£	£	£	£
Kingstown	1,873*	1,657	1,664	1,708	1,706
Georgetown	90	164	137	105	108
Chateaubelair	27	23	32	34	34
Calliaqua	36	31	38	35	31
Barrouallie	38	29	33	40	45
Layou	28	16	19	18	19
Bequia	6	15	11	10	9

* Inclusive of £201, 1902 revenue, not passed to account till 3rd January, 1903.

Expenditure.

Town.	1903.	1904.	1905.	1906.	1907.
	£	£	£	£	£
Kingstown	1,609	1,650	1,472	1,698	1,758
Georgetown	137	120	103	102	108
Chateaubelair	31	26	24	28	28
Calliaqua	33	40	24	52	30
Barrouallie	20	27	20	34	31
Layou	23	34	19	12	9
Bequia	7	4	10	27	2

Debts of Towns.

The debts of the towns at 31st December, 1907, were as follows:—

	£	£
Kingstown water supply	2,400	
Kingstown town improvement ...	250	
		2,650
Georgetown water supply		300
		£2,950

Provision for repayment of these loans is made by rates levied annually on the townspeople, and the debts are secured on the general revenue of the Colony. The Kingstown water supply loan is being repaid at a rate varying from £200 to £400 per annum, the town improvement loan at the rate of £50 per annum, and the Georgetown loan by annual instalments of £50.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and Exports.

The following comparative statement gives the value of the chief articles of import in 1907-8 and the previous year:—

Imports.

Chief Articles.	Value.	
	1906–7.	1907–8.
Class I.—	£	£
Beef, salted or cured	382	545
Biscuits	1,611	2,548
Butter...	1,654	1,711
Coffee	357	392
Fish, salted, &c.	5,954	5,911
Flour, wheaten	8,386	10,400
Flour, other kinds	567	708
Oilmeal and cake	345	435
Pork, salted	1,917	2,129
Rice	2,279	2,702
Salt	315	320
Spirits	868	981
Sugar, muscovado	126	139
Sugar, refined...	436	633
Sugar, crystallized	212	202
Wine	570	785
Food and drink supplies, unenumerated	939	1,262
Tobacco, cigars, &c.	889	1,038
Class II.—		
Manure	581	822
Petroleum oil...	1,383	1,400
Timber and shingles	7,000	7,270
Class III.—		
Textile manufactures, other than rope, cordage, and canvas.	16,581	22,021
Metal, manufactured	5,922	10,091
Boots and shoes	958	1,001
Cement	467	571
Rope, cordage, and canvas	1,134	1,540
Soap	1,569	1,747
Articles unenumerated, other than textiles or metal manufactures.	2,817	3,979

These figures are clear evidence of the general improvement that has taken place.

The annual report of the Supervisor of Customs shows an increase in value of imports of £18,546 compared with the figures of 1906-7, the distribution being as follows:—

Increase from the United Kingdom ...	9,154
,, ,, British Colonies	9,565
	£18,719
Decrease from Foreign Countries ...	173
	£18,546

The direct import trade from Canada and the United States seems practically stationary, the figures being £8,273 and £16,686, respectively, as against £8,145 and £17,319 in 1906-7. The increase from the British West Indies is £9,450, made up chiefly of merchandize of United States origin obtained at Barbados.

The value of the principal exports is given in the annexed table:—

Exports.

Articles.	1906–7.	1907–8.
	£	£
Cassava starch	1,439	1,296
Whale oil	250	446
Turtle shell	433	4[illegible]9
Firewood	493	742
Cotton and cotton seed	18,949	33,133
Vegetables	2,690	2,213
Syrup	452	550
Sugar, muscovado	3,555	3,172
Pease	689	504
Molasses	1,111	889
Rum...	—	99
Ground-nuts	1,929	1,589
Live stock	5,192	4,781
Fresh fruit	38	65
Farine	286	174
Arrowroot	24,351	25,555
Cocoa	3,838	4,960

The satisfactory feature of the above is the large increase in the output of cotton, and the steady rise in the cocoa figure. The larger cotton cultivation accounts to some extent for the smaller export of vegetables, pease, ground-nuts, &c.

The total imports and exports for the five years 1903-4 to 1907-8 are given below:—

Imports.

Classes.	1903–4.	1904–5.	1905–6.	1906–7.	1907–8.
	£	£	£	£	£
I. Live animals, food, drink &c.	31,643	32,534	31,575	32,000	38,864
II. Raw materials... ...	10,076	8,628	6,566	12,268	11,175
III. Manufactured articles	36,134	33,076	30,956	33,740	46,515
Total	77,853	74,238	69,097	78,008	96,554

Exports.

Classes.	1903–4.	1904–5.	1905–6.	1906–7.	1907–8.
	£	£	£	£	£
I. Live animals, food, drink, &c.	33,023	43,374	40,935	46,393	45,972
II. Raw materials... ...	3,572	6,648	10,289	21,899	36,120
III. Manufactured articles	1,579	1,880	1,854	15,463*	12,173†
Total	38,174	51,902	53,078	83,755	94,265

* Includes £13,200 specie. † Includes £10,000 specie.

The volume and direction of the Colony's trade in the five years 1903-4 to 1907-8 are shown in the following tables:—

Imports.

—	1903–4.	1904–5.	1905–6.	1906–7.	1907–8.
	£	£	£	£	£
United Kingdom	31,146	28,816	25,471	27,126	36,280
British Colonies	26,162	29,562	30,691	32,870	42,436
Foreign Countries	20,545	15,860	12,935	18,012	17,839
Total	77,853	74,238	69,097	78,008	96,554

Exports.

—	1903–4.	1904–5.	1905–6.	1906–7.	1907–8.
	£	£	£	£	£
United Kingdom	19,204	22,192	24,405	39,878	52,718
British Colonies	16,470	26,881	27,920	43,184	40,535
Foreign Countries	2,499	2,829	753	693	1,012
Tota	38,173	51,902	53,078	83,755	94,265

Manufactures and Fisheries.

The Grenadines whalers had a better year, and the export of whale oil rose from 5,824 gallons, valued at £250, in 1906-7, to 9,632 gallons, of the value of £446, in 1907-8.

The Central Cotton Ginnery erected in 1903-4 still remains under the successful management of the officers of the Imperial Department of Agriculture. The rate charged for ginning and baling is 1*d.* per lb., and the profit on the handling of the crop amounted to about £600.

The lint again secured the best price in the English market, but prices have unfortunately been very much lower than before, averaging from 1*s.* 3*d.* to 1*s.* 8*d.* as against 1*s.* 11*d.* to 2*s.* 5*d.*

One new private ginnery has been established in Kingstown with three gins, which has been of assistance in handling the largely increased crop, and another, with two gins, is at work on the leeward side of the island.

The disintegrator for crushing cotton seed has been used to some extent, one proprietor having some forty odd tons of seed crushed for the purpose of manure for his cotton lands.

Agricultural Industries and Agricultural Department.

Arrowroot still holds the first place in area of cultivation, but cotton this year has overtopped it in value as an export.

The Sea Island cotton export in 1907-8 was 388,833 lbs. as against 225,632 lbs. in the year previous, the area in cultivation being 3,200 and 1,534 acres respectively.

The yield did not quite come up to the anticipations, and planters are learning the lesson that land *must* be well selected, prepared, and manured, and the cultivation most scrupulously cared for in all stages if the best results are to be obtained.

It is greatly to be hoped that some improvement in price will take place before the next crop sales, and as the serious fall has been attributed to the general money disturbance occasioned by the recent American crisis, whereby the demand for the extra fine goods for which this quality of cotton is required has temporarily diminished, there are reasonable expectations that the sale conditions at the end of this year will be better.

The sugar industry may be said to be only just alive. Some cultivation there must always be for the sake of the rum manufacture, and as an incentive to attract and keep a supply of labour, but except for an output from the Carib country, where 160 odd acres have been put in by the proprietor in canes as a first step to the restoration of the land, the prospect of any large agricultural activity in this direction is practically nil.

As indicated, the proprietor of the Carib Country Estates has at last started on the work of restoration, and considerable progress in this direction has been made. A grant of £1,600 from the balance of the Eruption Fund to assist in

putting back the water supply canal, on which these lands are entirely dependent, was approved at the beginning of the present year, and the work is now nearly complete.

On the Land Settlement Estates matters are progressing fairly, and this year an appreciable quantity of cocoa from the various small holdings was marketed.

Anthrax still continues to be a serious trouble, and the question of the further action to be taken in dealing with it is now under consideration.

The Crown land which the Government has for disposal is nearly all mountain land, for the most part suitable for provision-grounds only. The price varies from £1 to something over £3 according to locality and nature of the land and whether purchase is arranged for by cash or instalments.

The amount of Crown land proper granted during 1907-8 was 68 acres, the number of grants issued being 21 as against 55 in the previous year; while of eruption lands (the latter being the estates acquired from the Eruption Fund in 1902 for location of refugees, on which, however, there were numerous tenants found, many of whom have since acquired their holdings) grants were issued to 34 persons, of which 33 were for small lots and one for a house-spot.

The revenue from sales and rental of Crown lands, not including eruption estates, was £460, as against £407 in the previous year; whilst the revenue from the eruption lands aggregated £167, as against £233 in the previous year.

Shipping.

A table of the entries and clearances of steamers and sailing vessels during the years 1906-7 and 1907-8 is annexed, as also a comparative statement of the total shipping for the last five years. These figures do not include ships-of-war, of which three British and one Italian visited the Colony during the year:—

III.—LEGISLATION.

Eight Ordinances were passed during the year 1907, but none were of any major importance.

IV.—EDUCATION.

The results of primary education in 1906-7 and 1907-8 compare as follows:—

—	1906-7.	1907-8.
Number of schools	27	27
Number on roll	4,876*	4,578*
Average attendance	2,162	2,265
	£	£
Government grant-in-aid	1,354	1,357

During the March quarter of the year.

The grant-in-aid of secondary education was withdrawn at the close of the financial year 1904-5 owing to financial stress. It is intended, however, to re-open a secondary school shortly with a resident master, who will combine this duty with those of Inspector of Schools.

The average number of pupils on the books of the Agricultural School was 24.

This institution is now beginning to be more largely appreciated, but it is unfortunate that the standards of intelligence and education of the boys whose parents apply for their admission are not higher. Notwithstanding this, however, the senior prize, offered for competition between the pupils of the senior classes at the three schools at St. Vincent, St. Lucia, and Dominica, was awarded to a St. Vincent pupil.

Two pupils left and took useful places on estates in the island.

The small stock farm continued to be worked satisfactorily and affords valuable opportunities for training the boys.

V.—GOVERNMENT INSTITUTIONS.

During the year there were 610 admissions to the Colonial Hospital, making, with those remaining from the previous year, 656 cases treated, as against a total of 744 in the previous year.

The daily average was 55, as against 52·4, 55·8 and 55 in the previous three years.

The death-rate was 6·5 of the total cases.

Operations numbered 153 as against 238 in the previous year.

The Medical Officer-in-Charge is greatly assisted in his work by the presence of an efficient European nurse-matron, selected by the Colonial Nursing Association, whose services are of great value.

A portion of the old military citadel at Fort Charlotte is available for detention of male lunatics who are violent or manifest destructive tendencies; other males, as to whom it is judged that they may be so treated with safety, are kept under supervision in the pauper asylum, and female lunatics are also detained there. A portion of the wards is partitioned off into cells to provide further and more suitable accommodation for these female cases, some of which are occasionally acute.

As soon as practicable any violent or difficult case is sent to the asylum at Grenada, but sometimes that institution has not got the requisite accommodation, and the transfer is delayed.

There were 15 cases under treatment during the year (ten being new admissions), of whom one was discharged cured, one died, and three were transferred to the Grenada Asylum. The total number of St. Vincent lunatics under care there was 28, at a cost to the Colony of £457.

The numbers of inmates of the Leper Asylum on the 31st March, 1907, was 7, of whom one died during the year. There were no admissions. There is no compulsory segregation of lepers.

The Colony's paupers are housed in the old military buildings at Fort Charlotte, on a considerable elevation commanding the town of Kingstown.

There were 95 inmates on 31st March, 1907, and the admissions and discharges in 1907-8 were:—

	Male.	Female.	Total.
Admissions	21	30	51
Discharged	8	10	18
Died	18	17	35
	26	27	53

leaving 93 on 31st March, 1908.

The total expenditure in 1907-8 was £919 on the poorhouse, including the cost of lepers and lunatics kept locally, as against £969 in 1906-7.

Chronic tertiary syphilis accounts for the vast majority of cases to whom this institution offers asylum for the closing stages of their lives.

Savings Banks.

The following is a statement of the work of the Bank for the last five calendar years:—

Year.	Number of Depositors at 31st December.	Amount of Deposits.	Amount of Withdrawals.	Balance at Credit of Depositors at 31st December (including Interest Capitalized).
		£	£	£
1903	987	6,587	6,171	12,653
1904	976	5,012	5,467	12,465
1905	933	4,883	5,276	12,232
1906	907	5,282	5,687	12,095
1907	1,010	7,629	6,757	13,247

Up to 1900 the bank was established in Kingstown only, but in that year branches were opened at the small towns of Chateaubelair and Georgetown.

The amount due to depositors was distributed thus:—

	At 31st December, 1906	At 31st December, 1907
Kingstown	£10,914	£11,837
Georgetown	635	828
Chateaubelair	546	582
Totals	£12,095	£13,247

The Government made a profit on the working of the bank of £131.

There was invested of Savings Bank funds at 31st December, 1907, £11,997.

VI.—JUDICIAL.

The St. Vincent Police Force consisted of a chief, a sergeant-major of European birth, late of the Royal Irish Constabulary, and 48 West Indian non-commissioned officers and privates. This number has been now increased to 50.

They are drilled and have some training in the use of arms, and are supplied with Martini-Enfield rifles.

In addition to ordinary police work, they are charged with many duties in connection with current details of administration, such as excise supervision, district post office work, births and deaths registration, poor relief, and the management of district telephone exchanges.

Furthermore, the Prison is worked entirely by the police, save for the assistance of one warder in charge of gangs at labour outside. A non-commissioned officer and a certain number of privates are told off from time to time for this duty, constant supervision being, of course, exercised by the sergeant-major and chief.

In Kingstown, a select number of the force form a fire brigade for the town, receiving supplementary pay for this service from the funds of the Town Board.

It will thus be seen that the small force of police in St. Vincent have little time for idling, and to this in some measure is probably attributable their acknowledged efficiency.

In July of 1907, Mr. F. W. Griffith, who had been acting as Chief of Police since early in 1905, and whose energy and success in the suppression of illicit distillation has been marked, was confirmed in the office.

During the disturbances which occurred in April in the neighbouring island of St. Lucia, an armed force of 25 police from here, under command of the sergeant-major, were sent across at a day's notice to supplement the available force there. The men responded eagerly to the call, and behaved excellently, rendering useful assistance, which was much appreciated.

The number of committals to prison in the year was unusually large, namely, 221 men, 73 women, and 12 juveniles, in all 306. The daily average was 34·7, against 12 in the previous year.

No special reasons are assigned by the Chief of Police in his report for this increase, beyond the presence for five months of the time of sixteen prisoners from St. Lucia, convicted of participation in the riotous disturbance which took place there in April. It is not unusual, however, in the West Indies, to find the prison average rising with increased general prosperity.

The practice of sending prisoners with sentences of over two years to serve their time in the Penitentiary at Grenada was also discontinued.

The total number of offences reported to the police or to the magistrates in 1907-8 was 1,015, against 982 in the previous year.

Of the offences reported in 1907-8, 251 were for offences against the person, 50 were for prædial larceny, 169 were for offences against property other than prædial larceny; 545 were for other offences.

The total number of convictions in the Inferior Courts is returned as 676, against 680 in the previous year.

These convictions are classed as follows:—117 for offences against the person, one for malicious injuries to property, 36 for prædial larceny, 108 for offences against property other than prædial larceny, 220 for offences against Revenue Acts, &c., and 194 for other offences.

The convictions in the Supreme Court were as follows:—7 for offences against property, and 5 for other offences.

The acquittals were as follows:—In the Inferior Courts, 128; in the Supreme Court, 1.

VII.—VITAL STATISTICS.

The population at the 1891 census was 41,054. No census was taken in 1901 on account of the expense involved, which the Colony was not in a position to afford. By the estimate

of the Registrar-General, the population at 31st March, 1908, was 51,779. This figure, however, as explained in previous reports, is generally considered to be unreliable, as it takes no account of the flow of emigration, which, during the past few years, has been very considerable in consequence of the exodus of labourers to Panama.

The births registered in 1907-8 were 1,668—849 male and 819 female—as against 1,768 in 1906-7. Of these, 947, or 56·77 per cent. were illegitimate.

Still births were 112—37 legitimate and 75 illegitimate; the figures for the previous year having been 37 and 67, respectively.

Marriages were 179, an increase of 38 on last year's figures. The figures are given in the following comparative table of marriages:—

Denomination.	1905-6.	1906-7.	1907-8.
Church of England	84	64	78
Roman Catholic	10	23	22
Wesleyan	96	46	68
Church of Scotland	6	6	11
Plymouth Brethern	—	2	—

The total registered deaths were 898, as against 929 in 1906-7, being 17·34 per 1,000 of the estimated population.

The infant mortality (infants under one year, exclusive of still births) was 230, being 25·61 per cent. of the whole. The similar figure in 1906-7 was 311, or 33·47.

The public health was more satisfactory than during the previous year. The following table of causes of death is interesting:—

Causes of Death.

General diseases (includes syphilis 154, tubercle 55, tetanus 27, malarial fevers 17)	345
Diseases of nervous system	30
,, ,, circulatory system	33
,, ,, respiratory ,, ...	35
,, ,, digestive ,, ...	162
Parasites	39
Age	70
Still-born	112
Other diseases	72
Total	898

The rainfall for the year 1907-8 was 93·17 inches, as against 104·45 inches in 1906-7.

Rain fell on 301 days throughout the year.

The maximum fall in one day was 2·75 inches, on 15th November.

December was the wettest month, with 12·26 inches, and March the driest, with only 3·06 inches.

The mean monthly temperature was 77·7° F. Maximum for the year 88° F., which was experienced, curiously enough, in April, October, November and February, and minimum, 64° F., in February.

VIII.—POSTAL, TELEGRAPH, AND TELEPHONE SERVICES.

The fortnightly intercolonial mail service performed by the Royal Mail Steamers was discontinued for a few weeks in May and June, but has, since then, been regularly carried on, a new contract therefor extending over a period of ten years having been entered into in August last.

The steamers of the Pickford and Black Line from Halifax, Nova Scotia, under contract with the Imperial and Canadian Governments, continued to run as usual, and occasional calls were made durng the year at the port of Kingstown by the steamers of the Direct and Quebec Steamship Lines.

A new line of steamers, the East Asiatic, from Copenhagen viâ London and the Danish West Indies, commenced calling at St. Vincent at the end of 1907.

There is an inland postal system by which the Windward District of the Colony is served three times a week, the Leeward District daily and the Grenadines weekly.

The postal order system introduced in 1904 continued to make strides in popular favour, and there was a large increase in the numbers issued.

The volume of the post office business was in excess of that of the previous year.

The revenue of the telephone department was £454, including £175 transferred to that head on account of the Government installations. The expenditure was £337. The lines run from Kingstown to Chateaubelair, on the Leeward side of the island, and to Mesopotamia and Georgetown on the Windward side, about 24 miles either way, and the service is a most useful one.

IX.—GENERAL OBSERVATIONS.

Sir Ralph Williams, K.C.M.G., Governor of the Windward Islands, visited the Colony in September, 1907, for a period of 21 days. During the absence on leave from June, 1907, to January, 1908, of the Administrator, Mr. E. J. Cameron, C.M.G., the local Government was administered by Mr. D. T. Tudor, Attorney-General of Grenada and St. Vincent.

As a result of the generosity of Mr. Andrew Carnegie, a very substantial Free Public Library Building, which will be a valuable addition to the Colony's institutions, was erected during the year by the Kingstown Board on a site belonging to that body in the town, and is now approaching completion.

Financially and industrially the year was a most satisfactory one.

The Colony has now been fairly extricated from the slough of impecuniosity in which it has been floundering for so many years. The financial returns show that a clear profit of over £4,000 was made during the year, and there are not wanting signs of further revenual expansion.

With a small but useful surplus of £6,000 in reserve and practically no debt, collections well in hand, and the contributory support of a variety of special funds, the income of which is available to supplement and so relieve current resources in certain directions, the pecuniary position of St. Vincent may, I think, be looked on as reasonably secure, for some years to come at any rate.

In arriving at this result, however, the Colony has, perforce, had to be somewhat starved; and it is pleasant, therefore, to record that the current year's Estimates make provision for various matters, such as further medical aid, secondary education, cable news subsidy, and other smaller amenities, which for some time past have had to be done without.

During the year 1907-8 the total area of land in the Colony under cultivation, including peasant agriculture, was larger than has been the case for very many years past.

The first steps were also taken last autumn towards resuscitation of the Carib Country, the large tract of valuable land at the north-east of the island that was devastated by the 1902 volcanic eruption, and at the present time the restoration of the destroyed water supply is almost complete. A large amount of labour has been and will continue to be employed here, and the local supply is scarcely equal to the demand.

The natural result of these conditions has been to place considerably more money in circulation, and to increase the purchasing power and comfort of the labouring class, bringing with such increase added contentment.

The policy of road-improvement which has been steadily pursued, and particularly the provision to the peasants of readier and improved means of access to and from the Crown and Land Settlement and other lands owned and worked by them, has certainly been a powerful contributing factor to

Ordnance Survey Office, Southan

this contentment. The latest work of this kind has been in the upper recesses of the Buccament Valley, where bush tracks have now been replaced by decent bridle-paths, down which a donkey-load of provisions may conveniently be brought, and which, moreover, admit of these lands and the general conditions being taken cognizance of by visiting officers.

A great deal, however, as regards the continuance and further development of the present quiet prosperity (I may now venture to use a term which strikes rather strangely on the ear in connection with St. Vincent), hinges on the future of the cotton industry and whether a more remunerative figure than that of last year will be forthcoming for the staple in the future, such as will encourage the estate owners to extend the cultivation and to expend on the land the requisite preparation, care, and supervision, with, of course, the attendant expense, which the industry demands to ensure its continued successful exploitation, and without which the quality of the product cannot be maintained.

It is unfortunate that the Colony is so little visited by the travelling public, but the present arrangements, under which the Royal Mail Steamers arrive at the port of Kingstown only at night, coupled with the absence of any first-class hotel accommodation, are serious obstacles to this. St. Vincent is an exceedingly beautiful and a very healthy island, with a good and pleasant climate, especially in the winter months; and it has the advantage over islands of similar mountainous formation, of considerable general accessibility, possessing a good carriage road for some 37 miles round the coast, and a regular net-work of easy bridle-roads through a large proportion of the interior.

In its Soufrière volcano it possesses a natural feature of absorbing interest. The ascent of this mountain is now quite easily compassed, and the magnificent prospect at the crater's summit is well worth the slight fatigue involved.

Lack of suitable accommodation off the beaten track is, of course, the drawback, but any enterprising traveller in good health and of reasonable activity and not too exigent, who may be wishful to have an experience of West Indian ways and scenes, might do much worse than spend a fortnight in investigating the many natural beauties which he will find here.

A sketch-map of St. Vincent is attached to this report, which has on it various notes of interest, and will serve to a fuller understanding by the average reader of the configuration, size, and settlement of the Colony and its exact location.

EDWARD J. CAMERON,
Administrator.

25th July, 1908.

COLONIAL REPORTS.

The following recent reports relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title page :—

ST. LUCIA.

(For Report for 1906, *see* No. 553.)

THE ACTING GOVERNOR to THE SECRETARY OF STATE.

St. Lucia,
22nd August, 1908.

MY LORD,

I HAVE the honour to transmit herewith the annual report on the Blue Book of St. Lucia for the year 1907.

I have, &c.,

P. C. CORK,
Acting Governor.

The Right Honourable
Earl of Crewe, K.G.,
&c., &c., &c.

1125 Wt 24282 10,08 D & S 5 33742 A 2

REPORT ON THE BLUE BOOK FOR 1907.

I.—FINANCIAL.

The finances are recovering from the condition of stringency in which they were involved by the sudden stoppage of military works three years ago and the subsequent abandonment of Castries as a garrison town. The ordinary revenue, which had been barely sufficient during the previous two years to meet an expenditure restricted severely within the narrowest limits, increased during the past year, in response partly to additional taxation, but in large measure to greater activity in trade and to agricultural prosperity, by over 14 per cent., not only covering the expenditure for the year, including heavy extraordinary expenses on account of a strike accompanied by disturbances, and a considerable outlay on a new road, but adding materially to the surplus. The surplus, which is nearly all invested in stocks or held in cash, now amounts to £25,400, with £2,600 invested as an insurance on public buildings, making the true surplus £28,000. The last contribution of £2,100 has been made for Interest and Sinking Fund on the Central Factory Loan of £30,000 incurred in 1875, thus securing a permanent relief on account of Debt Charges. The financial position of the Government has been greatly strengthened and may be considered satisfactory.

Tables are appended showing the Revenue and Expenditure for 1907-8 as compared with that for 1906-7.

Revenue.

Comparative Statement of the Revenue of the Colony for the years 1906-7 *and* 1907-8.

Heads of Revenue.	Actual Revenue 1906-7. £	s.	d.		Actual Revenue 1907-8. £	s.	d.
1. Customs	25,521	9	4	...	32,621	14	10
2. Port, Harbour, &c., Dues	4,866	11	0	...	7,086	8	10
3. Licences, Excise, &c., and Internal Revenue not otherwise classified	17,764	12	1	...	18,955	18	9
4. Fees of Court or Office, Payments for Specific Services, and Re-imbursements in Aid ...	3,710	8	2	...	3,510	9	4
5. Post Office	1,113	2	8	...	1,118	15	6

11. Medical	2,576	7	2	...	2,918	7	5
12. Hospitals and Asylums	2,913	4	1	...	3,018	4	0
13. Charitable	515	13	7	...	553	5	10
14. Education	4,343	9	9	...	4,326	17	11
15. Ecclesiastical	1,600	0	0	...	1,600	0	0
16. Agriculture (from local funds)	770	4	6	...	946	3	7
17. Miscellaneous	2,531	9	4	...	2,649	3	8
18. Colonial Engineer's Department	2,883	9	6	...	2,595	9	7
19. Public Works Recurrent	7,015	0	0	...	6,684	1	0
	58,224	12	11	...	59,466	13	3
20. Public Works Extraordinary	1,343	2	7	...	4,685	10	8
	59,567	15	6	...	64,152	3	11
16A. Agriculture (from Imperial Funds) ...	726	3	4	...	687	11	7
Total ...	£60,293	18	10	...	£64,839	15	6

The Expenditure was £4,189 more than was estimated for. The excess is due to considerable expenditure having been incurred on new roads for the development of the Colony voted after the Estimates were passed; also to disturbances having occurred after a labour strike; and to new arrangements having been made with the Royal Mail Steam Packet Company for the carriage of mails involving additional cost.

The Revenue and Expenditure of the previous five years were as follows:—

	Revenue.	Expenditure.
1901-2 ...	£67,365 ...	£67,486
1902-3 ...	72,193 ...	69,408
1903-4 ...	66,009 ...	70,692
1904-5 ...	69,273 ...	65,508
1905-6 ...	61,877 ...	62,521
1906-7 ...	60,012 ...	60,294

NOTE.—The Public Debt of the Colony at 31st March, 1908, stood at £153,729 11*s*, and the accumulated Sinking Fund towards its redemption at £14,611 7*s*. 5*d*.

Surplus Funds.

The surplus funds of the Colony on 31st March, 1908, amounted to £28,067 15*s.* 4*d.*, including the sum of £2,668 1*s.* 8*d.*, the amount of contributions at the rate of £300 a year set aside from general revenue as an insurance fund on public buildings. The investments on Surplus account amounted at the close of the year to £22,262 5*s.* 1*d.* and on Insurance Account to £2,668 1*s.* 8*d.*, making a total of £24,930 6*s.* 9*d.*

Public Debt.

The public debt at the 31st March, 1908, amounted to £153,729 11*s.* 0*d.*, apportioned as follows:—

Colony's share.

	£	s.	d.
Castries Harbour Loan ...	55,150	0	0
Central Factory	9,300	0	0
Public Works Loan	50,579	11	0
Water Works	12,000	0	0
Immigration	9,700	0	0
	136,729	11	0
Castries Town Board share...	17,000	0	0
	£153,729	11	0

The sinking fund amounted to £14,611 7*s.* 5*d.*

Towns and Villages.

Besides Castries, the chief town, there are nine towns and villages in the Island. The following table shows their order of importance as regards population according to the Census of 1901, and the revenue and expenditure in 1907 and the balance to the credit of each town or village fund at the close of the year:—

Name of Town or Village.	Population.	Revenue.	Expenditure.	Credit Balance.
		£	£	£
Castries	7,910	5,470	5,404	364
Soufriere	2,394	529	532	138
Vieux Fort	1,619	177	183	102
Dennery...	1,072	126	119	262
Anse la Raye	885	70	83	67
Laborie	808	69	84	34
Gros Islet	705	103	99	191
Micoud	577	74	87	30
Canaries...	522	38	32	128
Choiseul...	409	45	13	112
Total	16,901	6,701	6,636	1,428

The rates were, in Castries and Soufriere, 8 per cent. on assessed rental value of houses and 2 per cent. for water rate. In Vieux Fort, Gros Islet, and Canaries the rate was 6 per cent. on the assessed rental value of houses, and in the other villages the rate was 5 per cent.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

Imports.

The value of imports in 1907 was £310,309 as compared with £242,469 in 1906. Of these £80,603 in value were received from the United Kingdom, £33,982 from British Colonies, and £195,724 from Foreign Countries, a falling off of £7,240 in imports from the United Kingdom and £96 from British Colonies and an increase of £75,175 from Foreign Countries.

The importations of coal amounted to 111,232 tons, of the value of £137,200, as compared with 76,304½ tons in 1906, of the value of £94,056.

All the coal imported in 1907 came from the United States, and this accounts in great measure for the increase of foreign trade.

The imports are divided into the following classes:—

	£
Class I.—Live Animals, Food and Drink Supplies, and Narcotics ...	67,121
Class II.—Raw Materials	152,544
Class III.—Manufactured Articles ...	78,121
Class IV.—Coin and Bullion	12,523

As compared with 1906, Class I. decreased by £20,581, showing, I think, that the Island produced more of its own food-stuffs. Classes II. and III. increased by £40,976 and £10,610 respectively, indicating an increase of business, and Class IV. by £6,656, being the additional amount of coin which was probably needed for coping with the increased business.

Exports.

The value of the exports in 1907 was £264,401, as compared with £220,313 in the preceding year. £109,407 represented the produce and manufacture of the Colony, and £154,994 the produce of other countries, of which £142,381 was for bunker coal exported.

The exports are divided into the following classes:—

Class I.—Live Animals, Food and Drink Supplies, and Narcotics ...	104,032
Class II.—Raw Materials	151,453
Class III.—Manufactured Articles ...	1,776
Class IV.—Coin and Bullion	7,140

Class I. increased by £3,931, due to the export of cocoa reaching 1,719,700 lbs. or 140,500 lbs. more in quantity than in 1906, and £47,292, or £4,992 more in value. The sugar industry barely maintained the position regained in 1906, and there was a falling off in rum, live animals, hides, pimento sticks, &c., partly counterbalanced by an increase in the sale of logwood. Class II. increased by £37,288, the sale of coal having been the largest ever effected in any one year. Class III. decreased by £261, and Class IV. increased by £3,130.

Shipping.

The number of steamers that entered was 716, with an aggregate tonnage of 1,305,957 tons. The number that cleared was 714, and their tonnage 1,301,794 tons.

In addition, 27 ships-of-war and 4 yachts visited the port, as against 13 and 4 in 1906.

The year was an unusually busy one for shipping, and a record has been established in the number of ships and in tonnage.

So far as the information accessible to me indicates, the Port of Castries appears to do the most considerable coaling business in the West Indies, the exports during the year being 118,503 tons, valued at £142,381.

The following return shows the number of vessels, British and foreign, that entered and cleared, and the aggregate tonnage during the past five years:—

Vessels Entered.

Year.	British.				Foreign.			
	Steamers.		Sailing Vessels.		Steamers.		Sailing Vessels.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.

1907 ...	614	1,166,991	216	7,606	100	134,803	30	2,089

Manufactures and Fisheries.

There are no mines in the Colony.

The only manufactures of any consequence are sugar and rum. There are four well-equipped central sugar factories. The exported produce amounted to 5,302 tons of crystallized sugar, 62 tons of Muscovado, and 3,700 bags of Molascuit or food for stock made from sugar-cane. Of this output Canada took 833 tons of Usine sugar, and the rest of the produce went to London markets, except 1,725 bags Molascuit, which went to France.

There are two rum distilleries. Rum is produced principally for local consumption, and as the consumption has revived, the quantity distilled keeps pace with the revival, as the following table indicates:—

Year.	Quantity. distilled. Galls.	Consumed. Galls.	Exported. Galls.
1903	72,470 ...	53,558 ...	16,286
1904	57,429 ...	52,562 ...	5,684
1905	56,150 ...	50,337 ...	8,655
1906	49,553 ...	46,950 ...	6,319
1907	57,213 ...	51,453 ...	3,652

The export of rum is still steadily declining.

There is a number of boats, principally small canoes, engaged in fishing, and fresh fish in abundance can be obtained for local consumption all the year round. There is no attempt at preserving fish for exportation.

Agricultural Industries.

The sugar industry still continues to hold the first place in the agricultural business of the Colony, and has fairly maintained the position it assumed in 1906. The decline in the

quantity of rum exported has been counterbalanced by an increase in the amount of Molascuit (stock food). The total value of sugar, rum and other products of the sugar-cane exported in 1907 was £54,511.

Cocoa is next in importance, the value being £47,292.

The wood industry comes third with a total of £4,875, there having been an increase of £2,000 in the value of logwood exported, and cedar, appearing as a new item, yielding £363.

Limes and lime juice appear for the second time on the list of exports. The total is only £192, but thousands of lime plants have been set out during the past two or three years, and in five or six years' time it is probable that an important export trade may be developed. A factory has been erected on the Fond Devaux Estate on modern lines for the concentration of lime juice.

The value of honey exported is slightly less than in 1906, but the care of bees has been taken up by a few intelligent individuals, and is being taught at the Agricultural School and at some of the Elementary Schools in the country districts, and there seems every reason to believe that it will develop into a not unimportant minor industry.

The Government and the Agricultural Society have been working together to induce planters to turn their attention to rubber, and the Agricultural Superintendent raised large quantities of Castilloa Elastica seedlings, and the Agricultural Society imported from Ceylon Para rubber plants and seeds, which were taken charge of at the Experiment Station and cared for till in a condition to set out. The planters have been slow to respond, and only about 2,000 Castilloa plants have been taken. The plants of the Para rubber had not been distributed at the end of the year. Reporting on Castilloa, the Agricultural Superintendent indicates that the trees seed freely, and the seeds are dropped about by birds feeding on the pulp. He adds that several young trees are to be found near the Station grown from seeds dropped in this manner, "and in this uncultivated state the young plants are healthy and as promising as one could wish for under cultivation: and this tends to support the opinion already formed from observations on cultivated plants that this rubber tree will thrive exceedingly well in St. Lucia if due consideration is given to the selection of suitable soil and locality."

Mr. Sands, the Agricultural Superintendent of St. Vincent, was sent by the Commissioner of Agriculture to report on the lands in St. Lucia suitable for the growth of Sea Island cotton, and he was able to point out a number of places along the coast which were favourable. His report was published in August, 1907, too late in the year for planting operations, and only two or three trial plots were put in. A plot of an acre and a half was put in at the Agricultural School, which yielded 707 lbs. of seed cotton. The Agricultural Superin-

tendent states: "The percentage of clean lint was 24·3 (172½ lbs.) and of stained lint 2·2 (16 lbs.), the seed being 72·8 and the loss ·7. These results show a yield of 134·6 lbs. of lint per acre." At 1*s.* 4*d.* a lb., which would seem a moderate valuation, the yield of lint per acre ought to be worth £9, and I gather from this experiment that with careful cultivation in good soil in St. Lucia a cotton planter may reasonably anticipate the gross value of his crop to range from £8 to £10 per acre. The amount of profit which it may be possible to count on would depend so greatly on the skill of the manager and on the labour supply obtainable that no reliable estimate can be made without trials on a commercial scale, and for this purpose it would be advisable that labour-saving implements such as ploughs, harrows, and horse hoes or cultivators should be employed.

These figures are based on what seems to be a low yield of cotton, as a plot of half an acre grown at the Station in 1904 yielded at the rate of 247 lbs. of lint per acre, or 84 per cent. more than was obtained in 1907.

Agriculture appears to be engaging more attention than formerly. The area planted in seedling canes on sugar estates is increasing, and these appear to give a larger yield and to resist disease better than the old stock. The Agricultural Department's efforts to spread knowledge as to the cultivation, drainage, and manuring of cocoa seem to be bearing fruit, and there are many more cocoa fields showing signs of care being bestowed on them than was the case two years ago, though much still remains to be done before the exports will be commensurate with the area planted.

Generally a more hopeful tone prevails as regards agricultural pursuits, and the thanks of the Government are due to all those who by example or precept have given encouragement to the movement. Hitherto the struggle has been to overcome the *vis inertiæ*: the first clear signs of motion appear now to be indicated, and it is to be hoped that a sustained effort will be made to give momentum to the study and practice of agriculture on intelligent lines, so as to make the best of the natural wealth of the Colony.

Agricultural Department.

The Botanic Station and Agricultural School and Experiment Station were maintained in efficient working order.

There was a further great increase in the demand for economic plants for local planting. The total number of plants distributed was 74,644, or nearly 10,000 in excess of 1906, which till then was the highest recorded in the history of the Station. Limes headed the list with 56,425 plants, making a total of 105,475 for the past three years, and large numbers of plants have been grown in private nurseries. On

the other hand Castilloa rubber plants issued to local applicants decreased from 6,967 in 1906 to 2,000 in 1907, and there being no further local demand, 5,000 were sent to Martinique and 4,000 seeds to Demerara. The following extract from the Agricultural Superintendent's report will show the result of the effort to introduce Para rubber plants from Ceylon:—

> "Ten packages, containing 2,059 seeds of Hevea brasiliensis were received in October from the Royal Botanic Gardens, of Peradeniya, Ceylon, being kindly supplied by that Department at the cost of postage, in consideration of the poor results obtained from the consignment supplied in wardian cases and reported on last year. The seeds were packed for transit in charcoal dust, in tins containing from 130-400 seeds each. Of the 2,059 seeds received 947, or about 46 per cent., germinated. Observations on the condition of the packages on arrival indicate that the best results were obtained from those tins in which, on arrival, the charcoal dust was dry. The charcoal was probably slightly damp when packed, in accordance with our suggestion, but dried in transit, the tins not being hermetically sealed.
>
> "The contents of one tin of 400 seeds were mildewed and rotten, the charcoal being in a damp and sweaty condition. In another tin of similar condition only 4 out of 128 seeds germinated. In other tins in which the charcoal was dry on arrival as high as 88 per cent. of the seeds germinated.
>
> "The seeds were probably about two months on the passage from Ceylon to St. Lucia.
>
> "On January 27 the Agricultural Superintendent reported that 850 plants in bamboo pots were ready for distribution."

The total expenditure on the Botanic Station and connexions, excluding building repairs, was £633 18*s.* 4*d.* The sale of plants, &c., realised £55 16*s.* 0*d.*

The Agricultural Instructor resigned during the year, and the services of an officer to replace him were not secured for several months, so that the Agricultural Department was short-handed during a portion of the year.

Agricultural School.

The average number of pupils maintained during the year was 20·6. Eight pupils were admitted and three discharged, two to take up situations obtained for them, and one to work on his father's property.

All the ground provisions required for the institution were produced on the premises, and a large number of economic plants was raised for distribution. The routine work associated with the training of the pupils in agricultural science and practice received careful attention.

The half-yearly examinations of the pupils show that good progress was made in their school and field work. The Medical Officer's report on the health of the boys and the sanitary condition of the institution was very satisfactory. The expenditure on the Agricultural School and Experiment Station was £899 16*s.* 10*d.* The receipts from the sale of plants and produce amounted to £71 2*s.* 11*d.*, and of provisions used in the School £42 7*s.* 10*d.*, a total of £113 10*s.* 9*d.*

Crown Lands and Surveys.

During the year 95 applications were received for 995 acres. On 36 of these applications the usual survey fee and deposit were paid. 40 surveys were executed. The acreage alienated amounted to 342 acres and 22 perches, besides one village lot. Grants to the number of 66 were issued, and at the close of the year there were 83 further grants prepared and awaiting delivery.

The Vve. Girardin Estate, comprising 179 acres 2 roods and 27 perches, was escheated and two other estates, of 96 acres and 21 perches and 215 acres and 29 perches, respectively, put up for escheat.

The Land Sales Fund had at credit on 31st March last a sum of £1,932.

Public Works.

The ordinary expenditure on Public Works amounted to £9,862 for the maintenance of roads, bridges, public buildings, telephones, harbour works, jetties, &c. Much improvement has been effected on the roads by the erection of small bridges and culverts, by draining with concrete pipes, and by forming and metalling. Expenditure was also incurred under the head of Public Works Extraordinary for bridging the Canelles River and completing on a modified plan the bridge over the Fond River which had been partly erected and condemned some years ago. The scheme for opening up parts of the interior of the island not hitherto served by public roads was also started, work having been commenced on the road intended to open up and connect the Anse la Raye, Millet, and Roseau Valleys, and a survey of the route for the proposed road in the Canaries Valley was made.

III.—LEGISLATION.

Twelve Ordinances were passed during the year, two of which related to taxation—increasing the Customs tariff on a few articles, and imposing a licence duty on animals, wheels, and guns. Two related to the formation of a Volunteer Force and a Reserve. One provided for licensing purchasers of old metal, in order to check theft. One transferred to General Revenues the assets and liabilities of the Immigration Fund,

East Indian immigration having come to an end. Two were the ordinary Appropriation Ordinances, and the others dealt with small matters which it is not necessary to specially comment on.

IV.—EDUCATION.

Primary.

The general statistics for the year are given in the following table:—

Schools.	No.	Number on Rolls.	Average Attendance.	Number Examined.	Government Grant.
					£
Anglican	3	520	345	490	301
Wesleyan	1	278	132	178	91
East Indian Mission ...	1	43	27	36	34
Roman Catholic	41	5,875	3,809	4,990	2,866
Total	46	6,716	4,313	5,694	3,292
The figures for 1906 were	44	6,741	3,897	4,982	3,390

An additional sum of £39 was spent on matters connected with primary education, bringing the total to £3,331.

Fifteen out of the twenty-one juvenile schools for boys or boys and girls have school gardens, four are situated in towns or villages where land is not available, leaving two which have not yet started. It is hoped that one at least of these may commence operations in the coming year. £40 has been set aside as bonuses to head teachers who have taken serious interest in the garden work during 1907, and small grants have in other cases been made for purchasing tools or starting bee colonies. It cannot, however, be said that the gardens receive all the attention they deserve, and the new Agricultural Instructor has been directed to devote attention to the matter.

The teaching of elementary tropical hygiene was commenced during the year, with gratifying results in several cases.

A magic lantern was bought for the department, and the Inspector of Schools went round the island giving addresses and demonstrations in the schools. The subject chosen was London, and the Inspector says: "The schoolrooms were everywhere crowded and the children appeared much interested . . . . the various pictures, some sixty in number, were thrown one by one on the screen and explained in slow, simple English. This method of illustrated instruction appears very

well suited to a population where reading is uncommon, and capable of useful extension as an auxiliary incentive to the learning of English, which is a *sine qua non* as far as serious instruction in the Colony is concerned."

SECONDARY.

Secondary Education is provided for boys by the St. Mary's College, and for girls by the St. Joseph's Convent. The former school received a Government grant of £400, and the latter one of £50. The total expenditure on these schools was £802 and £680, respectively, the school fees collected being £230 and £270.

There were 51 boys on the roll of St. Mary's College, with 48 in average attendance, and 98 girls at St. Joseph's Convent, with 90 in average attendance.

The boys are prepared for the Cambridge Local Examinations, and the girls for those of the London College of Preceptors. The girls are also taught needlework—plain and fancy, drawing, and painting.

One of the conditions attached to the grant to St. Mary's College is the right to have ten Government scholars educated at the College free of charge. The report on these boys shows work "satisfactory" in seven cases, "moderate" in one, and "poor" in two.

At the examination in December to fill three vacancies, eight candidates presented themselves. The best candidates obtained out of a total of 100 marks, 74, 71 and 67.

V.—GOVERNMENT INSTITUTIONS.

HOSPITALS AND ASYLUMS.

The following statement tabulates the principal statistics relating to the hospitals and asylums of the Colony:—

Institutions.	No. of patients at beginning of year.	No. admitted during 1907.	Daily Average.	Patients discharged.		No. of deaths.	Remaining in Hospital at end of year.
				Cured.	Relieved.		
Victoria Hospital, Castries	64	1,147	66	678	314	123	49*
Soufrière Hospital ...	—	22	4	13	6	3	—
Vieux Fort Hospital ...	4	47	4	26	9	6	3†
Dennery Hospital ...	—	22	1	15	1	5	—‡
Yaws Hospital, Soufrière	34	87	36	55	6	7	53
Poor Asylum, Soufrière	58	72	58	—	39	31	60
Lunatic Asylum, Soufrière	17	21	16	—	1	3	11§

* 47 patients discharged, condition not improved.
† 7 " " " "
‡ 1 " " " "
§ 22 sent to Grenada Lunatic Asylum, including 2 from Castries. One patient discharged, condition not improved.

Dispensaries.

Out-door medical relief is given through the medium of a dispensary in each district, at which a medical officer attends every week.

The number of patients treated during the past two years was as follows:—

Dispensary.	1906.	1907.
Castries	8,007	8,947
Babonneau	88	132
Gros Islet	654	570
Dennery	992	562
Mabouya Valley	—	385
Anse la Raye	655	379
Soufrière	1,245	585
Choiseul	314	200
Vieux Fort	1,481	863
Laborie	490	723
Micoud	518	532
Total	14,444	13,878

Out-Door Relief of Paupers.

The number of persons in receipt of out-door relief on the 31st December, 1907, was 182.

The expenditure amounted to £575 11*s.* 3*d.*, including £203 8*s.* 9*d.* for pauper burials

Sanitary.

Constant vigilance had to be maintained during the year to prevent the introduction of quarantinable diseases, and 253 vessels were boarded by the Health Officer, six of which were fumigated. The presence of yellow fever in certain of the West India Islands and of small-pox or plague in foreign countries from which vessels arrived necessitated great caution. An Isolation Hospital was fitted up and screened, and vigorous measures adopted in Castries for destroying the breeding-places of mosquitoes.

Savings Banks.

The principal bank is in Castries, and is managed by the Treasurer of the Colony. There are four district branches in different parts of the island.

The following statement shows the transactions of the bank for the five years ended the 31st December, 1907:—

Year.	Total number of depositors on 31st December of each year.	Total deposits inclusive of Interest.	Total withdrawals.	Amount on deposit at the end of each year.
		£ s. d.	£ s. d.	£ s. d.
1903 ...	1,584	18,338 16 7	17,084 5 11	17,211 8 11
1904 ...	1,642	18,990 15 5	20,568 7 1	15,633 17 3
1905 ...	1,231	15,025 16 3	16,285 13 7	14,373 19 11
1906 ...	1,584	13,750 12 6	13,397 7 1	14,727 5 4
1907 ...	1,639	15,526 2 0	12,561 9 10	17,691 17 6

Investments through the Crown Agents on account of the Savings Bank on the 31st December amounted to £13,916 14*s.* 11*d.*

The working account of the bank showed a revenue of £501 18*s.* 8*d.*, and an expenditure of £430 1*s.* 10*d.* for interest paid or credited to depositors. The balance of £71 16*s.* 10*d.* was transferred to general revenue.

Friendly Societies.

There are 14 Friendly Societies, being one in excess of the previous year. The total number of members on the rolls on 31st December was 1,207, as against 1,114 in 1906.

		£ s. d.
The aggregate balance at 31st December, 1906, was		1,171 0 10½
Total receipts in 1907		1,505 0 10½
		2,676 1 9
The disbursements during the year were:—		
Sick benefits	£308 6 7	
Funeral claims	139 18 9	
Working expenses ...	411 14 9½	
Medicine and Medical attendance	204 18 2	
Bonuses to Members ...	16 0 0	
Payments to withdrawing members	28 5 2	
		1,109 3 5½
Balance at 31st December, 1907 ...		£1,566 18 3½

There was an increase of 89 in the number of members and £395 17*s.* 5*d.* in the balance of assets during the year.

VI.—JUDICIAL STATISTICS.

Police.

The strength of the force on the 31st December was one officer and 72 non-commissioned officers and men.

Ten extra men were enrolled after the disturbances, but the force has been reduced to its normal strength, as three resigned, three were dismissed, and four were discharged before the end of their probationary service.

There were 1,293 summary prosecutions and 207 indictable cases taken up by the police during the year. The strike disturbances were responsible for 238 of these cases, but in several instances there was more than one charge against the same individual, the number of persons charged being 186.

3,733 road tax summonses were served and 1,558 warrants were executed.

The force, which was armed in April, 1906, after the departure of the garrison, had to undergo a serious trial in April, 1907, when, supervening on a strike of coal-heavers and sugar factory labourers, disturbances occurred in Castries and at three of the factories. The strikers and the mob, who made common cause with them, numbered several thousands, while of the 72 policemen distributed throughout the island only 41 were available in Castries to be used as a military force, and, in order to effect this the men had to be withdrawn from their civil duties on the streets. With the assistance of special constables, who were sworn in and gave invaluable aid in scouting, patrolling, guarding the station, &c., junctions of the different mobs were prevented, and by detaching a force of 20 policemen to operate at different times against them they were dealt with in detail. The arrival of a reinforcement of 100 police and volunteers from Barbados, under the command of Lieutenant-Colonel Kaye, and 20 from St. Vincent, followed a few days after by H.M.S. "Indefatigable," enabled detachments to be placed in the disturbed areas until the ferment had quieted down and prevented any further trouble. The creditable behaviour of the St. Lucia force and the opportune assistance of the neighbouring Colonies, to whom the gratitude of this Colony is due, prevented the mob from gaining any considerable headway. Some of the police and special constables were badly injured.

Prisons.

At the commencement of the year there were 49 prisoners in the Royal Gaol—38 males and 11 females.

The number of committals on conviction during the year was 523, 305 being adult males, 194 adult females, and 24 juveniles, the number committed for trial or on remand being 778.

	1906	1907.
For Statutory Offences	387	487
„ Non-payment of Road Tax	193	36
„ Safe custody, trial, &c. ...	62	778
	642	1,301

The convictions from the Royal Court rose to 107 as against 14 in 1906.

The daily average number of prisoners in custody was 82·68 at the Royal Gaol, 21·87 at Grenada, and 6·87 at St. Vincent. The corrected daily average for St. Lucia would be 111·42, as against a total of 74·77 in 1906.

The labour of the prisoners during the year is valued at £740 7*s.* 3*d.*, and the profits of the Prison Manufacturing Account amounted to £121 4*s.* 4*d.*

The expenditure on the Prison was £1,804 11*s.* 8*d.*, of which £261 16*s.* 0*d.* was for the maintenance of St. Lucia prisoners at Grenada and £68 8*s.* 0*d.* at St. Vincent. The cost of the Prison Establishment and of the maintenance of prisoners was £1,706 0*s.* 9*d.*, the balance being made up of sums expended in repairing damage caused to the buildings by the earthquake of 16th February, 1906, in erecting a workshed, in improving ventilation, and in making temporary provision for the influx of prisoners after the disturbances.

The daily average on the sick list was 1·24. One death occurred in the Victoria Hospital of a prisoner removed there for treatment.

The natives of St. Lucia formed 62 per cent., natives of others places contributing 38 per cent. to the prison population. Of the riot prisoners 44 per cent. were natives of other Colonies. The percentage of old offenders was 48·57.

Criminal Statistics.

The following figures summarise the criminal statistics for the past five years:—

—	1903.	1904.	1905.	1906.	1907.
Offences reported	1,942	2,032	1,595	1,706	2,059
Summary convictions—					
For offences against the person ...	255	355	405	220	380
„ prædial larceny	28	29	60	37	37
„ offences against property ...	77	124	226	77	138
„ other offences	877	1,059	904	1,126	950
Convictions by the Superior Court—					
Child murder	—	—	1	—	—
For offences against the person ...	12	17	3	2	10
„ „ „ property ...	11	13	23	14	27
„ other offences	2	2	5	1	110

The strike disturbances of April were responsible for 185 convictions, of 52 persons summarily and 90 by indictment.

VII.—VITAL STATISTICS.

Population.

The estimated total population on the 31st December, according to the returns of the Registrar-General, was 54,599, an increase of 526 during the year, and was composed of 26,283 males and 28,316 females.

The birth-rate of the year was 29·8 per thousand, as compared with 31·9 per thousand in 1906; and the death-rate 20 per thousand, compared with 19 per thousand in 1906. The number of births was 1,611 and of deaths 1,085.

The population by the Census of 1901 was 49,883. The natural increase by excess of births over deaths from the date of the Census to the 31st December, 1907, has been approximately 4,716. No deduction is made of persons who have left the island since the withdrawal of the garrison in 1905, and since the Panama Canal works were started. The estimate of the present population appears, therefore, to be subject to modification.

The number of marriages during the year was 277, as compared with 352 in the previous year.

Public Health.

In the early part of the year malarial fever, which had been rife at Vieux Fort during 1906, supervening on an epidemic of influenza, began to abate, but the number of patients treated for this disease at the hospital and the dispensaries of Vieux Fort and Laborie was 922, showing that it was very widespread. The Medical Officer reports that by the end of June health conditions were normal.

Dr. King, the Health Officer of Castries, reports:—

"The year has not been healthy. There was a great deal of malaria in the early months; then in May and June a very severe epidemic of what, for want of a better name, may be called influenza. Although not true influenza, it was a very serious disease. Few persons escaped entirely, many developed grave complications, and a few died. Pneumonia and broncho-pneumonia were very common, the death-rate from them unnecessarily high for several reasons. In the first place the labouring class is apt to think very little of fever until it has lasted for a week or so, as they know by experience that fever patients frequently recover without treatment, so, being unacquainted with this influenza they believed it to be ordinary malaria. Hence it was common to see for the first time a patient who had already exhausted all his reserve of strength in an unaided battle with a double pneumonia. Such cases all ended fatally.

"Secondly, the people, who are becoming more and more willing to submit to hospital treatment for surgical diseases, cannot be brought to understand that hospital treatment is of advantage in medical diseases also. Unluckily, the negro, whose resisting power to some diseases is marvellous, succumbs to pneumonia very easily. Most of the cases treated in hospital from the beginning of their illness made satisfactory recoveries, but the hospital average is ruined by several neglected cases brought simply to die there, and so avoid for the relatives the unpleasantness of police enquiries and possible post-mortem examinations."

In the Dennery Quarter the Medical Officer reports:—"About the middle of the year there was a sharp outbreak of a severe type of influenza throughout the district, which was responsible for many deaths among the older inhabitants. There was also a mild outbreak of whooping-cough about this time, and of parotitis—"Mumps"—at the end of the year." There were 11 cases of influenza and 149 of fever treated at the Dennery dispensary, 8 and 90 respectively at Mabouya and 19 and 154 at Micoud.

The Soufrière quarter appears to have escaped this visitation, as only malarial fevers were returned; 73 cases in Soufrière, 83 at Anse la Raye, and 24 at Choiseul.

It would appear that an epidemic of influenza commencing at Vieux Fort spread to the Castries and the Dennery quarters, carrying in its train malarial fever.

CLIMATE.

The rainfall for the year at different stations was:—

	Inches.
At Botanic Station, Castries	71·33
„ Agricultural School, near Castries ...	73·50
„ Rivière Dorée	50·70
„ Anse la Raye	78·63
„ Soufrière	72·56
„ Errard	79·93
„ Fond	54·00
„ La Caye	62·20
„ Parc	80·18
	623·03
Mean for nine Stations	69·23

This is 15 inches below the average for 1906.

The maximum temperature registered during 1907 was 90° on August 24th and September 2nd, and the minimum temperature 60° on March 29th. The mean monthly temperature for the year was 78·2°. The mean barometrical pressure for the year was 30·001 inches at 10 feet above mean sea level.

VIII.—POSTAL AND TELEPHONE SERVICES.

Post Office.

The revenue of the Department was £1,359 0*s.* 10*d.*, of which £991 9*s.* 6*d.* was received from letters, post-cards, &c., £175 17*s.* 8*d.* from sales of stamps to collectors, and £169 13*s.* 7*d.* from commissions on postal and money orders, and £22 0*s.* 1*d.* for box rents.

The expenditure was £1,077 16*s.* 2*d.*, but the mail subsidy in respect of the new contract with the Royal Mail Company had not been paid, and no portion of the subsidy of the coastal steamer, which carries mails to and from the out-ports, is charged against the Post Office.

The total number of letters and post-cards dealt with was:—

Foreign sent	106,807	
„ received	96,704	
		203,511
Inland		89,294
		292,805
The number last year was		290,773
A net increase of		2,032
Newspapers and book packets sent ...	11,387	
„ „ „ received	51,341	
		62,728
Inland		17,689
		80,417
The number last year was		93,565
A net decrease of		13,148
Parcels sent	336	
„ received	2,027	
		2,363
The number last year was		2,276
A net increase of		87

The number of registered articles sent was 3,702, and the number received 3,676. The number of insured letters sent was four, and the number received 13. 3,793 letters were dealt with in the Returned Letter Branch.

The money orders issued amounted to £5,988, and the orders issued elsewhere and paid here £4,117. British postal orders were sold to the amount of £1,712, and paid to the amount of £351.

The inland postal orders issued only amounted to £44 17*s.* 6*d.*

In September a new contract was made with the Royal Mail Steam Packet Company for a fortnightly intercolonial mail service.

In October the weight for letters was raised from ½ oz. to 1 oz., the rate of postage remaining at one penny.

TELEPHONES.

The system consists of 111½ miles of trunk line, 48⅝ miles of branch lines, or a total of 161⅛.

The lines were maintained in good working order throughout the year.

On 31st December there were 116 subscribers, as compared with 110 in 1906.

The receipts were £636 12*s.* 6*d.*, and the expenditure £771 1*s.* 9*d.*, exclusive of charges for interest and sinking fund on the loan raised for the construction of the lines.

IX.—GENERAL REMARKS.

Mr. R. C. Williams, C.M.G., assumed the government of the Windward Islands as Governor and Commander-in-Chief on 17th January, 1907, and was promoted to be K.C.M.G. in November.

Mr. A. De Freitas succeeded Mr. E. Bateson as Attorney-General, Mr. W. J. Douglass succeeding Mr. De Freitas as Magistrate of the First District.

The Administrator was on leave for six months from May to November, when Mr. E. D. Laborde, I.S.O., acted for him.

The most important feature of the year is the marked increase of prosperity, indicating that the island has recovered from the depression which supervened on the removal of the garrison.

The prices of sugar and cocoa have been remunerative, the export of logwood has been resumed and the coal trade has expanded satisfactorily in spite of severe competition with other ports.

The Public Revenues, which had been insufficient to cover expenditure during the two previous years, showed a considerable surplus, partly on account of extra taxation, but largely because of an increased yield due to prosperity. The balance of deposits in the savings bank at the same time increased by about 20 per cent., and the balance of assets of the Friendly Societies by 35 per cent., showing that the prosperity was general.

Most hopeful signs for the future are the greater attention now being paid to agriculture, which has already been commented on under that heading, and the great increase in average attendance at the elementary schools. The aim of the Government has been to endeavour to push forward elementary, agricultural, and sanitary education, and although heavily handicapped by want of means during the past few years, a commencement has been made which it is hoped that more liberal provision in future Estimates will enable it to accomplish. The Inspector of Schools, the Agricultural Instructor, and the Crown Lands Overseer working together should be able to reach all classes of agriculturists—old and young, while teaching elementary sanitation by text books and lectures is relied on to yield good results.

At the same time the improvement of the roads now in existence, the bridging of the rivers which is proceeding from year to year, and the gradual making of new roads are calculated to reduce the cost of transport of produce and render agriculture more profitable.

A sketch map of St. Lucia is appended.

P. C. Cork.

SKETCH MAPS OF GRENADA AND CARRIACOU.

No. 590.

GRENADA.

(For Report for 1906, *see* No. 546.)

THE ACTING-GOVERNOR TO THE SECRETARY OF STATE.

St. Lucia,
13th November, 1908.

Forwarded.

P. C. CORK,
Acting Governor.

The Right Honourable
The Earl of Crewe, K.G.,
&c., &c., &c.

Government Office,
Grenada,
31st October, 1908.

SIR,

I HAVE the honour to forward my Blue Book Report for this Colony, in respect of the year 1907.

2. The delay in submitting these annual returns has been due, firstly, to my having to deal with them and other returns in arrear since my return from leave at end of July, and, secondly, to the fact that the financial returns were not in my hands until the end of September.

3. In preparing the report, I have paid careful attention to the instructions, and trust that it may be found to meet requirements.

4. As this Colony comprises not only the Island of Grenada but the smaller island of Carriacou and other adjacent cays and islets, and as the Dependency of Carriacou is daily becoming of more importance, I have thought it best to send a map, not only of Grenada but of Carriacou, particularly as the references now necessarily made in the annual report to the Land Settlement Scheme and cotton cultivation in that island will be better understood by reference to a map of it.

I have, &c.,

EDWARD DRAYTON,
Administrator.

His Honour
The Administrator of the
Windward Islands, St. Lucia.

1125 Wt 25928 12/08 D & S 5 34424

BLUE BOOK REPORT FOR THE YEAR 1907.

FINANCIAL.

The revenue for the year ended 31st March, 1908, was the largest yet received in Grenada, amounting to £79,871 altogether, of which £501 was the Imperial grant in aid of agriculture, and the balance, £79,370, revenue from local sources. This satisfactory result was due to the reaping of a fairly-good cocoa crop, accompanied by abnormally high prices for that staple, and also to the inflow of remittances from emigrants to the Canal Zone of the Panama Isthmus. The plentiful circulation of money thus induced, led to a large increase of imported goods, and the revision of the tariff of import duties, effected in 1905, was thereby enabled for the first time to produce its anticipated effect.

2. Following is a statement of the revenue for the year, classified under its usual heads:—

	£
Customs	44,962
Licences, Excise, and internal revenue	27,631
Fees of office, &c.	1,915
Post Office	1,562
Telephones	1,500
Water supplies	289
Rent of Government property	529
Refunds of interest and sinking funds	844
Miscellaneous receipts	114
Land sales	24
Total local revenue	79,370
Imperial grant for Agricultural Department ...	501
Total revenue	£79,871

3. The Customs revenue exceeded the estimate by £9,362, and the receipts of the preceding year by £8,743. Head 2 was £1,044 in excess of that year's results, in consequence of the operation of the Licences Ordinance of 1906 and better collection of the revenue thereunder, and also of collection of tax arrears. Post Office receipts fell off by £561, the preceding year's revenue having been inflated by sale of new issues of stamps. Land sales revenue was less than in 1906-7 by £549, owing to the sale of a valuable escheated property in that year.

4. The expenditure was kept well in hand during the year, and fell within the estimate by £1,083, being also £1,996 less

than in the preceding year. The details, under the usual heads, are as follows:—

	£
Charges on account of debt...	6,197
Pensions	2,482
The Governor and Legislature	2,491
Colonial Secretary's Department	1,675
Treasury, Customs, and Savings Bank	3,934
Inland Revenue Department	1,249
Post Office Department	2 323
Audit Department	613
Port and marine	294
Legal Departments	4,211
Police	4,908
Prisons	887
Medical	3,587
Hospitals and asylums	5,548
Education	6,532
Do. special expenditure	75
Ecclesiastical	444
Charitable	610
Telephone Department	1,277
Do. do. special expenditure ...	140
Carriacou District	936
St. Paul's and Richmond Hill water supply ...	181
Miscellaneous Services	4,529
Agricultural Department	413
Public Works Department	1,312
Public Works Recurrent—	
(1) Roads and bridges	8,380
(2) Other recurrent work	1,592
Public Works Extraordinary	1,084
Total expenditure from Colonial funds ...	67,904
Agricultural Department (share paid from Imperial funds)	479
Total expenditure	£68,383

5. The only increase, as compared with the preceding year, which is worthy of notice, is that of £613 under Post Office, due to the larger subsidy now payable for transport of inter-Colonial mails. Decreases of £641, under Roads and Bridges, and of £632, under Public Works Extraordinary, are attributable to restriction of the road grants and to the mild weather conditions of the year in the first case, and to abstention from important works during the year in the second.

6. The revenue and expenditure in the last five financial years were:—

	Revenue.	Expenditure.
	£	£
1903-4	70,260 ...	70,101
1904-5	69,993 ...	69,510
1905-6	69,954 ...	71,968
1906-7	71,786 ...	70,379
1907-8	79,871 ...	68,383

7. The pecuniary assets of the Colony at 31st March, 1908, amounted to £56,392, and the liabilities at that date to £22,464, so that the surplus of assets was £33,928, being an increase of £11,606 on the surplus with which the financial year opened. Of this amount £5,406 was held by the Crown Agents, on investment, by way of reserve fund, and this has since been increased by £10,000, remitted to them in the current year for that purpose.

8. The loan debt of the Colony is £123,670, in 4 per cent. inscribed stock, and the sinking fund, in the hands of the Crown Agents for its redemption between the years 1917 and 1942, amounted at 31st March, 1908, to £21,777.

9. The revenue and expenditure of the District Boards in the year 1907-8 were as follows:—

	Revenue.	Expenditure.
	£	£
St. George's Board ...	3,802 ...	3,678
St. Andrew's Board ...	2,450 ...	2,301
St. Patrick's Board ...	1,553 ...	1,236
St. John's Board	1,394 ...	1,376
St. Mark's Board	596 ...	602
St. David's Board ...	681 ...	681

10. Their loan debts (all due to the Colony) at 31st March, 1908, amounted to £16,935, as under:—

	£
St. George's	9,981
St. Andrew's	1,030
St. Patrick's	1,220
St. John's	3,250
St. Mark's	1,454

In the current year the Jetty Loan of the St. Patrick's Board will be written off (£1,100), the sinking fund contributions, at the rate of 5 per cent., which that Board elected to pay when the loan was made in 1890, having in effect extinguished the debt. The further loan of £1,000, made in 1907 from general revenue to the St. George's Board for extension of the water works, will also be brought to account this year. Sinking fund contributions and interest on these loans are regularly paid to the Colonial Treasury by the several Boards.

TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and Exports.

11. The total imports and exports in the last five years were, in value, as follows:—

	Imports.	Exports.
	£	£
1903	235,440 ...	283,565
1904	256,269 ...	321,766
1905	237,256 ...	283,955
1906	233,448 ...	210,149
1907	288,665 ...	417,299

12. The imports of 1907, therefore, exceeded those of 1906 by £65,217, the principal increases appearing under manufactured articles, £23,830, and live animals, food, drinks, &c., £23,314; while the quantity of coin, bullion, &c., imported, £22,584, was £15,458 more than in 1906, and largely in excess of the average.

13. Following is a comparative statement of the value of the principal articles imported in the last two years:—

	1906.	1907.
	£	£
Class I.—		
Bread of all kinds (biscuits)	3,412	4,446
Butter	2,026	2,559
Fish (dried or preserved)	12,362	14,146
Flour (wheaten)	28,928	33,998
Meat (salted and preserved)	8,609	10,747
Medicinal extracts and preparations ...	2,732	3,215
Oats	3,999	5,107
Oil (olive, and other for cooking) ...	3,302	4,291
Oleomargarine and butterine	3,467	4,246

Class IV.—	£	£
Silver coin	3,060	16,600

14. Of the imports for the year, 43 per cent. came from the United Kingdom, 27 per cent. from British Colonies, and 30 per cent. from foreign countries; the corresponding percentages for 1906 were 39, 30, and 31, respectively. The proportion of foreign imports has fallen from 35 per cent. of the total in 1902 to 30 per cent. The bulk of the foreign import trade is, of course, with the United States of America, which absorbed 91 per cent. of it in 1907, the preceding year's percentage being 90. It consists principally of foodstuffs and petroleum.

15. It will serve no useful purpose to give or comment upon the figures appearing as representing the trade with Canada. According to the returns it is rapidly diminishing since the withdrawal of the subsidised line of steamers, as was to be expected. At the same time a certain quantity of Canadian products reaches the Colony through New York, and this the returns do not disclose.

16. As will be seen from the figures given in paragraph 11, the value of the exports in 1907 reached the unprecedented figure of £417,299, being nearly double the value of the preceding year, and largely in excess of the average. This result is due to the exceptionally high prices realised by cocoa, as well as to the fact that the crop of that staple and of nutmegs was fairly satisfactory.

17. The following values of the chief exports of Colonial produce in the last two years show the position clearly:—

	1906.	1907.
	£	£
Cocoa	166,538	361,128
Spices (chiefly nutmegs) ...	24,941	35,954
Cotton and cotton seed... ...	8,003	7,731
Live animals	1,524	1,289
Timber (mahogany and cedar)...	603	1,692

18. The shipment of £2,556 in gold coins to the United States of America, appearing in the returns, deserves to be noticed as a most unusual occurrence. The cause is well known.

19. The statistics, showing the direction of the Colony's export trade in the year under review, contain a factor of unreliability which makes it impossible to indicate with accuracy the amount of the foreign trade. There exists an annually increasing practice of shipping cocoa to Havre on bills of lading *optional* for London, and it is not possible to ascertain how much of these shipments is actually diverted

to the United Kingdom from the Continent. In 1907, the figures of exports to France expand from £35,869, in 1906, to no less than £133,655, while those to the United Kingdom do not exhibit the marked advance which was to be expected from the known facts.

20. The only comment which may safely be made on the statistics, showing the direction of export trade in 1907, is that the volume of such trade with the United States of America nearly doubled itself in the year, the figures being £44,680 in 1906, and £95,063 in 1907. This is due almost entirely to the increasing market for the Grenada cocoa and spices in the States, the value shipped there in 1907 being:—Cocoa £85,470, and spices £6,856; in 1896 the corresponding figures were £4,752 for cocoa, and £1,276 for spices.

Agricultural Industries.

21. *Cocoa.*—The planters of Grenada in 1907 reaped the reward of their labours and a measure of compensation for other disappointing seasons in the highly satisfactory prices realised by the output of their plantations. The year opened with good prices in the London market (75*s.* to 82*s.* per cwt.), and these gradually rose higher and higher, until in September the record price, 119*s.* per cwt., was attained. If a thoroughly satisfactory crop had at the same time been picked, the beneficial result to the Colony, marked as it actually was, would have reached the maximum. The crop, however, was only 60,089 bags in the year ended 30th September, 1907, and this, although 5,708 bags in excess of the previous year, was much below that of the record year, 1904, when 67,225 bags were reaped.

22. The development of improved methods of cultivation and curing, which was referred to in the Annual Report for 1905, continues to receive much attention. Apparatus for drying the beans by hot air, instead of relying on the fickle sunlight, is being steadily provided on all of the best plantations, and the machine manufactured by John Gordon & Co., London, continues the prime favourite, and, apparently, deservedly so. Another move in the right direction is that taken by the Agricultural and Commercial Society, with funds granted for the purpose by Government, in giving prizes to peasant proprietors for the best kept and cultivated holdings of cocoa. The first prizes were distributed at Gouyave on March 21st by the Honourable C. M. Browne, C.M.G., the President of the Society, and the results were most gratifying. Operations in this direction are being extended this year.

23. *Spices.*—In quantity, the nutmeg crop for the year ended 30th September was a distinct improvement on that of the preceding year, amounting to 7,284 barrels and 735 half-barrels, as compared with 5,393 barrels and 602 half-barrels in 1906. Prices, however, were not satisfactory, and there is no evidence of an expanding market for this product at

present. In methods of cultivation there seems little, if anything, left to be desired, and a well-kept nutmeg grove, such as that at Belvidere (to mention the largest in the island) is one of the most satisfying sights in the Tropics.

24. *Cotton.*—The cotton crop fell below that of 1906, 934 bales of lint and 4,742 bags of seed being exported in the year ended 30th September, 1907, against 1,019 bales and 5,692 bags in the previous year. This is not surprising in view of the deficient rainfall at Carriacou, the seat of this industry, in 1907, when only 33½ inches were recorded, or less than one-half of the preceding year's record. Improvements in cultivation can be noticed in connection with this product also, following upon the success of the Land Settlement Scheme in the Dependency, the example set by recent opening up of some of the large estates there, and the energetic efforts of the Commissioner, Mr. Whitfield Smith. Sea Island cotton is being steadily taken up by the new class of peasant proprietors there, who are becoming assured that it can be successfully and profitably cultivated in the island.

Carriacou Land Settlement Scheme.

25. In regard to this, the fourth year of its working, it is again possible to record continued success of this scheme, and the subjoined figures will show that its pecuniary details are satisfactory:—

	£
Total expenditure on the scheme to 31st December, 1907	8,448
Received in cash up to that date	4,101
Balance due, Colonial Treasury	£4,347

	£	£
Total value of lots surveyed for sale ...		7,466
Cash received for lots sold	3,136	
Balance due by allottees, payable by instalments bearing interest at 5 per cent. ...	4,038	
Value of unsold lots	292	
		7,466

	£
Approximate value of reserves and other property resulting from the purchase of the estates	3,679

26. In his Annual Report on the Dependency, the Commissioner thus refers to the scheme: ". . . . . the people continue to make steady progress in the improvement of their holdings. One of the most prominent features, which marks the elevating results and success of the Land Scheme, is the large number of substantial cottages which have recently come

into existence on the lands of allottees. These are neat wooden structures of two or three rooms, often with glass windows and painted roofs; they stand out in marked contrast to the type of 'shanty' usually affected by the peasant cultivator of Grenada, and afford another instance of the remarkable thriftiness of these islanders. The cultivation of Sea Island cotton has now taken firm hold amongst the allottees, and most of them have plots, varying in size from half-acre to one acre, planted with this variety."

27. A work of some importance to the future of the little island was commenced during the year and brought near to completion. This was the construction of a jetty in Hillsborough Bay for the landing and shipment of goods and produce, and for the safety of passengers, hitherto exposed at times to much danger in consequence of the heavy surf which frequently breaks on the beach. Unlike the similar jetties in Grenada this structure is of steel and iron, and it is hoped will prove permanent. The cost, about £1,500, is being borne by the Colonial revenue, and while it is anticipated that the dues levied on shipments inwards and outwards will provide a sum, annually, equivalent to interest and sinking fund contributions on that amount, it may also be mentioned that the yearly saving resulting from better road administration in the Dependency since 1904 will of itself recoup the outlay in about eight years.

Manufactures.

28. Thirteen distilleries were at work in 1907, and the quantity of the rum manufactured thereat was 46,675 gallons, or 10,697 gallons more than in 1906, while the excise duty on the amount consumed realised £11,006, as compared with £10,555 in 1906. There were 160 dealers licensed for the sale of intoxicating liquors in the year, 17 being for wholesale and 143 for retail dealing; the revenue from these licences amounted to £3,455.

Shipping.

29. The total tonnage of shipping inwards and outwards in the last five years was as follows:—

	Tons.
1903	569,190
1904	632,291
1905	639,348
1906	595,534
1907	513,902

30. In the year under review, 99 per cent. of this was British shipping, and this is the general rule. The slight shrinkage of the total volume of shipping in the last two years is doubtless due to the discontinuance of the call here by the subsidised Canadian steamers.

LEGISLATION.

31. Of the 14 Ordinances passed by the Legislature in 1907, the most important were those "to validate a marriage between a man and his deceased wife's sister," and "to consolidate and amend the law relating to public primary education." To the latter reference will be made in its proper place, the former keeps pace with Imperial legislation on the subject, and remedies a long-standing defect in the marriage law.

EDUCATION.

Primary.

32. Although the new system, created by the Ordinance above referred to, did not actually come into operation until 1908, it is possible to record that definite legislative action was taken in 1907, putting an end to the state of transition which has existed since 1905 in regard to primary education in the Colony. The system in force, which was last revised in 1896, had been found both too expensive in its gradual expansion for the Colony's revenue to support, and also quite unsuited to the real wants of the community. Proposals for a complete change, originating with the late Governor, had been fully threshed out by the Board of Education, and a Bill was prepared at several discussions of that body which was passed by the Legislative Council in June, 1906, the date of its commencement to operate as law being fixed for the 1st of April, 1907. In the interval, however, not only was it ascertained to be more expensive in its working than had been anticipated, but its provisions failed to secure the support of those most interested in it, the managers of the denominational schools, which form the majority of the primary schools in the Colony. Upon the present Governor's arrival in January, 1907, they made energetic representations to His Excellency about the measure, and, after full consideration, it was decided that their criticisms were sufficiently well grounded and the fact of increased cost sufficiently clear to make it advisable not to enforce the new measure in April, and it was accordingly suspended by an Ordinance passed with that object.

33. A fresh Bill was then prepared, which, while taking as its basis the original proposals to which the suspended Ordinance owed its birth, gave effect to them in another way, which removed the obstacles discovered and disposed of the difficulties of the school managers, as represented. This was presented to the Legislative Council in July, and, after discussion by a committee of the Board of Education, most of whose sug-

gestions were adopted, was finally passed by the Legislative Council in December, 1907, and became law on 1st April, 1908. Comment on its provisions belongs, therefore, to the report for the current year.

34. There were 45 elementary schools in Grenada in 1907, nine of which were Government schools, supported altogether from Colonial revenue, and the remainder denominational schools aided by grants from that revenue. Twenty-one of these belong to the Roman Catholic Church, nine to the Anglicans, four to the Wesleyans, and two to the Church of Scotland. The total expenditure of the schools amounted in 1907 to £5,592, of which £5,215 was from public funds, the corresponding figures for 1906 being £5,727 and £5,467. The numbers on the roll were 10,406, and the average attendance 4,850.

SECONDARY.

35. No definite progress can be recorded in regard to this question in 1907. The Ordinance passed in 1906, but not brought into operation, remained in that condition of suspended animation, the primary difficulty connected with it, viz., the provision of funds for the erection of a boys' school, not being surmounted. The question, however, engaged the careful consideration of the Government, and in the current year proposals have been made and are being brought to finality, which should place the whole system on a sound and satisfactory footing.

36. During 1907 the existing boys' and girls' schools in St. George's were carried on, upon a temporary footing, under acting officers, and the Government grants to them were provisionally continued. The average attendance of boys was 25, and of the girls 27.

37. The St. Joseph's Convent School continued its satisfactory work as usual during the year. The considerations affecting the other two secondary schools have no connection with it.

GOVERNMENT INSTITUTIONS.

38. *Colony Hospital.*—Eight hundred and seventy-two cases were treated in 1907, the daily average being 94, and the cost per patient £22 16*s.* 3*d.* Four hundred and ninety-five patients were discharged cured, 247 were relieved, and 44 died. In the out-patient department there were 1,953 attendances, and there were 79 paying patients in the wards, from whom £114 in fees were received by the Colonial Treasury.

39. *Yaws' Hospital.*—Two hundred and forty cases were treated, the admissions being 158 in number, and the daily average 79; of these 168 were discharged cured, and one died from Bright's disease. The institution cost the Colony £805 in the year for maintenance.

40. *St. Andrew's District Hospital.*—One hundred and forty-five cases were treated, the daily average being 11; 121 were cured, 6 relieved, and 8 died. The cost per patient was £34 4*s.* 5*d.*, which is higher than in any other local institution. The dispensary receipts were £201 17*s.*, and 9,512 prescriptions were compounded, of which 4,023 were paid for. The District Dispensary was enlarged in 1907, securing *inter alia* a waiting room for patients.

41. *Carriacou District Hospital.*—An immense improvement has been effected here by the opening on the 1st October, 1907, of the new Bellevue Hospital. At this fine stone building, in the centre of the island, 800 feet above sea level, accommodation is provided for 28 patients, and it is made use of not only by natives of the Colony but by the people from the adjacent Grenadine islands belonging to St. Vincent. One hundred and seventy-eight patients were treated at the old and new hospitals in 1907, with a daily average of 14; 123 were cured, 36 relieved, and 5 died. The cost of a patient in the year was £30 15*s.* 9*d.* The receipts from the District Dispensary were £73, and 4,231 prescriptions were compounded, of which 1,224 were paid for.

42. *Lunatic Asylum.*—Forty-six patients were admitted during the year, of whom 21 were from St. Lucia, 24 from Grenada, and 1 from St. Vincent. The number under treatment was 174, of whom 23 were discharged and 7 died, and the daily average was 132, which is somewhat in excess of the accommodation. The departmental accounts were prepared and audited for the first time, in accordance with recent instructions from the Secretary of State, and show the cost of the institution to have been £2,447 in 1907, of which £1,066 was repaid by St. Lucia and St. Vincent and by paying patients, making the share borne by Grenada £1,151.

43. *Poor Asylum.*—This is practically a hospital for incurables, and 84 were cared for during the year, of whom 11 left of their own accord, 1 had to be transferred to the lunatic asylum, 1 was drowned while on leave and bathing in the sea, and 16 died at the institution. An inmate cost about £10 for maintenance.

44. The improved financial conditions of the year were fully reflected in the work of the Savings Banks. The depositors increased in number from 1,475 to 1,638, and the amount deposited from £7,875 to £12,564, while the balance remaining at the end of the year amounted to £15,419, as compared with £12,378 at 31st December, 1906. Of this balance £12,000 was invested in Colonial Securities and £2,000 was on deposit at

interest with the Colonial Bank. Arrangements were made with the British Minister at Panama whereby Grenadians on the isthmus can deposit their money in the Savings Bank of the Colony.

JUDICIAL STATISTICS.

45. The strength of the police force is 71, of all ranks, and comprises the Chief of Police, the sub-inspector, 5 sergeants, 5 corporals, 9 lance-corporals, and 50 privates; it receives a semi-military training, and is armed with the Martini-Enfield rifle. The men were exercised at rifle practice at the Queen's Park Range in 1907, going through the "Trained Men's Course —Militia" with satisfactory results. It may also be recorded that the headquarters' detachment stood the test of a rather trying period in October, when the normal calm of Grenada was interrupted for a time by popular excitement on account of an attempt made by a Revenue Officer to murder the Colonial Treasurer, and that they acquitted themselves creditably.

46. Two hundred and fifty-eight persons were committed to the Richmond Hill Prison in 1907, 203 men and 55 women; 225 being from Grenada, 30 from St. Lucia, and 3 from St. Vincent; the daily average being 63. Of the 258 committals, 215 were for purposes of penal imprisonment, and the 30 from St. Lucia were a batch of convicted rioters. The departmental accounts, kept for the first time this year in accordance with recent instructions from the Secretary of State, and audited, show that, after deducting £331 paid by St. Lucia and St. Vincent in respect of the maintenance of their convicts, the prison cost the Colony £836.

47. The prison suffered a loss in 1907 in the person of its excellent Superintendent, Mr. Richard Heels, who had to go on leave in August, his health having broken down, and has finally retired in the current year.

48. The Acting Attorney-General reports that the criminal statistics for the year indicate a noticeable decrease in crime, although the number of summary convictions for prædial larceny is apparently on the increase. This is due to the special efforts being made to check this form of crime, amongst which may be mentioned the grant of free summonses to complainants in the Magistrates' Courts in such cases.

VITAL STATISTICS.

49. The emigration in 1907 to the Canal Zone of Panama was not upon the same large scale as in the preceding year, and, according to the returns made, the Colony's apparent loss in population, due to emigrants not returned from the Isthmus during the year, was only 180. Deducting these from the population, as shown by the natural increase since the last census, the estimated population of the Colony at 31st December, 1907, was 71,504, or an increase of 8,066 on the census figures.

50. The birth-rate was 36·26 per thousand of the mean estimated population, and the death-rate 19·59, the averages for the preceding decennial period being 41·27 and 21·80, respectively. The fall in the birth-rate is perhaps attributable to the absence of large numbers of males in Panama.

51. The year under review was exceptionally healthy, a result probably attributable to the abnormally small rainfall, which will be noticed in the next section. A comparison of the deaths from the four principal causes in Grenada in 1906 and 1907 is here given to illustrate the improved conditions:—

	1906.	1907.
Diarrhœa	204 ...	112
Dysentery	135 ...	47
Enteritis	190 ...	165
Fevers	175 ...	120

52. Yellow fever was successfully kept out of the Colony from neighbouring islands, where it was prevalent. Two cases were imported from Trinidad, but were immediately isolated, and the disease did not spread. Twelve cases of the usual type of mild small-pox occurred, and being carefully isolated, the progress of the disease was checked in each instance.

53. The principal meteorological statistics of the year are as follows:—

Rainfall—	Inches.
North of the Island	65·58
Centre of the Island	131·19
South of the Island	59·04
Carriacou	33·61

The following figures are for the south of the Island:—

Mean relative humidity	76·3°
Maximum temperature	89·4°
Minimum temperature	67·8°
Mean pressure	29·979ins.
Days of rain	232

54. The average rainfall at the Meteorological Station in the south of the island in the 15 years ended 1905 was 78·34 inches,

in 1906 it was 83·27 inches, while, as will be seen above, it amounted to only 59·04 in 1907. In Carriacou the deficient rainfall was even more marked, the record of 1906 being 68·40 inches, while only 33·61 inches were received in 1907.

POSTAL AND TELEPHONE SERVICES.

55. There was an increase in Post Office business in the year 1907, as the subjoined figures show:—

	1906.	1907.
Letters and post cards	446,927	484,943
Newspapers, books, &c.	142,710	162,176
Registered articles	11,020	11,096
Parcels	6,950	7,421
Money orders issued and paid ...	£20,287	£24,807
British postal orders issued and paid	£2,442	£2,856

56. A prominent feature of the year's transactions was the large amount of money received from emigrants to the Canal Zone of the Panama Isthmus under the money order system established in July, 1906, no less than £6,235 being remitted to Grenada in this manner. In the five months of the preceding year, when it was in operation, £2,228 were thus remitted.

57. On the 17th September a new contract with the Royal Mail Steam Packet Company, for the transport of the inter-Colonial mails for ten years, commenced to operate. One-half of the total subsidy for this service, £25,000, is paid by the Imperial Government, and of the remaining £12,500 Grenada contributes £900 per annum. The Colonies concerned are to be congratulated upon the final settlement of this important question, and the ending of the difficulties and delays resulting from the absence of a service under contract.

58. The telephone service was satisfactorily maintained throughout the year, and there are no special changes or improvements worthy of mention.

MILITARY FORCES AND EXPENDITURE.

59. A rifle club was formed in St. George's on the 20th August, 1907, and is allowed the use of the Police Range at Queen's Park and of a certain number of police rifles. Police assistance is also given at the butts and in cleaning and attending to the rifles, and the Government allows the club to draw from the magazine an allowance not exceeding 10,000 cartridges per annum at half the cost price.

GENERAL REMARKS.

60. His Excellency, Ralph C. Williams, C.M.G., who had been appointed Governor of the Windward Islands on the 8th September, 1906, arrived in the Colony on the 16th of January, 1907, and next morning took the oaths of office. On the 9th of November the King was pleased to confer upon His Excellency the honour of appointment to be a Knight Commander of the Order of St. Michael and St. George.

61. A Commission was appointed on 4th March to enquire into certain matters of importance affecting the peasant proprietary of the island, and presented its report and recommendations on 3rd December. Legislative and other action is being taken in the current year in these matters, and more satisfactory conditions may fairly be anticipated from the contemplated improvements.

EDWARD DRAYTON,

Administrator.

Grenada,

31st October, 1908.

ST. LUCIA.

(For Report for 1907, *see* No. 579.)

THE ACTING GOVERNOR TO THE SECRETARY OF STATE.

St. Lucia,
3rd September, 1909.

MY LORD,

I HAVE the honour to transmit the Report on the Blue Book of this Colony for the year 1908, prepared by the Acting-Colonial Secretary, Mr. H. A. Smallwood.

I have, &c.,

EDWARD J. CAMERON,
Acting Governor.

The Right Honourable
Earl of Crewe, K.G.,
&c., &c., &c.,

(14415—2.) Wt. 26122—322. 1125. 10/09. D & S. A 2

REPORT ON THE BLUE BOOK FOR 1908.

I.—FINANCIAL.

The revenue for the year ended 31st March, 1909, amounted to £65,694 0*s.* 7*d.*, or £1,657 0*s.* 6*d.* less than that of 1907-8. The decrease would have been greater had not the following amounts been brought into account:—

	£	*s.*	*d.*
Transfer from Sinking Fund on redemption of Central Factory Six per cent. Loan	234	19	3
Vacant successions	156	17	0
Public works, materials, and stores	255	13	11
Balance of Land Sales Fund	1,752	5	11

The following tables show the revenue and expenditure, 1908-9, as compared with that of 1907-8.

Heads of Revenue.	1907–8.			1908–9.		
	£	*s.*	*d.*	£	*s.*	*d.*
1. Customs	32,621	14	10	31,289	18	10
2. Port, harbour, &c., dues	7,086	8	10	5,185	8	11

18. Miscellaneous services	2,649	3	8	2,403	8	8
19. Colonial Engineer's Department ...	2,595	9	7	2,557	15	8
20. Public Works Recurrent	6,684	1	0	6,563	15	3
	59,466	13	3	60,441	0	2
21. Public Works Extraordinary	4,685	10	8	3,992	14	2
	64,152	3	11	64,433	14	4
17A. Agriculture (from Imperial funds) ...	687	11	7	604	3	10
Total	64,839	15	6	65,037	13	2

The revenue and expenditure for the last completed five years is as follows:—

	£		£
1904-5	69,273	...	65,508
1905-6	61,877	...	62,521
1906-7	60,012	...	60,294
1907-8	67,351	...	64,840
1908-9	65,694	...	65,038

Included in the above figures are the receipts on account of, and expenditure from, the Imperial Grant-in-Aid of Agriculture.

The surplus and deficit account stood at £26,159 19*s.* 11*d.* on 31st March, 1909, not including the sum of £3,065 4*s.* 11*d.* to the credit of the public buildings insurance fund, making a total surplus of £29,225 4*s.* 10*d.*, or an increase of £1,187 9*s.* 6*d.* during the year. This surplus is invested in securities in England to the amount of £26,170 4*s.* 9*d.* face value, £22,953 14*s.* 5*d.* on account of surplus funds, and £3,216 10*s.* 4*d.* public buildings insurance fund.

The public debt of the Colony was £151,029 11*s.* 0*d.* on the 31st March, 1909. During the year £2,700 was paid to bondholders towards its reduction.

The Central Sugar Factory Six per cent. Loan was finally redeemed.

The sinking fund for the redemption of the public debt amounted to £14,924 14*s.* 6*d.* on the 31st March, 1909, and was fully invested.

The Spanish doubloon was demonetized; this was the only change in the currency during the year. Gold is scarce, due to the fact that there is no limit to tender of silver tokens.

The only municipality or Town Board is that of Castries. On 31st March, 1909, the amount to the credit of the Town Board was £525 0*s*. 10*d*., and its debt on same date amounted to £18,903 14*s*. 5*d*. Its revenue was £5,349 19*s*. 10*d*., and expenditure (including debt charges) was £5,188 11*s*. 11*d*.

The statement appended shows the number of licences issued for the sale of liquor during the year ended 31st March, 1909, and the revenue derived therefrom:—

Licences.	Rate of licence.	Number of licences issued quarterly.				Revenue.
		April to June.	July to September.	October to December.	January to March.	£ s. d.
Wholesale Liquor ..	£20 yearly	2	3	3	3	55 0 0

Refreshment House ..	£30 yearly	2	2	2	2	60 0 0
						1,623 7 6

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

The declared value of imports during 1908 was £289,775, or £20,534 less than 1907.

The proportion of imports from the United Kingdom during 1908 was 31 per cent., from British possessions 10 per cent., and from foreign countries 59 per cent.

The following statement shows the total value of imports from the above three sources during 1907 and 1908:—

	1907. £	1908. £
United Kingdom	80,603 ...	90,177
British possessions	33,982 ...	28,927
Foreign countries	195,724 ...	170,671

The preponderance of imports from foreign countries is due to the fact that nearly all the bunker coal imported comes from the United States, and amounted in 1907 to 111,232 tons, valued at £137,200, and in 1908 to 96,373 tons, valued at £119,794.

Imports from Canada amounted to £6,077 in value; in 1907 to £6,818.

There was a marked decrease in the quantity of butter imported, being 35,843 lbs. less than in the previous year; while on the other hand oleomargarine increased by 27,667 lbs.

The importation of sugar decreased by 90,831 lbs., probably owing to increased consumption of that locally made.

The value of the exports during the year was £252,668; but included in this is the value of certain military stores shipped to Jamaica amounting to £50,000. Eliminating this amount from the value of exports, there is a decrease in the declared value of £61,733 compared with 1907. The lower price of cocoa and a less quantity—1,355,000 lbs. in 1908, against 1,719,700 lbs.—account in some measure for the decrease, and the value of bunker coal exported fell by £30,000; logwood and sugar also showed decreases. On the other hand, rum was exported to a quantity of 23,440 gallons, against only 3,360 in 1907.

Cocoa, sugar, and its products account for £88,000 of the total value of the exports the produce of the Colony.

Bunker coal was taken to the value of £102,288, as compared with £142,381 in 1907.

Canada took produce of this Colony to the value of £8,318, as compared with £8,556 in 1907.

The following table gives the values of imports and exports for the last five years:—

	Imports. £	Exports. £
1904	370,706 ...	172,030
1905	285,987 ...	211,653
1906	242,470 ...	220,313
1907	310,309 ...	264,401
1908	289,775 ...	252,668

The discrepancy between the value of imports and exports can be accounted for by various factors that should be taken into consideration, otherwise the mere figures would appear to show that over-importation was going on. The money spent by the shipping and the commissions earned are two of the most important of such factors affecting the balance in favour of imports.

Shipping.

There is only one port of entry, viz., Castries.

There was a decrease in shipping during 1908, but St. Lucia was not alone in having to show a diminution in the number of vessels calling to bunker, for there was a disposition to lay up shipping during the year, which re-acted adversely on all coaling ports.

The number of steam vessels entered was 577, with a tonnage of 1,084,203, a decrease on the previous year of 139 in number and 221,754 in tonnage.

Eighty-four per cent. or 487 of the number, and 88 per cent. of the tonnage or 957,866, was British.

The total tonnage of steam shipping, other than men-of-war, Government vessels, and yachts, that entered and cleared was 2,167,330 tons, or a decrease of 459,888 tons on that of 1907.

There also called at the Port of Castries 11 men-of-war, 1 yacht, and 6 United States Government vessels.

The following tables give the number of vessels, British and foreign, entered and cleared with tonnage during the last five years:—

VESSELS ENTERED.

Year.	British.				Foreign.			
	Steamers.		Sailing Vessels.		Steamers.		Sailing Vessels.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
1904 ...	373	544,895	231	7,349	77	98,544	45	2,899
1905 ...	452	748,494	207	6,941	99	155,846	43	4,774
1906 ...	534	931,449	246	7,310	83	124,024	38	3,749
1907 ...	615	1,169,037	245	9,772	101	136,920	30	2,089
1908 ...	487	957,866	203	7,340	90	126,337	38	2,267

VESSELS CLEARED.

Year.	British.				Foreign.			
	Steamers.		Sailing Vessels.		Steamers.		Sailing Vessels.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage	No.	Tonnage.
1904 ...	374	546,795	237	7,537	77	98,544	45	2,869
1905 ...	452	748,494	207	6,941	98	153,905	43	4,774
1906 ...	534	931,449	252	7,541	84	125,965	37	3,696
1907 ...	914	1,166,991	216	7,606	100	134,803	30	2,089
1908 ...	487	958,607	201	7,387	89	124,520	38	2,267

Castries is a port of registry, and on 31st December there were 13 sailing vessels, with a net tonnage of 591 tons, remaining on the register.

MINES, MANUFACTURES, AND FISHERIES.

The sulphur deposits at Soufriere were worked a little during the year, and 25 tons of a value of £75 were exported.

The sugar factories working during 1908 were the same as in 1907, viz., Cul-de-Sac, Vieuxfort, Roseau, and Dennery.

The amount of sugar exported was 4,881 tons crystallized and 101 tons muscovado.

Molascuit, which seems to be growing in favour as a food for cattle, was exported to the extent of 2,594 bags.

The two distilleries, Cul-de-Sac and Troumassee, worked during the year, and the quantity of rum manufactured, 83,532 gallons,

exceeded that of 1907 by no less than 26,319 gallons, and most of this excess was exported. This is a hopeful sign of a revival in the export trade of rum, which for the previous five years had steadily declined. The local consumption hardly varied, being 51,216 gallons for 1908, against 51,453 gallons in 1907, and is not capable of much expansion; it is also very sensitive to the circumstances of the bunkering coal trade prevailing at any given time, but it is hoped, with a continuance of the better prices now being obtained for rum, that the export trade will steadily expand.

The following table shows the quantity of rum distilled locally, consumed and exported, during the last five years:—

Year.	Distilled.	Consumed.	Exported.
	Gallons.	Gallons.	Gallons.
1904	57,429	52,562	5,684
1905	56,150	50,337	8,655
1906 ... —	49,553	46,950	6,319
1907	57,213	51,453	3,652
1908	83,532	51,216	23,440

Agricultural Industries.

Sugar.—Although the quantities exported (the only index available to the quantities produced) of sugar and its products, except rum, were less than those exported in 1907, yet the enhanced prices ruling during 1908 resulted in an appreciable increase in value, and for their sugar, molascuit, and molasses the planters received £55,137, as compared with £54,348 in 1907. In 1907 the quantity of rum sent to the United Kingdom was only eight gallons; in 1908 the quantity rose to 12,938 gallons, of the value of £755.

Cocoa.—The year under review cannot be regarded as having been a prosperous one for the cocoa industry, which takes the second place among the industries of the Colony, for owing to short crops and a large drop in the price as compared with the previous year, the output realised only £30,487, as compared with £47,292 in 1907. The shortage in the crop is apparent from the following figures, showing the quantity of cocoa produced during each of the last five years:—

	Bags.
1904	6,768
1905	9,468
1906	7,896
1907	8,598
1908	6,775

Honey.—The amount of honey produced (252 packages) was also considerably below that of the previous year, but this was compensated by an appreciable and welcome increase in price, the product realising £356, as compared with £361 for 354 packages in 1907.

Fruit.—There appear to be indications of the growth of a promising fruit trade with the neighbouring Colony of Barbados, the value of the fruit shipped to that island during the year being £808. In 1907 the value was £672, and in 1906 £448.

Limes.—The planting of limes continued steadily during the year, and it is perhaps to be regarded as an indication of promise that the planters are now starting their own nurseries for the plants instead of relying, as hitherto, on the Agricultural Department to supply their needs in this direction.

The plantations are still young, and it will, of course, be yet a few years before the full effect of the widespread planting which has taken,—and is taking—place can be seen in the export returns. In 1908 the value of the limes and lime juice exported was £202, as compared with £192 in 1907.

Cotton.—The planting of cotton has not made the progress which was looked for, but a local firm has commenced the cultivation on a fairly large scale on an estate near Choiseul, and has erected a well-equipped ginnery in Castries. A propaganda for the encouragement of the industry has been started by the Agricultural Society, and greater progress may reasonably be expected in the coming year.

The Botanic Station and the Agricultural School and the Experiment Station were maintained in their usual good order.

The number of plants distributed was 43,492—a number largely below that for 1907, when 74,644 were distributed. The decrease is accounted for by the diminished demand from the Government nurseries for lime plants, large numbers of which, as has already been said, are being raised in private nurseries. Nevertheless, the number of lime plants issued totalled 23,610.

Several of the *Castilloa elastica* trees in the Botanic Station were tapped for the purpose of preparing an exhibit for the International Rubber Exhibition, held at Olympia in September, 1908. This sample was afterwards sent to the Imperial Institute for examination, and the report thereon states that its commercial value was about 3*s.* 6*d.* per pound in London, with fine hard Para from South America quoted at 4*s.* 3½*d.* per pound.

A new Agricultural Instructor, with special knowledge of cotton cultivation, was appointed, and assumed his duties on the 30th April, 1908.

The total expenditure on the Botanic Station was £784, and the receipts from the sale of plants amounted to £71—the highest on record from this source.

The number of pupils maintained at the Agricultural School during the year averaged 23·09. Eight new boys were admitted, four completed their course, and two were discharged—one at his own request, after being five months in the school, and the other at the end of his probationary period.

Vegetables, cocoa, and milk, in quantities sufficient to meet the requirements of the school, were produced at the station, and represent a saving of £57 on the expenditure for dietary.

The reports on the half-yearly examinations of the pupils were satisfactory, and the Medical Officer reports that the health conditions were excellent, no serious case of illness having occurred during the year.
